I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial: and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H - - Notre Dame, Ind., U. S. A.

You will want the 1912 Coca-Cola Girl Calendar

We will send you this beautiful Calendar, lithographed in sixteen colors, on receipt of 2¢ to cover postage.

The Coca-Cola girl is more fascinating than ever—you will like her. She will remind you that whenever you're tired or thirsty to

Drink

Coca-Cola

the one beverage that will refresh you, quench your thirst and please your palate.

Our new free booklet, telling of Coca-Cola vindication at Chattanooga, for the asking.

THE COCA-COLA CO.,
P. O. Box 1734
Atlanta, Ga.

Whenever you see an Arrow think of Coca-Cola.

CHRISTMAS BELLS.

I heard the bells on Christmas Day
Their old familiar carols play.
And wild and sweet
The words repeat
Of peace on earth, good will to men!

And thought as how the day had come
The belfries of all Christendom
Had rolled along
The unbroken song
Of peace on earth, good will to men!

Till ringing, singing on its way,
The world revolved from night to day.
A voice, a chime,
A chant sublime,
Of peace on earth, good will to men!

Then from each black, accursed mouth
The cannon thundered in the South.
And with the sound
The carols drowned
Of peace on earth, good will to men!

It was as if an earthquake rent
The hearthstones of a continent.
And made forlorn
The households born
Of peace on earth, good will to men.

And in despair I bowed my head,
"There is no peace on earth," I said.
For hate is strong,
And mocks the song
Of peace on earth, good will to men!

Then pealed the bells more loud and deep;
God is not dead, nor doth He sleep!
The wrong shall fail,
The right prevail,
With peace on earth, good will to men!
—Henry W. Longfellow.

DEVELOPING.

Strange to think that in the darkness of this little, silent room,
Where the lantern's steady crimson gleams a red eye—in the gloom,
I can watch imprisoned sunbeams weaving pictures in their loom.

Just one flash of Time's swift shuttle so!—that made them! There they creep
Slowly out upon the plate here, as a dream creeps out on sleep
When the awakening soul remembers long-lost thoughts from out the deep.

There they come then, streets and cities, fields and orchards far away—
I can almost smell the blossom, hear the children there at play—
I alone thus vainly watching the rebirth of yesterday.

So sometimes, when I am weary, out upon my mind's blank plate
Creep slow pictures that were graved there long ago by careless Fate,
Hidden deep in Memory's dark-room they like buried sunbeams wait—

Strang old pictures, long forgotten, left unrecked of in my brain,
Till comes Memory with her lantern, pours some scent, some old refrain,
Like a liquid spell upon them, and, behold, all's clear again!
—Isabel W. Hutchison, in Chambers' Journal.

WATCHING THE SHEEP.

We stood and watched the foolish sheep
As from the field they sped,
Each one intent that it should keep
Behind the one ahead.
"How silly!" cried the lady fair,
"'Tis comical indeed
To see them running everywhere
With one sheep in the lead."

(And she, as I told brother Mike
With a sarcastic smile,
She and the rest wore clothes alike
And hats all of one style.)
We stood and watched the sheep again
Until one nervous sheep
Dashed for the fence, and, there and then,
Went o'er it with a leap.

Behind it in an ordered line
The flock jumped one by one.
"The fools"—this wise remark was mine—
"Ape what they have seen done."
(And brother Mike and all the men,
As I observed to him,
Wore clothes that were called stylish then,
And hats alike in brim.)

And as we left we saw the sheep
Once more leap o'er the wall,
Behind its leader each would leap,
Behind it it would fall.
"Dumb, silly things," we all agreed,
As on our way we turned,
"For sheep there is a lot, indeed,
That they have never learned."

(But most of us do things alike,
As like as like can be—
As I observed to brother Mike
And Mike observed to me!)
—Chicago Evening Post.

THE COMRADE.

Be thou young, I will romp with thee,
Sun up, sun high, sun down, stars;
Be thou old, I will lean with thee,
Cackling over the cattle bars.

Be thou sad, I will weep with thee;
Tears are water, and, mingled, dry.
Be thou glad, I will laugh with thee,
Mirth is maddest when two are by.

Be thou lone, I will come to thee;
Twining hearts make dearth of woe.
Be thou ill, I will sit by thee,
And bid the devil quickly go.

Be thou living, I'll live with thee,
Strong in waking and warm in sleep.
Be thou dead, I will lie with thee
Under the cedars, cold and deep.
—Richard Wightman, in the Century.

HARMONIOUS DISCORD.

My wife and I, we disagree
On every mortal matter;
The Sprats, 'tis said, were odd; but we
Are infinitely spratter.

Of fifty Aprils she's the sum,
Sunshine and showers together.
While fifty-three Novembers come
In me to sober weather.

I love the daily round of life,
Its rare occasions please her;
I flouted Christmas, and my wife
Thought it was done to tease her.

Her fitting throne an easy chair,
Her joy a motor car is;
For me a stool, or Shank's mare,
A better mount by far is.

Words are my study, life is hers;
We go to different teachers;
I learn from books; while she prefers
To learn from living creatures.

Yet (though you'd say words had their use
In speech, as legs in walking),
A sentence rarely I produce,
And she does all the talking.

If hovering wasps assail our board,
I'm in a fearful bustle;
She sits and shames her craven lord
By moving ne'er a muscle.

Then let an earwig come but near,
Or woodlouse pink and tender,
Her courage all dissolves in fear;
'Tis I that must defend her.

Our looks no less than tastes you'll find
Alike antipodean;
She's of the tall and stately kind,
I stumpy and plebeian.

A natural perruque she grows
Of silver curls, well ordered;
With narrow fringe that sparsely shows
My naked noodle's bordered.

A crowning discord only can
Solve discords so inhuman;
She says the world to her's one man,
To me it is one woman.
—Westminster Gazette.

THE RAZORBACK "COME BACK."

Can he come back? has been the cry
That we have heard on every hand.
Some once affirmed, now all deny,
It's settled in this Yankee land—
"You can't come back," the people say;
You're doomed forever and a day."

This is a rule that none gainsay,
And yet we've overlooked a bet,
A gent "came back" the other day—
Yes, there came back an old-time "vet."
He's back; he's back. You say who's back?
The answer is: "The razorback."

The razorback, the one-time pet
Of our ancestors in the woods;
The only pork our daddies "et,"
And thought it surely was the goods—
The razorback from "Rackensack"
He has come back; he has come back.

For on the market page we read
That ounce for ounce and pound for pound,
He brings as much as do the breed
Of round, fat hogs in Kansas found.
The "razor" beats those Kansas fats,
There's breakfast bacon on his slats.

Corn belt prosperity has spoiled
With too much fat the bacon zone—
While into lard he must be boiled,
The lean hog comes into his own,
And on the rich man's table now
The razorback has made his bow.

Thus history itself repeats,
The scoffed at "razor," down and out,
Comes back and is the king of meats,
And puts the "dopesters" all to rout,
And rising from his lowly station,
Becomes the lard of all creation.

He's long and lanky as a rail,
Mere leanness fastened to a spine;
But frora his wolf ears to his tail
He's breakfast bacon, and he's fine—
For he's all back, so he came back,
That's how the razorback came back.
—C. L. Edson, in Kansas City Star.

For Lovers of Flowers.

Park's Floral Magazine is the oldest and best floral monthly in the world. Forty-first year. Illustrated. Bright as a Marigold and published at 25 cents a year.

The **Universal Magazine** is a bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money; also published at 25 cents a year.

We have made arrangements whereby by clubbing these two papers together and adding twelve fine tulip bulbs we are enabled to make the combination for 30 cents. The tulips are imported from Holland; the bulbs are all blooming size, and if planted now or before the ground freezes will bloom in early spring. They are hardy and will remain in the ground, increasing in size from year to year. Send 30 cents and we will send both papers one year and the bulbs post free by mail. **To Club Raisers:**—Anyone sending us four subscriptions in accordance with this advertisement and $1.20 to pay for same will receive both papers one year and an extra dozen tulips for getting up the club. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

$1 COUPON FREE

To every sufferer from

Rheumatism

Name .....

SELECTED POETRY.

AT HAMMOCK-BY-THE-TREE.

Some go to Hillcrest-by-the-Pool,
Some go to Glenview-by-the-Lake,
In search of somewhere that is cool,
And there they stew and fret and bake.
I have a quiet summer place
That's not like Sandhill-by-the-Sea—
Across the lawn my path I trace
And stop at Hammock-by-the-Tree.

At this resort one is surprised
To find that all the prospects please;
Home comforts, just as advertised,
And constantly a cooling breeze;
There one may look up at the sky
That is as blue as any sea
And count the cloudships sailing by—
It's fine at Hammock-by-the-Tree.

No pert-mouthed children flounce about,
No gossips sit in rocking chairs,
No bellboys clatter in and out,
No gay grass widows put on airs.
There is no rush to be the first
To reach the tables during meals,
No orchestra may do its worst
With shrieking flutes and fiddle squeals.

And there nobody rocks the boat,
But one may sail the Sea o' Dreams,
And all contentedly may float
Adown the babbling fancy streams;
There is no land in all the earth
That in this spot one may not roam;
He may have all the day is worth
And safely make the port of home.

My baggage is a pipe and book
And there I travel every day;
I find the quiet little nook
Where laughing breezes come to play.
It is the corner of content,
A place that has a charm for me—
There my vacation will be spent;
I'll stop at Hammock-by-the-Tree.
—Chicago Post.

SOMETIME.

Sometime we're going to do a kindly deed,
Or speak a helpful word to some lone heart;
Sometime we're going to plant the living seed
In soil where it will thrive and do its part.
Sometime we'll stoop to help a wearied soul
Which staggers underneath a heavy load;
Sometime we'll pause while rushing toward the goal
To aid a brother on the rocky road.

Sometime glad eyes will speak the love they bear,
Because of favors which were ours to show;
Sometime in Life's long day, we'll gladly share
The little blessings which are ours to know;
Sometime we're going to stop the ceaseless grind—
This everlasting hurry-life we live,
And be more loving, tender, true and kind,
More thoughtful and more ready to forgive.

Sometime we'll cease to fret at little cares,
And put away our foolish, timid fears;
We will not look for pitfalls or for snares,
We'll speak no gossip for our neighbor's ears;
Sometime we'll only see the good in men,
Be blind to all the worthless and the bad,
And recollect our own weak faults, and then
Just strive to make the whole world bright and glad.
—E. A. Brininstool, in Los Angeles Express.

THE VILLAGE BLACKSMITH.

Under a spreading chestnut tree
The village smithy stands;
The smith, a mighty man is he,
With large and sinewy hands;
And the muscles of his brawny arms
Are strong as iron bands.

His hair is crisp, and black, and long,
His face is like the tan;
His brow is wet with honest sweat,
He earns whate'er he can,
And looks the whole world in the face,
For he owes not any man.

Week in, week out, from morn to night,
You can hear his bellows blow;
You can hear him swing his heavy sledge,
With a measured beat and slow,
Like a sexton ringing the village bell,
When the evening sun is low.

And children coming home from school
Look in at the open door;
They love to see the flaming forge,
And hear the bellows roar,
And catch the burning sparks that fly
Like chaff from a thrashing floor.

He goes on Sunday to the church,
And sits among his boys;
He hears the parson pray and preach,
He hears his daughter's voice,
Singing in the village choir,
And it makes his heart rejoice.

It sounds to him like her mother's voice,
Singing in Paradise!
He needs must think of her once more,
How in the grave she lies;
And with his hard, rough hand he wipes
A tear out of his eyes.

Toiling—rejoicing—sorrowing,
Onward through life he goes;
Each morning sees some task begin,
Each evening sees it close;
Something attempted, something done,
Has earned a night's repose.

Thanks, thanks to thee, my worthy friend,
For the lesson thou hast taught!
Thus at the flaming forge of life
Our fortunes must be wrought;
Thus on its sounding anvil shaped
Each burning deed and thought.
—Longfellow.

GOBBLE, GOBBLE, GOBBLE!

A turkey perching in a tree
Turned round and looked right down at me,
And all the words he said were three—
Gobble, gobble, gobble!

I got that turkey in a shed;
Some yellow corn before him spread;
The same three words to him I said—
Gobble, gobble, gobble!

When he had gained about ten pound
And was fat, juicy, sleek and round,
Again he turned and made the sound—
Gobble, gobble, gobble!

"All right," said I, "I'll gobble you,
Invite my friends to help me, too.
What you request, dear sir, we'll do—
Gobble, gobble, gobble!"

There at the table to each guest
I read that turkey's last request.
They then proceeded with great zest
To gobble, gobble, gobble!

They made of him a perfect wreck;
They stuffed themselves full to the neck;
They gobble, gobble, gobbled,
Till they wabble, wabble, wabbled.
—C.M.Barnitz, in Petaluma Poultry Journal.

THESE COMMON SAYINGS.

These common sayings make me laugh,
For they are never true by half;
These foolish sayings, which each day
The common run of people say.

"'Im frozen stiff," we've often heard;
If true, they couldn't say a word;
"I'm all broken up," a man will say;
Yet tend to business every day.

"The wind blew through me," mind you, through!
How queer they'd look if it were true.
"She dropped her eyes," would not that be
A very sad calamity?

"I'm busted," a financial break,
A hundred times you've heard men make.
"I caught the train." You did? Well, well!
What did you catch it with, pray tell?

"She cut me dead the other day,"
You've often heard some fellow say.
Worse still, you've heard some one aver,
"She's stuck on him," or "he on her."

"I never slept a wink last night,"
Is an exaggeration quite.
"The rain came down in bucketfuls"
Is but another of the bulls.

And so they go from day to day,
These foolish things that people say.
To get them all in print, I think,
Would take a barrel full of ink.
—Joe Cone.

WHAT MARY DONE.

Mary had the queerest taste!
Just despised the military,
Gave her heart, her hand and waist
To a young apothecary,
Just a common, ordinary,
Pill-compounding, bumptious, bounding,
Fat and sassy, sassafrassy,
Smirking sonvergun.
When he smirked his smirks at Mary,
That's what Mary done.

Mary thought him such a dear;
We just thought it temporary,
Till at last it seemed quite clear
Her affection wouldn't vary.
Yes, she loved that smart and airy,
Puffed-up, placid, boric acid,
Seltzer-bromo genus homo,
Sneering, leering one.
When he leered his leers at Mary,
That's what Mary done.

He skipped out, the low-down trash!
She, so simple and unwary,
Sent him fifteen dollars cash
At his call epistolary.
Yes, the mean and mercenary
Drugs and notions, cream and lotions,
Small, cocaine, pop-eyed zany,
Out of town he skun,
Never did come back to Mary,
That is what he done.
—St. Louis Star.

Teach Children the Personal Equation.

In school life as at no other time it is necessary to warn the child of the danger from disease through too close associations with fellow-mates. Children are naturally affectionate and trusting, and while it is unwise farther than absolutely to break this bond, the safeguards against evils require that at least hints be given.

Seat-mates are especially in danger, even among the best of families. And where at least one comes from the poorer classes this may be increased. There are still districts in which the practice of using the same comb or exchanging hats brings trouble. When this comes, it is well to know that kerosene is an effective agent.

But it is against disease that the greatest warning should be sounded. Instill from the beginning that the pencil was made to mark with, never to be placed in the mouth. Statistics show that contagion in the public school is largely through this source, even where pencils are furnished to each pupil. They are taken up at the close of the day and redistributed the next morning, dainty little Miss Trim perhaps getting the one which Mike O'Harin had been chewing the day before while doing his hard sum; or it may be he had only moistened the lead, as so many get the habit of doing, to obtain a blacker mark.

Teach the little one to avoid breathing into the face of another or receiving such breath; to avoid those who have the habit of spitting. Neatness in person and a general avoidance of those who are the reverse count for sanitation as well as good breeding. — Bessie L. Putnam.

Uneeda Biscuit
In Select Company
It's the very nature of a soda cracker to absorb moisture and foreign odors.
That's why the ordinary soda cracker remained so long in obscurity.
The advent of Uneeda Biscuit and the moisture-proof and odor-repelling package changed all this—for Uneeda Biscuit, the perfect soda cracker, keeps select company —its own.
To-day the goodness, the freshness and body-building virtues of Uneeda Biscuit are acclaimed in tenement and mansion.
Never Sold in Bulk

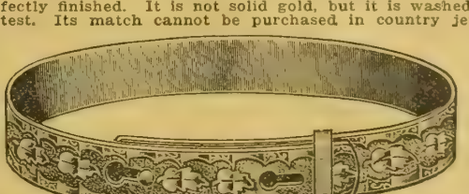
Money returned if not satisfied. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.** To Club Raisers:—Anyone who will get up a club of four two-year subscriptions in accordance with this advertisement and send us two dollars to pay for same will be credited with one extra two-year subscription to the **Universal Magazine** and we will also send one extra Bracelet for getting up the club.



Universal Magazine Bracelet.

Illinois Housekeepers' School.

We have received notice from Isabel Bevier, head of the Department of Household Science at the University of Illinois at Urbana, that they were making plans for the Annual School for Housekeepers to be held January 15th to 27th, 1912, in the north wing of the Woman's Building. At the time the notice was sent out the program had not been issued, but by the time this paper reaches the hands of our readers those who are interested will be furnished a copy by writing for it. Address, Chief of Household Science, University of Illinois, Urbana, Ill.

Concerning Silo Patents.

The Iowa Agricultural Experiment Station at Ames, Iowa, has set out on a nation-wide hunt for a home-made round silo built in 1898 or earlier and incorporating some of the essential features of the patented structure of to-day. H. L. King, Agricultural Engineering Experimentalist of the Station, has offered a reward of $50 for the first definite information about just such a silo. He expects also to make a trip to several of the older dairying districts of the United States for a personal search for pioneer silos.

Back of this unusual hunt is the claim of the wooden silo manufacturers that American farmers cannot build round silos of any type or material without first paying tribute to them in license fees. They claim a patent monopoly and they have organized themselves to enforce it. In the past summer of extensive silo building they sent out thousands of letters warning farmers who were putting up home-made silos and threatening suit for infringement.

This claim of a silo monopoly concerns the Iowa Station because two of its experimenters, Prof. J. B. Davidson and H. L. King, designed a successful hollow tile silo three years ago which they dedicated to the American farmer and his free use. This silo has been made the special object of attack in Iowa, where nearly a thousand are in use. Letters warning farmers building these silos have been sent out and intimations of damage suits have been frequent. Whenever appealed to the Station has taken the new stand that it is doubtful if the manufacturers really have a monopoly, as they claim, on wooden silo building.

"We have good reason to believe," says Mr. King, "that the special features of wooden silos for which patents are claimed were used in some of the silos built prior to the date of the patents, June, 1899. Those features are the continuous door, reinforced door jambs, door jamb braces and devices for holding the doors in place. Round wooden silos were in use long before 1899. We want additional information about them. For the first information received about such a silo containing some of these mentioned features, $50 will be paid, if it is sent to the Iowa Agricultural Experiment Station, Ames, Iowa.

"The Iowa Station is not setting out to fight anybody. It merely wants to make certain about these disputed points and to protect the farmers in Iowa and in every state in what it considers their right to build round silos of brick, tile or masonry, and possibly of wood also."

The Market For Oats.

On November 30th, at St. Louis, cash oats sold at 50½ cents a bushel, against 33½ cents the same day last year. Since then on closing days of the month oats sold: February at 30 cents; March, 31 cents; April, 32½ cents; May, 34 cents; June, 44 cents; July, 39½ cents; August, 43½ cents; September, 46½ cents; October, 46½ cents; and November, 50½ cents.

At Chicago, the December option for oats was quoted June 30th at 46⅛ cents a bushel; August 31st, at 46 cents; and November 29th, at 47⅛ cents. The December oats option was closed out last year at 31⅛ cents; and the year before at 43⅝ cents.

As with other grains, the May option is the most important with oats. On July 31st of the present year the May option of 1912 was quoted at 46 cents; August 31st, at 48⅞ cents; September 30th, at 50¼ cents; October 31st, at 49 cents; and on the closing day of November the May oats option was quoted at 49⅝ cents, and the July option at 46¼ cents a bushel.

We are inclined to believe that with active business conditions oats consumers could stand 55 to 60 cents a bushel, but we are informed that general business is not what it ought to be, and yet sometimes it appears that there are not enough oats to go round, no matter what the price may be.

A reference to the daily oats quotation will be a good idea after our patrons have read this review of the oats trade.

Late St. Louis onion prices: Red Globe, 75c. to $1.20 per bushel; Yellow Globe, $1.00 to $1.10; sacked White Globe, $1.90 for fancy.

Don't Wear a Truss!

Brooks' New Scientific Appliance--Adjustable to Any Size Person--Easy, Comfortable, Affording Instant Relief--Made for Men, Women and Children.

SENT ON TRIAL.

No risk in ordering--Money will be refunded if not satisfied.

After thirty years' experience in curing rupture, I have invented an Appliance which will absolutely hold the rupture and never slip, yet is light, cool and comfortable. It conforms to every movement of the body without chafing or hurting, and costs less than many common trusses. There are no springs or hard, lumpy pads, and yet it holds the rupture safely and firmly without pain or inconvenience. I make it to your measure, and send it to you on a **strict guarantee of satisfaction or money refunded**, and I have put my price so low that anybody, rich or poor, can buy it.

DOUBLE RUPTURE CURED.

Lecompton, Kans.,
R. F. D. No. 2, Feb. 7, 1911.

Mr. Brooks.

Dear Sir:—I drop you these few lines to say I am well pleased with your Appliance, as it has effected a permanent cure in my case. I have been ruptured eighteen years. Am now forty-two and wore a great many trusses before I got your Appliance. The ruptures disappeared after wearing the Appliance a few months. Mr. Brooks, I will do all in my power to recommend your Appliance, not only for your benefit, but to help others who suffer from rupture.

Your True Friend,
W. F. BUCHHEIM.

The above is C. E. Brooks, who has been curing rupture for over 30 years. If ruptured, write him today.

"COMPLETELY CURED."

Hebron, Douglas Co., Mo.,
June 12, 1911.

C. E. Brooks.

Dear Sir:—Some time ago I purchased an Appliance from you and am now please to inform you I am not wearing it nor will I ever need it again, for to my great surprise, it has completely cured me. I hardly hoped to be cured at all, but the cure was effected in about seven months. Many thanks for the kind way in which you have treated me.

Yours gratefully,
S. B. LITTELL.

I have received thousands of letters like these from grateful patients the world over. This appliance gives **instant relief**, and effects permanent cures when everything else has failed. Remember, I use no salves, no harness, no lies. Fill out the attached coupon and mail today, and I will send you free my illustrated Book on Rupture and its Cure, showing my Appliance, and giving you the names of many people who have tried it and are now permanently and soundly cured. Remember, I send my appliance **on trial** to prove what I say is true. You are to be the judge. Send free coupon **now**.

C. E. BROOKS,
59 A, Brooks Bldg., Marshall, Mich.

FREE INFORMATION COUPON.

C. E. BROOKS, 59 A, Brooks Bldg.,
Marshall, Mich.

Please send me by mail, in plain wrapper, your illustrated book and full information about your Appliance for the cure of rupture.

VICTOR—Grade Angus steer. Grand champion at Chicago International Live Stock Show of 1911. Bred by W. J. Miller, of Newton, Iowa. Fed and exhibited by the Iowa State College. Sold by Clay, Robinson & Co. at 90 cents a pound, weighing 1,610 pounds, bringing $1,449.00. Bought by The Fair at Chicago and slaughtered by Armour & Co., the slaughter record being 69.87 per cent. of dressed meat to carcass. That the price obtained was a remarkable one was reflected in the fact that it was the highest a fat two-year-old steer ever made, and the highest paid at the International Show for any fat steer in eleven years.

GRAND CHAMPION SHEEP AT CHICAGO INTERNATIONAL LIVE STOCK SHOW OF 1911. Sold by Clay, Robinson & Co. at $7.60 per 100 pounds. The average weight was 165 pounds.

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husks and prevent clogging. As this is the most approved husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions for palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The strap passes through the leather tongue and the first ring and over

the hand to the opposite ring and back through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch-lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle; the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the Cement Workers' Handbook. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

To Club Raisers:—Anyone getting up a club of four subscriptions and sending in $2.40 will be credited with one book and one-year's subscription free.

Bacterial Destruction of Wood.

We speak of wood rotting, but few realize that what we call rotting is the active work of minute growths, the filaments of which strike into and destroy the wood, changing it into other substances than those comprising the natural wood. A good many people think the rotting is caused by moisture, but that is not the truth. Wood entirely immersed in water will not rot. Last year some timbers were dug out of the Rhine river that had been there since the days of Julius Caesar. They were undecayed, though they had been immersed in water for two thousand years. They were reported to be as black as ebony and as hard as mahogany. This is an illustration of the fact that water does not rot wood. Also, out of the swamps of Western Europe have been dug logs that were submerged before written history began. The same is true of many other bodies of water. A diver who has been working in Lake Michigan for twenty years tells the writer that the whole southern part of the lake is shallow, and that in that portion tree trunks are common. Yet the settling of the land in that portion of the country must have been a great many thousand years ago.

The bacteria that destroy wood must have both moisture and air to permit them to work. The farmer drives a fence post and in a few years finds it is rotten just at the surface of the ground. Often the wood-destroying bacteria have not penetrated even to the bottom of the post, especially if it is driven in very wet land. The lesson to be learned is for the farmer that has fence posts to drive to protect them with tar or other substance just at the point where the moisture of the soil comes into contact with the air.

Air and moisture help the development of wood-destroying bacteria. That is why paint should be used on window sills and porches and piazzas oftener than on other parts of the house. Protecting the wood with paint prevents the working of the destructive bacteria. Every year the buildings should be examined to note the places where the rains have greatest effect, and such places should be protected with paint or other protective material.

Many a farm building goes to decay because it is allowed to become leaky and wet places are made that invite the work of the invisible hosts of the fungus family. It therefore pays to keep a roof mended and all other places tight where the moisture would not quickly dry out after a rain.

Vehicles that are allowed to remain where they will be frequently wet after the paint has worn off are sure to go to pieces. If kept in a dry place, these same vehicles would last indefinitely.

Often moisture exists where one does not suppose it to exist and so-called dry rot takes place. But perfectly protected wood will last indefinitely. The protection may be either paint or a good shelter.

Cider Not Intoxicating.

Not much cider is manufactured in Westchester county, New York, for export, nearly all of it being consumed at home. Two Tuckahoe farmers were comparing notes.

"How many barrels have you put up this year, Silas?" said one.

"Only seven, Joel," was the reply.

"Got any handy?"

"Sure thing, Silas," and Joel went into the house, returning soon with some of the apple elixir in a big tin dipper. "There," said he, "try that," and Silas sipped.

"Well, what do you think of it?" Joel inquired.

Silas shook his head dubiously.

"Don't you like it, Silas?" was the anxious inquiry.

"How many barrels did you say you made, Joel?" asked Silas.

"Seven."

"Well, Joel, if you had another apple you might have made eight."
—New York Herald.

Result From Complete Fertilizer.

"Last spring I bought my fertilizer (manufactured by the Empire Carbon Works, 421 Locust street, St. Louis, Mo.) from Wm. Stoddart. On account of the drouth I did not get it in until the first of June. It was a very poor piece of pasture land. I have been using fertilizer on my corn for several years, and have used several different kinds of fertilizers, and got the best results through your goods of any I have ever used. The corn that I fertilized stood the drouth better than any I ever had. It never fired." (Signed) Eugene Madden, Monroe City, Mo.

U. S. Cream Separator.

A very good advertisement of the U. S. Cream Separator will be found on page 10, also some very strong points in regard to the merits of the implement. When you write for catalogue, address Vermont Farm Machine Company, Box 125, Bellows Falls, Vermont. You will then get the name of the nearest representative of the company where you can see the U. S. Cream Separator in use.

You Get Your Roof at Agent's Price

and Profits Besides When Your Neighbors Buy Edwards Roofing Because They Like Yours!

This is our special Agent's Proposition in a nutshell. It is open right now to one man in each community. If you are the man, write us at once! Get the whole proposition. You place yourself under no obligation. You can have an everlasting roof of Edwards Interlocking "Reo" Steel Shingles on your house, barn or other farm buildings and let it make money for you.

Edwards "REO" Steel Shingles

Made Rust-Proof and Rot-Proof by Our "Tightcote" Process of Galvanizing

Each and every one of the high-grade Bessemer Steel Shingles is dipped singly into molten zinc. This gives heavy, uniform coating and covers all edges. No raw edges exposed to the weather. Edwards interlocking feature makes solidest roof. Lasts a lifetime. Comes in sheets 5 to 12 feet long, 24 inches wide. Galvanized or painted, all ready to put on. Hammer and nails all that is required. Anyone can do it. Can be applied over wood shingles or sheathing 12 inches apart.

$10,000 Ironclad Bond Lightning Insurance

We agree to refund the amount paid in every case where a roof covered with Edwards Interlocking "Reo" Steel Shingles is destroyed by lightning. This guaranty is backed by our $10,000 Ironclad Bond and stands forever. Ask for Big Free Roofing Catalog No. 157, with special low prices. Freight prepaid. Send dimensions of your buildings and we will quote you cost. Write today.

THE EDWARDS MFG. CO., 107-157 Lock Street, Cincinnati, Ohio

IMPLEMENTS AND PROFITS

Do you realize to what extent the implements on the farm control the profits? When you consider that each one is capable of either increasing or decreasing the returns from the crops upon which it works, it is apparent that too thorough a study of its uses and construction is almost impossible

While it is a matter of right—of justice—that farmers should buy their implements as cheaply as is consistent with quality, they can always afford to buy the best.

There are five points to consider in every machine: (1) Its purchase price must be fair. (2) It must do the work for which it is bought. (3) It must be economical to operate (4) Its repairs must be reasonable. (5) It must serve a long life.

Upon these five points every implement should be judged and selected. The second, third, fourth and fifth factors may all be included in the one term, *efficiency*. Upon the efficiency of the tools depends the yield and cost of production.

Mr Farmer, we have made farm machines for sixty years upon the standard of those five points by which you should select your implements. It is your standard, and our standard; just "Johnston Quality." If we are not supplying all of your tools, we should. It means satisfaction—profit.

Our free catalog will show you why. It is full of information on farm mechanics, and will be sent you on request. Write a post card for it today.

Johnston Harvester Co., Box 117-R, Batavia, N. Y.

RAW ROCK PHOSPHATE.

Pronounced Absolutely Worthless as Fertilizer For the Reason That It is Not Available as a Plant Food in Reasonable Time.

The advisability of using or not using ground rock phosphate as fertilizing material ought to be settled so that farmers will understand what to do. Raw rock phosphate is either available as a plant food in reasonable time or it is not a good purchase. It is either a good use of money or it is an absolute waste of money to buy it. When ground rock phosphate was brought into prominence several years ago the editor of The National Farmer and Stock Grower asked the best fertilizer authority he knew for the value of it, and the answer was to the effect that it had no immediate or appreciable effect on plant life. Not considering the answer conclusive, no mention was made of the subject in the columns of this paper at that time. Since then the editor has read notices of raw rock phosphate without gaining much information, and, although he was always anxious to be able to recommend this material as a cheap but effective manner of furnishing plant food to the soil, he did not feel justified in doing so.

A few months ago we noticed that raw rock phosphate was mentioned by Prof. H. G. Bell as one of five important forms by which phosphoric acid is supplied. Prof. Bell being engaged at Chicago, doing educational work in the interest of "larger crops and better yields," and having listed the goods in with all other recognized fertilizers, we expected to receive a favorable reply from him, if one could be sent. Our letter to Prof. Bell was as follows: "My Dear Sir:—In your address at Springfield, Ill., before the Agricultural Committee of the Bankers' Association, you mentioned 'Raw rock phosphate which carries 25 to 32 per cent. of very slowly available phosphoric acid.' I write for the purpose of asking the question: 'Does very slowly available mean one, two, ten, twenty or fifty years?' I have had the inclination to advise farmers to buy ground phosphate rock, but have hesitated because of the doubt in my own mind as to the time in which it requires to become available when applying it to the soil with barn-yard manure. If you will kindly give me a reply, I will be glad to use it." (Signed) Philip H. Hale, Editor.

The answer of Prof. Bell was dated October 25th, 1911, and was as follows:

"My Dear Sir:—Your inquiry of the 23d inst. is to hand. I beg to state, in reply, that the consensus of opinion of most of our leading Agricultural Experiment Stations and of all European Stations is, that phosphoric acid in raw rock phosphate is very slowly available, even in an acid and decidedly sour soil. You see, therefore, I cannot answer just within what time any of the substances will be available. The phosphoric acid in phosphate rock is in what is known as the three-lime form. That is, three quantities of calcium are combined with two quantities of phosphoric acid. This form is entirely insoluble in water. To confirm my statement, I quote briefly from experimental reports issued by prominent stations which have investigated this question.

"First. The Tennessee Station, which is located right in the raw rock mining center, says: 'The outcome of the experiments made thus far does not allow us to recommend for general use the ground phosphate rock, which is relatively cheap and which it was hoped would prove a strong competitor of other phosphates. Both steamed bone meal and acid phosphate can, however, be highly recommended."—Twenty-third Annual Report Agricultural Experiment Station, University of Tennessee.

"Second. The following resolution passed by the Association of German Agricultural Experiment Stations at Dresden, September 14, 1907: 'The association has concluded, from fertilizer experiments at hand with raw phosphate fertilizer, that there is shown no profitable fertilizer effect, apart from those of acid soil. In consequence thereof the association feels it should discourage the use of raw phosphate on other soils.'

"Third. Experiments made by Czerhati, L. Pey, Clausen and others led to similar results to those just stated. The same report states that 'From present experiments it can be concluded with certainty that the general use of earthy phosphates (raw rock phosphates) cannot be considered as phosphoric acid fertilization.'

"Several other prominent American Experiment Stations corroborate the opinion expressed as above. Prof. A. D. Hall, Director of Rothamsted Experiment Station, England, says after a comparison of other sources of phosphoric acid, such as bone meal and superphosphate, with raw rock phosphate: "In the main the mineral phosphates are used for the manufacture of superphosphate, practically the only manure which contains phosphoric acid at all readily soluble in water.

"From the above opinions you will see that the value of ground phosphatic rock as fertilizer is a doubtful question, and that the authorities are agreed that superphosphate, which is phosphatic rock treated with sulphuric acid, to render the phosphorus readily available for plant food, is the only form in which it should be used, and not in the raw and practically unavailable form. Superphosphate will give immediate and profitable returns." Yours Very Truly, (Signed) Henry G. Bell.

Since receiving the letter from Prof. Bell we have had a personal interview with him and we left him with the impression that he regarded the purchase of raw rock phosphate for fertilizer by farmers as an absolutely useless expenditure of money. It has also been suggested to us that far from being a benefit to the farmer it is to his disadvantage, for the reason that he thinks he has bought a fertilizer, when he has bought nothing of the kind, and, not obtaining results commensurate with the outlay, he will condemn all valuable fertilizers by reason of his first misguided purchase.

SHERWIN-WILLIAMS PAINTS & VARNISHES FOR THE FARM

For painting and refinishing farm machinery, wagons, implements, tools, etc., use Sherwin-Williams Wagon and Implement Paint—dries with a rich, durable gloss; prevents rust and decay. It is very permanent in color as well as very durable. Made in five colors and black, also as a clear varnish.

Sold by dealers everywhere. Ask for color cards

Address all inquiries to The Sherwin-Williams Co., 689 Canal Road, N. W., Cleveland, Ohio

A GROUP OF POLLED DURHAM FEMALES—Bred and owned by J. H. Miller & Sons, Peru, Ind. This group includes on the right QUEEN OF MIAMI, a four-year-old champion cow at State Fairs, and in the center WANDERER'S VIOLET, senior sweepstakes cow at the Chicago International Live Stock Exposition of 1911. This is a sample picture of famous animals collected for publication in the Book of Live Stock Champions mentioned on page 8 of this paper.

The Oklahoma Boy's Corn Premium.

The National Farmer and Stock Grower, published monthly at St. Louis, Mo., is the most influential paper for good in the United States. This paper has offered premiums for corn improvement for several years, and in the year 1911 premiums were offered at every County, State, Interstate and National Fair in the United States. The only condition was that the corn winning the prize must be grown from seed corn furnished by The National Farmer and Stock Grower as a subscription premium. The seed corn furnished to subscribers was grown by winners of championship prizes, and sufficient seed was furnished in each case to make a good showing.

Several prizes were paid in the fall of 1911, and one is just paid to Dennis F. Watson, a boy of 14, at Chandler, Oklahoma. Early in the year 1911 the Oklahoma boy of 14 sent in a subscription to The National Farmer and Stock Grower for one year, and in addition to receiving the paper he received one pound of Johnson County White Corn raised by L. B. Clore, the champion corn grower of the United States.

The young man planted the corn, and when the crop was harvested he selected ten ears and exhibited them at the Oklahoma State Fair and won the first prize. The certificate of the State Agent in charge of the Boys' and Girls' Demonstration Club is as follows: "This is to certify that the exhibit of ten ears of white corn entered by Dennis F. Watson, of Chandler, Oklahoma, in competition for the prizes offered by Senator T. P. Gore and Senator R. L. Owen under the supervision of this department at the Oklahoma State Fair at Oklahoma City, Oklahoma, 1911, received the highest score of any exhibited in this contest."

Immediately upon receipt of the notification The National Farmer and Stock Grower investigated the claim, found it to be correct, and forwarded the cash prize of $25.00 awarded by the paper to a first-prize winner at a State or Interstate Fair.

The Wheat Market Situation.

It is always interesting to study the wheat market situation, one month with another and one year with another. For instance, on December 31st, 1909, cash wheat sold at St. Louis at $1.29 to $1.30 per bushel; on December 31st, 1910, at 97 to 99 cents, and on December 30th, 1911, the cash wheat at St. Louis sold at 96½ cents a bushel. The quotation is for No. 2 soft red wheat.

In the speculative market represented by Chicago quotations the year 1911 went out with the December option closing at 93 cents, against 92½ cents the year previous, and $1.18 down to $1.12 the year before.

Here are the last three-year closing quotations for wheat at Chicago:

Year.	December.	May.	July.
1909.....	$1.12	$1.11½	$1.01⅝
1910.....	92½	97	93⅝
1911.....	93	99	94⅜

It will be observed that during the past two years the city consumers have not had any occasion to get excited over the price of wheat. If the cost of shipping wheat to market is considered it will be shown that farmers have not realized a fair price for wheat.

Flour, such as enters into average baker's bread, is not sold above $1.75 per 100 pounds. It may therefore be advisable to insert in this article the flour quotations by the barrel, December 30th, 1911:

Quote soft winter—Patents at $4.50 to $4.80 in wood; straights at $3.70 to $3.85 in jute; extra fancy at $3.40 to $3.55 in jute; fancy at $3.20 to $3.30 in jute; low grades at $3.00 to $3.10 in jute. Hard winter, in jute—Patents at $4.50 to $4.65; saraights at $4.35 to $4.45; clear and first bakers' at $3.25 to $3.60; low grades and second bakers' at $2.90 to $3.10. Spring patents at $4.80 to $5.00 in jute. The foregoing prices are for car lots from first hands on track or at depot.

Now, every farmer raising wheat wishes to know what the future has in store for him, and there is no getting away from it. The future as predicted by the Board of Trade is indicated by two quotations, one being the May quotation of 1912, which is influenced by the crop of 1911, and the quotation on December 30th, 1911, was 99 cents a bushel, and the other, the July, 1912, quotation is indicated by the expected crop of 1912, and the quotation December 30th, 1911, was 94⅜ cents. It is possible that by the time the size of the new crop is fairly estimated the July quotation will be advanced five to ten cents.

The Hay Market at St. Louis.

The hay market would look pretty good to a farmer if there were no freight bills to pay. St. Louis sells hay on both sides of the river. On December 30th, 1911, the sales on the St. Louis Side were: Part car clover-mixed at $20; one car light do. at $21.50; one do. at $22. Timothy—Part car No. 2 at $20; one car part No. 3 at $18, and part No. 1 at $22; one car No. 1 at $22; three do. at $22.50; five do. at $23; two good do. at $23.50. Prairie—Part car No. 3 at $12; one car No. 3 at $12.50; one car No. 2 at $13; one car and part car do. at $14; one car do. at $15; two cars No. 1 at $15.50; one car do. at $16. Alfalfa—One car wet and heating at $13; one car do. at $14; one car No. 2 at $16; one car do. at $16.50; delivered to East Side; two cars No. 1 at $18. On East Side: Timothy—Two cars No. 2 at $19; four cars No. 1 at $23, delivered to St. Louis. Alfalfa—Two cars No. 1 at $18. Clover—No. 2 quotable at $17 to $18; No. 1 at $19 to $20.50; choice at $21. Straw—Sale of one car wheat straw at $7.50.

The Economical Reader.

A man who was too economical to purchase or to subscribe for a paper sent his little boy to borrow the copy taken by his neighbor. In his haste the boy ran over a $4.00 stand of bees and in ten minutes looked like a warty summer squash. His father, who ran to his assistance, and, failing to notice a barbed-wire fence, ran into that, cutting a handful of flesh from his anatomy and ruining a $4.00 pair of pants.

The old cow took advantage of the gap in the fence and got into the corn field and killed herself eating green corn. Hearing a racket, the wife ran out, upset a four-gallon churn full of rich cream into a basket of kittens, drowning the entire litter. In her haste she dropped a $25 set of false teeth. The baby, having been left alone, crawled through the spilled milk and into the parlor, ruining a brand-new $20 carpet. During the excitement the oldest daughter ran away with the hired man, the dog broke up eleven setting hens and the calves got out and chewed the tails off'n four fine shirts.—Bernie (Mo.) Star.

Florida is now busily engaged in furnishing tomatoes for those who live high.

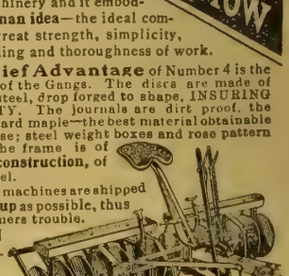
Your Farm Will Yield Better Crops If You Use The Kingman Disc Harrow
The KINGMAN No. 4 Disc Harrow is the product of nearly half a century's experience in building machinery and it embodies the Kingman idea—the ideal combination of great strength, simplicity, ease of handling and thoroughness of work.
The Chief Advantage of Number 4 is the construction of the Gangs. The discs are made of high carbon steel, drop forged to shape, INSURING UNIFORMITY. The journals are dirt proof, the bearings of hard maple—the best material obtainable for the purpose; steel weight boxes and rose pattern scrapers. The frame is of **triple truss construction,** of Bessemer steel.
All Kingman machines are shipped **as nearly set up** as possible, thus saving customers trouble.


KINGMAN PLOW CO., Dept. 101, St. Louis Mo.

Free instruction. Write for special offer to live agents. Send no money. Name county where you live.
AUTOMATIC JACK COMPANY
Box 199 Bloomfield, Ind.

The Railroad and the Settler.

The enlightened conduct of the railroad is a recent development. Formerly railroad management consisted of making rates on commodities as high as the traffic would bear and letting it go at that. But more recently the idea has been advanced that the railroad prospers best through the encouragement of industry upon the lines of the system. The first step was to establish town sites and factories and then came the instruction and guidance of the farmer. The encouragement of the farming industry is now engaged in by railroads as a business. It is not enough that settlers shall come in; it is also necessary to show them the profitable crops to raise. For instance, a farmer on the Rock Island Railway System has an Agricultural Commissioner to turn to for advice and assistance. Several times a year agricultural instructors go over the lines showing profitable crops to raise and how to raise them. Let the farmer find an opening for the development of a new local industry and the Agricultural Commissioner of the railroad is the first man on the ground to help the move along. We are reminded of this by the works of Prof. Cottrell, Agricultural Commissioner of the Rock Island Lines. His free book on scientific corn raising alone has been of untold value to farmers, and his assistance is always available. In recent years some of the richest plantations in Arkansas and Louisiana have been cut up into tracts of moderate size. These lands are on the Rock Island System. All who desire information concerning them can address L. M. Allen, Rock Island Lines, 411 LaSalle Station, Chicago, Ill. All who do so will obtain full description of lands and Prof. Cottrell's Book, "How to Double the Yield of Corn."

Golden Arrow Seed Corn.

We have just received word from Mr. W. A. Crawford, of Sullivan, Mo., that the Golden Arrow Seed Corn which he purchased from one of our worthy advertisers, namely the A. W. Schisler Grain Company, of St. Louis, Mo., won first prize and took the blue ribbon at the Tri-County Fair, 1911, as being the best specimen of yellow corn which was exhibited. It won the favor of many prominent farmers who had for years been using Reid's Yellow Dent Corn, but after the success of Golden Arrow as a prize getter and giving a heavy yield in spite of the dry weather, they had Mr. Crawford reserve them seed for their own planting.

Golden Arrow is a variety of Yellow Dent, but is claimed to have superior points over all other yellow varieties on account of its rich, golden-yellow grain, deep kernel, small cob and shapely ear, about 10 to 10½ inches in length, having on the average about eighteen to twenty straight rows, running well to a full, round tip. It matures in about 100 days and is a very heavy yielder. It is remarkable how it responds and adapts itself to any character of soil and climates. A bushel of Golden Arrow corn in ear, 70 pounds, when shelled tested 58½ pounds, thereby only leaving 11½ pounds for the cobs. This clearly shows any planter the value it has for ear-feeding corn or as a shipping corn. The Schisler Grain Company had many reports from many localities, bearing the same praise as above, and in some cases give a reader the names of farmers who are using this splendid variety right in their own community. A line to them will give you this information free of charge. Address, A. W. Schisler Grain Company, 708 North Fourth street, St. Louis, Mo.

The next movement is said to be to put the farm on a factory basis. Factory basis means incorporations, larger farms, more machinery, high fertilization, intensive methods, fewer owners, more employes and more watered stock.

Our Foreign Population.

According to the last census, the foreign-born population of this country increased from 10,213,817 in the year 1900 to 13,342,500 in the year 1910.

Foreign Population, 1910.

Germany	2,499,200
Russia	1,706,900
Austria-Hungary	1,658,700
Ireland	1,351,400
Italy	1,341,800
Norway, Sweden, etc.	1,250,500
Great Britain	1,221,400
Canada	1,198,000
Mexico	218,800
Switzerland	124,800
Holland	120,000
France	117,100
Greece	101,100
Miscellaneous	432,800
Total	13,342,500

The decreased items are: Germany, 314,213; Ireland, 263,832; and Wales, 10,960. All other countries show gains. Russian arrivals increased 1,066,190; Austria, 698,941; Hungary, 322,791; England, 35,570; Scotland, 29,927; Italy, 857,837; Norway, 67,121; Sweden, 93,514; Denmark, 27,741; France, 13,069; Greece, 92,587; Holland, 15,078; Switzerland, 9,219; Canada, 25,255; and Mexico, 116,892.

GOOD BOOKS AND PAPERS.

FARMERS' BULLETIN, NO. 475, issued by the Department of Agriculture, is entitled ICE HOUSES. It is by Prof. L. C. Corbett, Horticulturist of the Bureau of Plant Industry. It is illustrated; contains pictures and plans of inexpensive ice houses. There are chapters on Source of Ice Supply; Principles of Ice Storage; the Ice Harvest; Types of Ice Houses and Their Advantages: Construction; Relation of the Ice Supply to Fruit Storage; Combined Ice House and Dairy; Combined Ice House and Refrigerator Plant for the Storage of Farm Products; the Construction of a Refrigerator; the Construction of an Ice Chest. The way to get this bulletin is to write to the Secretary of Agriculture, Washington, D. C., and ask for a copy.

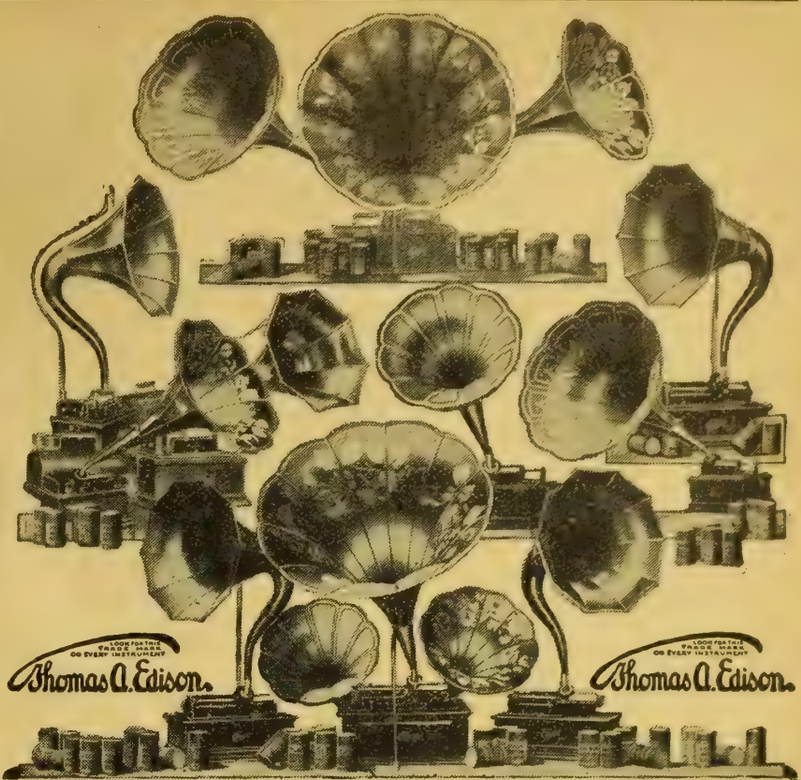
THE SOUTHERN FIELD, issued monthly by the Land and Industrial Department of the Southern Railway, Washington, D. C., is for the purpose of giving reliable information concerning the progress of Southern agriculture. It is full of facts, giving exact location for every incident mentioned. To get a free copy, write to Land and Industrial Department Southern Railway, Room 71, Washington, D. C.

A CHINCHBUG SITUATION. This is a pamphlet prepared by Stephen A. Forbes, State Entomologist of Illinois, in the interest of farmers, and copies of it can be had by addressing him at Urbana, Ill. He warns farmers against the chinchbug and advocates co-operation by farmers to eradicate the pest. It is reasonably easy to do so and Prof. Forbes has stated exactly what must be done to get rid of them.

"FACTS ON FERTILITY." This is a pamphlet issued for free distribution by the Middle West Soil Improvement Committee. It is on the subject of profitable fertilization and covers the subject from the need of fertilizers to the cost and profit. Write for a copy to Prof. H. G. Bell, 919 Postal Telegraph Building, Chicago, Ill.

FARMERS' MANUAL OF LAW by Hugh Evander Willis, author of "Willis on Contracts," "Willis on Damages," etc., is issued by Orange Judd Co., of New York City. This is a book of 456 pages, a manual of law adapted for the use of farmers and students in Agricultural Colleges, and is elegantly bound with gilt title. The forms for leases, mortgages, bills of sale, wills, etc., are fully up-to-date.

Farmers' shipments of cultivated ginseng are selling at $4.00 to $4.50 per pound. Golden Seal is close second, at $4.00.



Your Choice of Any of These ....New Style.... Genuine Edison Phonographs Shipped Free!!

The Edison! The genuine Edison—Thomas A. Edison's new style instrument shipped positively and absolutely FREE! You do not have to pay us a single penny either now or later on this free loan. No deposit—no guarantee—no C.O.D. payment to us.

Mr. Edison Says:

"I want to see a phonograph in every home."

The Edison Offer:

Get any of the new style instruments shown above—take your choice of Edison records also. **Simply get the Phonograph and the records and use them free just as though they were your own.** Entertain yourself, your family and friends, too, if you wish—with everything, from the catchiest, newest, most popular songs, side-splitting minstrel and vaudeville monologues, to the famous grand operas, **Amberol** and other records sung by the world's greatest artists. Now remember—**all this entertainment is free!** After you have had all this entertainment absolutely free—then you may simply send the outfit right back to me—**and I will pay the freight.**

MY REASON When you get the free concerts in your own home, I am sure you will be glad to make your neighbors and friends hear the *new style* Edison. It's almost sure someone will want to buy such an outfit. Perhaps you yourself will want to keep it, either for cash or at $2.00 a month. But if you do not find it worth the $2.00 a month to you, you are to judge and you may return it at our expense. If none of your friends happens to want an Edison just now, we'll be glad anyway, that we sent you the new style Edison and convinced you and your neighbors of the **splendid superiority** of the new style Edison phonograph. Sooner or later you or your neighbors will buy. And that's *our* way of advertising this new Edison.

Wonderful Edison Catalog Free

Get our handsome Free Edison Catalog and list of Amberol records so you can select just the machine and the songs, recitations, etc., that you want to hear on this ultra-generous offer. Remember there is absolutely **no obligation.**

If you enjoy good music and the finest and most varied entertainment, or if you want to give your family and friends a treat such as they could not get by any other means, then you should certainly investigate this remarkable offer.

The Healthy Hog.

"Abundant hair on swine, lively and somewhat fine and soft, growing out of a pliable skin, which is neither thick nor papery, and free from mangy conditions, tells the story of robust health, vigor, thrift and active circulation. The ideal hog should not be sleepy and sluggish, nor, on the other hand, restless and uneasy. Free action and a bright, sprightly manner are signs of good digestion and good health. If he is a comfortable, good-natured, friendly creature, wide-awake, disposed to visit with his owner instead of running away from him, and has the other points of excellence mentioned, he can scarcely fail to be a joy to his possessor and approximate, in the eyes of many, a thing of beauty."—From Coburn's "Swine in America."

The Hackney in Harness.

Hackney bred horses and ponies made an unexampled record in the open harness classes at the National Horse Show last year, winning thirty-five first prizes to six for all other breeds combined. In eighteen classes they bore away every ribbon awarded. In the seven championship classes six of the winners were Hackneys, Mr. J. W. Harriman's Nala being the only harness champion that was not by a Hackney sire. He is a trotting-bred horse. Five of the seven reserve championships also went to Hackney bred horses.

THREE-YEAR SUBSCRIPTIONS.

We desire to invite attention to our three-year subscription proposition. It is practically a trial subscription, payable at the end of the first year. The subscription can be stopped at any time by paying for the period the paper is taken. This method of taking subscriptions is the invention of Uncle Piper, our subscription editor, who has gnaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper slips in a list of handy premiums for the subscriber to select one from, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay one dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

The Superiority of Alfalfa.

Nothing else stands out so clear and distinct as the superiority of alfalfa when considered as a forage crop. We have lands devoted to timothy alone and clover alone, and clover and timothy mixed, also to all other forms of forage, but after taking into consideration the different crop values as ascertained by the census, it stands out that every acre of alfalfa averaged in value $19.78, and all other hay crops averaged $12.94 per acre. Taking the country over, as was done by the census enumerators, the figures ought to be accurate, and we find that 4,702,230 acres of alfalfa are cultivated in the United States, and the average crop value in the census year was $6.84 per acre more than was realized for each acre of timothy and clover.

How to Save Feed.

A marked difference exists between individual animals as regards the returns which they yield for the feed consumed. Some have greater digestive powers than others. The power of assimilation of the one animal is superior to that of the other, and the advantage of the better type of animal lies in its ability to produce more flesh or milk from a unit of feed than could the poorer one. It is also an established fact that young, growing animals not only make actually larger gains than more mature ones, but likewise more economical gains.

That pure-bred animals are more economical to keep than scrubs is well known. Few farmers can boast of wholly pure-bred herds, but every farmer can greatly increase the milk yield of his cows. Pratts Animal Regulator will increase the economical utilization of every ounce of feed, protect cattle from disease and prove a great help to big dairy profits if used every day.

This is a most efficient tonic and aid to thorough digestion and assimilation obtainable. It has been used regularly for forty years by some of the most successful farmers, breeders and dairymen in the United States and Canada. See advertisement of Pratt Food Company, Dept. 54, Philadelphia, Pa., and write for Free Live Stock Book.

German Meat Packers in Paraguay.

The beef-extract establishment of Dr. E. Kermerich, situated at San Salvador, in the northern part of Paraguay, has recently been purchased by Hermann Krabb & Co., an importing and exporting firm, having its principal house in Hamburg, Germany, with branches in other European cities, as well as in Montevideo and Buenos Ayres.

Heretofore the only product of the establishment has been extract of beef, but the plant will now be equipped with $50,000 worth of machinery just ordered from the United States for the canning of meat and utilizing all the by-products of cattle. The entire plant when completed will represent an investment of $250,000 American gold, and will be able to handle 50,000 to 100,000 head of cattle a year. This information is received by the Department of Commerce and Labor from United States Consul Cornelius Ferris, Jr., at Asuncion, Paraguay, a small country in South America, which has no seacoast and is surrounded by Bolivia, Argentine and Brazil. The principal city is Asuncion, and the outlet to the sea is by the river De la Plata.

Read about our Rose Premium on page 22.

More Feed Per Acre

The cost of producing meat or milk would be much less if it required less acres to produce the feed.

Both the *quantity* and *quality* of the feed improve when the right plant foods are used to supplement the manure and clover. They improve enough to yield a *handsome profit* on the expenditure.

The right plant food includes enough

POTASH

in available form. Supplement the manure and phosphate with 50 to 100 pounds of Muriate of Potash, or 200 to 400 pounds of Kainit, per acre, and you will raise big corn and fine clover after the grain and at the same time improve the fertility of the soil.

Try Potash salts alone on the swamp land pasture and note the clover and good grasses crowd out the wild hay. Write us for prices of Potash, one bag up.

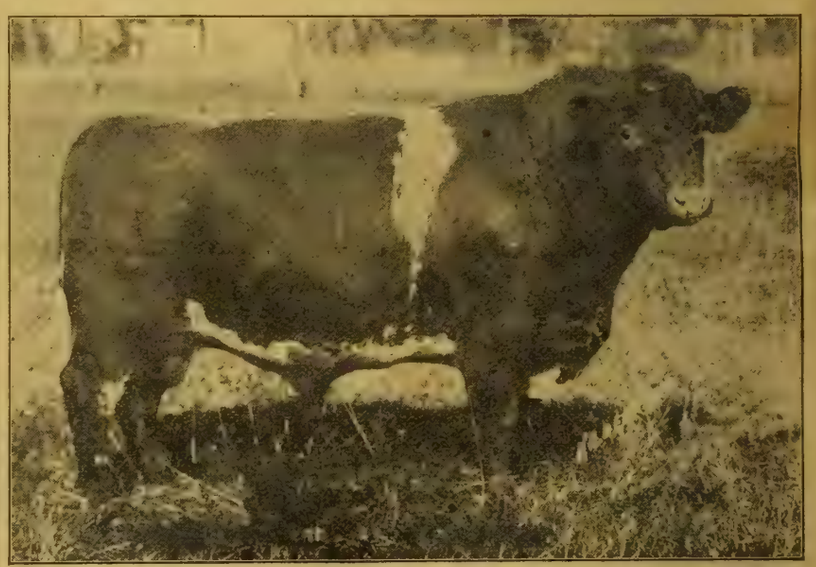
Whitney Central Bank Building, New Orleans

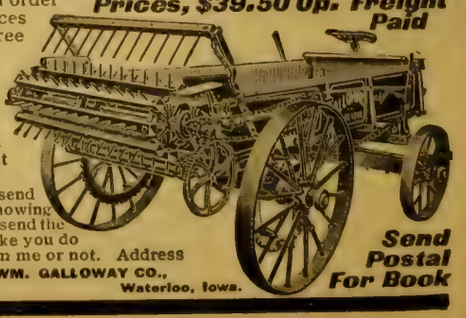


THE CONFESSOR—Polled Durham bull. Exhibited by J. H. Miller, Peru, Ind. THE CONFESSOR was junior champion of the breed up to two years ago, and since then has been grand champion and champion without a single defeat. Was grand champion International Live Stock Show, 1911. This is a sample picture of famous animals collected for publication in the Book of Live Stock Champions mentioned on page 8 of this paper.

Let Galloway Save You $25.00 to $40.00 on a Manure Spreader

If you'll send a postal for my Special 1911 Spreader Offer, I believe we can make a deal. If we do, you'll save at least $25.00, perhaps $40.00, according to size and style you want. And you get a free trial and a guarantee that would break me if my Spreader wasn't *right*. I know I *have* to go *high on quality* and *low on price*, because I sell by mail. The other fellow is right on the ground to *persuade* you personally. My *quality* and price has to do all *my* persuading. Let me try it. Our capacity is 42,000 spreaders this year in order to quote the low prices I do—30 to 365 days free trial and my long time binding guarantee in writing. $25.00 to $40.00 saved—think of it! That's fair, isn't it? If you can think of a fairer proposition than I'll make you, I'll print it in my next advertisement.

Prices, $39.50 Up. Freight Paid



Get your pencil or pen right now, and send me a postal for my big Spreader Book, showing 5 styles and sizes, from $39.50 up. I'll send the book free and a proposition that will make you do some tall thinking whether you buy from me or not. Address

WM. GALLOWAY, Pres., THE WM. GALLOWAY CO.,
1289 Galloway Sta., Waterloo, Iowa.

Getting Knowledge From Others.

The natural tendency of most people is to run around in a circle, both in their practices and in their methods of thinking. Here and there a genius is able to plunge outside the circle and get new ideas and adopt new methods. He then becomes a teacher of others, and the race has made that amount of progress.

But to most people new, original thoughts are not common, and most thoughts are such as have been thought by the same person before or been obtained from others. It is probable that an absolutely original thought is very rare. We obtain most of our education by coming into touch with others.

The man who lives in himself and keeps away from other people makes little real progress. He may sometimes think that he is making progress, but it is usually in the direction of dreams and illusions. It is the part of wisdom to constantly be on the alert to learn from others and to miss no opportunity to get into touch with the thoughts of others.

This is the central idea of the numerous conventions that are held every year in all parts of the country. Every farmer should make it a point to attend as many conventions as possible, that he may be able to find out the thoughts that others have thought that he has not. An energetic convention-goer soon finds that he has a long list of new ideas that are valuable to him and that he would not miss knowing.

Farmers' conventions are now more numerous than ever before, and they are of more importance, because the knowledge brought to them is greater than ever before. The speakers from the Agricultural Colleges have in turn been in touch with other men and have obtained new ideas on the principle and methods of farming. It pays to take advantage of these moving educational centers, which are now brought to the door of the farmer.

For the same reason, it is important that the boy be sent to the Agricultural College, if he chooses agriculture as his profession. In the Agricultural College are brought together the experiences of multitudes of people and many new ideas. The Agricultural College courses are designed to lead students outside of the circles in which they are wont to travel. For this reason an agricultural student will make more real progress in a four-year college course than he would in a lifetime of circulating experiences on the farm, where the same operations would be repeated over and over indefinitely.

The visiting of other farms is a good way to get in touch with the thoughts of others. On every first-class farm will be found some unusual thing that is worth considering and often worth copying. Accident now and then leads a person to adopt a process that proves of value. The amount of valuable information thus obtained will go far towards making all farm work a success. The intercommunication of all the best methods will gradually raise the standard of all our agricultural operations.

Side Notes on Alfalfa.

It used to be thought that alfalfa could be grown only in a very limited region, but as time goes on we are compelled to recognize the fact that alfalfa has a capacity for extending the boundaries of its habitat. When the writer first began to observe it, it was grown in the United States, principally in California, Nevada, New Mexico, Arizona and Colorado. It was looked upon as a semi-tropical plant. The idea that it could be grown in regions where the winters are bitterly cold had not then been accepted. Perhaps the first impression of its great hardiness came in the report of an agricultural professor sent to Siberia by the United States Department of Agriculture. He reported that he had followed the alfalfa north till he reached a region where the winter temperature falls to 40 degrees below zero.

The writer has since that time seen good fields of alfalfa as far east as North Carolina and as far north as Alberta, in Canada. He has seen it growing luxuriantly in Northern Minnesota, where the winters are severe. He also noticed that along one railroad right of way in Michigan a mass of it was growing with great vigor. One of the best clumps of alfalfa he has ever seen was at a railway terminal in Wisconsin, from seed that had evidently fallen from a freight car. The soil in which it was growing was composed partly of cinders, and much of the rest was gravel and sand, but the alfalfa seemed to be in its element. Its roots had evidently struck the living fountains below and the soil around it was free from weeds. It was on a slight elevation, where it caught the full blaze of the sun.

It had the conditions right for large growth, for it was in a friable but rich soil, had a good supply of water below it and was not encumbered with weeds. Weeds will probably kill out more new plantations than any other one thing. After a plantation is well established it is difficult for the weeds to get in, but before the alfalfa has really gotten deeply rooted the weeds have the best chance, at least in the region where skies are not cloudless. A piece of land to be put into alfalfa should be cleared of weeds, even if it takes several months to accomplish that end. The imperfect preparing of the seed-bed is the cause of many failures. Thus, a farmer will turn over a piece of land, give it a harrowing or two and sow the alfalfa seed. When the alfalfa comes up it is being pressed on all sides by weeds and grass and fails to get a good start. After a year the farmer in disgust plows up the field and says that alfalfa does not do well on his land. The fault is more often with the handling of the processes of seeding than in the land.

Of course, if the land has not before grown alfalfa the soil should be inoculated by scattering over it soil from fields in which alfalfa has been grown. These soil particles carry some of the bacteria that develop the root nodules, in which the change of free to fixed nitrogen goes on.

A Prize Hog Record.

The winner in the prize-hog competition held last summer at Henderson, North Carolina, was Milton Allen, a farmer living at Horse Shoe, in that state.

The hog which took the silver cup weighed 523½ pounds net at twelve months, and sold at 10 cents per pound. The owner states that the cost of producing this animal did not exceed five cents per pound, according to his books.

The hog was a Poland-China, full blooded, and was weaned at seven weeks. It was then allowed to run in a pasture lot of lespedeza and white clover until nine months old. —Southern Field.

The Howard Watch

When the time comes to buy your HOWARD Watch—go to the *leading jeweler* of your locality.

The HOWARD is sold only by legitimate jewelers—and you will not find HOWARD Watches in *every* jewelry store, at that.

The HOWARD Company are as critical in selecting the jewelers to represent them as they are in perfecting the watches themselves.

They produce the finest practical watch in the world—and they want to deliver it to you through a jeweler who is capable of respecting it, and of handling it as such a timepiece ought to be handled.

A HOWARD Watch is always worth what you pay for it—

In *service*, owing to the precise and permanent adjustment, which is peculiarly a HOWARD achievement.

In *prestige*, because ever since 1842 the HOWARD has been pre-eminently *the* watch with the leading men of every phase of American activity.

And in the sheer pleasure of owning the finest article of its kind ever produced.

The price of each watch—from the 17-jewel (*double roller*) in a Crescent or Boss gold-filled case at $40 to the 23-jewel at $150 and the EDWARD HOWARD model at $350—is fixed at the factory and a printed ticket attached.

Find the HOWARD jeweler in your town and talk to him. He is a representative merchant—a good man to know.

Send us your name on a postal card and we will send you—FREE—our pamphlet, THE STORY OF EDWARD HOWARD AND THE FIRST AMERICAN WATCH. It is a chapter of History that every man and boy in this country should read.

E. HOWARD WATCH WORKS

Dept. No. 122, Boston, Mass.

1912 Pratt-Forty

Fourth Successful Year

Backed by 39 Years' Manufacturing Experience

Guaranteed for one year. Self-Starter, 120-inch Wheel Base, Unit Power Plant, Three-point Suspension, Bosch Magneto, Demountable Rims, 36x4 inch Tires, Inside Control Levers, Electric Side and Tail Lamps. List price Model "H," $2,000, fully equipped, Mohair Top, Windshield, Speedometer, Prest-o-lite Tank, etc.

There are many localities where we have no agent, and if you will write us, we will send you our catalog and interesting proposition on a car for your own use. We also make a full line of carriages and harness.

Our Industrial Policy.

We wish it most thoroughly understood that The National Farmer and Stock Grower has a decided policy in regard to the matter of protection of all American industries, and especially farm products.

The National Farmer and Stock Grower is in favor of the United States collecting a reasonable range of customs duties upon all foreign farm products and all foreign manufactured goods admitted into the United States from foreign countries, said duties to be applied to the support of the national government.

Every farmer in the United States is taxed by his county and by the state, and he pays indirect taxation for the support of the federal government. We believe that the advantages of our own markets belong to the tax-paying citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted.

By collecting these customs duties the United States government receives the income that is necessary and must be collected for the public service, and the farmer has a very moderate degree of what is called protection. In times of scarcity caused by drouth or other unavoidable influences the foreign farm productions can come in on a fair basis, and in times of abundance the country thrives better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmers' products the manufacturer would have to shut his doors. Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. It will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out.

Our position as stated has never varied and never changed. During the past year three great organizations have endorsed our views. They are the National Grange, the American National Live Stock Association and the National Wool Growers' Association. If all other farm organizations will stand upon the resolutions that these associations have adopted the law-makers of the United States will see that the policy the farmers unite upon will be the law of the nation.

THE GREAT BOOK OF LIVE STOCK CHAMPIONS.

We are actively engaged in preparing the new edition of the Book of Live Stock Champions for publication.

We have published several editions of this valuable book and intend to make the new edition far superior to all others. To this end we have waited for the list of champions at the International Live Stock Exposition of 1911.

We already have illustrations of seven hundred different champions, and in each case the picture occupies a half page of the book. We are now gathering the remaining three hundred pictures.

Each illustration is a special demi-tone engraving from a photograph taken from life. No drawings or fancy pictures appear in the book.

First and second-prize winners are not eligible unless they have also won championship prizes. It is a Book of Live Stock Champions, not simply a book of ordinary prize winners.

Champions of the beef cattle breeds are admitted by their showring honors. We have enough pictures of beef cattle champions to make a book by themselves.

Dairy cattle are admitted by showring honors, also by officially tested dairy records. We have the finest selection of dairy cattle in the world.

Dairy cattle are admitted by showring honors. Trotters and pacers are admitted on track records or as noted sires. We have all the famous horses, going back thirty years.

Thoroughbred horses are admitted on account of track honors or as sire or dam of champions. Saddle horses and ponies are admitted as championship winners.

Jacks and jennets, also mules, are admitted on show-ring or market honors.

Hogs, sheep and Angora goats are admitted as winners of sweepstakes prizes at State, National or International Fairs.

Numbers of famous car-loads of cattle, horses and sheep which have won show-ring and market honors will be published in the book.

Every live stock champion is entitled to entry providing a first-class photograph can be obtained. We do not intend to disfigure the book with poor pictures. It is better to leave out the poor pictures than to apologize for an inferior book.

A number of live stock champions appear in this edition of The National Farmer and Stock Grower to show the character of the Book of Live Stock Champions.

We do not charge the owner for publication of his animal, but we do ask his co-operation in furnishing first-class photographs and the records of said animals.

It is worth something to a publisher to know how many books to print and bind. We therefore offer the first ten thousand copies of this edition at one dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies will be handsomely printed and elegantly bound in red cloth, with gilt title. This is an extraordinary offer.

HERE IS A SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of the Book of Live Stock Champions, cloth-bound edition of 1912, immediately after publication.

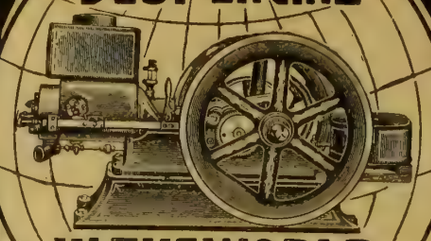
THE BEST ENGINE IN THE WORLD



WATERLOO BOY

Two gold medals, at two International Expositions, in open competition with the leading manufacturers, not only of this country, but of every nation of the globe. THAT is real **proof** that the **Waterloo Boy Gasoline Engine** is the best engine built today. And the real importance of this great double victory is the fact that it was won, not by a specially designed engine prepared and primed particularly for the contest, but by a **regular Waterloo Boy TAKEN FROM STOCK.**

Thousands of these engines are in regular daily use on farms all over the world, and **you** can buy an exact duplicate of this medal winner for your own work. This supreme make-good quality of the

WATERLOO BOY GASOLINE ENGINE

is built into it—it is best from foundry to testing room. **Best** and **simplest** in **material, in workmanship and in many important features of design which are found on no other engine in the world.**

The speed lever which works like the throttle of a locomotive and regulates the speed while the engine is running, is an **exclusive Waterloo feature,** and it alone adds $20.00 to $50.00 to the value of your engine. Many other features are just as important—our patented mixer which does away with the expense and bother of a pump; new type igniter that never misses a spark; automatic fuel regulation making it the cheapest to run; frost proof construction.

Burns either Kerosene or Gasoline= starts easy in the coldest weather. All parts are interchangeable and it is so simple that a child can run it.

The Waterloo Boy is no experiment—it is the oldest successful farm engine on the market and has made good for nearly 100,000 farmers for over 19 years—**some of your neighbors among them.** Built in one of the biggest engine factories in the world, with a capacity of 130 complete engines per day, nearly 40,000 per year.

Let the other fellow experiment—you use his experience and buy a **Waterloo Boy** in the first place. Get the certainty of absolute satisfaction at the *lowest price ever made on a reliable engine.*

5-Year Guarantee. Catalog and full details FREE. Write today.

WATERLOO GASOLINE ENGINE CO.,

AWARDED GOLD MEDAL at INTERNATIONAL Gasoline and Oil ENGINE SHOW, BUDAPEST, HUNGARY. JULY, 1911

AWARDED GOLD MEDAL at INTERNATIONAL EXPOSITION, Turin, Italy. September, 1911

[Please mention National Farmer and Stock Grower.]

Pull Stumps! Make Big Money Easy!

Increase the value of your land. Raise stumps, trees and hedges *out of ground.* then raise big crops. Do work for neighbors or rent machine at a big price. You can **pull** trees faster than you can cut them. Get the only Puller that is self-anchored and stump-anchored, the *unbreakable*

Milne All Steel Combination Stump Puller

Simple, light, handy, rapid, powerful. Many features—Patent Wire Rope Coupler, All Steel Rope Safety Double Power Pulley, Double, Triple and Quadruple Power Attachments, etc. Our new Rotary Power Attachment is a wonder for sawing, grinding, washing, and other power work—a farm horse power.

SEND NAME Get our new catalog of facts, proof and prices. Address **MILNE MFG. CO., 1002 Eighth Street, Monmouth, Ill.**

[Please mention National Farmer and Stock Grower.]

Lightning Pitless Scales

New Pattern. Solid Channel Steel Frame

Channels are seven inches which is the height of platform from ground. Levers are octagon in shape giving greater strength. Bearing are Toolsteel. This scale will last a life time with ordinary care. Equipped with compound Beam Free. Furnished absolutely complete except platform planks. Guaranteed accurate and tested to more than its capacity. Write for our prices and description before buying.

KANSAS CITY HAY PRESS CO., 425 Mill St., Kansas City, Mo.

[Please mention National Farmer and Stock Grower.]

DISTEMPER in COLTS

FRAZIER'S DISTEMPER CURE

Positively Cured, if you use **FRAZIER'S DISTEMPER CURE.** Influenza, Pink-Eye, Catarrhal Fever, Coughs and Colds, cured in four to eight days. One dose acts as a preventive. One bottle a guaranteed Cure or your money refunded. $1.00 bottle holds three 50 ct. bottles. Send postal for free horse booklet. Sold by all druggists or prepaid from

BINKLEY MEDICAL CO., Dept. H, NAPPANEE, IND.

[Please mention National Farmer and Stock Grower.]

Cost of a Suit of Clothes.

It cost the United States a large amount of money to obtain information secured by the Tariff Board. Included in this information are the facts relating to an average suit of clothes, such as is worn by men of moderate means.

For the wool that enters into an average suit of clothes the sheep farmer is figured to receive $2.23.

The profit on the wool as sold by the sheep farmer is estimated by the Tariff Board at 68 cents in the whole suit of clothes.

When the manufacturer gets hold of the wool at $2.23 he manufactures it into cloth and increases the selling value $4.78, out of which he obtains a profit of 23 cents.

When the wholesale clothing manufacturer gets the cloth at $7.01 and makes clothing out of it he receives $16.50 for the suit, and out of this he obtains a profit over cost of manufacture and sale of $2.18; then the retailer makes a margin of $6.50 for selling the suit of clothes, out of which the cost of selling has to come.

For the better understanding of the situation we append the following statement:

Cost Evolution of a Suit of Clothes.

Cost of wool to farmer	$ 1.60
Profit obtained by farmer	63
Price received by farmer	$ 2.28
Cost to manufacture into cloth	4.55
Profit to manufacturer	23
Price received by manufacturer	$ 7.06
Cost to make into clothing	7.26
Profit on suit to clothing maker	2.18
Wholesale price of suit	$16.50
Margin received by retailer	6.50
Price paid by consumer	$23.00

Now see what's next! Congress is advised to reduce the profits of the sheep raiser by admitting foreign wools free of duty. Good-bye sheep raiser's profit of 68 cents! Congress is also advised to reduce the duties on woolen cloth so as to admit foreign cloth. Good-bye manufacturer's profit of 23 cents on cloth! When the sheep raiser raises hogs instead of sheep, cloth and clothing cannot be made out of hog bristles; then good-bye clothing profits and good-bye retailer's profits!

Read This Remarkable Free Offer.

We wish to call the special attention of every one of our readers to the remarkable offer of a free package of Stock Food made by the Wilbur Stock Food Company in their advertisement in this issue.

Wilbur's Stock Food has been used by stock raisers for over twenty-five years with excellent results. It tones up the powers of digestion and assimilation; it increases the flow of milk; it is without rival as a fattener of horses, sheep, hogs and steers. For poultry it is one of the best egg producers that is known. It makes your stock rolling fat.

Every keeper of live stock should write to-day for complete information concerning the free package and also with respect to the $1,000 prize contest, with 127 cash prizes, which the Wilbur Stock Food Company is conducting and which is open to every stock raiser. Fill out and mail the coupon in the Wilbur advertisement, or write to the Wilbur Stock Food Company, 439 Huron street, Milwaukee, Wis.

The Sheepman and Congress.

When the men in Congress vote against the sheep breeders and wool growers in the country, the men in Congress must not be surprised if sheep raising and wool growing go out of fashion. For the jobs in Congress there are many applicants, but for jobs to herd sheep on the lone prairie the applicants are less than formerly. It is much easier to get sheep raisers to ship their sheep to market and go out of the business than it is to get them to start up again. If Congress takes the duties off wool and woolen goods, Congress will be responsible for any shortage in mutton and wool that follows their action. Congress can starve the people, but Congress cannot feed them.

Our Grapevine Premium.

On page 9 will be found our great and valuable grapevine premium offer. The same offer was made last year with great success, and with one known exception all the plants grew and thrived. If you wish to discover by experiment which vines grow best on your farm, make the test by trying these eight varieties.

At the St. Louis National Stock Yards during the year 1911 the receipts were 1,067,076 cattle, 3,107,868 hogs, 989,783 sheep and 170,379 horses and mules.

A top load of 1,400-pound Missouri steers sold at St. Louis early in January at $7.40 per 100 pounds.

Chicago received 104,545 horses in 1911.

New York cabbage is selling at St. Louis at $28 to $30 per ton.

$25 an Acre for land that will grow Corn like this.

If this land was located in the northern corn belt you couldn't buy any of it for less than $150 an acre. There is no better corn land in the world than these rich river bottom lands of Arkansas and Louisiana. Not only will they grow, with ordinary cultivation, 50 bushels of corn, but they will produce two big money crops a year.

For generations these big plantations have been held intact. Now they are being cut up because the owners have found out that there is big money in 160 acres properly cultivated and they do not need more. *It is the greatest opportunity ever offered to northern corn growers.*

50 bushels of Corn and 60 bushels of Oats in one year.

Mr. W. N. Ruffin, of Monroe, Louisiana planted 50 acres to oats in November, and harvested 60 bushels to the acre. In June he followed the oats with corn and got 50 bushels to the acre. He sold his oats for 75¢ a bushel, and refused 70¢ a bushel for his corn, preferring to feed the corn to his stock.

Mr. Ruffin is a good farmer, but his yields are not exceptional. Other good farmers are making big records. Wherever good farming methods are followed the wonderful richness of the soil produces a big yield—not one crop a year, but two always and sometimes three. The rainfall averages from 50 to 55 inches a year and

there has never been a crop failure from drouth.

Not only do these corn growers get big yields, but they get big prices, too. The big export market of New Orleans is near at hand, and Louisiana corn brings about 10¢ a bushel more than northern corn because it contains less moisture and is ready for export as soon as it is harvested.

Prof. H. M. Cottrell, an expert of national reputation, formerly Professor at the Kansas and Colorado agricultural colleges, and now Agricultural Commissioner of the Rock Island Lines, recently made a very careful inspection of many of these corn lands. It is Prof. Cottrell's expert opinion that no where in America is there a better opportunity open for corn growers to make money than there is in these Arkansas and Louisiana corn lands.

Better look into this proposition at once. If you are renting, your rent money will quickly pay for a better farm in Arkansas or Louisiana; if you want a place for the boys you can buy them one of these rich river bottom farms, as good or better than yours, for one sixth the cost.

You will find this southland a delightful and exceedingly healthful place to live. The people are good neighbors. Rural Free Delivery, Telegraph, Telephones are everywhere; good markets are accessible and are shipping in farm produce because the local supply is not equal to the demand.

You owe it to yourself to investigate this at once. If you are interested, drop me a line saying how many acres you would want; whether you own a farm at present, and how many acres. You will be given careful, personal, individual attention, and the best unprejudiced advice as to where and how to get one of these splendid corn land farms at a price much below its actual worth.

Book on Scientific Corn Raising, FREE.

Rock Island

Prof. Cottrell's book, "How to Double the Yield of Corn," is the result of years of experience, experiment and study. It is worth dollars to any farmer who will read it and follow the advice it gives. You may have a copy free, if you will write me today. I will also send you a book written by Prof. Cottrell, telling more about these wonderful corn lands.

The statements herein made have been fully investigated and can be absolutely relied upon.

R.F.D. 50, ROCKFORD, ILLINOIS.

Protecting Cheese by Paraffine.

Nearly all cheese of the cheddar type made in the United States is paraffined before it reaches the public. Yet it is not more than six years since it became a general practice, and less than ten that paraffine to protect from loss of weight was first brought to the attention of cheese handlers.

At first the process was in order to improve the appearance, but when it was found that the protecting coat of paraffine to a great extent prevented the considerable loss of weight by evaporation it became the usual treatment. The circular (No. 181, Bureau of Animal Industry) just issued by the United States Department of Agriculture, Washington, D. C., discussing the methods and results of paraffining cheese, concludes that it is an effective way of preventing loss in weight and the growth of mold; that for one to ten seconds in a paraffine bath at 220 degrees Fahrenheit is sufficient; that treatment on the third day after coming from the press gives the best results; and that cheese should not be allowed to remain in a warm curing room for more than one day after paraffining.

The New Oleomargarine Bill.

Representative Burleson, of Texas, has introduced into Congress an oleomargarine bill known as House Bill 14,112. Among the provisions of this bill are: A reduction of the present tax on all oleo to one-fifth cent. per pound, a reduction in the present license fees, a provision that all oleo be put up by manufacturers in their factories and sold only in cartons of one-half to ten pounds and providing severe penalties for infraction of its provisions. The bill further aims to change the descriptive name of oleomargarine to "margarine." Under existing laws the tax on uncolored oleo is one-fourth cent per pound, and the colored ten cents a pound. The largest production of oleomargarine was 141,862,280 pounds in the year 1910. The total possible output of all oleo factories is estimated at 192,000,000 pounds in a year, but it is doubtful if the record of 1910 will again be reached in many years. Oleo is just as much a cattle product as butter, and cattle for slaughter decreased six per cent. last year.

Cost of Making and Selling Milk.

Many people in the cities complain at what they consider the high price of milk, this being from eight to ten cents a quart. About eighty cities in the United States are supplied with milk at eight cents per quart. This is a very moderate price, considering the cost of making milk and the difficulty of handling it.

Milk is one of the food articles that is always sold on a close margin. This is due to the universality of the competition existing among producers of milk. The man that produces milk and the man that makes a business of selling milk know that the price even at eight cents a quart is so low as to make it impossible for any man to become very rich out of either end of the business.

We have not yet arrived at definite methods for the delivery of milk, nor have we attained the highest knowledge of how to produce it. Yet the delivery of milk comprises its greatest group of problems. It is one thing in which competition is a disturbing element, for several dealers working over the same ground are duplicating efforts without increasing results.

The producer of milk is credited with getting about one-half of the price at which the milk sells at retail. If the milk sells at eight cents per quart, the producer is supposed to get about four cents, or approximately $2.00 per 100 pounds. This estimate is made on figures collected in a dozen states of the Union. Of course, there are many farmers who are selling milk at a much lower price than this; but this depends on local conditions, which always disturb any estimates made on such a problem.

The cost of transporting milk on the railroads and of delivering it to consumers is about equal to the price received for it by the producer. The question of profits is one that always has to be left to take care of itself. The first effort of the dealer is to get enough out of his milk to pay expenses, which includes a fair sum for his own labor. If above that he has no profit, he at least has had the satisfaction of conducting his own business and making a living.

The dealer is to-day put to larger expenses in carrying on his business than he was in the past. The change from the old dipping method to the bottle system costs him about one cent per quart. A big bottler of milk informs the writer that the entire supply of bottles has to be renewed every thirty days on account of the breaking of bottles and loss of bottles in other ways. The bottler figures one cent a quart for this, which probably more than covers the loss.

The cost of making milk to-day is greater than ever before, on account of the high price of all feeding materials coming from the mills. Few farms are as yet equipped with silos, and in some localities the bottling establishments will not accept milk made from silage. This is a mistaken objection, but it has its effect on the cost of producing milk.

Holstein Milk Records.

Being tested for admission to the Holstein-Friesian Advanced Register, 245 females, of which one-half were heifers with first or second calves, produced in seven consecutive days, 95,246.5 pounds of milk, containing 3,245.332 pounds of butter-fat, thus showing an average of 3.41 per cent. fat. The average production for each animal was 388.8 pounds of milk, containing 13.246 pounds of butter-fat, equivalent to over 55.5 pounds or 26.4 quarts of milk per day, and over 15.45 pounds of the best commercial butter per week. The Superintendent of Advanced Register says: "Here we have a large issue of the official reports with nothing remarkable to mention; only one animal producing above 21 pounds fat. The records were for the most part made just as the animals were going into winter quarters, and till a herd gets settled down contentedly for the winter the best results cannot be expected from official test work."

A Community Bull.

Some time ago we were informed of what the dairymen in a certain small town were doing in the way of owning in common a pure-bred bull. The idea is not a new one in dairy sections of the West. Most farmers are not able to pay a big price for a first class sire; ;but several are in a position to make a contribution toward the purchase of a bull that is able to greatly improve the herds in the community. It would bring rich reward to the dairy industry if farmers in a given community would pool their interests and own in common a high-grade sire, making provision for the keeping and service of the animal.—Connecticut Farmer.

The Prize Winners

Use United States Cream Separators

Throughout the country the U. S. Cream Separator is gaining fresh laurels because of the **perfect cream** which it separates. The smooth, velvety U. S. cream makes the first premium butter.

No other cream separator equals the UNITED STATES in the superiority of its patented skimming device. With this the cream particles are thoroughly extracted in a perfect unbroken condition.

That is why the U. S. users have this year won such first prizes as these:

$500 Silver Cup

offered by the Northern Pacific R. R.

Awarded A. G. Scholes, Townsend, for the Best Creamery Butter at Montana State Fair.

First Prizes on Creamery Butter

Ogden Fair, Utah, Jensen Creamery Co., Ogden.
Hamilton Fair, Mont., Bitter Root Creamery, Stevensville.
Missouri Slope Fair, N. D., Michaels Creamery, Judson.
Valley Fair, Vt., W. C. Hall, So. Londonderry, score 97¾.

Dairy Sweepstakes

Vermont State Fair, L. R. Dana, Pomfret, score 98½.

Dairy Butter—First Prizes

Michigan State Fair, D. P. Miller, Almont.
Illinois State Fair, Wm. Brautigam, Brighton.
Virginia State Fair, R. S. Hartley, Youngsville, Pa., score 96½.
Vermont St. Fair, E. H. Hazen, White River Jct., score 98 on prints.
Utah State Fair, W. H. Smith, Woods Cross.

The United States Cream Separator is superior to all others in skimming, washing, easy running and durability. Prices reasonable. *Why not own one?*

VERMONT FARM MACHINE COMPANY
Bellows Falls, Vermont

Distributing Warehouses in every dairy section of the country.

DAIRY AND CREAMERY NOTES.

Butter is a necessity just so long as the price is reasonable; when butter gets too high for consumers to pay, consumption decreases. The New York butter salesmen said that the butter market was four cents too high when the wholesale price was 39 cents for the top grade, and purchasers waited until the price was reduced to 35 cents when the movement began again.

The average dairyman does not feed enough to his cows to develop them to their full capacity. Most milch cows can stand full feeding and pay a profit on it.

The Holstein breed of cattle is noted for the large supply of milk, and ten cows of the breed have each given 850 pounds of butter-fat in a year.

Empire Brand Fertilizer.

"I used 1,000 pounds of Empire Brand Fertilizer in 1911. The results were largely better than I expected. I feel assured in stating that my cotton crop where fertilizer was used was increased not less than 300 pounds per acre. I do not hesitate to say that it pays to use fertilizer, and, as with everything, it pays to use the best, and I can recommend the Empire Brand." (Signed) M. F. Grimes, Houston, Tenn. See card of Empire Carbon Works, 421 Locust street, St. Louis, Mo.

Rubber Roofing

Warranted For Twenty-Five Years.
FREIGHT PAID To Any Station East of Rocky Mountains, except Texas, Okla., Colo., N. D., S. D., Wyo., Mont., N. M., La., Ga., Ala., Miss. and Fla., on all orders of three rolls or more. Special Prices to these States on request.

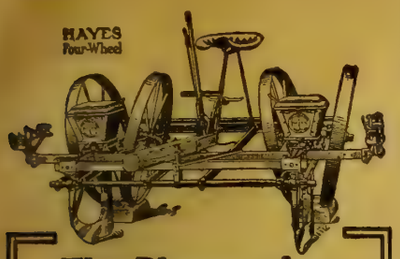
CENTURY MANUFACTURING COMPANY, Dept. 998, East St. Louis, Ills.



The Planter that Never Misses a Hill—

No matter how carefully you prepare the soil, select the seed and cultivate the corn—no matter how rich the soil or favorable the weather—you lose money by planting with a planter that misses even an occasional hill. Don't be blinded to this fact—figure it out yourself. How much did the bare spots cost you last year? Eliminate this waste! Get right down to the bottom of the planter question.

The Hayes Drop never fails. It is the simplest, most durable and most efficient ever made. Always in plain view of the operator—works perfect all the time and lasts for years.

Never cracks or grinds the seed—over 40 sizes of seed plates, ground by special machinery and the cells do not vary 1-1000 of an inch. Will drop accurately any size or shape kernel.

Big Advantage in Four Wheels

Wheels running on an angle pack the dirt around the corn, leaving a loose ridge on top. Will cover where all others fail—even in wet and sticky ground.

Runners set back between the wheels, regulating depth of planting to the fraction of an inch. The Hayes is the only planter made that will plant every kernel exactly the same depth. Corn all comes up at same time. Cultivation 2 to 4 days earlier.

Ridge over the corn prevents washouts on hillsides, gives greater sun surface and loose soil on top allows corn to sprout and come up several days quicker.

The Hayes checks with absolute accuracy—cross rows straighter than the way you drive.

Shortest coupled planter made, lightest draft and turns in shortest space.

Can be furnished with perfect working Fertilizer Attachment, also Disc Furrow Openers or Stub Runners if preferred.

Ask your neighbor and dealer about the Hayes and send for free booklet "Z" containing valuable planter facts.

Galva, Illinois

HAYES
FOUR WHEEL PLANTER

Difficult Churning.

In the fall and early winter conditions often arise which make the churning of cream on the farm a difficult matter. At this time of year, cows are usually well along in their period of lactation and are upon dry feed. The effect of both these conditions is to make the fat in the cream harder and in smaller globules. Butter-fat is a mixture of many kinds of fat, each having a different melting point. When the cow is fresh and upon pasture or other succulent food the fat in the milk consists of a large proportion of the soft fats, which unite easily into butter upon agitation in the churn.

Practically all cases of difficult churning can be readily overcome by methods of handling. Ripening the cream to a higher degree of acidity and churning at a little higher temperature will overcome the most of these cases. Cream at this time of the year is often allowed to sour at too low a temperature and is kept too long before churning. It should be ripened at a temperature of about seventy degrees, and when it has developed a clean, sharp, acid taste it should be churned. A thermometer is almost a necessity in getting cream ready for churning. The temperature at which to churn cream will vary with conditions, but for this time of the year it should probably not be below sixty degrees.

When thick cream is put into a churn at a low temperature the agitation may cause it to incorporate bubbles of air, which make the cream swell and froth and behave as though it were beaten. It cannot be churned in this condition, but must be warmed gradually several degrees and then the churning started again. This can be accomplished by a little lukewarm water added directly to the cream or by warming the cream from the outside. Too much water should not be added or difficulty in churning will result from the thinness of the cream.

Sometimes, when the churning temperature is low, no frothing will result, but the formation of butter seems to stop just short of the breaking point. The difficulty is overcome by slightly warming the cream or by adding a little dry salt. The salt affects the viscosity so as to facilitate the union of the fat globules.—G. A. Gilbert, Colorado Agricultural College, Fort Collins.

Bacterial Contamination of Milk.

The bacteria, seeded so numerously in our market milk, come from widely different sources. It is practically certain that milk as it is secreted by the healthy udder is sterile. However, it is difficult to draw sterile milk from the cow. In the case of a cow suffering from disease, such as tuberculosis or inflammation of the udder, the germs can pass dirctly from the cow into the milk. Bacteria, adhering to the mouth of the milk ducts, can make their way up into the teat for a short distance. Here they find rich food in the few drops of milk that remain, and the warmth of the teat causes their rapid increase.

One of the chief sources of contamination is from the cow herself. The coat of the cow, even kept under good condition, offers the best of facilities for harboring dust and dirt. All of this filth is laden with bacteria in immense numbers. In the switching of the tail, the movement of the flanks, the rubbing of the skin by the milker, there is a constant shower of bacteria into the pail.

What is true of the cow is also true of the person of the milker. Clothed in the dust-laden garments of daily use he carries innumerable bacteria, many of which are dislodged and fall into the milk. It is not so much the number from this source as it is their liability of being disease producers that is important.

The air is another source of contamination. The movements of men and animals in the stables cause a good deal of dust to raise and settle in the exposed milk. The presence of dust is always accompanied by large numbers of bacteria, especially of the putrefactive and spore-producing kind.

Probably the most prolific source of milk contamination, as far as numbers are concerned, is the milk utensils. As the milk passes from one utensil to another it gathers more and more bacteria. Pails and other utensils are usually washed with hot water and soap. But after ordinary washing there will be left clinging to such utensils many bacteria which are ready to develop as soon as fresh milk is added to furnish proper food and conditions. Undoubtedly most of these bacteria are lactic acid producers, and, although harmless, will cause an early souring of the milk.

These various contaminating factors can be largely lessened or completely eliminated. The most of the bacteria from the fore milk can be thrown out by rejecting the first few streams. Dust in the air can be reduced by exercising care as to the time of feeding and bedding. The number of germs from the animal and the milker can be reduced by cleaning and moistening the udder and the flanks of the animal, by using a pail with a small opening, and by requiring the milker to wash his hands and use clean clothes. The use of steam or scalding water in washing the dairy utensils will entirely exclude the germs from this source.—G. A. Gilbert, Colorado Agricultural College, Fort Collins.

Beware of "Gasoline Doping"

It is a favorite trick of the professional "gyps" who infest the great horse markets—also the "ginger trick" and the "artificial tail" frame-up. These smooth dodges and all the other rascalities of these brazen scamps are laid bare in

"Horse Secrets"

by Dr. A. S. Alexander, famous veterinarian. The only complete book of horse-trading swindles ever published as far as we know. Farm Journal has distributed seven editions of this book—75,000 copies—in the past two years. We want every farmer to have one for his protection against roguery and for the valuable information this book also contains about the feeding and conditioning of stock and the cure of diseases and bad habits.

The warning advice contained in this book and in the pages of Farm Journal have probably saved "Our Folks'" $100,000 in the past year. Subscribers constantly write to tell us of the cash value—dollars and cents—they have received from

FARM JOURNAL

This wise little paper will be of real money-saving and money-making value to you. No other farm paper is so broad in its scope—so intensely practical—so interesting in its presentation of facts—so helpful and entertaining in its columns devoted to the home—so strict in its demands that all its advertisers shall be absolutely reliable.

You need it for yourself and your family—and you can have

Farm Journal every month for four years and Horse Secrets at once, postpaid, for only $1.00.

Send for them at once, and if, on receipt of the book, you don't believe that in it alone you have more than your money's worth, say so and we'll stop the paper at once.

If you order promptly, we will send, absolutely free, "Poor Richard Revived"—our splendid new Almanac for 1912.

FARM JOURNAL, 257 N. Clifton St., Philadelphia

A New List.

"EVERYBODY"

Can Afford a Gasoline Engine With Galloway's New Low Prices

1½ HP $27.50

Other Prices in Proportion

You've never before heard of such startling values—I've never offered anything like them and you know full well that no one else has ever come anywhere near my regular prices. But this time I've a startling reason—*I want 10 men in every township in the county to own and operate a Galloway Engine*—I've decided to double my factory capacity by increasing the sales twice and sell two where I formerly sold one—this calls for unusual values—hence, the greatest offer I have ever made. I can save you from $25 to $300 on an engine according to the H. P. needed. It doesn't matter what sized engine you want I've got the one to fit your wants and do more work and better work at less actual cost than any other engine in the world. Write at once for full information of the Greatest Offer Ever Made To American Farmers—don't delay but send me your name and address now, before you do another thing. Let me prove to you in cold facts why I can put $25 to $300 in your pocket.

Fattening Lambs.

The great question which the successful lamb feeder is now trying to solve is that of the most economical concentrate to be used in fattening his lambs.

The fact that most feeders are using alfalfa for a roughage simplifies the above problem considerably. Alfalfa supplies the protein, and when fed with a fattening concentrate, as corn or barley, reduces the amount of food required for a pound of gain to the minimum. Experiments prove that corn is just a trifle better, pound for pound, than barley when both are fed in connection with one of the legume hays, as clover or alfalfa. There is little data on the economy of feeding corn alone with upland or timothy hay or with corn stover. This follows from the fact that such a ration would lack considerably in protein. Doubtless barley would somewhat excel corn, pound for pound, when fed with roughages lacking protein, as the ones last named. Whole barley may be fed very successfully to fattening sheep.

The fact that cotton-seed meal can be purchased for a price comparing favorably with that of corn in Colorado has suggested the feeding of this concentrate with alfalfa hay for fattening lambs. In this combination, however, we have two feeds high in protein and consequently an unbalanced ration. Oil meal is fed quite extensively with timothy hay and roots, in which combination it gives very good results. On the other hand, very few records of sheep fattened on cotton-seed meal and alfalfa are available, for, as a rule, protein-rich feeds (alfalfa and oil meal) are the most expensive nutrients of a ration and are not usually combined. It is very probable, however, that some cotton-seed meal can be fed when alfalfa is fed if we use a mixed ration of corn and cotton-seed meal. The best proportion would perhaps be one-third cotton-seed meal and two-thirds corn, either shelled or cracked. This combination should give good results and at the same time be much less conducive to digestive disorders than a ration of cotton-seed meal and alfalfa.

Peas are strongly recommended for fattening sheep. When fed in combination with either corn, barley or oats, equal parts, better gains are made than when either of the above cereals is fed alone. This is especially true where timothy hay or corn stover is fed as a roughage.—J. B. McNulty, Colorado Agricultural College, Fort Collins.

GRAND SUBSCRIPTION OFFER.

A Splendid Magazine One Year, The Ladies' World — National Farmer and Stock Grower One Year—Eight Standard Grapevines —All For One Dollar.

This is a startling subscription offer, especially valuable to farmers' families and to anyone who owns a home. **"The Ladies' World"** is a monthly magazine, forty-eight pages, four columns to the page, highly illustrated, cover in colors, beautiful, delightful, splendidly edited, lovely stories, instructive articles, lessons in housekeeping, domestic science, dressmaking, music, amusements, etc. **The National Farmer and Stock Grower** is a monthly paper; contains practical information, clean-cut, instructive, up-to-date news of markets. Collection of **Eight Two-year Standard Grapevines.** These grapevines are ready for planting. They are two-year-old vines from the best Chautauqua vineyards. The collection consists of **Moore's Early,** a black grape; **Catawba,** dark red when fully ripe; **Diamond,** a large white; **Concord,** black early; **Agawam,** red or maroon; **Niagara,** large and handsome white; **Delaware,** compact red; and **Worden,** a large black grape. We offered this premium last year with great success. The vines are taken up in the fall and held in storage for spring planting. A booklet giving complete directions for planting, pruning, etc., is sent with each set of grapevines.

We will send **The Ladies' World** one year; **The National Farmer and Stock Grower** one year; and the **Collection of Grapevines,** nicely packed, postage paid—all for one dollar. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

American Source of Potash.

According to the officials of the United States Department of Agriculture, a satisfactory source of home potash has been found in the Giant Kelps of the Pacific coast. Kelp is a large, blackish seaweed, which being reduced by heat to ashes is also called kelp; in other words, kelp is a growth of seaweed, and there is plenty of it in the waters of the Pacific coast. These seaweeds are able to extract by selective absorption the potash from the sea water, and on drying the seaweed these salts are very largely exuded on the surface. The dried plants contain from 25 to 35 per cent. of their weight of potassium chloride, and the latter can very easily be extracted.

The kelps also contain iodine and have been used as a source of iodine alone, and many other by-products can be obtained from them. It is possible that these by-products will more than pay the manufacturing expense, leaving the potassium chloride free from cost. The Japanese have already shown considerable ingenuity in working up these by-products. Not only do they use some of the waste material for cattle food, but the Japanese themselves use it as a staple article of diet. Glue, shellac, paper and other useful products can also be made.

These Pacific groves of seaweed are in the ocean and within the three-mile limit. The government investigators say that it ought to be harvested cheaply, and no doubt it may be, but fishing for seaweed and reducing the seaweed to ashes and the ashes to commercial fertilizer and transporting it from the Pacific coast to the Atlantic will be no easy matter until after the Panama Canal is finished. It may be, however, that the Department of Agriculture has hit upon a means of obtaining a supply of potash which will finally be utilized.

HOW THEY SAVED THEIR HOGS.

Attention of our readers is directed to the letter below, from J. F. Cook & Co., of Lexington, Ky. The Cook Farms are well known all over the United States and foreign countries. They are large breeders of the big black and Tamworth; also Hampshire hogs. Also the largest breeders of mammoth jacks in America.

"Lexington, Ky.: Gentlemen:—We have been using your hog medicine made at Nashville, Tenn., and we are much pleased with the results we have had with it. Enclosed please find check, for which ship us another supply." J. F. Cook & Co. The letter was addressed to Dr. D. C. Snoddy Co., Dept. H, Nashville, Tenn.

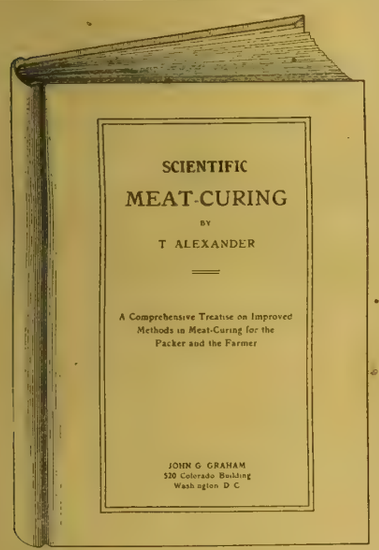
SCIENTIFIC MEAT CURING.

A Booklet For All Farmers, Stockmen, Butchers and Packers.

There is a book on meat curing. It is descriptive of the methods used by the most expert of all the butchers and packers. It is actually a text book for the curing of all meat products. It includes elimination of animal heat, difference between weight alive, dressed and cold, with shrinkages; table for making different strengths of pickle, mild and strong cured meats, temperatures,, pumping, pumping pickle, pumping of hams, calas, picnics etc. Time in pickle for different weights, curing pickle for hams, etc.; sweet pickle bellies, time for smoking, number of days in cure per pound, overhauling, handling old meats, soaking, washing, soaking first-grade bellies, soaking beef hams, long and short cut tongues, dry salt meats, temperature of smoke house, time for smoking to prevent skippers, kind of wood to use, use of sawdust for color, smoking S. P. meats, summer schedule, smoking colored and uncolored meats, first-grade hams, beef hams, No. 1 pork hams, picnics, No. 1 bacon wide, No. 1 bacon narrow, with shrinkage, smoking tongues, firing house for S. P. meats, coloring, use of liquid smoke, and insect proof covering. Instructions for preparing



mess beef for curing, chopping and scoring, mess chucks, mess rumps, curing mess beef, packing for curing, S. P. beef hams, beef rump butt cure, Antwerp beef hams, overhauling, packing mess beef for shipment, weights summer and winter, amount of capping salt to be used for Northern and Southern points, Scotch buttock cure, dry cure shoulder clods, dry cured boneless beef, beef tongue cure, weights and strengths of pickle to use in shipping, beef tongue smoking ages, for export shipment, handling and curing of lamb tongues and tables showing the strengths of pickle from day to day from which the amount of solids taken up by the meat can be computed.

We have adopted the booklet "Scientific Meat Curing" as a subscription premium to be furnished subscribers to The National Farmer and Stock Grower. Send us sixty cents by money order and we will send you The National Farmer and Stock Grower for one year and you can select one copy "Scientific Meat Curing" as a premium, to be sent postpaid, safe delivery guaranteed Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

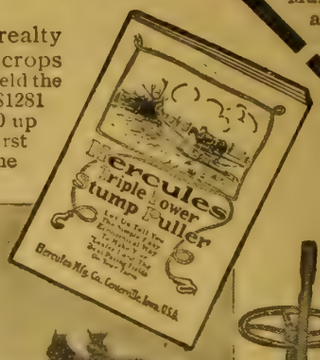
Hercules Mfg. Co.,
340 17th St., Centerville, Iowa

Mail me your free book and special price offer. I want to know all the facts about the Hercules All-Steel Triple Power Stump Puller.

Let me mail you all the facts, figures and proofs that will show you convincing evidence of what big profits the Hercules Stump Puller has made for many others—a fair indication of what a Hercules will do for you. Pull out the stumps now and you are rid of them forever.

Stumps cost big money! They take half the realty value away from the land. They rob you of crops and profits you ought to have. On a 40-acre stump field the profits derived from stump pulling the first year are $1281 and up according to the value of the land—from $750 up in crops every year after. 5000 men who write me first will receive a money-making, money-saving offer on the

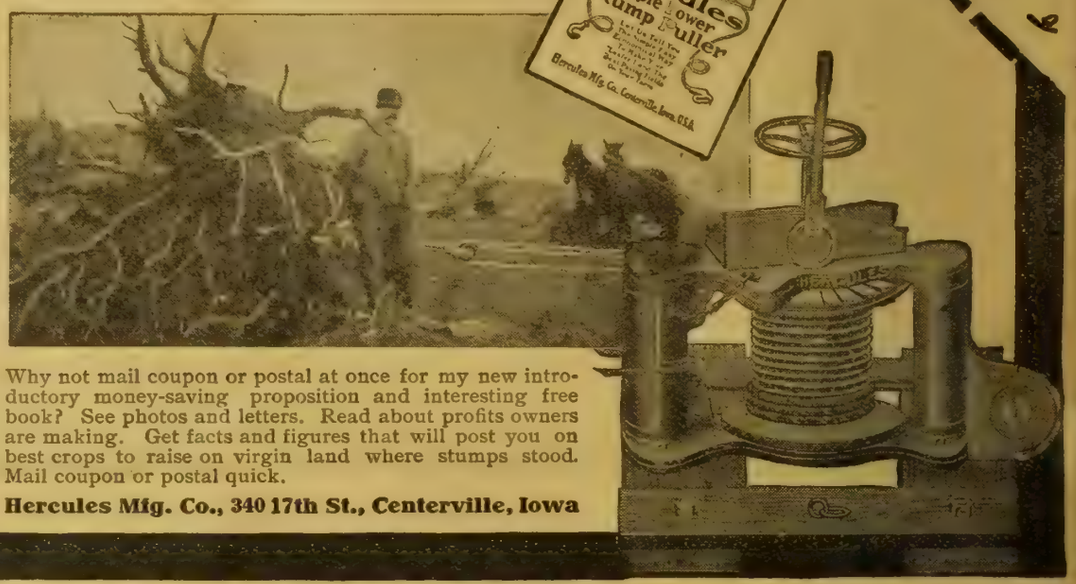


HERCULES

All Steel, Triple Power

STUMP PULLER

Sold on 30 Days' Free Trial
Guaranteed for Three Years



Triple power means more than the **pull of a locomotive.** All steel means 60% lighter weight, 400% more strength than any cast iron or "semi-steel" puller ever made. Accurate machining and turning means smooth running and light draft. Double safety ratchets mean safety to men and team. 3 year guarantee means replacement of any broken castings, whether your fault or fault of machine. Pull an acre of stumps a day easy with the Hercules. When **your** stumps are pulled, do work for your neighbors or rent machine at a nice profit.

Why not mail coupon or postal at once for my new introductory money-saving proposition and interesting free book? See photos and letters. Read about profits owners are making. Get facts and figures that will post you on best crops to raise on virgin land where stumps stood. Mail coupon or postal quick.

Hercules Mfg. Co., 340 17th St., Centerville, Iowa

Stockmen and the Tariff.

At the meeting of the American National Live Stock Association held recently at Denver, the following was the first and most important resolution adopted:

Resolved, By the American Navention assembled at Denver, Colorado, December 12th and 13th, 1911:

1. That we demand the retention of sufficient duties on imports of live stock and its products and all farm products of this country, as will be equal, fair and just to the industry which we represent, compared to the import duties on other products, whether those duties shall be levied for the avowed purpose of protection, or for the avowed purpose of producing revenue to run the government.

2. We condemn as unjust, unfair and discriminatory, the Payne-Aldrich Bill in placing hides on the free list and demand the restoration of same, and declare that we are unalterably opposed to the placing of live stock and live stock products and the products of the farm and ranch on the free list.

3. We appeal to the live stock producing interests and to the agricultural interests to unite in opposition to a discriminatory and unjust system of levying import duties whereby our interests shall be sacrificed for the benefit of others.

4. We declare it to be the just right of the live stock and agricultural interests of this country to enjoy equally whatever preferences any system of import duties gives to the industries of this country, incidental or otherwise, in the home markets of the United States in preference to the products of foreign countries, and we appeal to the fairness and good sense of the people of the United States to maintain the fundamental principle of our government—equal rights to all and special privileges to none.

Never Misses a Hill.

Corn is going to be worth good money and it is worth while to insure having good seed and effective seeders. Study your planters while you may and be sure to get one that will not cause you to do the work or any part of it over again. The merits of an implement are best set forth in the manufacturer's own words and best illustrated in his own catalogue. The Hayes Four-wheel Planter, manufactured at Galva, Ill., is advertised in this paper on page 11, and our readers can note the points of superiority and then send for the special booklet which describes it in every detail. Our readers who are interested should write at once to Hayes Pump and Planter Company, of Galva, Ill., and ask for a copy of booklet Z, which explains all points concerning the Four-wheel Planter.

Hay and Forage Statistics.

According to the United States census, the hay and forage-producing area of the United States in the year 1909 was 71,915,457 acres, against a total of 61,691,069 acres ten years previous, in the year 1899. The acreage harvested in hay and forage consists of 19,536,644 acres of timothy and clover-mixed, 14,675,375 acres in timothy alone, 16,868,374 acres in prairie grasses. Then there are 2,442,836 acres in clover alone, 4,702,230 acres in alfalfa, 1,113,179 acres in millet or Hungarian grass, 4,210,470 acres in other tame or cultivated grasses, 4,254,177 acres in grains cut green, 4,093,256 acres in coarse forage and 18,916 acres in root forage. The 71,915,457 acres classed as hay and forage lands are credited with producing 97,147,446 tons of hay.

The Loss is Ours.

On December 15th it was reported that the British government had decided to exclude the American meat packers, against whom prosecutions are instituted, from tendering contracts for the supply of meat to the British Army and Navy, pending the settlement of the suits. It was also stated that the contracts heretofore entered into by the War Office and which had hitherto been secured by American firms, are now expected to go to Argentina meat packers. But the American meat packers will probably not be disturbed by this for the reason that the American packers own the most active beef plant in Argentina. If the supply from the United States is barred out, the Argentina bids will be advanced, and the War Office of Great Britain will pay more money to the same packers. The loss of trade, if any, will fall upon the stock raisers of the United States.

Alfred R. Urion, of counsel for Armour & Co., after a conference with the concern's officials, said:

"Great Britain's action cut off our largest market for canned meats, which amounted to millions of pounds annually. There is no demand in this country which will equalize the loss, which seems greater because every pound of canned meat represents two pounds of fresh meat."

GENERAL FARM NOTES.

A trucker in Southern Alabama had three acres in cucumbers last season, from which he gathered 1,392 hampers. These were sold in St. Louis for $1,111.25, leaving a net profit to the grower, after every item of planting, cultivation, picking and marketing had been deducted, of $834.—Southern Field.

From Austin, Texas, it was reported on December 16th that the State Prison Commission leased 9,907 acres of land for five years. All of it will be planted in sugar cane, making the total acreage of that product owned by the state about 42,000 acres. The plantations are worked by penitentiary convicts.

Canning on the Farm.

Canning fruits and vegetables has made many a farming community rich and prosperous, and it always makes a tremendous advance for the farm upon which the canning factory is located. Formerly a canning plant cost several thousand dollars, whereas now a few hundred dollars will establish a farmer in the canning business. Mr. Thos. M. Brown, of Springfield, Mo., will tell you all about it, if you will write to him for circular and mention this paper.

CUT DOWN YOUR GROCERY BILL

THIS FREE BOOK shows you how to save from 20 per cent to 50 per cent on all your groceries.

Buy your groceries direct from us and save from twenty to fifty per cent of what you are now paying. We have solved the "high cost of living" problem for thousands of delighted customers.

We buy everything in enormous quantities. This means rock bottom prices — prices that small buyers cannot get. We sell direct to you with only one small profit added. We save you all the "middlemen's" profits that eat up so much of your money.

All our groceries are full measure—absolutely pure. Write to-day for our interesting, money saving grocery book. It is book No. 11. It is free. We want you to compare our prices with those you are now paying.

We issue the grocery book every two months and will send it to you regularly.

Below is a partial list of the other books we issue. They contain thousands of big, money saving opportunities. No matter where you live we can fill all your needs and save you an amazing amount of money. No matter what it is you want, we have it. We can save you many dollars on everything you buy. We are doing it every day for over 2,000,000 delighted customers.

Send to-day for the books that interest you.

Order the books by their numbers.

Medicinal Leaves and Herbs.

The Department of Agriculture has just issued a bulletin on leaves and herbs used as medicine. Nor is this the first publication put out by this Department on the subject of medicines, the others being "Weeds Used as Medicine, Root Drugs and Medicinal Barks."

Collectors of medicinal plants have made such insistent demands on the Department for a guide in their work that a description of thirty-six medicinal plants, including only such as are in most common use, has been prepared by direction of the Secretary, fifteen of them being mentioned in the Eighth Decennial Revision of the United States Pharmacopoeia.

Each plant is listed under the name in most common use, but synonymous common names, and the pharmacopoeial name, if any, are also given, that no one should have difficulty in recognizing the plants familiar to him, or to identifying an uncommon one, if of the series, from the description given.

Perhaps the best-known plants included in this bulletin are peppermint and spearmint, which are not only found in the wild state, but are also cultivated for the distillation of oil, an important American industry. Witchhazel, almost a household word, is found in low, damp woods, from New Brunswick to Minnesota, and south to Florida and Texas. The soothing properties of this plant were known to the Indians, and it is still employed for the relief of inflammatory conditions.

Wintergreen is described as having stimulant and antiseptic properties, though its chief use seems to be as a flavoring agent.

Horehound, one of the best-known domestic remedies for colds, has a wide range, being found from Maine to South Carolina, Texas and westward to California and Oregon. Jimson weed, a common weed in field and waste places, is found almost everywhere except in the North and West. The dried leaves are frequently smoked, or the fumes inhaled, as a remedy for asthma. Catnip, familiarly associated with a tea for babies, is described as a common weed naturalized from Europe. It is noted for its quieting effect on the nervous system.

Boneset is another familiar plant in many households, the leaves and tops of which form an old and popular remedy in the treatment of fever and ague. Pennyroyal, aside from its value as an aromatic stimulant, has an odor which is very repulsive to insects, and is therefore much used for keeping away mosquitoes and other troublesome insects.

Among the other plants not in such common use mentioned in this paper, are foxglove, gum plant, bugleweed, balmony and skullcap. Tansy, wormwood, fireweed and fleabane are described as furnishing useful oils. The complete bulletin can be had by addressing the Secretary of Agriculture, Washington, D. C.

Allerton Sold to Armour.

Another independent stock yard and meat-packing interest is now classed as a trust organization. The Pittsburg Provision and Packing Company has been turned over to the Armour interests of Chicago.

Samuel W. Allerton established the Pittsburg Provision and Packing Company and owned a controlling interest in both the packing house and the yard company. It appears, however, that in his old age Mr. Allerton is closing out his interests at Pittsburg,and it was reported that J. D. Callery, who controlled about 49 per cent. of the stock, had already closed out to Armour. It is very probable that the death of Simon O'Donnell had as much to do with the sale as any other consideration. He was manager of the Pittsburg interests of Samuel W. Allerton, and died a couple of years ago.

Cold-storage Facts.

The following facts concerning cold storage of meat products is taken from the Annual Report of the Secretary of Agriculture:

The principal months when fresh beef is placed in cold storage are September, October and November; mutton, August, September and October; butter, June, July and August, and sometimes May; eggs, April, May and June. Pork is quite well distributed throughout the year. Poultry is made up of diverse elements; broilers go into storage early in the spring and roosters in the early autumn; November, December and January, and sometimes October, are heaviest storage months. With regard to fish there seems to be no regularity in the heavy cold-storage months; most of the fish is received fresh and is frozen, and after the lapse of some time is sent to warehouses or places of consumption, where it is stored again. These two periods of storage are combined in the investigation.

During the three heavier cold-storage months of 1910-11, 47 per cent. of the fresh beef placed in cold storage during the whole year was received into the warehouse; 59.8 per cent. of the fresh mutton, 59.2 per cent. of the dressed poultry, 70 per cent. of the butter, and 79.4 per cent. of the eggs.

It is established by this investigation that 71.2 per cent. of the fresh beef received into cold storage in the year 1909-10 was delivered within three months; 28.8 per cent. of the fresh mutton, 95.2 per cent. of the fresh pork, 75.7 per cent. of the poultry, 40.2 per cent. of the butter, 14.3 per cent. of the eggs, and 35.5 per cent. of the fish.

The percentage of receipts delivered in seven months is 99 per cent. for fresh beef, 99.3 per cent. for fresh mutton, 99.9 per cent. for fresh pork, 96.1 per cent. for poultry, 88.4 per cent. for butter, 75.8 per cent. for eggs, and 64.9 per cent. for fish.

"The important observation to be made," declares the Secretary, "is that the receipts into cold storage are entirely or very nearly exhausted by the deliveries out of cold storage within ten months."

The fresh beef received into cold storage during the year beginning with May, 1909, was kept there on the average for 2.3 months; the fresh mutton, 4.4 months; the fresh pork, 0.9 of a month; and the butter, 4.4 months. The poultry received druing the year beginning with March, 1909, was kept on the average 2.4 months; the eggs, 5.9 months; and the fish, 6.7 months.

A live man in your neighborhood can create a good business for himself by selling our fertilizers. They are rightly balanced and blended to improve both crops and soils.

They are adapted to all crops and soils; they are "making good," hence are well-known and popular, and sell readily to progressive farmers.

We have the largest and best equipped Fertilizer Factory in the State of Illinois.

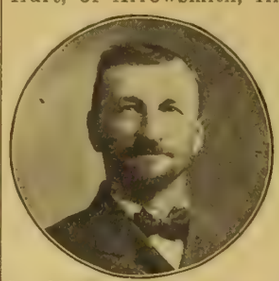
The Breeders' Horse Sale.

The Annual Breeders' Sale will be held at Bloomington, Ill., under the presidency of Mr. D. Augstin, famous breeder of Percheron horses, and under the management of Mr. C. W. Hurt, of Arrowsmith, Ill. The sale is mainly by breeders and such horses as are imported are intended specially for this sale. The offerings will consist of 300 imported and native-bred registered Percherons, Belgiums, French Draft, Shire and Clydesdale stallions and mares, and the sale will be held Tuesday, Wednesday, Thursday and Friday, January 23, 24, 25 and 26, 1912. The day for the catalogue to be ready to mail out is January 8. We are specially requested to mention that the Friday auction will include 100 registered trotters, 100 head of ponies, besides grade draft, single drivers, saddle and all-purpose farm horses, stallions, mares and geldings. The best way to keep up with this sale is to write C. W. Hurt at Arrowsmith, Ill., and get a catalogue and follow it up later by attending the sale. Bloomington is a first-class railroad junction point on the C. & A. R. R., the Big Four Route, the Illinois Central and the Lake Erie & Western R. R.



D. AUGSTIN, President.

C. W. HURT, Manager.

Mr. HARRY GILL, Horse Dealer.

One of the noted horse buyers of the United States, and probably the largest individual buyer of horses and mules, has come to the conclusion that the place to sell his horses is at the largest horse and mule market in the world—the St. Louis National Stock Yards, Illinois. Mr. Gill will have from two to five loads of horses a week at the National Stock Yards Horse and Mule Market during the year 1912, where he invites all his old-time customers and friends from the Eastern and Southern markets to meet him. Mr. Gill has shipped during the past year 7,554 head of horses, and has paid to the farmers of Iowa and Illinois over a million and a half dollars. Mr. Gill has the happy faculty of satisfying the farmers that he buys horses of, and also the customers that he sells to. He buys all of his horses direct from the farmers, and they come to market fresh and healthy, which is one of the main reasons that the shippers of horses to the Eastern and Southern markets purchase their horses from him, as their horses give them better satisfaction than horses that have passed through two or three markets. Mr. Gill sells part of his horses with the Holland, Nugent & Maxwell Bros. Commission Company at their Monday and Tuesday auction, the balance with the Campbell & Reid and the Western Sale Stables Company on Wednesday and Thursday.

MR. HARRY GILL,
Who buys more horses direct from farmers than any other purchaser in the United States. His horses and mules are usually sold at the St. Louis National Stock Yards.

Weekly Live Stock Report.

The Live Stock Report issued by Clay, Robinson & Co., Union Stock Yards, Chicago, Ill., is by far the best weekly live stock market report; in fact, it is the only weekly report covering transactions of ten principal markets. Clay, Robinson & Co. are leaders in the commission business and do not issue the Live Stock Report for a profit, and all they require a shipper to do is to pay the postage on it as an evidence that they are interested in live stock markets. Write for a sample and you will be pleased with it.

New Year Hog Market.

The hog market of St. Louis opened up the New Year's trade with the bulk selling at $6.00 to $6.25 per 100 pounds; and the top price for choice hogs, 225 to 240 pounds, at $6.35.

Early January sales of onions at St. Louis: Red Globe, No. 2, 57 to 75 cents; fancy, $1.00 to $1.10; extra fancy, $1.10 to $1.20 a bushel; Pacific coast sacked yellow at $1.00, delivered; sacked White Globe at $1.75 per bushel, and Cummer crates at $1.50.

We have very decided views regarding the meat packers and have never failed to publish them; but for the present, while they are being tried on a serious charge, we will refrain from comment and await the decision of the courts.

On January 1st, at St. Louis, home-grown Bermuda sweet potatoes were selling at 85 to 90 cents a bushel, and red and yellow Nansemond at $1.00 to $1.10 per bushel.

Wisconsin Rural potatoes at 91 and 92 cents, and Minnesota Burbanks at 94 to 96 cents a bushel, represent the early January sales on the St. Louis market.

CURE THAT SPAVIN

—or that Curb, Splint, Ringbone or other lameness with Kendall's Spavin Cure. Mr. Montgomery Sheppard of Richfield, N. J. writes this about
Kendall's Spavin Cure
"I have been using your Spavin Cure and have found it a sure cure for Spavins, Splints, Ringbone, Lameness, etc."
Let us send you other letters. Get a bottle of Kendall's at once. You may need it any day. At your druggists $1 a bottle. 6 for $5. Ask for "Treatise on the Horse"—Free, or write to
Dr. B. J. Kendall Co., Enosburg Falls, Vermont, U. S. A.

W. F. YOUNG, P. D. F., 106 Temple St., Springfield, Mass.

Paint Without Oil

REMARKABLE DISCOVERY THAT CUTS DOWN THE COST OF PAINT SEVENTY-FIVE PER CENT.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.
Write to Mr. A. L. Rice, Manuf'r, 66 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write to-day.

FREE-FARM ACCOUNT BOOK

Know How Much You Make This Year

No one shall pay a cent for Bickmore's Farm Account Book. It will be sent free to any farmer who will be good enough to tell who and where he is. The cost of a crop never demanded closer attention. Business farming puts money in the bank. This book is arranged to keep all accounts in simple form—more simple, and certainly more practical, than trying to remember them; shows what to charge against crop production, has a laborer's time record; and section for personal accounts. 64 pages; for ink or pencil. Not a cheap affair. It is meant for business. Its quality is in keeping with

BICKMORE'S GALL CURE

a remedy that cures, and the horse works all the time. Users keep it in their stables the year round—they believe in it. It is always ready for Harness or Saddle Galls, Chafe, Rope Burns, Cuts, Scratches, Grease Heel, etc. In cows use it for Sore Teats. Don't buy a substitute. Insist on getting Bickmore's Gall Cure—for the sake of your horse's health. But write now for Bickmore's Farm Account Book—it is ready for you. No cost. No obligation. Send your name and address—that's all.

The St. Louis market increased over a million hogs during the year 1911.

HORSE AND MULE NOTES.

The Stock Farm, commenting upon the great sale at Madison Square Garden, said: "One thing that impressed the onlooker was the fact that the sire of pacers is not considered as valuable as the sire of the trotter, and that the value placed upon the pacer is what he can win racing. Direct Hal, with a record of 2:04¼ and with five pacers in the 2:10 list and four times that number in 2:20, and all of which race well, was knocked down at $4,700."

From Spirit of the West: "At this time, December 1st, it is likely the returns for the 1911 racing season are about all in, and the number of 2:10 trotters totals 51. The fastest of the number is the seven-year-old gelding, Charlie Mitchell, 2:04¼. Peter the Great, 2:07¼, and Todd, 2:14¾, divide the honor of leading the list of sires for the year, with four performers each. Onward Silver, 2:05¼, claims two, and beyond that no one sire has more than one performer in 2:10."

Native Cattle on the Market.

Light cattle of high quality are outselling heavy cattle. At St. Louis, January 1st, 1912, C. M. Berry, of Audrain county, Missouri, marketed 1,197-pound steers at $7.25 per 100 pounds; and E. J. Shobe, from the same county, marketed 1,248-pound steers at $7.00 per 100 pounds. Other cattle from the same county: J. C. Diggs, with five cars of his own feeding that averaged 1,177 pounds, and sold at $6.50; R. H. McClintock, with a two-car shipment, that were fed by himself. These cattle averaged 1,113 pounds, and brought $6.50; Ed Hildebrand, with two cars of his own fed cattle, among which was a drove of heifers, that brought $5.80.

New Year Sheep Prices.

On January 1st, at St. Louis, the best lambs sold at $6.65 per 100 pounds. They were Westerns, fed in Missouri, and averaged 73 pounds. Other good lambs sold at $6.00 to $6.50. Some choice native sheep sold up to $3.75, and a string of Western sheep fed in Atchinson county, Missouri, consisting of almost 1,000 head that weighed 74 pounds, brought $3.65. Stockers were slow sale at $2.00 to $2.50, and bucks went at $2.50 to $3.00 per 100 pounds.

Immense Hog Marketing.

A very large number of hogs were marketed in the West in the year 1911, and it will be many a long year before the same number of hogs will be marketed again. Chicago, St. Louis, Kansas City, Omaha, St. Joseph, received nearly 20,000,000 hogs in 1911, showing a gain of about 5,000,000 over the previous year. The end of 1912 will tell another story.

The Stock Cattle Market.

Native cattle are selling at St. Louis as stockers and feeders as follows: Good to choice feeders, $5.00 to $5.25; medium to good feeders, $4.75 to $5.00; good to choice stockers, $4.25 to $4.75; plain to good stockers, $3.50 to $4.25; fair to good heifers, $3.50 to $4.50; stock cows, $3.25 to $3.50—all quotations being at the price stated per 100 pounds.

Oklahoma Cattle at St. Louis.

Included in the Oklahoma cattle sold at St. Louis on New Year's Day were sixty-one steers, 1,041 pounds, at $6.80; sixteen steers, 1,213 pounds average, at $6.65; sixty-six steers, 1,097 pounds, at $6.50; and forty-seven steers, 1,085 pounds, at $6.40. All these were free from ticks and were yarded in the native division; others were sixty-nine head, 1,014 pounds average, at $5.80; and twenty-nine yearlings, 827 pounds, at $6.00; and 1,091-pound cows at $5.15—all sales being at the price stated per 100 pounds.

Highest price for prime white live geese feathers in wholesale market, 63 cents; prime gray, 44 cents; old white, 36 to 38 cents per pound.

American Steel Fence Post Cheaper than Wood and More Durable. Get Catalog.

THE Fence adds value to the farm. Keep fences in order and the house painted. It indicates prosperity.

Here's an instance: Not long ago a little farm with shabby buildings and fences rotted down, sold for a song. The new owner had the right idea. Buildings were painted. Wire fences were erected to divide the farm into small fields in order to change pastures and rotate crops systematically. Then circumstances compelled him to sell out. The cost of painting and fencing was less than $200.00. The farm sold for four times its purchase price. Appearances *do* count.

AMERICAN FENCE is made of large, stiff wires, galvanized heavily, having the American hinged joint (patented), a fabric most flexible and wear-resisting. A square mesh fence of weight, strength and durability—three great needs in farm fences.

Dealers in Every Place

where farm supplies are sold. Shipped to them direct from mills in carload lots, thus saving freight charges and enabling dealers to sell at lowest prices, giving buyer the benefit.

Send for copy of "American Fence News," also book "How to Make the Farm Pay," profusely illustrated, devoted to the interests of farmers and showing how fence may be employed to enhance the earning power of a farm. Furnished free upon application.

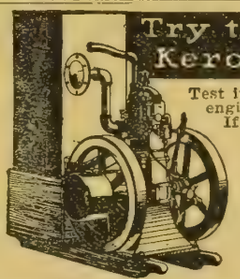
Try the Wonderful Columbia Kerosene Engine at our Risk



Test it out on your own place for fifteen days. Give it the hardest engine test you can think of. Compare it with any other engine. If the Columbia doesn't develop more power at less cost, send it back quick. No conditions. We are willing to let you be the judge and jury. Kerosene (common lamp oil) is by far the cheapest fuel today. The price of gasoline is climbing all the time, while kerosene remains the same, and in the right engine, it lasts longer and produces more power per gallon than gasoline. You get ALL the power when you use a Columbia, because it is the right engine. It is the one really simple and perfect kerosene engine. It never bucks when you need it most. It is always on the job.

Write for Particulars of Our Big Special Offer.

Size 2 to 16 H. P.

We are going to double our output for next year. We can do it easily. It is just a matter of getting engine users to test the Columbia for themselves. So we are making a great special money saving offer on Columbia Kerosene Engines. This offer is liable to be withdrawn at any time, so write today for full particulars, for it is a money saver you would hate to miss. **Free Book No. 84 full of engine facts you need to know, sent free.**

COLUMBIA ENGINE CO., 84 Fuller St., Detroit, Mich., U. S. A.

Stop!

Just a Minute, Please

This *little* ad tells you how to get the *big* incubator bargain.

Write me a postal for **"Hatching Facts"** and ample proof of superiority of my famous

World's Champion BELLE CITY 140-Egg Incubator

Has double walls and door and dead air space all over, copper tank, hot water heat, self-regulator, "Tycos" thermometer, egg tester, safety lamp, nursery, high legs, 1, 2, or 3 I am going to sell all my months' machines out on **1, 2, or 3 Home months' Home Test** this year. Test Don't you want to be one of the lucky testers! If so, write today. I will surprise you with the proofs of the wonderful hatches of this machine. Why pay more for a machine that can't compete with mine in the championship class! My machine makes you money from the start at small outlay. When shipped together, I sell my Incubator (price $7.55) and 140-chick double-walled hot water top heated Brooder (price $4.85) for **$11.50** and pay freight. Send for **"Hatching Facts"** today, or if in hurry you may send price direct from this ad—same home test—same guarantee. Money back if not satisfactory. Thousands buy this way. Address, JIM ROHAN, Pres.

$7.55 FREIGHT PAID East of Rockies

$4.85 140-Chick Brooder

Belle City Incubator Company Box 74 Racine, Wis.

Poultry and Farm Paper Club.

Two first-class papers can be had for the price of one. **The National Farmer and Stock Grower** is one, and the **American Poultry Journal** is the other. There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is the **American Poultry Journal.** We have made arrangements whereby we can send **The National Farmer and Stock Grower** and the **American Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Two Kinds of Socialists.

The Rev. Archibald D. Pinkerton, the well-known Christian Socialist of Duluth, said in a recent address:

"I asked a crusty old millionaire the other day to contribute to our book fund. He frowned and said:

" 'So you're a Socialist, eh?'

" 'Yes, sir,' said I.

" 'Well, tell me what a Socialist is,' said he.

" 'But you must tell me first,' said I, 'what sort of Socialist you mean—a political Socialist or a Christian Socialist. For there is a vast difference. The political Socialist says: 'What's yours is mine.' But the Christian Socialist says: 'What's mine is yours.' "—Pittsburg Chronicle-Telegraph.

HENS LAY AND PAY BY THE PHILO SYSTEM

FREE Booklet by E. W. Philo, entitled "A Little Poultry and a Living." Or New 96-page book, "Making Poultry Pay," 10c. Both books and the new enlarged edition of the Philo System text-book, $1.00, or all three books with our monthly magazine, Poultry Review, one year, $1.50.

E. R. PHILO, 13 North Ave., Elmira, N. Y.

SHOEMAKER'S BOOK on **POULTRY**

and Almanac for 1912 has 224 pages with many colored plates of fowls true to life. It tells all about chickens, their prices, their care, diseases and remedies. All about Incubators, their prices and their operation. All about poultry houses and how to build them. It's an encyclopedia of chickendom. You need it. Only 15c. C. C. SHOEMAKER, Box 915, Freeport, Ill.

Five Pullets in Oregon.

Five pullets in a pen 10x10 space at the Oregon Agricultural College, lay a total of 538 eggs in six months, from November until April. This is probably about as many eggs as pullets can lay in the first six months after starting to lay, the average being 107.3 eggs per pen in six months. They were single comb White Leghorns. The financial statement shows that the eggs sold for $12.66, and the feed, including board for a rooster, cost $3.92¾, leaving $8.74 to pay for time and trouble.

The Boston Poultry Show occupies the attention of twenty-five judges, there being $6,000 in premiums to be awarded, beside 1000 silver cups.

Feeding Poultry in Canada.

A farmers' bulletin issued by the Department of Agriculture of Saskatchewan, Canada, concludes with the following summary:

Birds of the utility breeds are easily fattened and are in demand by the general trade. They should weigh from three to three and one-half pounds when put into the feeding crate.

The egg-laying strains are not suitable for fattening.

The most profitable period for fattening is from three to four weeks.

Be careful not to overfeed chickens the first week. Feed lightly and remove any feed left in the trough half an hour after feeding. Keep the troughs clean and sweet.

After the first week give chickens all they will eat, regularly twice a day.

The oats or mush must be ground very fine. Oats ground for horse feed are not suitable.

Feeding milk or buttermilk whitens the flesh, which is desirable.

Put a little salt in the feed.

Give water in the trough twice a day.

Give some form of grit twice a week. Sifted gravel will do.

Feed tallow during the last ten days. Begin with one pound per day to seventy or one hundred chickens and increase to one pound to fifty to seventy chickens.

To prepare tallow: Weigh quantity required for three days, melt it, and thicken, while hot, with ground oats. Mix one-sixth of this paste with the morning and one-sixth with the evening feed.

If the chicken gets off its feed, remove it from the fattening pen for a few days, allowing it to run free.

Do not allow any food for thirty-six hours before killing.

Kill chickens by dislocating the neck or by bleeding in the roof of the mouth. Use care so that no outside blemish is made.

Market birds with heads and feet on.

Dry pluck at once, while the bird is warm. Observe the buyer's wishes as to whether the bird should be stripped of all feathers or a rim left on the first wing and leg joints. Leave about two inches of feathers around the neck.

As soon as plucked, place the chicken in the shaping board to give it a compact, square appearance.

Chickens should not be drawn.

When cold, wrap in clean parchment paper and pack tightly in shipping case to prevent injury by knocking about.

See that chickens, paper and cases are kept perfectly clean.

He Was Trained For Pawning.

Not even the author of the "Club of Strange Trades" conceived of an odder means of livelihood than that of Dr. Martin Potter, says the New York correspondent of the Cincinnati Times-Star. He runs an animal pawnshop. If you have a lion that you don't need as badly as you need the money, or want to soak a trained bear for a few weeks, or put up an elephant until you hear from home, go around to Dr. Potter. He'll loan you the money against your live stock, and he will not charge you any interest. But you'll have to pay the board of your pledge. "I just drifted into the business," said Dr. Potter. "I started out to furnish trained animals to shows. I've rented everything to showmen from a troup of thoroughbred horses to a red-eyed Numidian lion. By and by I found that I had to lend money now and then to my patrons and take their stock in pledge. It was a necessity of the business, but now I like it."

His stables contain elephants and camels—if you're a regular showman you'll say cam-u-el—and monkeys and a dozen sorts of dogs and all varieties of the cat tribe and the deuce knows what. And his proudest boast is that he was never stuck but once. "Fellow borrowed $20 from me on a trick dog," said he. "Finest dog I ever saw. I'd have loaned $100 on him as easy. But I wasn't shown all that dog's tricks by his owner. That night I found that he had been trained to unlatch the door and get out—and his owner had not trained him to come back."

For Better and Larger Crops.

A good lesson in crop improvement can be learned by obtaining a pamphlet entitled "Better Crops Through the Use of FERTILIZERS." It is issued in handy pocket shape, to be studied at odd times. It contains an analysis of over forty different brands that are prepared for special purposes. To increase crop yields is absolutely necessary. Land is too valuable to work forty acres to produce crops that can as easily be raised on twenty acres. To obtain copy of the booklet, "For Bette Crops," write to Empire Carbo Works, 421 Locust street, St. Louis Mo.

Laying Hens are Money Makers

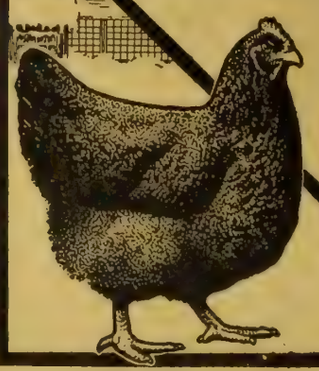
We Guarantee

that by the use of Pratts Poultry Regulator you can have plenty of eggs even when prices are highest and busy hens pay big. A small dose of Pratts Poultry Regulator added to the feed will put more money in your pocket. Try

Pratts Poultry Regulator

on all your hens. Or if you want to make a more careful test, give it to a few for a month, then compare results. Pratts Poultry Regulator doubles the nutritive value of the feed by keeping the digestion in perfect condition.

Satisfaction Guaranteed or Money Back



Our dealers will promptly refund purchase price if you do not find Pratts Preparations pay a handsome profit. If your dealer cannot supply it, write us.

Best Watch in the World.

One hundred and eighty of th leading railroads have adopted th Howard Watch as the standard o excellence. It is because the Howar Watch has no actual competitor There is an interesting story abou this watch which our patrons wil take pleasure in reading. Just writ a postal card to Dept. 122, Howar Watch Works, Boston, Mass., an ask for the story of The Firs American Watch. See page 7 and read about the best watch in the world.

Read about raw phosphate rock as non-available fertilizer on page 3.

ELECTRIC Low Down Handy Wagon

The only wagon for hauling manure, stone, fodder, grain, etc. Saves thousands of high lifts, saves horse flesh, avoids rutting. Makes an end of tire setting and repairs. This wagon will last a generation. Electric Steel Wheel Wagons don't break down. Write for book and see why.

Make Your Old Wagon Over

Use your old running gears, we'll supply Electric Steel Wheels to fit. All heights, all tire widths. Wagon better than ever by simply buying wheels. Let us prove it. Address **ELECTRIC WHEEL CO., Box 40 Quincy, Ill.**

Electric Steel Wheels

The American Swineherd.

Every farmer and stock raiser will find it to his advantage to buy a paper that is devoted to swine raising as a specialty. The best publication in that class is the **American Swineherd,** a monthly publication, issued at 50 cents a year. It is also a good companion for The National Farmer and Stock Grower, and we have decided to handle it as such. Anyone who will send us 50 cents can combine The National Farmer and Stock Grower and the American Swineherd, both papers, for 50 cents, and both papers for one year. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Factors Influencing Quality in Eggs.

Farmers and those handling eggs commercially, as well as the housewives and other consumers of eggs, will be interested in Secretary Wilson's remarks on two systems in vogue in the egg trade.

The system of marketing eggs in general use in the Middle West, known to the trade as the "case-count" system, has proven detrimental to quality. Briefly, case-count buying consists of the payment of the fixed price which happens to be current at the time for each and every dozen which may be offered for sale, regardless of whether the eggs themselves are good, bad or indifferent. The only requisite in most cases to consummate a sale is for each egg to have an intact shell. No more practical step can be taken in improving quality than to discard this system of buying and replace it by the one known to the trade as "loss off."

Where the "loss-off" system is in use the eggs as bought are "candled:" that is, subjected to a test which shows quite definitely their condition and quality. By this test it is possible to detect "rots," "spots" and other deteriorated eggs, such as shrunken, weak, watery and heated eggs. In paying for eggs bought on this basis, the rots and usually the spots and blood rings are thrown out entirely, so that they become a dead loss to the person responsible for them. Such a classification and method of payment is a distinct step forward and results in a great improvement in the eggs.

Dressed Poultry in New York.

These quotations, late in December, show all grades: Fresh killed turkeys, dry-packed, Western dry-picked, selected hens, 20c.; common, 19c.; selected hens and Toms, 19 to 20c.; dry-picked, average best, 18c.; scalded, fancy hens, 20c.; Toms, 19c.; scalded, average, 18c.; old hens and Toms, dry-picked No. 1, 17 to 18c. Chickens—Dry-picked, twelve to box, milk-fed, 24 pounds and under to dozen, 20 to 22c.; 26 to 30 pounds, 18 to 19c.; corn-fed, 24 pounds and under to dozen, 17 to 18c.; 26 to 30 pounds, 15 to 16c.; milk-fed, 5 pounds and up, 20c.; 4 pounds, 18c.; 3½ pounds, 16c.; 3 pounds, 14½c.; corn-fed, 5 pounds and up, 16c.; 3½ pounds, 13 to 14c; do. dry-picked, barrels—Western milk-fed, 5 pounds up, 16½c.; 3½ pounds, 14½c.; mixed sizes, 14½c.; corn-fed, dry-picked, 4 pounds up, 14½c.; 3½ pounds, 11½c.; medium, 10½c.; scalded, broilers, 12c.; 4 pounds up, 14c.; 3½ to 3 pounds, 11 to 11½c.; mixed sizes, 10½ to 11c.; medium, 10½c.; poor to fair, 6 to 8c. Fowls—Dry-picked, Western boxes. 60 pounds and over to dozen, 16c.; 48 to 55 pounds, 15c.; 40 pounds and under, 12 to 12½c.; barrels, clean, 5 pounds and up, 14½c.; 4 to 4½ pounds, 13c.; average best, 12½c.; 3½ pounds and under, 11c,; scalded, average best, 12 to 12½c.; poor to fair, 6 to 8c. Other poultry—Old cocks, per pound, 10c. Spring ducks, 18 to 19c.; Western choice, 16 to 17c.; poor to good, 12 to 14c. Spring geese—Western, average best, 13 to 14c. Squabs—Pair, white, 10 pounds to dozen, per dozen, $4.50; 9 pounds, $4.00 to $4.25; 8 pounds, $3.50 to $3.75; 7 pounds, $2.75 to $3.00; 6 to 6½ pounds, $2.00 to $2.25; dark, $1.50.

Dirty Eggs on the Farm.

While there are a few egg producers who take the best of care of their product, the average farmer considers the eggs produced on the farm a by-product and makes very little provision for their care, aside from gathering them. A large loss is caused by dirty eggs, the number being enormous, and according to the estimate of Secretary Wilson, of the Department of Agriculture, this money loss to the farmers in the United States amounts to about $5,000,000 annually.

This loss is very largely brought about by not gathering the eggs often enough. In wet weather more dirty eggs are found than at any other time. This is caused by the fact that the hen's feet are often covered with mud or filth, and in going on the nest to lay she soils the eggs already in the nest.

An insufficient number of nests is often the cause of many of the dirty eggs found. Eggs are laid on the ground and around the hay and straw stacks, and, becoming stained, are classed as "dirties." Again, when too many eggs are allowed to remain in a nest some are broken, and many of the others become smeared with broken yolks. This condition is often brought about by allowing the broody hens to use the same nests with the layers. On a farm where one nest to every four hens is provided and the nests are kept clean and well bedded, it is found that very few dirty eggs are produced.

After gathering the eggs care should be taken not to put them where they will become heated, or near oil, onions or other vegetables, as they readily absorb odors.

Although dirty eggs may be perfectly fresh, they invariably sell as "seconds," and when but a few dirty eggs are mixed with an otherwise fresh, clean lot, they materially decrease the price of the clean eggs.

Big Four Subscription Combination.

Four best monthly farm papers for one dollar a year. Practically a half-price subscription. **The American Poultry Journal,** one year, **The American Swineherd** one year, **The Fruitman and Gardener** one year, and **The National Farmer and Stock Grower** one year. All for one dollar. These four papers cover the entire field of agriculture—stock raising, dairying, grain growing, vegetables, fruits, poultry, etc. Each publication is the best in its class. No other combination in farm-paper circulation will show such a satisfactory dollar's worth. All these papers are good in any state, useful in any climate and well worth the money to any farmer. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

According to the Stock Farm of December 7th, there are 142 pacers in the 2:05 list and more than 500 trotters in the 2:10 list.

POULTRY PROFITS ON YOUR FARM

EVERY farm can well support, *at low cost* its flock of chickens. And poultry raising, *rightly done,* will net you a big satisfactory *crop of dollars.*

But chicken raising demands the right tools—just as much as any other form of farm work. We want to tell you about the right tools—*why they are best*—and how you can make the most money with chickens on your farm.

Get Our Big Free Book: —Cyphers Company's "Poultry Growers' Guide for 1912." It contains 244 pages, including eight chapters of just the kind of information you need—*practical ideas and facts* from men who know. Study for a *few moments* the following chapter headings—they are *right to the point,* are rich with *profitable* information:

I.—How to Get Twice as Many Eggs from the Same Number of Hens. II.—The 200-Egg Per Year Hen—How to Produce Her. III.—Large Sized Eggs in Demand as Well as Lots of Them. IV.—Mating and Feeding of Fowls to Get Fertile Eggs. V.—Selection and Care of Eggs for Successful Hatching. VI.—Proper Care of Fowls and Chicks with Least Amount of Work. VII.—How to Brood Chicks Properly at the Lowest Cost. VIII.—Premium-Price Table Poultry and How to Produce it. This big book also describes in full

Cyphers Incubators and Brooders

—and explains why they are used by *more* leading fanciers, by *more* large poultry plants, by *more* state agricultural schools and Government Experiment Stations than *all other makes combined.* It tells why they are the greatest money makers *for the farmer*—and proves it by letters from hundreds of successful poultry raisers in all parts of the country.

Cyphers Company Service

—which is fully explained in this book—means that we extend to our customers *the kind of help* that insures for them the best results—that we co-operate with them by means of personal letters, bulletin service, leaflets, egg record cards, incubation charts, etc.,—in meeting their problems as they arise. We are spending thousands of dollars in this work and it is absolutely *free* to all our customers.

Write Today —now—for our free "Poultry Growers' Guide for 1912." 244 pages, weighs a pound and it's free, postpaid to any address. It should be worth many dollars to you.

Breeder and dealer in registered high-class Starlight Jacks and Jennets from four months to eight years old. (No partial Jacks.) Written guarantee. Catalogues contain pictures of each animal. Also Jersey Cattle.

R. F. D. 7, - NASHVILLE, TENN.

Long Distance Phone, Main 1326.

BLOODED STOCK NOTES.

Mr. S. O. Albin, of Siloam Springs, Ark., who is advertising Duroc-Jersey swine, is in Benton county, on the Kansas City Southern Railroad. He is nicely situated to ship pigs to Southwest Missouri, all of Arkansas, Oklahoma and to Texas. He has some fine September and October pigs that should soon be moving.

Messrs. H. T. Brown & Co., of Cloverdale Farm, near Lexington, Ky., are breeders of Percheron horses, mammoth jacks, Tamworth swine and Rhode Island Red chickens. They have an office in Lexington, 156 West Short street, where visitors and customers are welcome. See advt. in breeders' column, page 20.

At the Chicago International Live Stock Exposition, fifty-one head of Aberdeen-Angus cattle averaged $171.00 per head. The average of the twenty-seven females was $153.00, and twenty-nine bulls, $191.25.

E. L. John, of Maries county, Missouri, is an advertiser who came back directly he had more stock for sale. He is at Broadway, between two good shipping railroads, the Rock Island and the 'Frisco.

At the sale of Herefords held at the Chicago International Live Stock Exposition, fifty-one head averaged $286.30. Perfection Lass, 342,053, went to J. P. Cudahy, at Kansas City, at $2,000, and two young bulls were sold for a thousand dollars each.

The 1912 catalogue of Trumans' Pioneer Stud Farm, Bushnell, Ill., is now at the printers. A recent sale by this firm was to that young, enterprising breeder, L. P. Miller, of Knox county, Illinois. He selected an imported grey Percheron stallion weighing 2,000 pounds, four years old, one of the kind that are so much sought after and seldom found.

We cannot mention all our live stock breeders in this edition, but we recommend them all to our patrons. Fine stock at fair prices is the rule, with good value for the money.

The Shorthorn cattle sold at the Chicago International Live Stock Exposition of 1911 averaged $311.50 for forty-three head. The top price for a bull was $700, paid by Ed W. Monnier, of Elizabeth, Ill.; and the top price for a cow was $825, paid by F. W. Harding, of Waukesha, Wis.

RECORD DRAFT MARE SALE.

At the draft mare sale by Trumans' Pioneer Stud Farm, Bushnell, Ill., all previous records were broken, the top price being for Billingborough Belle, champion Shire mare at the Illinois State Fair, to John J. Mitchell, President of the Illinois Trust and Savings Bank, Chicago, at the record price of $6,200. Mr. Mitchell is owner of the world's champion Shire stallion Dan Patch, purchased by him from the Trumans at $10,000.00. The same purchaser also bought Bollam Lady at $4,500; Duchess of Westminster, champion at Wisconsin State Fair, at $1,300; and Coldham Charm, champion at the Minnesota State Fair, reserve champion Iowa and Wisconsin State Fairs and International, at $4,000, her dam being Coldham Surprise, sold by the Trumans at the record price up to that time of $3,600, to George M. McCray. The foal, Dan Patch's Daughter, was also sold to Mr. Mitchell at the record price of $1,600. This foal was bred by Messrs. White & Son, of Blandinsville, Ill., her dam having been purchased by them in one of the Truman auctions.

Your Name Will Get $2 Eggs

For 50 Cents Per Sitting

The White and Brown Leghorns are the greatest layers in the world. I keep 2000 of the celebrated Chamberlain laying strains on my Experimental Farms, and to increase the sale of my Perfect Chick Feed, I will send to any one who will send me their name so I can send them my Perfect Chick Feed Catalogue, 2 sittings of Single Comb Brown or White Leghorn Eggs for $1 for the 2 sittings. The FARMER'S SON'S GREAT OPPORTUNITY

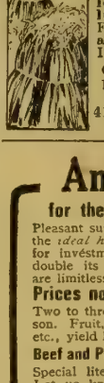
Why wait for the old farm to become your inheritance? Begin now to prepare for your future prosperity and independence. A great opportunity awaits you in Manitoba, Saskatchewan or Alberta, where you can secure a Free Homestead or buy land at reasonable prices.

NOW'S THE TIME

—not a year from now, when land will be higher. The profits secured from the **abundant** crops of Wheat, Oats and Barley, as well as cattle raising are causing a steady advance in price. Government returns show that the **number of settlers in Western Canada from the U. S. during the last year was upwards of 125,000 and imigration is constantly increasing.**



Many farmers have paid for their land out of proceeds of one crop.

Free Homesteads of 160 acres and pre-emption of 160 acres at $3.00 an acre. Splendid climate, good schools, excellent railway facilities, low freight rates; wood, water and lumber easily obtained.

For pamphlet "Last Best West," particulars as to locations & settlers' rate apply Supt. Immig., Ottawa, Can., or Can. Gov. Agt.

Canadian Government Agent, 125 W. 9th St. Kansas City, Mo. C. J. BROUGHTON, 412 Merchants Loan & Trust Bldg., Chicago, Ill.

An Open Winter

for the man living in the Southeast.

Pleasant summers and mild winters make the South the *ideal home country*. Wonderful opportunities for investments in land which will soon be worth double its present cost. Its producing qualities are limitless.

Prices now range from $10 an acre up.

Two to three crops from the same soil per season. Fruit, truck, alfalfa, corn, cotton, wheat, etc., yield large profits.

Beef and Pork produced at 3 to 4 cents

Special literature on each State. Let us know which interests you. Write at once.

SELLING HORSES AT ST. LOUIS.

The Methods of the Firm That Transacted the Largest Business in the Year 1911.

The sale of horses at a great central market in the interest of the shipper is no small proposition. It requires a full equipment, men of talent, good financial standing, untiring energy, skill, ability, superior management and a great receiving and distributing center to work in.

MR. T. H. HOLLAND,
Head of the firm of Holland, Nugent & Maxwell Bros., horse and mule commission salesmen at the St. Louis National Stock Yards.

The firm of Holland, Nugent & Maxwell Bros. was organized three years and five months ago, and since then has become the selling agency of the largest number of horses and mules in the world, and a few brief remarks concerning them is not out of place at the close of the most successful year.

Mr. T. H. Holland is chief auctioneer, head of the firm, and it is he who dictates the personal letters of advice to shippers. "Give honor and credit where it is due," said he, "and we are obliged to confess that our success in a great measure is due to the magnificent service of the Stock Yard Company. All that pertains to yard management is absolute perfection. Not only is the expense of yardage and feed less than at other markets, the service is better, and it is the only market where men are furnished by the Yard Company to clean the horses on arrival. We always are able to improve the condition of the horses between arrival

MR. JOSEPH NUGENT,
Master of the sale ring, auctioneer and sale manager for Holland, Nugent & Maxwell Bros.

and shipment by reason of the superior accommodations.

"Another reason for our success," continued Mr. Holland, "is, that this is a fresh horse market. The consignments come direct from farming sections and are shipped from here right into the hands of the retailers. Horses are bought to be sold again, and the quickest, best and safest route with the least money to come out of the horse is via St. Louis. We can supply any class of buyers and save them time and money by the ease and rapidity in which carloads can be collected for shipment."

Mr. Holland is assisted in the auction ring by Col. Ike Howard and Ab. Guy, of Indianola, Iowa, and together with Mr. Joseph Nugent they keep a red-hot auction going on Monday and Tuesday of each week in the year.

Mr. Joseph Nugent also looks after

MR. JOHN K. MAXWELL,
Of the firm of Holland, Nugent & Maxwell Bros., specially skilled in preparing horses for the sale ring, also buyer on order for Southern interests.

all horses sold in their auction ring and rejected by the inspectors, seeing that justice is done between the shipper on the one hand and the buyer on the other. All horses have to be as represented, and none are rejected without just cause.

In this great firm, one of the partners, Mr. John K. Maxwell, looks after the trimming, bedding, sacking and getting the horses ready for the auction ring. He also fills orders for horses in the Southern trade besides having general supervision of receiving and shipping.

A commission firm in the horse trade always buys and sells horses just the same as a commission firm in the cattle trade sells fat cattle and buys feeders. Holland, Nugent & Maxwell Bros. buy horses on orders, and this branch of the trade is in the hands of Mr. Geo. Nugent. He will average three express loads of horses a week to Philadelphia, another to Boston. To the largest retailer of horses in the state of Maine he shipped fifty loads in the year 1911. He furnishes regular supplies to the McHenry Horse Exchange of New Orleans, La., besides other important points in the East and South.

MR. GEORGE NUGENT,
Of Holland, Nugent & Maxwell Bros. He attends to filling orders for Eastern trade and is remarkably gifted in getting satisfactory shipments together.

The mule trade of Messrs. Holland, Nugent & Maxwell Bros. is characteristic of the firm. The mule sales are conducted by Lan Morris and Ed Conway, both men of high ability and national reputation. All mules are sold at private sale, and, as there is a city of mule dealers in and around the National Stock Yards, the salesmen have a strenuous time.

Most of the horses and mules for sale by Holland, Nugent & Maxwell Bros. arrive on Sunday and are met at the chutes by members of the firm, who take every possible care of them. When the auction begins, everything is ready, and as the rush begins the traffic is kept open, so that late arrivals are at no disadvantage.

Shippers of horses or mules in the country and buyers of horses and mules in car lots in any section will find it to their interest to keep in touch with the firm of Holland, Nugent & Maxwell Bros. at the National Stock Yards, where the receipts were 170,000 head, against 105,000 at Chicago, 85,000 at Kansas City, 4,000 at St. Joseph, and 32,000 head at Omaha.

OBTAIN STRAWBERRY CATALOGUE.

It is early to plant strawberries, but not too early to obtain and study a reliable catalogue. Mr. W. F. Allen, of 116 Market street, Salisbury, Md., has 120 acres planted in strawberries, and he will furnish plants true to name. See his advertisement in this edition.

The farmer must increase his individual yields, first, because small yields are unprofitable; and, secondly, because increased yields will be necessary to feed the people.

Push and energy put a young man to the front; also pull and energy.

FARM AND RANCH LANDS.

ARKANSAS.—Richest lands in the state, cut up plantations, that will grow fifty bushels of corn to the acre with ordinary cultivation. Prices strictly reasonable. Write for particulars to **L. M. Allen,** Rock Island Lines, 411 LaSalle Station, Chicago, Ill.

ARKANSAS.—Lands on the Cotton Belt Route in Arkansas are offered for sale at remarkably low prices. All farmers and "intend-to-be farmers" should post themselves. Write for free books showing the best locations. Address, **E. W. LaBeaume,** G. P. & T. A., 1419 Pierce Bldg., St. Louis, Mo.

LOUISIANA.—Rich plantations on the Rock Island Route cut up into smaller tracts and for sale at $25.00 an acre. Splendid opportunity for Northern corn farmers who know good land when they see it. Write for particulars to **L. M. Allen,** Rock Island Lines, 411 LaSalle Station, Chicago, Ill.

FLORIDA.—HOW TO RAISE CROPS THE YEAR ROUND. Buy Georgian Heights, Florida, land, where the climate and soil will produce twelve months in the year. There is no better land in Florida than at Georgian Heights, only fourteen miles from Jacksonville. Now being sold by the owner. **J. T. George,** Wainwright Bldg., St. Louis, Mo.

MISSISSIPPI.—Splendid farm of 460 acres on Southern Railway, with small peach orchard. All fenced, with first-class house, two wells, several springs. Situated with one end in corporation limits of county seat and railroad town. Magnificent opportunity for combination dairy, vegetable and poultry farm. Market right in town at summer health resort or at Memphis. Owner is too rich and too old to handle it and will sell at a bargain. Address, **Philip H. Hale,** 3550 Vista Ave., St. Louis, Mo.

TEXAS.—Many of the very best farms and farm lands are to be found on the line of the Cotton Belt Route in the state of Texas. A reference to that country will be found on page 2 of this paper. Send in your name and receive free books concerning the rich land bargains to be had on this line. Address, **E. W. LaBeaume,** 1419 Pierce Bldg., St. Louis, Mo.

We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **HALE PUBLISHING CO., 3550 Vista Ave.. St. Louis, Mo.**

A GARDEN OF ROSES FREE!

Fine, Sturdy Plants.

The Most Delightful Subscription Premium Offered by a Farm Paper.

The National Farmer and Stock Grower has again decided to send out a collection of eight choice everblooming Rose Plants to our patrons who will send in a special subscription. They are one-year plants and will give good satisfaction.

Little wonder that plants so boldly decorative in outline and bearing flowers of such exquisite coloring, so marvelously formed, should be the most popular. Roses are of the greatest value and importance in the adornment of the home grounds, giving a finished and very artistic appearance even to those of moderate dimensions. The varieties of to-day are models of excellence and beauty and can be planted with absolute success. Those named below are the choice, new, hardy everbloomers, full of vigor and wonderful productiveness, and they will thrive vigorously and bloom most lavishly all summer long. Not only has great care been used in the selection of these varieties, but careful methods are used in packing them for shipment, thus avoiding all damage while in transit. We guarantee plants to reach you in good growing condition, and with each package we send complete directions for planting, care and culture.

Etoile de France.

This rose has been selected from the unlimited list of hardy red roses as being the acme of perfection, one possessing every distinctive attribute which adds to its beauty and appeals to all. A giant in hardiness and sturdiness, the bush grows upright, covered with beautiful bronzy green foliage and forming a magnificent bush, which is an ornament to all gardens. The growth is so luxuriant and lusty that great masses of the most beautiful roses imaginable are borne all summer. The flowers are glorious in form, perfectly molded, with large, heavy petals of splendid substance, forming an elegant bud, while the open flower is massive, deep and cup-shaped. The fragrance is delicious and the color exquisite, a clear, rich, velvety crimson. It certainly is one of the finest of all garden roses.

President Taft.

In the superabundance of now famous everblooming pink roses it would seem impossible at first thought to choose the one of superior merit. We have no fear, however, of the result of your opinion when you have tried out this superb newcomer, for it is absolutely distinct, there being no variety in any class showing the marvelous beauty of this magnificent kind. It has that which is of prime importance—a hardy, vigorous constitution—forming a symmetrical bush, and by reason of its unusually vigorous habit it makes a sturdy plant, with large, heavy, insect-proof foliage. It blooms continuously from the first days of spring throughout the growing season, a single plant producing innumerable flowers on stiff, strong stems well above the foliage. The flowers are glorious in form, perfectly molded, with heavy petals of splendid substance, forming a long-pointed bud, while the open flower is large, full, deep and well filled. The fragrance is delicious beyond description, while the color is a beautiful sparkling pink, so vivid as to fairly startle one with its brilliancy. This is a rose among roses, and its introduction marks an important epoch in the rose world.

Yellow Kaiserin.

Without this rose the most valuable collection of hardy everbloomers is incomplete, and it is one which will thrive under most unfavorable conditions of soil or treatment. It is an exceptionally rapid grower, producing a succession of bloom from early spring until late fall. The large double flowers are of artistic formation, a rich canary yellow, deliciously fragrant, retaining their freshness of odor and beauty of form long after being fully developed. It well deserves a prominent place in the most beautiful gardens.

White Killarney.

The wonderful new "Irish Beauty" which has carried off every prize when exhibited and set everyone to raving over its surpassing beauty and elegance. A description cannot do justice or convey to you the marvelous beauty of this rose. In habit of growth it is a robust grower, free branching, having an abundance of rich green foliage. The buds are exquisitely long and pointed, unfolding broad, wax-like petals into enormous semi-full flowers of pure snow white which retain their freshness of form and purity of color for an extensive time.

Helen Gould.

This is the most valuable and satisfactory red rose for general planting ever introduced, and no garden collection would be complete without it. In habit of growth it is vigorous and robust, throwing long, strong shoots from the roots, which are clothed with clean, heavy foliage, making an excellent setting for the fragrant, beautiful flowers. Great masses of splendid, rich, velvety roses are produced all through the summer, impressing everyone with their superiority and great beauty. The buds are of unusual size and exquisitely shaded, the petals of which are smooth and velvety.

Marigold.

The sight of this grand rose never fails to create a desire to possess the flower, and a more valuable variety for outdoor planting does not exist. It is a fine, upright grower of free branching habit and as a liberal and continuous bloomer it is unsurpassed, heading the list for size, fragrance and beauty of form of flowers. It is impossible without seeing it to conceive of the wonderful beauty and splendor of the deep, full flowers, which are a clear, saffron yellow, opening canary with dark, golden shadings.

Clothilde Soupert.

This rose well deserves the title of "Premium Bedding Rose," and is one of the few varieties with which all can succeed in producing flowers under house or pot cultivation. It is extremely hardy and a vigorous, healthy grower, quickly developing into a fine, shapely bush, which is covered with clusters of beautiful roses through the entire growing season. This rose may be potted for house culture, and if given ordinary care will produce an abundance of bloom, frequently hiding its foliage with flowers. Through the hottest summer months, when other plants show a withered, sickly condition, this rose continues to grow and bloom, and its beautiful white, pink-tinted flowers always appear charmingly fresh and sweet.

Everblooming Crimson Rambler.

The advent of the famous Crimson Rambler produced most startling results, the only possible flaw to be found was its habit of blooming but once during the season. So for years it has been the aim of every rose grower to produce an everblooming type, and this has now been accomplished in the production of this variety. The plant is of very vigorous growth, making shoots from eight to ten feet during the season. It is magnificent in bush form, completely covering itself with bright green and glossy foliage. The flowers are produced in great pyramidal clusters, the individual flowerets measuring from one to two inches in diameter. The color is the brightest crimson, so vivid as to fairly startle one with its exceeding brilliancy, and, best of all, it blooms from early spring until along late in the autumn, proving a constant source of pleasure and delight.

Our Special Offer.

Send us sixty cents, by money order preferred. We will send you The National Farmer and Stock Grower for one year. We will send you direct by mail, postpaid, the full set of eight hardy, everblooming Roses. We will also send you a 16x20 inch picture entitled **"The American Beauty Rose."** The picture is most beautiful. There is a great bunch of roses resting on the white linen cloth of a table. It is glorious, magnificent. Send us sixty cents. The paper can go to one address, the picture to another and the roses to another, or all three to one address. The roses are sent out directly it is safe to dig them in the spring.

The Aviation Cap.

This is so easily made, so cheap and so convenient that it is little wonder it still holds a place in public favor; in fact, it is more popular, if possible, than last year, and is worn by old and young alike.

While the two-color schemes are much in favor, as light blue with dark blue rim, white with red or blue, and gray with any preferred trimming being much in vogue, many still prefer the solid color, especially white, which is becoming to all faces and ages.

From three to five skeins of Germantown yarn are required, the amount depending upon the size of the head and the shape of cap fancied. The four-ply yarn, large and cord-like, works up in more fanciful form, and is more quickly knit, though the ordinary yarn may be used. Work always with a double thread, using a large bone crochet hook.

Make a chain of five stitches, join. In this crochet twelve double crochet, and unite into a circle. Throw thread over hook, take up the farthest thread only of the stitch between the first of the d. c.'s, thread over hook, pull loop through, thread over and pull through the same loop again. You now have five stitches on hook. Thread over, and pull through all five at once. This makes one "puff." Make another in the next stitch in the same way. About every fourth stitch make two puffs in the same stitch to increase the width properly. Knit about six rounds in this way, making the crown somewhat pointed.

Knit four or five rows straight (without widening) for the rim. Then make four rows to turn up by turning the work over, knitting alternately from the right and wrong side, or the last rows may all be knit from the wrong side, according to taste. Finish by running a band of black velvet ribbon around the edge of the rim, or complete with a pompon or a ribbon bow of harmonizing shade. The crocheting should be done very loosely.—Bessie L. Putnam.

HOW TO GET BETTER LIGHT From KEROSENE (Coal Oil)

Recent test by Prof. Rogers, Lewis Institute, Chicago, and Prof. McKergow, McGill University, Montreal, on leading oil-burning lamps show the Aladdin Mantle Lamp is the most economical and gives over twice as much light as the Rayo and other lamps tested. It is odorless, safe, clean, noiseless. Better light than gas or electric. Every Aladdin Lamp fully guaranteed and protected by patents in nearly every country on earth. Our burners fit your old lamps. To introduce the Aladdin, we will give

ONE LAMP or BURNER FREE

in each neighborhood. Send postal with name and address, ask for catalogue M. **AGENTS** Ball sold over 1000 on money back guarantee; not one returned. Bruner sold 800 in 15 days. Ask for liberal agency proposition. Sample lamp furnished.

MANTLE LAMP COMPANY, 182 Aladdin Building, Chicago, Ill.

300% Profit!

If hogs are the "mortgage lifters" in the corn belt, what would you call them in Arkansas and East Texas, where, according to *government test*, they can be fattened at 1½ *cents per pound*. Farmers there have *proved* that an acre of peanuts will put on 1,200 pounds of pork—*three times* as much as an acre of corn. Peanuts, grown on land there that can be bought for $10 to $20 per acre, will return $80 *per acre* when marketed through pork. And peanuts are grown by the *same methods* used for corn.

On account of the mild, healthful climate, and the *splendid* variety of stock feeds which can be grown on lands along the

Cotton Belt Route in Arkansas and Texas

a sow will stand more frequent breeding and will bring bigger litters than the same grade sow elsewhere. Mr. Hays, of Waldo, has a Tamworth hog which brought 48 pigs in *fourteen* months. This is unusual, of course, but *two big litters* can be *counted* on, each year. The same conditions that make hog raising so profitable, make any line of stock raising pay *big* in Arkansas and Texas.

There are many sections in Arkansas and Texas that are *just suited* for your line of farming—where you can buy *many* acres with the price of every *one* you now own—get the benefit of the *big* boost in land values sure to come—live in a mild climate where you can do money making work *every* month—without sacrificing *anything* in living conditions that you now have. Telephones, good schools, rural delivery, modern towns, close markets—you'll find them all through Arkansas and East Texas.

On the 1st and 3rd Tuesday of each month there are very low round trip excursions to Arkansas and East Texas via Cotton Belt Route, allowing 25 days for trip and *free stop overs*. Plan to go on the *next* one.

COTTON BELT ROUTE

Up-to-date Country Homes.

There is every reason why farm houses should be the best homes in the nation. Up to the present time the dwellers in the country have been content to have the dwellers in the cities have the fine, well-provided homes, with all appliances for health and convenience. But a change is fast coming over the rural sections of the country.

Here and there we run across a farm home that is as good as any in the cities. We have in mind a farm house that cost in the neighborhood of $5,000. It is wired for electricity, because it is expected that before long a cross-country electric line will supply electric light. It is well sewered and has a perfect system of water works of its own, the water for which is pumped by a windmill erected solely for the use of the house. There is no attempt to make the barn windmill do double service.

The problems connected with making a first-class country home are generally less than in the city. The sewage can usually be taken care of by running a sewer pipe from the house to a box in the ground a hundred feet or more from the house. If this box is tight, so that nothing but the sewage can get in, save where the water flows out, the result is a little septic tank that works to perfection, destroying the organic matter in the sewage and allowing the partly-purified water to run off without notice by anyone. Other pumping machines can be used in place of the windmill, if so desired.

The modern home in the country can have every convenience that the city home has. Take the single matter of drinking water. Of course, if there is a deep well to supply a tank above the house, the problem of water pressure and supply is already settled. But where no pumping power is provided, it is easy to run a pipe from the well to the house and have connections made in different parts of the house and the necessary pumps supplied. There are still millions of farm houses where the water from the well is brought in pails instead of in pipes. This is really absurd, when the first cost of laying pipes and installing pumps is so small, and the cost of keeping in repair is only that of keeping the pump washers in proper state.

When the well is being considered it should be placed at a good distance from any privy or barn, that the water may not be contaminated. Many farm wells are altogether too close to barns, privies, hog pens and poultry houses, but at the up-to-date houses they are at a healthful distance from all such places.

The telephone system now serves the up-to-date country home and many others. Small local systems also frequently connect the house with the barn and other outbuildings that are much used, such as the work shop.

In the up-to-date country home there is now to be found many an appliance for lessening the work in the house. Kitchen cabinets are common and the pantry arrangements are as good as in any city homes.

This is a reform that is filled with promise of better things for the mistress of the country home, who has too often been neglected and left to her own devices and her overwork.

Our Best Asset.

Health is the greatest asset of the nation, the community, the individual. We do not realize its value until we lose it, yet then we readily admit its importance. At this season, when the system is stuffed with the good things stored away for the winter, we are in greater danger than at any other time of the year.

In olden times it was quite the fashion in spring to resort to blood purifiers to straighten out the clogged system; but we now know there is a better way, even though we sometimes fail to observe the rules. In cold weather we relish the rich, heavy foods and partake of them too freely. While in moderation once or twice a day they may be safely indulged in, when it comes to making three meals a day of meat, mince pies and doughnuts, with possibly a midnight lunch of the same character sandwiched in, this is more than anyone can stand.

If a simple breakfast could be substituted for the hearty one, there would be fewer doctor's bills. Buckwheat cakes with sausage are a temptation, we admit; but why not vary them by alternating with the saner food, toast and cereals? There are so many prepared foods on the market. Then there are Graham gems, rice, baked apples and many other simple dishes which are quite as palatable as the richer ones, which are bound to breed trouble later.

Carnegie clings to his simple morning meal, though millions are at his disposal. Fortunately, he is well aware that overindulgence in food would soon put a stop to his personal enjoyment. It is worthy of note that wherever we go, it is those who cling to the simple diet who are spared the trouble and worry of "dieting." Our health is too important a matter to be juggled with; and if we wish to keep well we will eat with moderation and come out in the spring with digestion unimpaired through high living.—Bessie L. Putnam.

SULTAN'S CREED—Polled Durham bull. Age, June, 1910, photograph as a junior yearling. Exhibited by J. H. Miller, Peru, Ind. Winner of prizes in the State Fair Circuit and junior champion of the breed at Chicago International Live Stock Exposition of 1911. This is a sample picture of famous animals collected for publication in the Book of Live Stock Champions mentioned on page 8 of this paper.

The Fruitman and Gardener.

There is a fine monthly paper called the Fruitman and Gardener that stands high with growers of large and small fruits. It is useful in any state and of practical value on any farm. It is edited by men of ability and is in every way worth the money it costs. We have adopted the Fruitman and Gardener as a companion publication to The National Farmer and Stock Grower, and it is a combination hard to beat. Anyone who will send us 50 cents can combine The National Farmer and Stock Grower and the Fruitman and Gardener, both papers, one year. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

The Buttercup Cream Separator is advertised on page 8 in the Waterloo Gasoline Engine advertisement. Don't fail to read about it and write to the Waterloo Gasoline Engine Company, 228 West Third Ave., Waterloo, Iowa.

On December 12th it was reported that Natchez, Miss., will have a public park and city Fair Grounds on the order of the Dallas Fair. Deeds conveying to the city the Auburn and Sunnyside properties, comprising 161 acres just beyond the city limits, were filed by S. B. Duncan, of Issaquena county. The property was left by Steven Duncan, a millionaire of Adams county, who died last year.

LIGHT UP!

You can transform any kerosene (coal oil) lamp or lantern into dazzling brilliancy with our wonderful **Bright Light Burner.** 50 candle power invisible and **unbreakable Steel Mantle.** Brighter than electricity, better than gas or gasoline, and **perfectly safe.** No generating—simply light like any kerosene lamp. Nothing to get out of order. Positively will not smoke or flicker.

AGENTS WANTED EVERYWHERE. Sells like wildfire. An opportunity of a life time, work all or spare time. Experience unnecessary. Make big money—be independent. Write today. Act quick—territory going fast. Complete sample, postpaid, **30c, 4 for $1.00. Money back if not satisfactory.**

BRIGHT LIGHT CO., Dept. 64, Grand Rapids, Mich.

Use KEROSENE Engine FREE!

Amazing "DETROIT" Kerosene Engine shipped on 15 days' FREE Trial, proves kerosene cheapest, safest, most powerful fuel. If satisfied, pay lowest price ever given on reliable farm engine; if not, pay nothing.

Gasoline Going Up!

Automobile owners are burning up so much gasoline that the world's supply is running short. Gasoline is 9c to 15c higher than coal oil. Still going up. Two pints of coal oil do work of three pints gasoline. No waste, no evaporation, no explosion from coal oil. Cylinders cannot carbonize

Amazing "DETROIT"

The "DETROIT" is the only engine that handles coal oil successfully; uses alcohol, gasoline and benzine, too. Starts without cranking. Basic patent—only three moving parts—no cams—no sprockets—no gears—no valves—the utmost in simplicity, power and strength. Mounted on skids. All sizes, 2 to 20 h. p., in stock ready to ship. Complete engine tested just before crating. Comes all ready to run. Pumps, saws, threshes, churns, separates milk, grinds feed, shells corn, runs home electric-lighting plant. Prices (stripped), $29.50 up. Sent any place on 15 days' Free Trial. Don't buy an engine till you investigate amazing, money-saving, power-saving "DETROIT." Thousands in use. Costs only postal to find out. If you are first in your neighborhood to write, we will allow you Special Extra-Low Introductory price. Write!

Detroit Engine Works, 383 Bellevue Ave., Detroit, Mich.

MISSOURI'S SHOW HERD WINS FAME AND MONEY.

A Remarkable Record Made Last Year by the Steer Exhibit of the College of Agriculture.

A total of fifty-four prizes won, carrying a money award of $1,204, in competition with the herds of the leading breeders of the world. This is the remarkable record of the show herd of the Missouri College of Agriculture, as shown by the report just made by the Professor of Animal Husbandry to the Board of Curators.

Of the fifty-four prizes, six were championship awards; twenty-five were first prizes; seven second prizes; twelve third prizes; three fourth prizes; one fifth prize and one twelfth prize.

One animal alone, the grade Hereford calf Disputer, bred, fed and exhibited by the college, took four champion prizes and six first prizes, bringing in a money premium of $355.

All of these prizes were won at the big Stock Shows of the country. The first showing of the College herd was at the Interstate Live Stock Show at St. Joseph, Mo., where eleven steers won five first prizes, two second prizes and two third prizes. The same eleven animals were shown next at the Missouri State Fair at Sedalia. Here they captured three champion prizes, seven first prizes, one second prize and four third prizes. The herd kept up its winning record at the American Royal Live Stock Show at Kansas City, taking one championship, eight first prizes, two third prizes and one fourth prize.

Two of the steers were sold and only nine were taken to Chicago to enter the world competition at the International Live Stock Show. Here again the College herd more than held its own, adding to its list of winnings two champion prizes, five first prizes, three second prizes, four third prizes, two fourth prizes, one fifth prize and one twelfth prize.

Disputer, the Hereford steer, was champion steer under twelve months and champion grade Hereford. He also won first prizes in the senior grade or cross-bred calf class, senior grade Hereford calf, and the Clay, Robinson & Co.'s special classes. It is noteworthy that the college in the last three years has twice placed a steer among the champion groups at Chicago. The other was Deserter, who, in 1909, was reserve champion.

Grand Champion Sheep.

Looking at the picture does not clearly convey the impression that the grand champion wethers weighed 165 pounds, but they did. They were grand champion sheep at the International Show of 1911, and were sold by Clay, Robinson & Co. at $7.60 per 100 pounds. They were fed and exhibited by J. Orton Finley, of Oneida, Ill.

For the first time in the history of the International Show, aged wethers won the sweepstakes over lambs. They were the pick of three carloads bought at South Omaha last August by Clay, Robinson & Co. at $3.35, averaging 132 pounds. They were out of medium wool Merino ewes by thoroughbred Cotswold bucks, raised by J. A. Delfelder, of Wolton, Wyo., who is a pioneer flockmaster of Wyoming, and President of the Wool Growers' Association of that state. Upon reaching the Finley farm, the wethers were put on blue grass, timothy and clover pasture. On September 1 they were started in a little feed of ear corn, which was gradually increased, and a little oil meal was added the middle of September. Along the middle of October they were put in a dry feed lot and fed alfalfa in the place of given the run of a pasture. About six weeks before being shipped the feed of ear corn was changed to shelled corn, because they would not take enough of the corn off the cob to make a satisfactory flesh gain. September and October, when very wet and warm weather prevailed, were the worst fall feeding months Mr. Finley ever experienced. For some years Mr. Finley has been one of the largest and most successful car-lot sheep exhibitors at the International. Last year he captured every premium except one offered for range-bred sheep and lambs, and took third premium with his native lambs. Mr. Finley is seen standing in the background of the photo.

MRS. ELLA D. ROWLAND,

Of the Zillah section of the Yakima Valley, winner of $500.00 in gold for the best twenty-five box apple display, any variety, grown anywhere. This was Nov. 4th, 1911, at the New York Land Show.

Mrs. Rowland's apples—Winesaps—scored 982 5-6 points out of a possible 1,000. While her exhibit competed with not only the finest samples from all other districts of the Yakima Fruit Valley, there were samples of the best produced in many other sections of the country, thus without a doubt the Rowland Winesaps proved to be the equal of any grown anywhere; and as a clincher of the fact it may be stated that Robert Johnston, of Fruitvale, another important part of the great Yakima Valley, scored second, with 978.7 points, making the contest between Yakima Valley fruit raisers the feature of that great show. Both of these winners own high-class orchards, located in territory which, only a few years ago, like all other sections of this valley, was a dense mass of sage brush, giving proof of the argument that Yakima Valley, in the state of Washington, will and does produce the best fruit that grows.

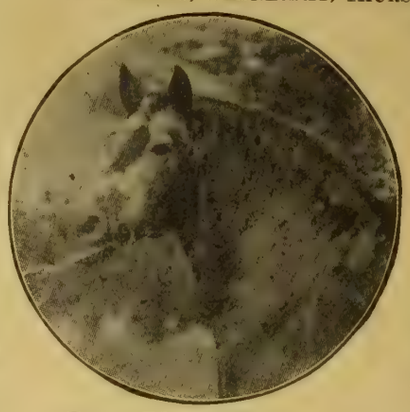
BREEDERS' SALE

400 HORSES 400

In Coliseum, BLOOMINGTON, ILLINOIS,

JANUARY 23, 24, 25 and 26, 1912.

ON TUESDAY, WEDNESDAY, THURSDAY AND FRIDAY WE WILL SELL



300 IMPORTED and NATIVE-BRED Registered Percherons, Belgiums, French Draft, Shire and Clydesdale Stallions and Mares.

CATALOGUE READY JANUARY 8, 1912.

D. AUGSTIN. **C. W. HURT, Mgr., Arrowsmith, Ill.**

THE GALLOWAY PLANT AT WATERLOO, IOWA, is one of the foremost manufacturing establishments in the country. It is represented in this edition of The National Farmer and Stock Grower by an engine advertisement on page 11 and a manure spreader advertisement on page 6. "Bill" Galloway, as the principal owner is called, has recently established an Agricultural Club at his works, the club building appearing in the foreground. This building was finished at a cost of $65,000, and is for the comfort of farmers visiting the works. All the dairy products used in this great establishment are supplied from "Bill" Galloway's own farm, just outside of Waterloo, where he keeps a large herd of the finest Holstein and Ayrshire cattle and raises chickens by the hundreds to supply eggs and poultry for the club table.

BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

STEEL ROOFING Of All Kinds,

Stock and Storage Tanks, Wagon Tanks, Etc.

Send for Free Catalogue.

O. K. HARRY STEEL WORKS, 2353 Papin Street, ST. LOUIS, MO.

MUSIC TAUGHT FREE

Home Instruction

We want to advertise and introduce our home study music lessons into all parts of America, and will give you absolutely free instruction if you will simply recommend the INTERNATIONAL INSTITUTE to your friends after you learn to play. We successfully teach Piano, Organ, Violin, Mandolin, Guitar, Cornet, Banjo, Cello and Sight Singing. You may not know one note from another; yet, by our wonderfully simple and thorough method, you can soon learn to play. If you are an advanced player you will receive special instruction. Our lessons are sent weekly. They are so simple and easy that they are recommended to any person or little child who can read English. Photographs and drawings make everything plain. If you accept our free tuition offer you will be asked to pay only a very small amount (averaging 14 cents a week) to cover postage and necessary sheet music. We have successfully taught others and we can successfully teach you. Write today for our **Free** booklet, which explains everything. It will convince you and cost you nothing. **INTERNATIONAL INSTITUTE OF MUSIC, 98 Fifth Ave., Dept. 358, New York.**

$3.50 Recipe Free For Weak Kidneys.

Relieves Urinary and Kidney Troubles, Backache, Straining, Swelling, Etc.

Stops Pain in the Bladder, Kidneys and Back.

Wouldn't it be nice within a week or so to begin to say goodbye forever to the scalding, dribbling, straining, or too frequent passage of urine; the forehead and the back-of-the-head aches; the stitches and pains in the back; the growing muscle weakness; spots before the eyes; yellow skin; sluggish bowels; swollen eyelids or ankles; leg cramps; unnatural short breath; sleeplessness and the despondency?

I have a recipe for these troubles that you can depend on, and if you want to make a **quick recovery**, you ought to write and get a copy of it. Many a doctor would charge you $3.50 just for writing this prescription, but I have it and will be glad to send it to you entirely free. Just drop me a line like this: Dr. A. E. Robinson, K-1174 Luck Building, Detroit, Mich., and I will send it by return mail in a plain envelope. As you will see when you get it, this recipe contains only pure, harmless remedies, but it has great healing and pain-conquering power.

It will quickly show its power once you use it, so I think you had better see what it is without delay. I will send you a copy free—you can use it and cure yourself at home.

MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.

Sprays of Forget-me-nots.

No. 614.—Design for embroidering sprays of forget-me-nots. Suitable for lingerie blouses, children's dresses and for all objects for which small flowers are appropriate. The price of the pattern is 10 cents.

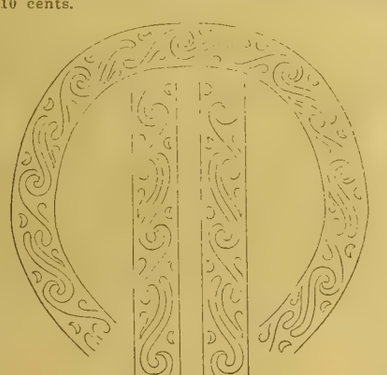
No. 617.—Design for an embroidered doily six inches in diameter. The price of the pattern is 10 cents.

Infant's Clothing.

No. 616.—Design for embroidering an infant's robe dress. Transfer patterns for yoke, front, sleeves and neck are given. The price of the pattern is 10 cents.

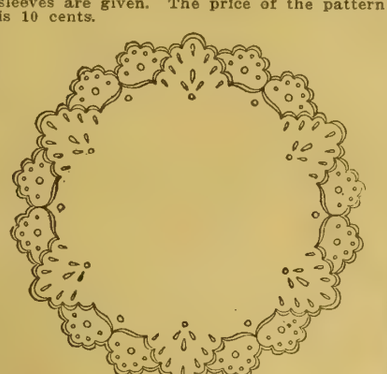
An Envelope Bag.

No. 618.—Design for an embroidered bag in envelope shape. The work can be done in beads, in solid embroidery or in outline or cable stitch. The price of the pattern is 10 cents.



A Two-inch Banding.

No. 613.—Design for banding two inches wide. Especially adapted to May Manton's Pattern No. 7218. To be embroidered with beads or French knots. A curved band for a low-neck gown and straight banding for sleeves are given. The price of the pattern is 10 cents.



Good-size Center Piece.

No. 615.—Design for an embroidered center cloth twenty-two inches in diameter. The price of the pattern is 10 cents.

Please send all orders for these embroidery patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Ah! There's the Rub.

"Ladies hoping to annex husbands in leap year will do well to trust in Providence, but they shouldn't forget to keep their powder dry."—Washington Star.

About Curing Sick Hogs

How To Prevent Hog Cholera

The Merry War Powdered Lye Treatment

By E. Myers.

E. Myers, President, E. Myers Lye Company, St. Louis, Mo.

Not a single year passes but severe outbreaks of Hog Cholera occur in nearly every state.

If the aggregate loss could be ascertained definitely, its total would be in the seventh column—millions.

To no other single source can such enormous and rapid losses be traced—thus in all probability, no other disease is of such vast economic importance to the American hog raiser as Hog Cholera.

It has been so often stated by experts on hog diseases that hog cholera is incurable, that many hog raisers have come to accept that opinion as final. On the other hand there are many others whose experience in the treatment of swine diseases gives weight to THEIR opinion who just as stoutly maintain that hog cholera, when treated in the early stages, IS curable. Moreover there is ample proof to back up this belief for it can be stated without fear of successful contradiction that there are numerous cases on record where cholera has been effectually stamped out of entire herds and the sick hogs completely cured. In fact there really seems no necessity of a hog raiser being forced to see his hogs dying off today like flies without being able to help them through to health.

It is undeniably true, however, that it is far easier to PREVENT hog cholera than it is to cure it. It forcibly emphasizes the truth of the adage that "an ounce of prevention is worth a pound of cure". Therefore it behooves every farmer who is looking forward to pork profits that are worth while, to be well informed regarding the most effective means of preventing this terrible scourge before it has any chance to work havoc in the herd.

Positive measures for prevention are first; thorough precautions against any cholera conditions which may exist in the neighborhood—and then a vigilant, scientific treatment of the entire herd by feeding daily, a portion of Merry War Powdered Lye with the regular night and morning rations. This is most effective and is also inexpensive.

Upon premises which have sheltered diseased hogs the greatest cleanliness should prevail at all times and extreme sanitary measures should be adopted before feed lots, troughs, pens, etc., can again be considered safe. Rake up and burn all loose straw and litter. Get a spray pump and spray thoroughly all permanent structures, such as sheds and pens. For this purpose, make a solution of Merry War Powdered Lye in the proportion of one can to about eight or ten gallons of water, stirring well until thoroughly dissolved. Use this spray mixture liberally. Do a thorough job of it—squirt it into all cracks and crevices. Clean up every nook and corner which might, by any possibility, harbor any of the disease germs. Stables, barns, kennels and poultry houses can also be disinfected and purified with this same solution. Whenever practical to do so, it is a mighty good idea to change the entire location of the hog pasture and erect new pens and sheds. The pork profits of the average farmer are well worth all this care.

It has been amply demonstrated that hogs which are well nourished with a properly balanced ration of Merry War Powdered Lye as per directions given herein are not liable to contract cholera—and big hog profits are worth this proper feeding.

If the above precautionary and preventive measures are adopted there will be little danger of an outbreak of hog cholera or any other infectious disease. And the cost is ridiculously small.

Years of experiment and thousands of tests have conclusively proven that Merry War Powdered Lye is not only the best protection against hog losses ever discovered, killing worms, preventing hog cholera, rendering hogs immune to infectious diseases, keeping them on their feed, with hearty appetites and keen relish; toning them up, making them fat and sleek, insuring prime condition for top notch prices in the shortest possible time—but, also, that it is the least expensive remedy any hog raiser can use.

Its use by thousands upon thousands of hog raisers everywhere has resulted in unanimous and enthusiastic praise over the truly wonderful results attainable by regularly feeding Merry War Powdered Lye.

It is to be regretted that some commercial lye makers and some dealers are trying to persuade hog raisers that any lye will do as well for hogs as Merry War Powdered Lye.

Merry War Powdered Lye is especially prepared by a scientific secret process in which is contained just the right combination to produce healthy, fat hogs. The makers of regular commercial lye do not understand the combination and lye preparation necessary to produce these results.

Some dealers not familiar with the difference between Merry War Powdered Lye for hog use and other lye have been known to recommend the use of other lye in cases just because they did not happen to have Merry War Powdered Lye in stock at the time. This is a grave mistake—do not permit your dealer to make this error; be sure that you use only Merry War Powdered Lye for use in feeding hogs.

Hog raisers will find Merry War Powdered Lye a profit earning investment if fed regularly every day with the daily ration. The directions for feeding Merry War Powdered Lye should be carefully followed. They are: Mix one tablespoonful of Merry War Powdered Lye with slop for 10 hogs or ¼ can with a barrel of slop. Stir well and feed every night and morning. Where hogs are kept on dry ration, mix ½ can of Merry War Powdered Lye to each barrel of drinking water. If hog raisers will start litters from sound, healthy parents in new, clean quarters and begin feeding Merry War Powdered Lye from the time the young pigs are six weeks old, worms and Hog Cholera will henceforth be unheard of factors in figuring hog profits.

All who are interested in keeping their hogs free from disease should write to E. Myers Lye Co., Dept. 22, St. Louis, Mo., and ask for a free copy of booklet "How to Get the Biggest Profits From Hog Raising."

Only 40 Cents

Anti-Nicotine Calabash Pipe

THIS splendid Calabash is modeled on the lines of the original African Calabash Gourd. I have placed in it my famous Anti-Nicotine Bowl, made of a clay-like material which absorbs the nicotine and uses it to color the pipe like the finest Meerschaum. **Three for One Dollar** You do not have to "break in" this pipe. There are no vile fumes. It is always sweet, clean, dry. With German Silver mountings, 40 cents each, three for a dollar. Sent prepaid anywhere with a copy of our fine catalog of smokers' articles. Send today. Money back if not satisfied. H. Menges, The Smoker's Friend, 266 Menges Bldg., St. Louis, Mo.

ASTHMA CURED TO STAY CURED

No relapse. No return of choking spells or other asthmatic symptoms. Whetzel system of treatment approved by best U. S. medical authorities as the only system known to permanently cure the disease. **FREE TEST TREATMENT** including medicines, prepared for any one giving a full description of the case and sending names of 2 asthmatic sufferers. Address **FRANK WHETZEL, M. D.** Dept. N, American Express Building, Chicago.

GRAY HAIR Can be restored to natural shade to STAY DARK and will be beautified. Don't waste money and take risks with questionable dyes or stains. Get our BIG BOOK on the Hair. We will send it FREE, in plain wrapper, postpaid. Address Koskott Laboratory, 1269 Broadway, 268 A, New York, N.Y.

Rats and Mice.

It is not what they eat so much as what they waste that makes these rodents so very expensive to the farmer. Rats especially have the habit of rendering a bin of apples a complete mush of chewed bits in a surprisingly short time. Their habits are disgusting in the extreme, and from a sanitary as well as from a financial point of view war should be waged upon them most vigorously until they are exterminated.

They are too shrewd to fall into the same trap which has caught a mate, and one must be continually devising new tricks to get ahead of those that have grown wise. Covering the trap with old carpet, changing its location, varying the bait, smoking the trap, these and many other variations have been made, and still the pest seemed to increase faster than the inmates of the rat graveyard.

As a bait for either rats or mice we have found nothing which they like better than seeds of pumpkin, squash, cucumber or other seeds of the gourd family. If the mouse trap fails to spring easily, a drop or two of melted paraffine will fix this bait so firmly that the mouse must give an extra pull to dislodge it and so spring the trap.

But a good cat or two are, after all, better and less bother than traps. Even though they do not catch all the rodents, their presence is so annoying that those of the pests which do not fall a prey to their claws will finally hunt more congenial quarters. Their soft tread gives a constant feeling of insecurity which animals so cunning as those you wish to dislodge will very quickly appreciate. They are alert at night, just the time when the pests want to get in their work. Concrete walls will aid. Wire screen cloth is a barrier which they cannot penetrate. But cats are an enemy which they will not tolerate, even though it means the hunting of a new home.—Bessie L. Putnam.

Breaking the Daily Monotony.

Any round of duties, regulary performed, becomes at times monotonous. We may groan at the monotony, but the likelihood is that we will pray for it back again, once it is disturbed and our lives thrown into wholly new channels. I remember a woman who said she hated housework, despised the washing and scrubbing, the sweeping and dusting that were necessary to keep her house sweet and clean; and she detested cooking and went about the preparation of her meals in an indifferent manner. Then one day she and her husband disagreed about some trifling matter, and while the wife was away for an hour in the afternoon the man returned to the house, packed his suit case and departed. When the woman returned she found a note from her husband, saying that in one year from that date he would return with the hope that things would be different then. Well, the monotony of housework and cooking was broken for that woman all right. She said that when she saw her neighbors preparing their meals and going about their menial household tasks, she envied them from the bottom of her heart, and thought them the most blessed women to have someone for whom they could cook and clean. The husband came back before a month was past, for he truly loved his wife and she loved him. But from that time on the woman counted it her blessed privilege to do what before she had looked upon as drudgery.

Often we do much toward making our tasks unnecessarily monotonous. Why cannot a woman as well keep her kitchen work table before a window as up against a blank wall? She will have better light for her work and she will have an outlook. Suppose she sees no more than a patch of blue sky occasionally flecked with the white of a cloud, or the green branch of a tree with a bird tilting upon it, won't these carry her to another world than the warm kitchen? True, she may look and not see, but let her make it her business to see. And what suggestions just this bit of a view may give! How many promises brought to mind! What a symbol of resurrection and life is the leafy tree, so short a time ago stripped of all its leafy beauty! What a reminder of heavenly care is the tilting bird, for the Father is mindful of every one that perishes! You see, monotonous though the task in itself may be, we can keep our thoughts from tracking always along the same dead level.

It is true in whatever we do. If we go to the store every day, there may be several roads that lead to the store and we can take them turn about and we can open eyes and ears to things of interest on the way. And also to humor. There are so many funny things in the world. Why, we are very funny ourselves, if we could only see it. How many good laughs we miss because we go along so consumed with serious thoughts about our own little selves and our own little lives that we do not hear or see the humor in things happening all about us. And what medicine a good laugh is! I have known a headache to be driven away by a hearty laugh. One girl cured a tendency to the blues and incessant grumbling by thinking several times a day of the funniest things she could and by keeping her eyes open for amusing things. Then she enjoyed them to the full and dwelt upon the humorous side until she laughed heartily. Those daily laughs straightened all the ugly kinks in her brain and now she can laugh without trying.

During this season there is a happy look on most faces and a feeling of good will thrills in the air. We have stepped out of our own little narrow road, so closely hedged in by self, to give of our substance and of ourselves to others. We are doing kind, good, little acts, that ordinarily we might not take the time or trouble to do. At the anniversary of the Savior's birth we are reminded of God's love for man, and so strive to show our love for our friend and neighbor.

We are having a wonderfully happy time over it all, but in a little while we will go back to that narrow road so closely hedged in by self. That is, unless we take the true meaning of the Christmas season into every day of our lives, allowing it to touch with new meaning every task and pleasure that comes our way. Then, indeed, will it be a Merry Christmas and a Happy New Year.—Janet Thomas Van Osdel.

Sister Woman!

READ MY FREE OFFER

My Mission is to make sick women well, and I want to send you, your daughter, your sister, your mother, or any ailing friend, a full 50-cent box of Balm of Figs Compound absolutely free. It is a remedy for the treatment of woman's ailments, and I want to tell you all about it—just how to use it yourself—right at home without any inconvenience—and the best of it is that it will not in the least interfere with your work or pleasure. Balm of Figs Compound is a remedy that has made sick women well and weak women strong, and I can prove it—let me prove it to you, and I will gladly do it, for I have never heard of anything that has, according to the abundance of testimonials at hand, so quickly and surely cured women's ailments. No internal dosing necessary—it is a local treatment, yet it has to its credit some of the most extraordinary cures on record. Therefore I want to place it in the hands of every woman suffering with any form of female weakness or diseases so common to women.

This 50c box of Balm of Figs Compound will not cost you one cent

I will send it to you absolutely free, to prove to you its splendid qualities, and then if you wish to continue further, it will cost you only a few cents a week. I do not believe there is another remedy equal to Balm of Figs Compound, and I am willing to prove my faith by sending out these 50-cent boxes free. So, dear reader, irrespective of your past experience, write to me at once — today — and I will send you the treatment entirely free by return mail, and if you so desire, I can readily refer you to many, who can personally testify to the great and lasting cures that have resulted from the use of this remedy. But after all, the very best test of anything is a personal trial of it, and I know a 50-cent box of Balm of Figs Comcound will convince you of its merits. Nothing is so convincing as the actual test of the article itself. Will you give Balm of Figs Compound this test? Write to me today, and remember I will gladly send you a 50-cent box of this remedy absolutely free. Address,

MRS. HARRIET M. RICHARDS, Box E 18, JOLIET, ILLINOIS

SILVER SECRET—Polled Durham bull. Age, January 4th, 1910, photo as junior yearling. First-prize winner and reaching junior championship honors in State Fair Circuit of 1911. Owned and exhibited by J. H. Miller, Peru, Ind. This is a sample picture of famous animals collected for publication in the Book of Live Stock Champions mentioned on page 8 of this paper.

At the National Wool Growers' Association meeting President Gooding said: "Wages in Australia are only 15 or 20 per cent. less than in the United States, but sheep owners there are allowed to fence the government range at three cents per head per year, and, owing to the fences, one man can care for five times as many sheep as in the United States."

TOBACCO HABIT CONQUERED IN 3 DAYS

I offer a genuine guaranteed remedy for tobacco or snuff habit in 72 hours. It is mild, pleasant, strengthening. Overcomes that peculiar nervousness and craving for cigarettes, cigars, pipe, chewing tobacco or snuff. Tobacco is poisonous and seriously injures the health in several ways, causing such disorders as nervous dyspepsia, sleeplessness, gas, belching, gnawing or other uncomfortable sensation in stomach; constipation, headache, weak eyes, loss of vigor, red spots on skin, throat irritation, catarrh, asthma, bronchitis, heart failure, lung trouble, melancholy, neurasthenia, impotency, loss of memory and will power, impure (poisoned) blood, rheumatism, lumbago, sciatica, neuritis, heartburn, torpid liver, loss of appetite, bad teeth, foul breath, lassitude, lack of ambition, weakening and falling out of hair and many other disorders. It is unsafe and torturing to attempt to cure yourself of tobacco and snuff habit by suddenly stopping—don't do it. The correct method is to eliminate the nicotine poison from the system, strengthen the weakened, irritated membranes and nerves and genuinely overcome the craving. You can quickly and easily quit tobacco and enjoy yourself a thousand times better while feeling always in robust health. My FREE book tells all about the wonderful 3 days Method. Inexpensive, reliable. Also Secret Method for conquering habit in another without his knowledge. Full particulars including my Book on Tobacco and Snuff Habit mailed in plain wrapper free. Address:

Floral Gossip.

A single plant well cared for is worth more than a dozen of neglected ones. The woman who is eternally looking her plants over, noting the fading of a single leaf or the appearance of a stray insect, may be called a crank; but she knows what she is doing, and her plants thrive as a result. House plants to do their best need more than the regular amount of watering; individual oversight tells every time.

If you have a plant which is especially ornamental as to foliage, do not expect the blossoms to be equally charming. The dual-purpose cow is still a debatable question, and we must not expect to find all the good qualities summed up in a single plant any more than we can hope to have the acme of beef and dairy excellence concentrated in one animal.

Of the many varieties of coleus, no plant is improved by the inconspicuous blossoms, which sap some of the strength from the foliage. The ornamental foliage geraniums are not the ones which furnish the gay flowers. The farfugium loses its chief charm if allowed to perfect its cluster of small yellow flowers. Even the far-famed century plant is a delusion and a snare so far as flowers are concerned, though, happily, it seldom flowers in cultivation in the North. But the blossoms are of a greenish yellow, coarse, and anything but attractive.

The lesson is that we should make up our minds which we prefer, flowers or foliage, and choose accordingly. Not that there is never a beauty in the combination, for in almost every instance the two taken as nature devised are admirable. No other leaf could be more beautiful with the gay orange or scarlet nasturtium than the peculiar green one accompanying it, while the delicate tracery of the cypress vine is fully in keeping with the star-like blossoms. Yet any marked elaborateness of leaf shows an inferior blossom, and vice versa.

At this season the Chinese lily is a favorite, and there are many methods of growing these bulbs, each bringing good results. The main thing is to get a robust growth rather than an abundance of long, slender leaves with comparatively few flowers. If the plants are grown in water, care should be taken on the start to prop the bulbs up firmly with stones, for as the roots increase in size the tendency is to lift the plants out of the water unless care has been used to prevent. A few bits of charcoal mingled with the pebbles or concealed by them will tend to keep the water pure and sweet and obviate the necessity of renewal once or twice a week, as would otherwise be necessary.

Whether grown in water or soil, the plants should be placed in a dark room for two or three weeks until root growth is fully established. Then bring them to the light, but keep in a cool room if possible. The plants grown in soil are more robust, though the rate of growth is slower.

What shall we do with the bulbs after they are done blooming? All authorities concur in that if they have bloomed in water it is best to throw them away. The drain of flowering has been so great upon the plant as to weaken its vitality and interfere with its ripening properly. It will never again produce first-class blossoms. If the bulb has been grown in soil, condemning it for future use is not quite so pronounced; yet there is little hope that it will ever prove satisfactory again for forcing. No bulb does that. It might be set out of the way and allowed to ripen as it will and planted in the ground as soon as the weather permits. Yet it is doubtful if even this pays. For there is a knack in growing first-class bulbs which only experts understand. And with those warranted to do good work so cheap few will care to try raising those which are only of medium quality, unless it be through love of experiment. — Bessie L. Putnam.

Every-day Helps in the Home.

Every housekeeper should have a good-sized chamois leather to use as a dust cloth, as it not only removes the dust but is an excellent polisher.

To keep the windows shining, go over them with a soft cloth wrung out of clear, warm water, and then rub with a soft chamois skin wrung out of clean, warm, soft water, and this will leave the glass bright and shining.

Your matting will last twice as long if it is always swept crosswise, and then you can get it cleaner, and a good way to sweep the carpet without having any dust is to put some newspapers in water, then wring them out, tear into small pieces, and throw over the carpet, and the paper collects the dust and leaves the colors of the carpet brighter.

If there are children in the family and you have a nice floor covering on the sitting-room floor, a good way to protect it is to cover the center of the room with a large square of denim, and this is made by sewing several widths of the desired length together.

If rugs have a tendency to curl up at the edges, sew strips of stiff buckram along the edges; and one of the greatest helps in the home during the winter months is to have plenty of rugs to protect the floor coverings, and quite a number of these can be made with very little trouble or expense, and there is no better way to use up the old clothes and scraps of all kinds. It takes only a short time to prepare balls enough for several woven rugs, and these can be made as plain or as pretty as desired; but the easiest way to make a rug is with a solid center and a striped border. A rug that has done good service was made with a dark red center and entirely of woolen pieces, and all the pieces that were not red were colored a rich dark red with Diamond dye for wool, and as all the pieces did not take the colors alike, the shaded effect was very pretty, and this rug was woven with black warp, and the warp was knotted at the ends of the rug to form a fringe. Another was made of all cotton pieces and with a solid dark brown center, and the dyes for cotton were used for coloring these pieces, and the rug was woven with red warp, and the woven rugs seem to be more popular than any other kind just now. Only stout material should be used for rugs, as they are usually placed to protect the carpet and receive the hard wear, and it pays to get the best warp, as it looks better and will last longer.—M. A. T.

Plants True to Name.

Buyers of nursery plants are confronted with the problem of securing the varieties of fruits and shrubs they want. True, it is not difficult to find the names of the varieties desired in the catalogues. But after carefully unpacking, planting and cultivating, too often only disappointment awaits us at fruiting time. Because of these experiences with unscrupulous growers of nursery plants the purchasing public has rightfully grown suspicious. The result is that they have placed a premium on the man and his stock whom they can trust implicitly. It is, therefore, with considerable satisfaction that we commend the stock of W. F. Allen, of Salisbury, Md., to our readers.

Mr. Allen has 120 acres planted to strawberries alone, in which there are over 100 varieties. While he has stood by many of the old standard varieties of proven worth, he has produced many new ones of great excellence.

Besides strawberries, Mr. Allen grows raspberries, blackberries, gooseberries, currants, grape vines, California privet and other small shrubbery on a large scale.

While Mr. Allen is probably the largest grower of small fruits in America, he does not sacrifice quality and accuracy to maintain his position for quantity produced. His advertisement appears in our columns, and we suggest anyone wishing to buy any nursery plants will do well to write for the catalogue. Address, W. F. Allen, 116 Market street, Salisbury, Md.

"Forestry in Nature Study" is the title of Farmers' Bulletin No. 468, issued by the United States Department of Agriculture.

Prime sorghum at 40 cents a gallon was paid for consignments received at St. Louis late in December.

$1 Worth of Mayr's Wonderful Stomach Treatment FREE

CENTURY MFG. CO., Dept. 999, East St. Louis, Ills.

TEXAS-BRED BRANDED GRADE HEREFORD CATTLE (of the old L S brand)—Sold Monday, December 11th, at St. Louis National Stock Yards by Clay, Robinson & Co. at $9.35 per 100 pounds; record price on that market for cattle weighing above 1,600 pounds. Purchased through Clay, Robinson & Co.'s Kansas City house when yearlings as feeders, and fed to perfection by J. N. Runkle, of Industry, Ill., who is sitting on the fence. Mr. A. J. Milton, on the right, is the salesman, and Wm. Cassell, buyer for Morris & Co., is in the center.

Brazil to Raise More Beef.

Brazil, in South America, is an immense country, and the government caters to monopolies. One ranch of 9,000,000 acres is being established, and when fairly stocked will have 500,000 cattle. The headquarters of the syndicate will be in the city of San Paulo, 250 miles north of Buenos Ayres. The head of the concern is Murdo McKenzie, of Colorado, former manager of the Matador Cattle Company, who will receive a salary of $50,000 a year.

The Corn Market Situation.

Chicago is the indicator of the corn market, and said indications are not so bad. What did corn sell for December 30th, 1911? The answer is 68 cents a bushel; and on December 31st, a year ago, 46½ cents; on December 31st, two years ago, 61¾ cents. What does the Board of Trade expect corn to sell for, May 31st, 1912? The answer is 63½ cents. What is the expectation for July 31st, 1912? The answer is 63½ cents.

There is not enough money in the country to buy better information. If, on December 30th, 1911, Mr. Patton or Mr. So-and-So determined to corner the corn market he would start with these figures and he would consider how far he could change them by trading or other influences. "What do you think of the Chicago corn market quotation?" was asked of a grain buyer. He answered: "They are the real thing." "How are they made?" "They are made by records of contracts day by day. The last price paid is the last quotation, and every purchase is made with money."

The corn crop of the year 1911 was five hundred million bushels less than the year before, but the market indicates no shortage. There will be a shortage on many a farm, however, before the next crop is harvested, and corn ought to be raised to the greatest possible extent in the year 1912 in the interest of the farmer.

The Oats Situation.

In forty-seven years the highest price for oats was 90 cents (greenbacks) in May, 1867, and the lowest price was 14¾ cents, in September, 1896. In neither instance were the prices caused by large or small crops. The crop of 1867 was not small, and the crop of 1896 was not large.

Of recent years the size of the crop has had more to do with the price than formerly. The crop of 1909 being large, sold at moderate prices; the crop of 1910 being the largest ever known, sold at low prices; and the crop of 1911 being rather light, is selling at strong prices.

On December 30th, 1911, at St. Louis, cash oats were quoted at 48 cents, against 50½ cents a bushel the month before, 31½ cents December 31st, 1910, and 45½ cents on December 31st, 1909. So much for cash grain sold on delivery at St. Louis.

At Chicago, where the great grain trading is done, the December oats option was closed out at 46½ cents, being about 16½ cents above the same quotation the year previous.

In regard to the future, there were only two living indicators on December 30th, 1911; one was the May, 1912, quotation, 47⅝ cents, and the other, July, at 43⅝ cents. These are indicators that the men who deal in grain believe there will be a pretty good oats crop this year.

WATCH RING & CHAIN FREE

MAY MANTON PATTERNS.

ery Elegant Pattern Service, With Full Instructions For Ordering and Making.

This is the best pattern service, and we re very much pleased to obtain it for our iends and patrons. Each pattern is new nd original. In this edition we present for onsideration twenty seasonable patterns solutely up-to-date, with directions for dering and quantity of material required.

FASHIONABLE WINTER DESIGNS.

No. 6971—7224.—Chiffon velvet is extremely shionable this season and is always becoming, but this model is a good one for mpler fabrics as well. White broadcloth ould be lovely made just in this way with ce for the guimpe portions, or French rge could be combined with velvet or ith lace or with fancy silk.

No. 7229.—The frock that is made with gh or Empire line is extremely becoming the younger girls and is greatly in vogue. his dress is made of striped challis with alloped edges and chemisette of tucked uslin banded with lace; but any pretty asonable material is appropriate.

No. 7253.—The narrow circular skirt is uch liked this season and is treated in any ways. This one shows fringe applied indicated lines that gives the effect of apery. Crepe de chine with wide silk inge and the lower part of the skirt faced ith velvet would make an exceedingly ndsome effect.

No. 7214—7166.—Just such a costume as is one belongs in every woman's wardbe. It is practical and very useful. It is ouble-breasted and can be made from the vorite serge or cheviot, from plain color well as from mixtures and the collar and ffs and revers can be treated in a number ways. They can be of velvet or satin, or the material of the coat. Plain colored oadcloth on mixed suitings and serge is uch liked and champagne or chamois lor is exceedingly smart.

No. 7208.—The double-breasted reefer coat is a smart one for the little boys and thoroughly comfortable. A great many different materials are being used for such coats. Frieze is a favorite, mixed cheviots are being much worn, and what are known as overcoatings, herring-bone stripes and diagonal mixtures are being much used.

The price of each pattern is 10 cents.

SUITABLE DESIGNS FOR ADULTS AND CHILDREN.

No. 7237.—Full sleeves joined to the blouse below the shoulder line make one of the very latest features of dress. It can be made without the peplum and is equally well adapted to the high and natural waist line. It is made of satin with the revers and belt of velvet and the chemisette of lace.

No. 7152.—The blouse suit is always one that the little boy likes to wear. This one is made of dark blue serge with collar and cuffs of white, but cuffs of the same are somewhat more practical, and the collar, being adjusted, always can be of white linen. Both the blouse and the knickerbockers are extremely simple. Serge, cheviots, heavier washable materials and shepherd's check are liked by all mothers.

No. 7221—7215.—The evening gown made with a long tunic is always a beautiful one and is one of the smartest of the season. This would be beautiful made of chiffon, bordered and plain, combined with velvet ribbon with crystal trimming.

No. 6963—7149.—Short tunics that suggest the Greek idea are very pretty for young girls. This one is made of crepe meteore and the blouse is trimmed with little silk braid and iridescent beads. Pretty, light-colored crepe de chine or chiffon broadcloth would make up charming and smart in the extreme.

No. 7225.—Sleeves that make a part of the blouse yet are not distinctly in kimono style are among the newest and latest. Rose-colored cashmere or voile would be charming, and light-colored cheviots and broadcloths are being much used for dresses of the sort.

The price of each pattern is 10 cents.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.
I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial; and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H ▪ ▪ Notre Dame, Ind., U. S. A.

GRACEFUL GOWN AND NEW SKIRTS.

No. 7227.—This simple overblouse closed under the arm is one of the latest, and can be used in combination with the tailored suit, made up in broadcloth, velvet, silk, satin or crepe de chine, and can be worn over any blouse, consequently becomes adapted to daytime and evening occasions.

No. 7204—7149.—The peplum blouse is an unquestioned favorite. It appears in many variations, but this one is exceptionally smart. It is made of French serge, and is such a favorite, and is trimmed with soutache braid. Dresses such as this one are made from many different materials, but light-weight serge and broadcloth are pronounced favorites for simpler occasions. For more dressy ones can be used messaline, crepe de chine and cloth in white or a pale color.

No. 7223—7222.—Satin as trimming for wool is among the best-liked effects of the season. Here is a gown that shows it combined with checked voile and there is additional trimming of embroidered batiste that gives a very dainty effect. This model could be made more elaborate by using silk in place of the voile, or, again, entirely different materials could be combined. Velvet could be used in place of satin and the gown proper made from striped silk, of plain crepe de chine or any similar material.

No. 7242—7232.—French serge makes one of the best-liked materials for afternoon dresses. If the high collar is not liked, the neck can be finished without and with short sleeves. This pretty and attractive model can be made of velvet, velveteen or corduroy.

No. 7236.—The skirt that is overlapped in place of being seamed is a fashionable one. The skirt is an excellent one made of velvet, velveteen, corduroy, serge or broadcloth.

No. 7143.—The apron that is both pretty and practical is one with many advantages. This one is made of white linen with the bands of embroidery in a little cross-stitch design and would be childish and attractive. The front can be cut in one piece or in two, with a seam in the center, as best suits the material. The back edges are finished with hems and the pockets are arranged on indicated lines.

No. 7211—7171.—This model would be an excellent one made of chiffon broadcloth, crepe de chine or voile. If the fancy trimming material is not liked, plain velvet or satin could be substituted, or striped silk could be used to make a good effect.

No. 7217.—The boy's overcoat that can be worn with a slightly open or closed neck, as occasion demands, is sure to be comfortable. This one is made of herring-bone material and finished only with stitched edges, but it can be made with collar of velvet, if liked. Mixtures and plain colors both are used for coats of the kind. Blue and Oxford chinchilla are warm and serviceable.

The price of each pattern is 10 cents.

Please address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

IMPROMPTU.

"If I should kiss you," asked the man,
"My dearest girl, what would you say?"
"I don't know," answered Mistress Anne—
"My best things are extempore!"
—Cleveland Plain Dealer.

"This year woman proposes and we hope accepts the mitten as gracefully as the men do if she has to."—Globe-Democrat.

SHORES-MUELLER CO.

Whenever you see an Arrow think of Coca-Cola.

A Judicial Somersault.

Broadway heard with some surprise that H. A. Du Souchet, the author of "The Man From Mexico," is a candidate for Justice of the Peace in the hamlet in which he pays taxes in New Jersey. Why should he want to be a Jersey Justice has the big street guessing, says the New York correspondent of the Cincinnati Times-Star. The obverse of the proposition is the wonder why Jersey should want him to be a justice. "Away back in 1878," said one of the old-timers, "Du Souchet was a Justice of the Peace down on the New Mexico line. In those days tarantulas and Indians were the chief native products of that region. Residents wore their guns handy, and train robbery was considered a profitable and not discreditable form of speculation. One day the Chico Kid, being very drunk, insisted on being arrested. The Marshal didn't want to arrest Mr. Kid, but the latter insisted.

"'I wanna plead guilty to drunkenness and disturbin' thuh peace," said the Kid to Justice Du Souchet.

"'I will have to fine—' began Du Souchet.

"'What?' howled the Kid. Fine me? Why, you pin-eared, yaller-livered, pigeon-toed ole maverick, there ain't enough Justices in New Mexico to make me pay a fine. I—'

"But Justice Du Souchet interrupted him urbanely.

"'I was about to say,' said he, 'that I will have to find time to get real well acquainted with you, Mr. Kid. In the meantime, suppose we go and have a drink.'"

"Who's Who?" and "What's What?"

Several years ago a mother decided that, so far as possible, she would have her two boys answer their own questions, beginning with "who" and "what." Every woman who has dealt with growing children knows that a large share of the questions begin with one of these words. So Mrs. Brown went to a neighboring printing office and had cut for her several hundred cards of a convenient size for handling and filing. Then she went to a stationery shop and purchased guide cards, on the raised tip of which she had her boys print two sets of the alphabet. With their own tools the boys then made a cabinet containing four drawers. Two of these were given over to "Who's Who?" and the other two to "What's What?" and the respective drawers were so labeled. Then the boys began to keep their ears and eyes open. If they saw in the paper the picture of an inventor or any other person of note, they immediately cut out the picture with whatever interesting notes might accompany it, pasted it on one of the blank cards and filed this card away in its alphabetical place in the "Who's Who?" drawer. Or it might be an article on aluminum or astronomy that would attract the boys. Such things would be clipped, pasted on the cards and filed in the "What's What?" file in proper alphabetical order. In time the boys had a handy reference file which they made frequent use of and which they looked upon as especially valuable because they had themselves compiled it. And it did have a value to them that no encyclopedia could have. Its compilation had taught them to read discriminatingly, placing only what they considered of real value in their file. It had taught them self-dependence in gaining information, and it had taught them the value of the filing system and the need of accuracy in keeping it up-to-date in order to make it of greatest benefit.

The boys are a healthy, energetic pair, overflowing with life, and needed just some such outlet for their activity. On rainy days or winter evenings they often work on their files and get so much pleasure out of them that they never guess they are really attending one of the best schools in the world.—Janet Thomas Van Osdel.

The "Spitting Devil."

"I am going to let you decide, my boy," said Jack's mother. "This telegram says that grandmother is very ill and wants me to come. Father may not be back before midnight. Will you be afraid to stay alone with little Janie?"

His mother couldn't see the lump in his throat that Jack bravely swallowed. She only heard his "Of course I'll do it, mother."

The house that always seemed so cheery with mother it it was a gloomy enough place without her. The nearest neighbor lived three miles away, so there were no other children to play with. Between doing up the chores and amusing Janie the morning passed somehow. At noon he brought out the bread and milk and the plate of ginger cookies for lunch. He pulled little Janie's chair up to the table near the window and they began their meal. Suddenly Janie held out her arms in the direction of the window and called: "Tum, pretty kitty! See, Jack, pretty kitty!"

Jack looked and saw something that made his little heart beat hard and fast. For there, sniffing around the outhouses, was a huge wildcat. Jack knew the beast would soon come to the house, for the cattle were out on the range and there was nothing in the barns to satisfy the appetite of the wild creature. Quickly the boy ran to the doors and windows and made them fast, although he well knew a pane of glass or a door lock would not keep out the cat if he wanted to get in. His father's gun and powder horn were on the shelf, but he did not know how to use the gun. And then, like a flash, he remembered the "Spitting Devil" which his father had made for them one Fourth of July. It was harmless, but so awful!

As quickly as his shaking hands could do it, Jack emptied the powder from his horn into a big pan and wet it. Then he grabbed up the broom and jammed the wet powder between the stalks until the broom was honeycombed with powder. Next he picked up an old flannel dust-cloth and wound it around the broom. Then he poured a little coal oil over it all.

While he worked he watched the wildcat and he now saw him turning toward the house. He must act quickly. Rushing to the kitchen stove, Jack seized a stick of burning wood and threw it on a stone near the kitchen door. As he stood looking through a crack in the door waiting for the cat to draw near enough, he could hear Janie, still in her high chair, talking to herself and calling the big kitty to come to her. That made him feel very brave in spite of the fact that his teeth were chattering and his knees nearly knocking together.

But the cat was turning onto the patch leading to the kitchen door. Jack threw open the door and thrust the prepared end of the broom upon the burning stick of wood. Instantly it burst into flame and the whole thing began to spit and sputter. There would be no explosion, just a fierce spitting, but the wildcat did not know that, and as Jack rushed down the path, pointing the "Spitting Devil" directly at him, the brute stopped short, stood staring, stupefied and fascinated for a moment, then he dropped his tail between his legs, turned and made for the woods as fast as he could go.

Jack's father got home about dark, and when he heard the story, he was sure he had a little hero for a son.

Jack has done some big hunting since that day, but he says he has never seen another animal so frightened as was the wildcat when it saw the harmless "Spitting Devil" in the hands of a scared little ten-year-old boy.—Janet Thomas Van Osdel.

Her Offering.

She was a plain, common-sense country girl who had been trained to sew in the old-fashioned way, making quilts in which there were no "cat's teeth," and doll's clothing which "fitted to a T." Later she was her own dressmaker, and when the high school stage was reached she picked up dollars for her own dainty dresses through sewing for neighbors.

And when others were making Christmas presents she turned aside from the dressmaking which would bring in money for the graduating outfit next June, and from the dainty gifts she would have been glad to make for friends, and devoted her attention to a little waif whose whose mother was kept so busy supplying food for the family that she had no time for dressmaking, even if she had had the ability. The little one had never owned a dress that was neatly made, and because of lack of clothes she had been dropped out of school.

From one of her own dresses the school girl made a neat, serviceable dress for the child. A mate volunteered from her own and a sister's outgrown clothing a thick white dress for next season and a winter dress for "best." Her mother furnished new underwear. A friend found a pair of outgrown arctics. From a bit of bright yarn was evolved a neat skating cap, knit large enough to protect her ears, and there was enough yarn left to knit a pair of mittens. Odds and ends that were doing no good were collected and put to good use for the wee mite. The result was that when her original benefactor was ready to make her trip to the neighborhood where the child lived, a new suitcase was found necessary, her own being entirely filled with clothing for the child.

And the little one's pleasure at receiving the dainty dresses which fit as well as those of other children was a sight that will long be remembered by her fairy godmother. "Now you can go back to school," exclaimed her mother, and the child was delighted with the prospect.

The thought came to those who had seen the girl's labors, and noted how skillfully she had refashioned the old clothing to look almost as well as new, that in every community there is material for some of this home missionary work, and that the doing of it is much better than spending the same time and probably more money in making Christmas gifts which are not really needed.

We are apt to look upon an article after it has passed the original stage of usefulness in our family as fit only to turn to some other use in the home, even if it be only carpet rags; and in the effort to thus utilize there are warm cloaks which are outgrown that might better be handed down to some little one needing them in the original form or remodeled.

It is always well when sorting over discarded garments to strive to find some one that they will still serve. In cities the rummage sales look after these things. But there is room in the country for generosity. Neither disgrace nor insult should attach to the plan. In some of the best families hand-downs are accepted in the true spirit. And certainly if the service of any article can be prolonged thus it is a pleasant duty to see that it is wisely placed.—Bessie L. Putnam.

At the close of the Old Glory sale held at Madison Square Garden, New York City, during the week ending December 2d, 1911, it was found that 778 head of light harness horses had passed under the hammer for a total of $327,200, an average of $420.50. No better prices have been realized at a public sale of horses in the history of the turf.

ELEGANT THIN MODEL 20 YEAR WATCH

Hunting case, beautifully engraved, gold finished throughout, stem wind & stem set, fitted with 7 ruby jeweled American lever movement, guaranteed 20 years, **$3.95** with long gold plated chain for Ladies or vest chain for Gents

Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

SELECTED POETRY.

THE JANUARY SONG.

old crow wingin' 'crost de sky so cold
an' gray;
clear his throat a little an' he holler
down good-day.
does his best at singin', but his music's
mighty pore;
has been out in de weather till his
throat is gittin' sore.
t he says: "Dem yuther birds dat made
de concert sweet an' gay
ne travel wif de sunshine; dey has faded
clean away.
singin's easy when de flowers is bloomin'
sweet an' strong,
t dey leaves me here alone to sing de
January song!"

says to him: "Ol' Mistah Crow, yoh
music's kind o' tame,
t I sho'ly does appreciate yoh tryin', jes'
de same,
r's always cheer an' comfort whar de
world is fine an' bright,
t de friends don't mostly linger when dey
takes away de light;
even if de song yoh sings ain't melody
clear through,
shows yoh good intentions. It's de bes'
dat yoh kin do.
when den sunshine birds again comes
loiterin' along,
hold kind recollections of yoh January
song."

—Washington (D. C.) Star.

THE PEASANT'S PRAYER.

e roan cow rests content under the trees
at shade the lane's end. Bumblebees
th golden thighs grip the sweet flowers
the sun-lighted bridal wreath. No
showers
ve laid the dry loam, and dust veils
e dragman's team as wearily it trails
e warping frame over the ocher ground
ping to the blue marsh edge. The main
sound
fitful creaking of the half-shadowed mill
at rests from labor, like a true bard, until
ne god's good wind comes on to bid it
move.
song but the faint cooing of a dove,
ely on the barn-ridge, mourning a mate.
re in my tired heart, early and late,
dows, dim lights, sounds of forgotten
years:
sorrow-songs from memory of tears.
ave not known great love—the less to
grieve—
hated aught but to its course must
cleave.
books of wisdom, mirth and things of
beauty
ould not give the hour forepledged to
Duty
ling on busy hands. Ill fares the Soul,
und my life of labor scroll on scroll
wonders I can not read, music unheard
my dull ears. How understand the word
night stars speak and language of the
winds?
ss is pasture, wheat bread. To other
minds
mbols of God, mystery divinely sweet;
us—man, cow, or bee—but straw and
meat.
e the gray toil; all sweet illusion yours.
grant me yet one dream—one that
secures
childish hope of comfort in the grave
love beyond! This gone, what do we
peasant's save?

—Ivan Swift, in the Outlook.

THE EDUCATED CATTLE.

vas punchin' cows one season, as I'm
very proud to state,
a ranch whose wealthy owner was a
Harvard graduate,
the punchers he selected, 'cept a couple
of guys like me,
s a lot of college students that had
taken their degree.

we taught 'em cattle punchin' and' they
taught us classic Greek,
we spent the evenin's learnin' of the
proper way to speak
en addressin' cows in Latin er in Arabic
an' such,
we learned to swear in Sanscrit, which
amused us very much.

ey filled us full of Horace an' of Mr.
Vergil, too,
our heads was fairly bustin' with the
Latin that we knew,
we used to sing the cattle little odes
that Horace wrote,
ich the same was very soothin' if you
struck the proper note.

en we went to town for pleasure an'
some pretty lofty jinks,
was allus usin' Latin as we ordered up
our drinks.
ough the people thought us locoed an'
plum crazy in the head
en we talked to 'em in language which
was lively though 'twas dead.

w the p'int of this here story is a simple
one to tell,
em cattle learned to listen when they
heard a Latin yell;
the calves they had that season
wouldn't take a single stride
less we wore a toga and a laurel wreath
beside:
we had to dress like Horace, which is
most amazin' hard
en your pony's kind of skittish an' a
buckin', nasty pard;
at last we got 'em herded in a manner
that would suit,
we coaxed 'em through the gateway by
a-playin' on a lute.

Says the owner: "This is classic," as we
went an' closed the gates;
"But I ain't a-raisin' cattle to be college
graduates;
So hereafter we'll punch cattle speakin'
plain United States."

—Berton Braley.

MY GUIDE.

There is no faith in this desert waste,
For the winds have swept the shifting
sands;
The trail is blind where the storms have
raced,
And a stranger, I, in these fearsome
lands.
But I journey on with a lightning trend.
I do not falter nor turn aside;
For I see his figure just ahead—
He knows the way—my guide.

There is no path in this trackless sea;
No map is lined on the restless waves;
The ocean snares are strange to me,
Where the unseen wind in its fury raves;
But it matters naught; my sails are set.
And my swift prow tosses the seas aside;
For the changeless stars are steadfast yet,
And I sail by his star-blazed trail—my
guide.

There is no way in this starless night;
There is naught but cloud in the inky
skies;
The black night smothers me, left and right,
I start with a blind man's straining eyes;
But my steps are firm, for I can not stray;
The path to my feet seems light and
wide;
For I hear his voice: "I am the way!"
And I sing as I follow him on—my guide.

—Robert J. Burdette.

WOMAN.

To man a woman is a source
Of constant glad surprise.
He always finds new meanings in
The riddle of her eyes.
And though at times she will not do
As he would fain demand her,
He likes her all the more because
He cannot understand her.

She fascinates him every time
And wins him with her wiles.
She drives him to despair and then
She cheers him with her smiles.
And though she sometimes is perverse,
Though he at times may flout her,
Of this you may be very sure—
He'll never be without her!

—Somerville (Mass.) Journal.

THE DANCE PROGRAMME.

Caller, let no echo slumber.
Fiddler sweatin' like a steer.
Hoof a-poundin' at the lumber,
Makin' noise the stars could hear.
Hug the gals up when we swing 'em,
Raise 'em plum off of their feet,
Balance all, ye saddle warmers!
Rag a little! Shake yer feet!
On to next 'un an' repeat!
Balance to the next in waitin'!
Promenade an' off you go!
Seat yer pards an' let 'em blow.

—Springer, N. M.

A SPIRITUAL SUGGESTION.

There comes a Spring for every snow,
For every death a life hereafter;
And they whose tears have bitterest flow
Shall fill their lips with sweetest laughter.

—Rose Terry Cooke.

Sorrow of the Microbes.

"The germ theory, thanks to the study of hygiene in the schools, is familiar even to our children," said Dr. Charles T. Atkens, President of Susquehanna University, in an address at Selinsgrove.

"Two little Selinsgrove urchins played in their mother's kitchen the other day while the cook boiled some water. Hearing the sound of the boiling, they drew near the gas range.

"'What is in that pot?' asked the first urchin.

"'Water,' said the second. 'Just water.'

"'What is the sound I hear, then, brother?'

"'Sister, it is the microbes crying.'"—New York Tribune.

He Knew.

"The object of the average explorer seems to be to acquire enough material for a lecture."

"Yes; that is my wife's aim when she explores my pockets."—Louisville Courier-Journal.

Nifty.

"How does this noted healer, who cures his patients by touching them, differ from a regular physician?"

"Why, he touches them before he cures them." — Cleveland Plain Dealer.

FARM with a TYPEWRITER

IT PAYS TO BE UP-TO-DATE

Pen-written letters are decidedly out of date for a live, wide-awake farmer.

WITH A TYPEWRITER YOU CAN

Sell your apples, potatoes, butter, eggs or stock—Typewritten Letters Bring Better Prices.

Order your 1912 grain, seed, machinery, repairs—Typewritten Letters Command Attention!

Trade. Work up a direct trade with town or city people by typewritten letters giving lowest prices.

Typewrite all your results. Know exactly what pays, what you spent, what you receive. Typewrite all accounts for easy reference!

Correspond. Typewritten letters look business-like and trustworthy. No better introduction than a good typewritten letter.

Copy Letters. A Typewriter will make a copy of your letter same time it writes. Copies protect you, remind you!

Educate the children. A Typewriter helps your boy or girl to spell, punctuate, write good English; fits them for good positions in city or town.

Improve the long winter evenings. Get busy with a typewriter. Let the boy or girl help you in your correspondence, etc

Typewriting Easy to Learn

You can learn to work the typewriter in an evening and end by writing a letter. Speed comes with use.

NOW'S YOUR OPPORTUNITY!

In all the 25 years we have been selling Standard typewriters we do not know of such a Big Bargain as this Standard $100 Machine for $26.

The Smith Premier Typewriter Co. recently put on the market a new model and took these No. 2 machines as part payment.

By an extraordinary deal we secured all they had. They have been thoroughly rebuilt, refinished, renickelled in our own factory. Now they Look Like New, Work Like New and will give perfect satisfaction.

Our Guarantee is equal to the manufacturer's original guarantee.

IMP. BRITISH GLORY, 180,304—Shorthorn bull. Owned by C. F. Curtiss, of Rockwood Farm, Ames, Iowa. BRITISH GLORY was shown at nine Fairs in Central Illinois and won nine firsts and eight sweepstakes prizes. He has been at the head of the Rockwood Farm Herd of Shorthorns during the past five years and has proven himself a sire of exceptional merit. This is a sample picture of famous animals collected for publication in the Book of Live Stock Champions mentioned on page 8 of this paper.

ITCH-ECZEMA FREE TRIAL

(Also called Tetter, Salt Rheum, Pruritus, Milk-Crust, Weeping Skin, etc.)

ECZEMA CAN BE CURED TO STAY, and when I say cured, I mean just what I say—C-U-R-E-D, and not merely patched up for awhile, to return worse than before. Now, I do not care what all you have used, nor how many doctors have told you that you could not be cured—all I ask is just a chance to show you that I know what I am talking about. If you will write me TO-DAY, I will send you a **FREE TRIAL** of my mild, soothing, guaranteed cure that will convince you more in a day than I or anyone else could in a month's time. If you are disgusted and discouraged, I dare you to give me a chance to prove my claims. By writing me to-day you will enjoy more real comfort than you had ever thought this world holds for you. Just try it and you will see I am telling you the truth.

Dr. J. E. Cannaday, 684 Park Square, Sedalia, Mo.

and Stock GROWER

My Farewell Car

By R. E. Olds, Designer

Reo the Fifth—the car I now bring out—is regarded by me as pretty close to finality. Embodied here are the final results of my 25 years of experience. I do not believe that a car materially better will ever be built. In any event, this car marks my limit. So I've called it My Farewell Car.

My 24th Model

This is the twenty-fourth model which I have created in the past 25 years.

They have run from one to six cylinders—from 6 to 60 horsepower.

From the primitive cars of the early days to the most luxurious modern machines.

I have run the whole gamut of automobile experience. I have learned the right and the wrong from tens of thousands of users.

In this Farewell Car, I adopt the size which has come to be standard—the 30 to 35 horsepower, four-cylinder car.

Where It Excels.

The chiefest point where this car excels is in excess of care and caution.

The best I have learned in 25 years is the folly of taking chances.

In every steel part the alloy that I use is the best that has been discovered. And all my steel is analyzed to know that it meets my formula.

I test my gears with a crushing machine—not a hammer. I know to exactness what each gear will stand.

I put the magneto to a radical test. The carburetor is doubly heated, for low-grade gasoline.

I use nickel steel axles with Timken roller bearings.

So in every part. The best that any man knows for every part has been adopted here. The margin of safety is always extreme.

I regard it impossible, at any price, to build a car any better.

Center Control, Finish, Etc.

Reo the Fifth has a center, cane-handle control. It is our invention, our exclusive feature.

Gear shifting is done by a very slight motion, in one of four directions.

There are no levers, either side or center. Both of the brakes operate by foot pedals. So the driver climbs out on either side as easily as you climb from the tonneau.

The body finish consists of 17 coats. The upholstering is deep, and of hair-filled genuine leather. The lamps are enameled, as per the latest vogue. Even the engine is nickel trimmed.

I have learned by experience that people like stunning appearance.

The wheel base is long—the tonneau is roomy—the wheels are large—the car is overtired. Every part of the car—of the chassis and the body—is better than you will think necessary. No price could buy anything better.

Price, $1,055

This car—my finest creation—has been priced for the present at $1,055.

This final and radical paring of cost is considered by most men as my greatest achievement.

It has required years of preparation. It has compelled the invention of much automatic machinery. It necessitates making every part in our factory, so no profits go to parts makers.

It requires enormous production, small overhead expense, small selling expense, small profit. It means a standardized car for years to come, with no changes in tools and machinery.

In addition to that, by making only one chassis, we are cutting off nearly $200 per car.

Thus Reo the Fifth gives far more for the money than any other car in existence. It gives twice as much as some.

But this price is not fixed. We shall keep it this low just as long as we can. If materials advance even slightly the price must also advance. No price can be fixed for six months ahead without leaving big margin, and we haven't done that. The cost has been pared to the limit

Catalog Ready

Our new catalog shows the various styles of body. It tells all the materials, gives all specifications. With these facts before you, you can easily compare any other car with this Reo the Fifth.

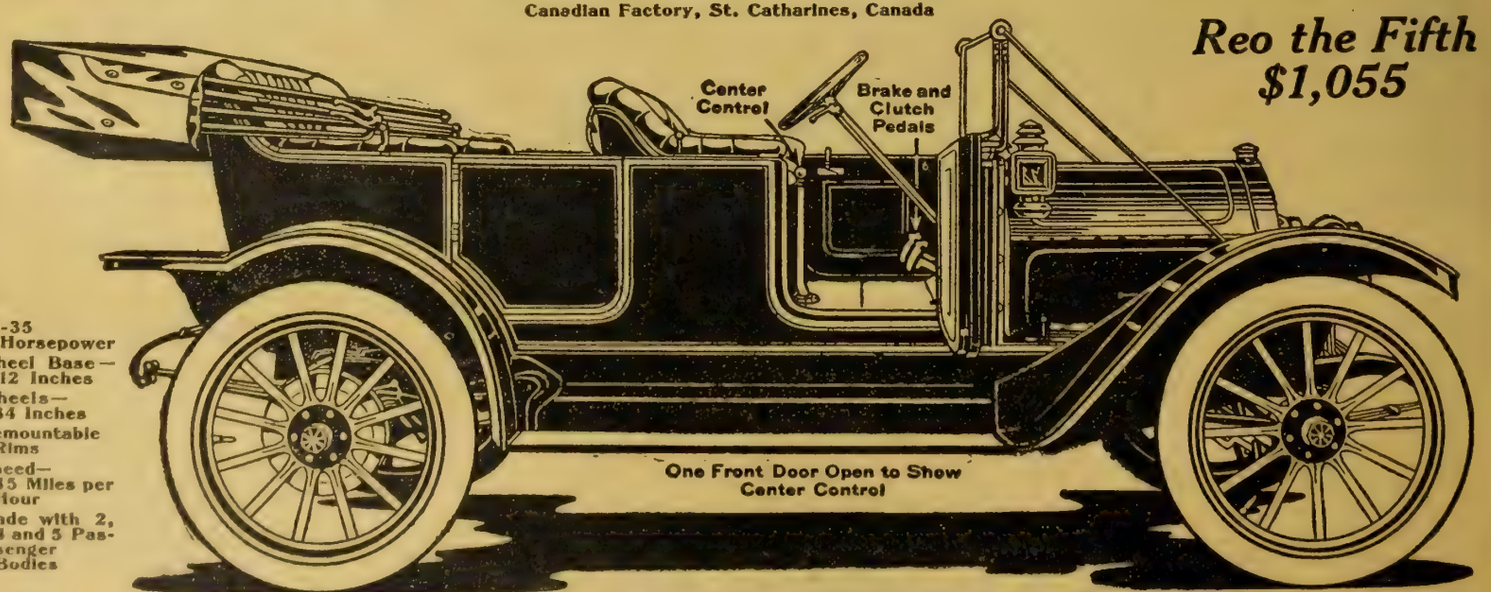
If you want a new car you should do that. Judge the facts for yourself. Don't pay more than our price for less value. After 25 years spent in this business, here is the best car I can build. And the price is $1,055. Don't you think you should know that car?

Write now for this catalog. When we send it we will tell you where to see the car. Address—

R. M. Owen & Co., General Sales Agents for **Reo Motor Car Co., Lansing, Mich.**

Canadian Factory, St. Catharines, Canada

Reo the Fifth $1,055



One Front Door Open to Show Center Control

30-35 Horsepower
Wheel Base—112 Inches
Wheels—34 Inches
Demountable Rims
Speed—45 Miles per Hour

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip-cover, windshield, gas tank and speedometer—all for $100 extra. Self-starter, if wanted, $25.00 extra.

Caring For the Apple Orchard.

The man that owns an apple orchard should become an extensive reader of literature touching its care. There are numerous mistaken ideas prevalent, which can only be eliminated from common practice by a fuller knowledge of cause and effect of different operations.

Take the matter of orchard cultivation. Some orchardists say it is always beneficial, while other orchardists say that it can be very easily overdone. To what extent it should be done will depend very largely on the richness of the soil and the supply of moisture the soil contains.

If the orchard is in very rich soil, the cultivation should be sparingly done, as too much cultivation will lead to a growth of wood that will be detrimental to fruit production. If the soil is not very rich, the cultivation can be freely given in the early part of the growing season, from April to the end of July. Cultivation should not be given later than the end of July for two reasons: First, a fall growth of wood may result, which would not have time to harden up before the stopping of growth in the fall. This will expose the new growth to winter killing. Second, the late cultivation will loosen up the dirt over the roots and the ground would not work back to a hard condition before it freezes up. The frost will strike much deeper than if the ground had not been disturbed late in the season. Often the killing of the roots by freezing results in the death of the tree.

The pruning of fruit trees is done at any time of year, but the winter is a good time, because the one that does the pruning has more time than he has in the summer. Some argue that the tree is dormant, and not therefore injured as would be the case in the summer time. It is doubtful if this is a matter of consequence. The bleeding of the tree in the growing season is not a serious matter; for it must be remembered that if a branch is not needed in the summer time it is continually taking sap out of the tree and its leaves are evaporating it into the air in large quantities. The loss from the evaporation through the leaves is probably much greater than the loss from the so-called bleeding. But as winter is a good time for this work, it is best to do it at that time.

A little pruning should be done every year, and a tree should not be permitted to go for six or seven years, with the idea of doing the pruning all at one time. This frequently results in so butchering a tree that will be set back for several years. A tree should not be allowed to get too thick, nor should it be pruned out so much that its branches will not protect its limbs from the sun.

In every orchard of considerable size, spraying must be resorted to, if the ravages of fungous diseases and of insects are to be prevented. The spraying, to be effective, must often be done in the spring, in the midst of the spring rush of work. But there is no avoiding this unhappy combination. The best way out of the difficulty is to make thorough preparation in the winter, so that when the day comes when the first spraying must be done, everything will be in readiness. The non-preparation beforehand is one of the prime causes of the neglect of the spraying operation. The details of the process must be learned by the study of many kinds of literature on many kinds of insects and fungoids. The spraying machine companies furnish a large amount of this kind of literary material.

Human Effort the Big Thing in Agriculture.

The great thing in agriculture is human effort. It is the variable factor that is responsible for the great difference in results obtained by different cultivators of the land.

There was a time when land in the West was worth a few dollars an acre only. The same land is now worth $100 an acre or more. The difference is due to human effort.

When the land was low in price it was just as valuable from the fertility standpoint as it is now; but the man had not come to take the value and market it.

We are learning that the great difference between two farms is not so much the amount of fertility in the soil as the difference in the men that are managing them.

It is not infrequently the case that one man makes a success of a farm where another man has failed. The writer knows of two different farmers, each owning a good farm, advantageously situated near a good-sized city. One man has made a great success of his farm, while the other man has just existed, but has been continually pinched for money.

The man who has only existed has done very little work in the last twenty years. He has had a boy working for him who has done most of the work on the farm. The owner has been taking life easy. He spends a large part of his time with his pipe and papers and much of the rest of the time is spent loafing about grocery stores in the city. He has kept out of debt because his farm is a good one, but his wife has been a slave to her household duties and has settled down to a life of semi-seclusion. She works from early morning till late at night and says her husband is lazy. The only kind of agriculture that suits this man is a kind that runs itself. He has a good-size orchard and a big pasture for the feeding of a few cows and other stock, as it is easier to have the cattle harvest the grass than to do it with machinery and human effort.

The other man has a good farm, but he is a worker. He finds less time for reading than he would like to have, but he is full of enterprise as to the productiveness of his acres. He carries on mixed farming and finds employment for himself from one year's end to the other. He employs considerable extra help to assist himself and sons.

His "truck" wagon is frequently seen on the streets exchanging agricultural products for money. It is said that he is very successful and that his bank account is a strong one. His wife is not forced to do all her own work and finds time and opportunity to take part in the social life of the community.

The farm of the prosperous farmer is a delight. The buildings are all well painted and the orchards and gardens well kept. Flowers bloom in the front yard. The owner can sleep in peace, for there is no mortgage on his place and the "wolf" is far from his door.

In the case of the comparison made it was not so much a difference in knowledge as in energy and enterprise. The man that had trouble to make a mere living was a reader of agricultural papers and books and talked big about how to do things. His information was all right, but he had not enough will power to resist the temptation to consider his own ease above everything else.

In agriculture, labor must always count for a great deal in the effort for success.

The *very latest* New York, Paris and London fashions, in fascinating array, are shown in the new "NATIONAL" 200-page Style Book which is *absolutely FREE* to you for the asking—FREE! Be sure to write and

Won a Third Corn Prize.

Clark Reibel of Arbela, Mo., won a third prize at the Missouri State Corn Show with ten ears of Yellow Dent Corn which he raised. The seed corn from which this prize corn was grown was a single pound furnished him by The National Farmer and Stock Grower as a subscription premium in February, 1911. The original seed came from the farm of D. L. Pascal, De Witt, Iowa, who has a prize-winning strain of Reid's Yellow Dent which he obtained from the originator of that breed of corn. Last year Clark Reibel won two prizes with seed corn furnished by this office.

From Argentine to Liverpool.

Developments in connection with the importation of meat from Argentine have been so rapid of late, says the London (England) Meat Trades Journal, that there is almost feverish anxiety among the shipping companies engaged in this trade to enlarge their fleets, whilst the formation of new combines for the purpose of securing a wider market for the traffic is an indication of the efforts that are now being made to control shipments of meats from the South American Republic. There are at present 139 vessels holding the refrigerating machinery certificate at Lloyd's Register, mostly carrying cargoes from Argentine, and twenty-seven are being constructed. A steamer was recently launched at Hartlepool for the Argentine trade which is said to be the largest meat carrier ever built. It has an insulated carrying capacity of over 405,000 cubic feet. She is to be employed in the new fortnightly express service between River Platte and Liverpool.

The three most important points for the export of cotton are Galveston, New Orleans and Savannah.

In the culture of flax, Russia is first, and the other countries are nowhere.

Look for Rose Premiums on page 31.

THE SEWING AWL.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Missouri Farms and Improved Acreage.

According to the census of 1910, there are 277,244 farms in Missouri, 34,591,241 acres in farms, of which number 24,581,186 acres are improved. The average size of a Missouri farm is 124.8 acres. The average value of land per acre is $41.80, and the average value per farm is $7,405.

ONE THOUSAND BROOD MARES

To be Sold at Public Auction at the St. Louis National Stock Yards.

During the last week in February, Monday, 26th; Tuesday, 27th; Wednesday, 28th; Thursday, 29th; and on Friday, March 1st, Messrs. Campbell & Reid and Western Sale Stables Company will hold an extraordinary sale of horses at the St. Louis National Stock Yards. The offerings will consist of the usual supplies of domestic horses for sale in the auction ring, only that a large number of shippers will concentrate a fine line of geldings at this sale. There will also be some Western range horses and range mules. The principal interest in this sale, however, will be a round thousand of brood mares from Illinois, Iowa, Kansas and Nebraska, which will arrive in good condition and be sold in bunches to fit the market. This is practically a sale of farmers' horses, assembled at the greatest horse concentration center at the least possible expense to be charged to the animal. This will be the first actual brood-mare sale at auction at a first-class market center. Later on some advertising will be done to bring buyers and sellers together. All who are interested should address J. J. Searcy, Sale Manager, National Stock Yards, Ill.

Cash Wheat at St. Louis.

On January 31st 1912, cash grain at St. Louis sold as follows: No. 2 red wheat, $1.00 to $1.01¼; No. 3 do., 98½ to 99½c.; No. 4 do., 94 to 97c.; No. 2 hard, $1.03 to $1.12; No. 3 do., $1.01 to $1.12; No. 4 do., 93 to 98c. No. 3 corn, 65c.; No. 4, 64c.; No. 3 yellow, 65 to 65½c.; No. 3 white, 66 to 67c. No. 2 oats, 52½c.; No. 3, 51½c.; No. 4, 50½c.; No. 2 white, 54 to 54¼c.; No. 3 do., 53½c.; No. 4 do., 52 to 52½c.; standard, 53¾ to 54c. No. 2 rye, 95¼c.

Live Stock Shippers' Movement.

On Saturday, February 17th, there will be a meeting of live stock shippers at Mexico, Mo., to take into consideration the recently advanced commission charges on cattle, hogs and sheep at the St. Louis market. It is the intention to organize a Missouri Shippers' Association and probably establish a commission company. The committee in charge of a working plan consists of H. D. Wilcox, of Randolph; Henry Gant, of Audrain; J. F. Rumans, of Monroe; W. D. Harrington, of Chariton; H. C. Newmier, of Macon; B. O. Henseley, of Montgomery; Jas. H. Starr, of Boone; S. B. Houston, of Saline; W. P. Hawkins, of Pike; G. G. Terry, of Calloway; J. R. Brown at large, and J. D. Taylor, Counsel. The Secretary is Chester G. Starr, of Centralia, Mo.

Our Live Stock Supply.

The Crop Reporting Board of the United States Department of Agriculture estimates that the domestic animals on farms and ranges amount to 20,699,000 milch cows, 37,260,000 other cattle; 65,410,000 swine, 52,362,000 sheep, 20,508,000 horses, and 4,362,000 mules. The census, taken April 15, 1910, enumerated 20,630,122 milch cows, 41,13,744 other cattle, 58,185,676 hogs, 52,447,861 sheep, 19,833,113 horses, and 4,209,769 mules.

International Corres. Schools, Box 1153 Scranton, Pa.

Potato Market at St. Louis.

Wholesale prices for car-lot consignments, January 31st, at St. Louis, were as follows, quote by the bushel: Northern Ohios, sacked, $1.15 to $1.20, the latter price for extra fancy Red River stock; Minnesota Rurals at $1.00 to $1.10; Wisconsin Rurals at $1.00 to $1.08; dusty Rurals at $1.00 to $1.10, delivered; Burbanks at $1.05 to $1.12.

The Oats Market Situation.

Again an advance is recorded in the price of oats. Since we began to review the oats trade this particular cereal has been quoted as low as 30 cents a bushel.

We feel awfully sore when oats sell lower than 45 cents a bushel, and during nine months of last year there was occasion to be sore. Just now things look better and cash oats at St. Louis advanced from 48 cents on December 31st to 52¼ cents a bushel at the close of trading, July 31st.

On December 31st, 1911, the May option in oats was quoted at 47⅝ cents a bushel, and on January 31st the same option was advanced to 51⅞ cents a bushel. The July oats quotation on December 31st was 43⅝ cents, and on January 31st it had advanced to 47¼ cents.

It was the big oats crop of 1910 that set back the price of oats, and it was the moderate crop of 1911 that caused the reaction. The oats market is not high, neither is it low. Oats at 50 cents is practically the same as wheat at a dollar.

The Market For Wheat.

January is an off month in speculative trading. All eyes are centered on the May option, which calls for deliveries May 31st, which is four months from January 31st. In this four-month period almost anything is likely to happen. The May option closes before the new crop is in harvesting distance, and the principal factors are, first, the quantity of the old crop in sight and the estimates of the new crop. The market reports of wheat can be compared with the thermometer. Any hour of the business day you can ascertain how high or low the market is, but the market report cannot foretell the future price any more than the thermometer can indicate future temperatures.

On December 30th, at the St. Louis market, we left cash wheat No. 2 selling at 96½ cents a bushel, and we find that on January 31st St. Louis cash wheat is selling at $1.00 to $1.01¼. We leave St. Louis at that, and it is gratifying to learn that St. Louis is a pretty good market for wheat.

Looking to Chicago for the speculative market, we left the May wheat option closing on December 31st at 99 cents a bushel, and we find on January 31st that the market has advanced to $1.02½ to $1.02⅝, a small but substantial gain, which indicates that the trade believes that there is no decline in sight.

The July option, which is influenced by the coming crop, is not so good an indicator from a farmer's standpoint. We left the July option quoted at 94⅝ cents on December 31st, and we find the quotation to be 95¾ cents on January 31st. There is some little satisfaction in this, but not much.

Home-grown Nansemond sweet potatoes were selling at 75 to 85 cents a bushel, and Bermuda and Queen at 65 to 75 cents a bushel. This at St. Louis wholesale market, February 1st.

Corn Harvest is Easy

with the **Johnston Corn Binder.** The old, wasteful, drudging way is gone. In its place is the economical, easy, quick, modern method—the Johnston way. **Johnston Farm Machines** have represented implement **quality** for 60 years, do still and always will.

THE JOHNSTON CORN BINDER handles "down" corn, tall corn, short corn—all kinds of corn in all kinds of places. The big drive wheel; balance and distribution of weight; dust proof roller and brass-bush bearings; natural inclined elevation; **automatic gates;** perfect bundle tier; steel bundle carrier; special chain adjustment; right hand levers; strong, compact steel construction; light, straight draft; and perfect operation are a few of its winning points.

Johnston Harvester Co., Box 117-H, Batavia, N.Y.

Write today for 1912 Catalog—Free. Full of information for farmers. Tells of Johnston quality machinery.

Extent of Missouri Farms.

In the state of Missouri there are 277,244 farms and 194,286 are operated by owners and managers, and 82,958 are operated by tenants. In Missouri there are 455 farms under three acres; 8,561 from three to nine acres; 10,740 from ten to nineteen acres; 47,398 from twenty to forty-nine acres; 74,178 from fifty to ninety-nine acres; 80,020 from 100 to 170 acres; 32,109 from 175 to 259 acres; 19,812 from 260 to 499 acres; 3,427 from 500 to 999 acres; and 544 farms of which the extent is 1,000 acres and over.

Virginia is reported to be making considerable advances as a creamery state. A meeting of creamery men has just been held at Charlottesville.

Egg dealers are having the utmost difficulty in quoting eggs high to the consumer who buys and low to the farmer who produces and sells.

Quality You Can't Equal —a Price You Can't Beat!

Direct From Factory—Freight Prepaid

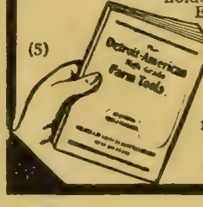
Here's the Genuine—All Others are Weak Imitations

Let us *show* you! Send name on postal for book and price. Detroit-American is first *genuine* tongueless disc ever invented! Features protected for 17 years by *patents.* All other "tongueless" discs are built like old styles with tongues cut off. Years behind the Detroit-American. No one else will give you 30 days' trial with *money in your pocket—no deposit—freight paid, cash or credit* and *factory prices!* No other harrow *good enough* to *sell itself.*

Detroit-American Tongueless Disc

Sold Direct from Factory Complete, with Hitch Free. The only all steel tongueless disc made. Practically no chance of breakage—no repairs—no delays—no waiting for new parts—no express bills. Steel wheels have wide tires. Steel axle is high arched and gives good clearance. Trucks are flexible. Wheels pass over uneven places and stones without disturbing balance. Double levers—each section works independently. Adjustable holddowns insure uniform depth of cut. Disc sections do not strike together. End thrust taken up by a hard maple ring bearing. Only harrow with steel separators between blades. Hitch free to suit size of harrow.

(5)



Mail Postal Now! Get our big book which fully explains the above and many other features. Detroit-American All Steel Harrows are made in sixteen sizes, cut from 4 ft. to 10 ft. in width, 16, 18, or 20 inch blade as ordered and cutaway style if desired. Book also shows world's best manure spreaders, engines and cultivators. Send your postal now.

Luther Grinder Mfg. Co. 257-A Stroh Bldg., Milwaukee, Wis.

Fertilizing the Corn Crop.

"Most certainly, under ordinary circumstances, the corn grower should make use of every bit of barn manure he can save on his farm. The average ton of barn manure supplies about ten to fifteen pounds of nitrogen, five to nine pounds of phosphoric acid and ten to fifteen pounds of potash. We have already discussed the availability of these elements in this kind of manure. The fertility added by the growth of the leguminous crop, such as clover preceding corn, would be in about the state of availability as are the elements in barn manure. We would draw the attention of the corn grower that the amount of plant food supplied in barn manure is not in correct balance for best results from the corn crop. This is an exceedingly important point. The farmer knows that he can get good results by feeding ensilage to his stock during the early period of their fattening, but he also knows that he must add some concentrates carrying a high percentage of protein during the finishing period, so that the animals may put on flesh. In just the same way the corn grower, while he may supply a large amount of nitrogen and some of the other food elements by the growing of nitrogenous crops preceding corn, and by the application of barn manure, must supplement these with a fertilizer carrying a medium amount of available nitrogen, a fairly liberal amount of phosphoric acid and potash. This will be found in the use of 400 to 600 pounds of a fertilizer analyzing about 2 per cent. nitrogen, 8 per cent. phosphoric acid and 4 per cent. potash. We have gotten good results from corn by applying half of this fertilizer sown broadcast just before the last disking of the corn field preparatory to planting, and applying the other half through the fertilizer dropping apparatus of the corn planter.

"May we again emphasize the great necessity of all of the good practices of corn culture when fertilizers are used so that the best results may be obtained. The land must be drained; it must be sweet; it must contain a good supply of vegetable matter and moisture; crop rotation should be observed and all available barn manure should be added to the corn field. These good practices should be supplemented by the final and telling good practice of balancing the plant food by the addition of a judicious amount of suitable available fertilizer.

"Various ideas are prevalent as to the best fertilizer to use, as to the best quantity to use and as to the best shape in which it should be. We have known of good results where lime has been applied alone, since lime upon the soil corrects the acidity of the soil and puts it in such condition that the beneficial bacterial life reproduce and thrive in it. Lime also sets free a large amount of plant food and may actually set free more plant food than the plants can take up, resulting in a loss of soil fertility. We have also known of good results coming from the use of barn manure alone where the land had not been cropped to its limit in previous seasons. The papers are now freely discussing the benefits arising from the use of ground phosphatic rock applied to the soil alone with barn manure and with lime. We would suggest that it is important not to confuse the returns from such an application with the returns that would be gained from the application of lime or barn manure alone. The phosphoric acid in phosphate rock is in the three-lime form, in which form it is found in use already. It is a well-known fact that while phosphorus is in this form it is insoluble in water. It, therefore, appears to us as doubtful policy to add to soil still more of this unavailable phosphoric acid. In the manufactured fertilizer this phosphate rock has been treated with just sufficient sulphuric acid to change the three-lime form of phosphate rock to a one and two-lime form, the first of which is readily soluble and the second more slowly soluble in water. The idea prevails in some sections that this treated plant food contains an amount of sulphuric acid which renders the soil sour. This is entirely contrary to fact where the fertilizer has been well manufactured, which covers 95 per cent. of the cases in these days of keen competition.

"The farmer is surely safe in using this form of plant food, and not only safe but wise, inasmuch as this treated phosphate plant food is readily available to the growing plant. Again we repeat that the results obtained where the crude rock has been applied with manure and lime it appeared to us to be largely due to the action of the lime and manure. We would also like to see investigated whether or not equally good results could not have been obtained by the addition of lime or manure alone. Most certainly we recognize that the crude form of the phosphatic rock applied to a very sour soil would readily provide some phosphatic plant food, inasmuch as the acid of the soil would react on the otherwise insoluble phosphorus in the gorund rock, but very few of the corn-belt soils are sour."—From address by Prof. Henry G. Bell, before the Ohio Corn Show Association, January, 1912.

The Mule Was Uninjured.

Senator John Sharp Williams, whose supply of darky stories seems inexhaustible, tells this new one:

"I was proceeding leisurely along a Georgia road on foot one day, when I met a conveyance drawn by a mule and containing a number of negro field hands. The driver, a darky of about 20, was endeavoring to induce the mule to increase its speed, when suddenly the animal let fly with his heels and dealt him such a kick on the head that he was stretched on the ground in a twinkling. He lay rubbing his woolly pate where the mule had kicked him.

"'Is he hurt?' I asked the older negro, who had jumped from the conveyance and was standing over the prostrate driver.

"'No, boss' was the older man's reply; 'dat mule walk kind o' tendah for a day or two, but he ain't hurt.'"

In the year 1909 the United States wool production was 328,000,000 pounds, and the imports were 263,940,000 pounds. Who says wool cannot come in under present tariff laws?

Good Crops of Oats were Formerly the Rule; Now a Good Crop is the Exception.

One reason is starvation—the lack of the right kinds of plant food in the right form, available at the right time. The result is weak plants that grow slowly, yield light, chaffy grain and fall an easy prey to rust, blight and insects.

POTASH

has been shown to greatly decrease the liability of the small grains to attacks of rust, as well as lodging because of weak straw. Be sure that your oats fertilizer contains 6 to 8 per cent. Potash. Ask your dealer to carry such brands, or Potash Salts, to enable you to bring the brands up to this standard.

If he will not, we will sell you Potash in any amount from a 200 pound bag up. Write for prices and for our book on fertilizer formulas and how to adjust them.

CENTURY MANUFACTURING COMPANY, Dept. 161, East St. Louis, Ills.

Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husks and prevent clogging. As this is the most approved husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions for a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of

hand and prevents chafing. The strap passes through the leather tongue and the first ring and over the hand to the opposite ring and back through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch-lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle; the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Our Industrial Policy.

The National Farmer and Stock Grower is in favor of the United States collecting a reasonable range of customs duties upon all foreign farm products and all foreign manufactured goods admitted into the United States from foreign countries, said duties to be applied to the support of the national government.

Every farmer in the United States is taxed by his county and by the state, and he pays indirect taxation for the support of the federal government. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. By collecting these customs duties the United States government receives the income that is necessary and must be collected for the public service and the farmer has a very moderate degree of what is called protection. In times of scarcity caused by drouth or other unavoidable influences the foreign farm productions can come in on a fair basis, and in times of abundance the country thrives better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmers' products the manufacturer would have to shut his doors. Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. It will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out.

The World's Supply of Meat.

In recent years the meat-eating population of the world has increased considerably faster than meat production until it is safe to assert that there will be a struggle from now on in all well-populated nations to obtain meat. We have not the statistics before us, and reliable figures are hard to obtain, but we have the satisfaction of knowing the change of conditions we have actually seen, the evolution from a surplus to a deficit; the change from an abundance of meat to a comparative shortage.

We have seen the time when ordinary, every-day restaurants could put a good loin beef on the counter or dining table for a quarter of a dollar, and we have lived to see the same beefsteak invoiced on the bill of fare for 45 to 50 cents.

In the higher class of restaurants a dainty single tenderloin used to be served up at 50 or 60 cents, at most, and now the same dainty tenderloin is quoted at 90 cents or a dollar.

We have seen the surplus cattle of the United States unloaded at Birkenhead, near Liverpool, and we now hear that the same slaughtering plants are idle because there is now no surplus of cattle arriving from the United States on the hoof.

We can see from the export statements that dressed-beef shipments from the United States to Great Britain are becoming smaller and smaller, and finally we are told that the cattle production in the great South American grazing grounds is less than formerly; that exports now made in great quantities cannot possibly be kept up.

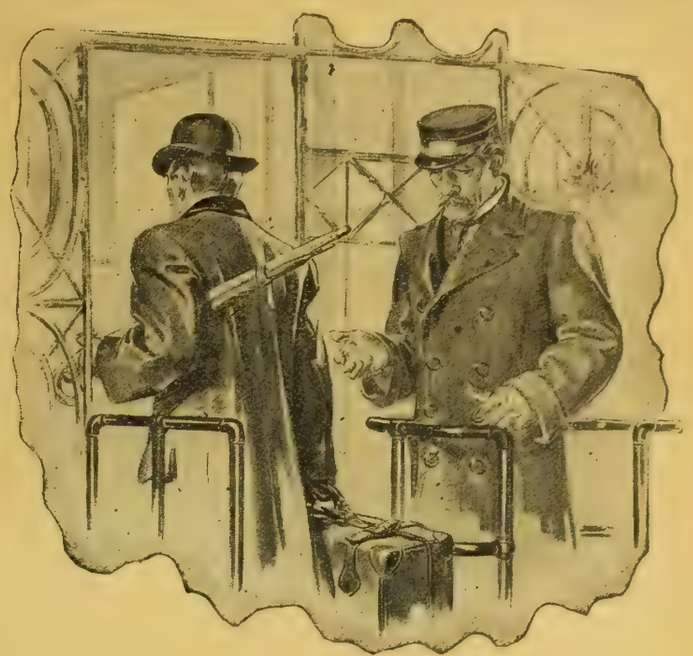
For four years the North American companies doing business in the Buenos Ayres district have increased their output direct to Liverpool; but now comes Senor Jose Maria Palma, himself an investigating stockman, who criticises the Argentine government statistics, claiming an annual Argentine surplus of half a million head of cattle, and he says no annual surplus exists, and, on the contrary, the herds of the country are diminishing, anl, unless a reaction sets in—that is to say, unless the excessive slaughtering of cows, and above all calves, is stopped—they will not be able to entertain the idea of supplying Europe with live stock, as before long Argentine will be hard pushed to meet the wants of the cold-storage works now in existence.

This is a new feature in the world's meat situation. We know that much of the meat from South America is in the hands of our own American packers. They will ship from Argentine to Great Britain so long as that is the highest market, but when the highest meat market is in the United States, we can look out for Argentine grass beef to come in at New York, New Orleans and Galveston. But we take some comfort in the assertion that Argentine cannot keep up the gait that has been set.

We therefore advise all cattle raisers to stick to their business; to study their end of it, which is to produce beef cattle of quality as cheaply as possible. Don't feed, raise and produce on a basis to sell at a profit only on a high market, but produce with true economy of production, so that profits can be obtained almost on any kind of market, which is easier to say than to do, but it can be done, and it certainly ought to be done on the markets we have to-day and the markets we are likely to have in the near future.

Great Britain, Germany and France, in the order named, are the principal countries importing American cotton.

Look for Rose Premiums on page 31.



The Howard Watch

EVERY year, Nine Hundred Million passengers use the railroads of this country—traveling on "HOWARD Time."

The HOWARD Watch is officially certified and adopted for trainmen's use on 180 of the leading American railroads.

But in fact, wherever you find men who insist on the value of time you will find owners of the HOWARD Watch.

One great sign of the advance of agriculture is the fact that Farmers and Stockmen are buying HOWARDS—just as they are insisting on the best in every other line.

As a practical man, the farmer is certainly in position to appreciate *the finest practical watch in the world*—the watch, moreover, that is carried by the leading men of every practical occupation.

A HOWARD Watch is always worth what you pay for it.

The price of each watch is fixed at the factory and a printed ticket attached—from the 17-jewel (*double roller*) in a Crescent *Extra* or Boss *Extra* gold-filled case at $40, to the 23-jewel at $150—and the EDWARD HOWARD model at $350.

Find the HOWARD jeweler in your town. When a man makes a permanent investment like the purchase of a HOWARD Watch he naturally wants to *see* what he is buying—he wants to get the jeweler's expert advice. The HOWARD Watch is sold only by legitimate jewelers—and not every jeweler can sell you a HOWARD. The jeweler who can is a representative merchant—a good man to know.

Send us your name on a postal card and we will send you—FREE—our pamphlet, THE STORY OF EDWARD HOWARD AND THE FIRST AMERICAN WATCH. It is a chapter of History that every man and boy in this country should read.

A New Dairy Champion.

A new dairy champion has arrived in the Holstein cow Pontiac Clothilde De Kol, 2d. She has just produced 25,318 pounds of milk in a year with an average butter-fat content of 4.02, which credits her with 1,017.28 pounds of butter-fat during the year. Pontiac Clothilde De Kol, 2d, is the property of Stevens Bros. Co., of Liverpool, N. Y.

Horseradish at St. Louis, February 1st, was selling at $4.50 to $5.75 per barrel.

Increased Horse Power

Humor your horses by properly padding their collars and they will repay you with better work. **Ventiplex Pads** are the kind to use, because they are made of ventilated fabric, which allows a free circulation of air under the collar. This keeps the shoulders dry and cool, preventing gall and sores.

You can use your horses every day. Ventiplex Pads wear longer, prove more satisfactory, and cost no more than other kinds. You will be glad you bought one.

Most dealers have them, but if yours has not send us his name and we will forward a sample quickly. **Patented Sept 20, 1910.**

Our folder will interest you. It is free for the asking.

GRAND SUBSCRIPTION OFFER.

A Splendid Magazine One Year, The Ladies' World — National Farmer and Stock Grower One Year—Eight Standard Grapevines —All For One Dollar.

This is a startling subscription offer, especially valuable to farmers' families and to anyone who owns a home. **"The Ladies' World** is a monthly magazine, forty-eight pages, four columns to the page, highly illustrated, cover in colors, beautiful, delightful splendidly edited, lovely stories, instructive articles, lessons in housekeeping, domestic science, dressmaking, music, amusements, etc. **The National Farmer and Stock Grower** is a monthly paper; contains practical information, clean-cut, instructive, up-to-date news of markets. Collection of **Eight Two-year Standard Grapevines.** These grapevines are ready for planting. They are two-year-old vines from the best Chautauqua vineyards. The collection consists of **Moore's Early,** a black grape; **Catawba,** dark red when fully ripe; **Diamond,** a large white; **Concord,** black early; **Agawam,** red or maroon; **Niagara,** large and handsome white; **Delaware,** compact red; and **Worden,** a large black grape. We offered this premium last year with great success. The vines are taken up in the fall and held in storage for spring planting. A booklet giving complete directions for planting, pruning, etc., is sent with each set of grapevines.

We will send **The Ladies' World** one year; **The National Farmer and Stock Grower** one year; and the **Collection of Grapevines,** nicely packed, postage paid—all for one dollar. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Sale of Horses and Mules.

Holland, Nugent & Maxwell Bros. sold 1,267 horses at auction on Monday and Tuesday, January 29th and 30th. Buyers were plentiful, and all offerings sold good. The Southern horses sold better, and there was a splendid demand for 1,200 to 1,400-pound chunks. Heavy draft horses were a little lower and slow. The mule trade was the best in three months. T. H. Holland, addressed at National Stock Yards, Ill., will give personal attention to correspondence from buyers or shippers.

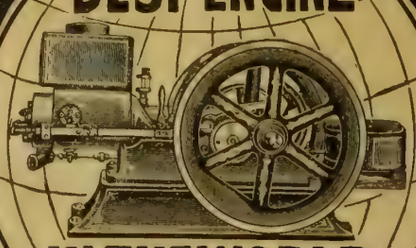
The Corn Market Situation.

On January 31st, at the St. Louis market, no sale of No. 2 cash corn was made, but No. 3 sold at 65 cents. No. 2 would probably have sold at 66 cents, which is four cents higher than on December 31st, 1911. The St. Louis market holds up well, and, as is understood, all this cash grain is entering into consumption, there being a good commercial side to these transactions.

Now comes the speculative market at Chicago, which gives us the only indications of the future. Without the future trading there would be no sign to indicate whether corn will or would sell high or low three months from now. Some people think it would be a good thing, and so it would be for sharks and swindlers.

On December 31st corn for May 31st delivery was quoted at 63½ cents a bushel, and on January 31st the same quotation was advanced to 67½ cents a bushel, which is a substantial advance, indicating that corn is good property in the minds of those who put up the cash money to buy it. Furthermore, the July option has advanced also. We left it on December 31st quoted at 63½ cents a bushel, and thirty days later we find it at 67⅝ cents. Farmers will see from this that until after next July the majority of the grain dealers believe corn will sell on the market not far from 65 cents a bushel. When such an opinion is backed by money to buy in advance on such a basis, a corn grower can count his corn as "good as wheat in the mill."

THE BEST ENGINE IN THE WORLD



WATERLOO BOY

Two gold medals, at two International Expositions, in open competition with the leading manufacturers, not only of this country, but of every nation of the globe. THAT is real **proof** that the **Waterloo Boy Gasoline Engine** is the best engine built today. And the real importance of this great double victory is the fact that it was won, not by a specially designed engine prepared and primed particularly for the contest, but by a **regular Waterloo Boy TAKEN FROM STOCK.**

Thousands of these engines are in regular daily use on farms all over the world, and **you** can buy an exact duplicate of this medal winner for your own work. This supreme make-good quality of the

WATERLOO BOY GASOLINE ENGINE

is built into it—it is best from foundry to testing room. **Best** and **simplest** in **material, in workmanship and in many important features of design which are found on no other engine in the world.**

The speed lever which works like the throttle of a locomotive and regulates the speed while the engine is running, is an **exclusive Waterloo feature,** and it alone adds $20.00 to $50.00 to the value of your engine. Many other features are just as important—our patented mixer which does away with the expense and bother of a pump; new type igniter that never misses a spark; automatic fuel regulation making it the cheapest to run; frost proof construction.

Burns either Kerosene or Gasoline— starts easy in the coldest weather. All parts are interchangeable and it is so simple that a child can run it.

The Waterloo Boy is no experiment—it is the oldest successful farm engine on the market and has made good for nearly 100,000 farmers for over 19 years—**some of your neighbors among them.** Built in one of the biggest engine factories in the world, with a capacity of 130 complete engines per day, nearly 40,000 per year.

Let the other fellow experiment—you use his experience and buy a **Waterloo Boy** in the first place. **Get the certainty of absolute satisfaction at the *lowest price ever made on a reliable engine.***

5-Year Guarantee. Catalog and full details FREE. Write today.

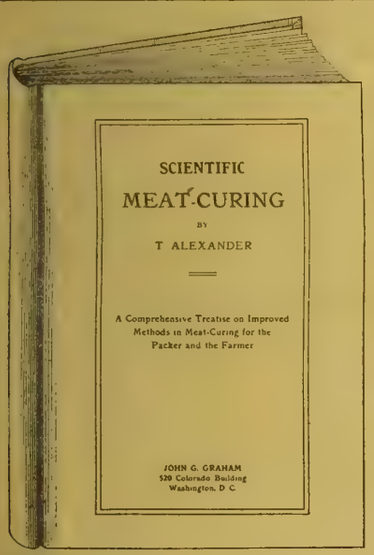
SCIENTIFIC MEAT CURING.

A Booklet For All Farmers, Stockmen, Butchers and Packers.

There is a book on meat curing. It is descriptive of the methods used by the most expert of all the butchers and packers. It is actually a text book for the curing of all meat products. It includes elimination of animal heat, difference between weight alive, dressed and cold, with shrinkages; table for making different strengths of pickle, mild and strong cured meats, temperatures, pumping, pumping pickle, pumping of hams, calas, picnics, etc. Time in pickle for different weights, curing pickle for hams, etc.; sweet pickle bellies, time for smoking, number of days in cure per pound, overhauling, handling old meats, soaking, washing, soaking first-grade bellies, soaking beef hams, long and short cut tongues, dry salt meats, temperature of smoke house, time for smoking to prevent skippers, kind of wood to use, use of sawdust for color, smoking S. P. meats, summer schedule, smoking colored and uncolored meats, first-grade hams, beef hams, No. 1 pork hams, picnics, No. 1 bacon wide, No. 1 bacon narrow, with shrinkage, smoking tongue, firing house for S. P. meats, coloring, use of liquid smoke, and insect-proof covering. Instructions for preparing



mess beef for curing, chopping and scoring, mess chucks, mess rumps, curing mess beef, packing for curing, S. P. beef hams, beef rump butt cure, Antwerp beef hams, overhauling, packing mess beef for shipment, weights summer and winter, amount of capping salt to be used for Northern and Southern points, Scotch buttock cure, dry cure shoulder clods, dry cured boneless beef, beef tongue cure, weights and strengths of pickle to use in shipping, beef tongue smoking ages, for export shipment, handling and curing of lamb tongues and tables showing the strengths of pickle from day to day from which the amount of solids taken up by the meat can be computed. The book includes table giving average weights of the various cuts of pork, veal and mutton, lists of the different standard brands of sausages, giving per cent. of beef and pork used, parts of the carcasses and the amounts of cereal used, and the constituents of the cereal used in sausage, etc.

We have adopted the booklet "Scientific Meat Curing" as a subscription premium to be furnished subscribers to The National Farmer and Stock Grower. Send us sixty (60) cents by money order and we will send you The National Farmer and Stock Grower for one year and you can select one copy "Scientific Meat Curing" as a premium, to be sent postpaid, safe delivery guaranteed. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

DEEP WELLS A NECESSITY.

If the world is to make the sanitary progress in the next decade that is due mankind, care must be given to providing pure water. The health of both man and the domestic animals calls for deep wells to penetrate hundreds of feet into the earth and bring from beneath the solid rock the pure liquid, unadulterated by surface drainage. Such wells are not to be thought a luxury for only a few. Every farm needs one. The mammoth catalogue of the American Well Works, Aurora, Ill., gives much valuable advice on this subject. It is free to those who write for it and mention the name of this paper.

Seed advertising on page 12.

Native Cattle at St. Louis.

On the last day of January, at St. Louis, thirty-four Iowa steers, 1,399 pounds average, sold at $7.50 per 100 pounds; 1,191-pound natives at $7.05; 1,244-pound steers at $6.85. Choice to prime native steers of the favorite weights were quoted at $8.50 to $8.75 per 100 pounds.

Look for Rose Premiums on page 31.

$25 an acre. 2 crops a year.

Just look at this corn. Some of these stalks have 3 ears. Can you beat corn like this anywhere? What would you have to pay for land that would grow corn like this in the northern corn belt? You can buy all you want of this kind of corn land in Arkansas and Louisiana at from $25 to $50 an acre.

The big river bottom plantations are being cut up into smaller farms. No where is there another such a chance for corn growers to make money.

You would be more than satisfied with this land if you only got one big corn crop a year, but you can get two —one corn and the other potatoes, oats, cowpeas or other similar crops.

Corn, Cowpeas and Potatoes yield $106 an acre a year

Mr. S. W. Day, a native of Iowa, raised 50 bushels of corn, 6 bushels of cowpeas, and 90 bushels of potatoes to the acre, this past year, on his farm near Alexandria, Louisiana. These crops brought him $106 an acre. It cost him $25 an acre to make them, leaving $81 an acre net profit.

Mr. Day's neighbors are also doing wonderful things, for it is easy for a good farmer to succeed where the soil is so rich, the growing season so long, the rainfall abundant and so sure, that *there has never been a crop failure from drouth.*

Not only do these corn growers get big yields, but they get big prices, too. The big export market of New Orleans is near at hand, and Louisiana corn brings about 10¢ a bushel more than northern corn because it contains less moisture and is ready for export as soon as it is harvested.

Prof. H. M. Cottrell, an expert of national reputation, formerly Professor at the Kansas and Colorado agricultural colleges, and now Agricultural Commissioner of the Rock Island Lines, has made a very careful inspection of many of these corn lands. It is Prof. Cottrell's expert opinion that no where in America is there a better opportunity open for corn growers to make money than there is in these Arkansas and Louisiana corn lands.

Better look into this proposition at once. If you are renting, your rent money will quickly pay for a better farm in Arkansas or Louisiana; if you want a place for the boys you can buy them one of these rich river bottom farms, as good or better than yours, for one sixth the cost.

You will find this southland a delightful and exceedingly healthful place to live. The people are good neighbors. Rural Free Delivery, Telegraph, Telephones are everywhere; good markets are accessible and are shipping in farm produce because the local supply is not equal to the demand.

You owe it to yourself to investigate this at once. If you are interested, drop me a line saying how many acres you would want; whether you own a farm at present, and how many acres. You will be given careful, personal, individual attention, and the best unprejudiced advice as to where and how to get one of these splendid corn land farms at a price much below its actual worth.

Book on Scientific Corn Raising, FREE.

Rock Island

Prof. Cottrell's book, "How to Double the Yield of Corn," is the result of years of experience, experiment and study. It is worth dollars to any farmer who will read it and follow the advice it gives. You may have a copy free, if you will write me today. I will also send you a book written by Prof. Cottrell, telling more about these wonderful corn lands.

The statements herein made have been fully investigated and can be absolutely relied upon.

Use KEROSENE Engine FREE!

Amazing "DETROIT" Kerosene Engine shipped on 15 days' FREE Trial, proves kerosene cheapest, safest, most powerful fuel. If satisfied, pay lowest price ever given on reliable farm engine; if not, pay nothing.

Gasoline Going Up!

Automobile owners are burning up so much gasoline that the world's supply is running short. Gasoline is 9c to 15c higher than coal oil. Still going up. Two pints of coal oil do work of three pints gasoline. No waste, no evaporation, no explosion from coal oil.

Amazing "DETROIT"

The "DETROIT" is the only engine that handles coal oil successfully; uses alcohol, gasoline and benzine, too. Starts without cranking. Basic patent—only three moving parts—no cams—no sprockets—no gears—no valves—the utmost in simplicity, power and strength. Mounted on skids. All sizes, 1 to 20 h. p.; in stock ready to ship. Complete engine tested just before crating. Comes all ready to run. Pumps, saws, threshes, churns, separates milk, grinds feed, shells corn, runs home electric-lighting plant. **Prices (stripped), $29.50 up.** Sent any place on 15 days' Free Trial. Don't buy an engine till you investigate amazing, money-saving, power-saving "DETROIT." Thousands in use. Costs only postal to find out. If you are first in your neighborhood to write, we will allow you **Special Extra-Low Introductory** price. Write!

Detroit Engine Works, 383 Bellevue Ave., Detroit, Mich.

Conclusions on Cream.

Several professors of dairying were engaged in experimenting to obtain a better knowledge of the factors affecting the percentage of fat in cream. The final conclusions were as follows:

"If cream is tested correctly and if the tests of different lots of cream from the same patron vary, then these variations must be due to variations in the richness of the cream. It is impossible to procure cream of exactly the same richness from different skimmings from the gravity can.

"The richness of cream from a farm separator is primarily determined and regulated by the cream screw. The richer the milk the richer the cream if all conditions remain the same, for the ratio of skim milk to cream remains constant. During early summer months the milk is usually comparatively low in fat. Advance in lactation period and change from succulent to dry feed cause milk to become richer in fat. The first drawn milk is much poorer in fat than the strippings. The greater the amount of milk running into a separator of a definite capacity per hour the thinner will be the cream. The greater the speed of the separator the richer the cream. If the speed is too slow a large amount of the fat is lost in the skim milk. Warm milk produces more and thinner cream than cold milk. The proper temperature to separate milk on the farm is from 90 to 95 degrees Fahrenheit and immediately after it is drawn. The more water or skim milk used to flush the bowl of the separator the thinner will be the cream. The most satisfactory cream for the creamery is that which tests about 35 to 40 per cent. fat.

"If the tests are to be uniform and accurate, the cream must be in such condition, when sampled, that a fair and representative sample can be taken. If, at the time of sampling, the cream is too thick, is tough, dry and leathery on the surface, is partly churned or curdy, it is very difficult to secure a fair sample, and tests of such cream are likely to be irregular as well as inaccurate.

"In order that the cream may be in proper condition for sampling and testing upon delivery to creamery, the farm separator should be thoroughly cleaned and scalded after each separation; after separation, the cream should be immediately cooled and kept cool by setting in cold water; the cream should be stirred occasionally; the cream should be delivered in clean cans not less than twice per week in winter and three times per week in summer; in transit the cans should be covered with a dry blanket or jacket in winter, and with a wet blanket or jacket in summer; cans should be reasonably full of cream in transit to prevent churning."

Ayrshire Official Records.

A new list of official records of Ayrshire cows was published at the annual meeting of the Ayrshire Breeders' Association.

In the mature class, Netherhall Brownie, 9th, owned by Mr. J. W. Clise, Redmond, Wash., gave a rceord of 18,110 pounds of milk, 820.91 pounds of fat, equal to 958 pounds of butter, with 4.69 per cent. fat.

In the three-year-old class, McAlister's Betty, owned by Mr. Percival Roberts, Jr., Narberth, Pa., gave a record of 14,208 pounds of milk, 581.41 pounds of fat, equal to 678 pounds of butter, with an average of 4.19 per cent. fat.

The average result of the advanced registry work during the past year was, sixty-eight two-year-olds averaged 7,610 pounds of milk, 306.52 pounds of fat, equal to 353 pounds of butter, with an average of 4.04 per cent. fat.

Thirty-six three-year-olds averaged 9,318 pounds of milk, 374.41 pounds of fat, equal to 432 pounds of butter, with an average of 4.14 per cent. fat.

Twenty-four four-year-olds averaged 8,723 pounds of milk, 349.93 pounds of fat, equal to 408 pounds of butter, with an average of 4.12 per cent. fat.

Ninety-seven mature cows averaged 9,923 pounds of milk, 332.03 pounds of fat, equal to 442 pounds of butter, with an average of 3.875 per cent. fat.

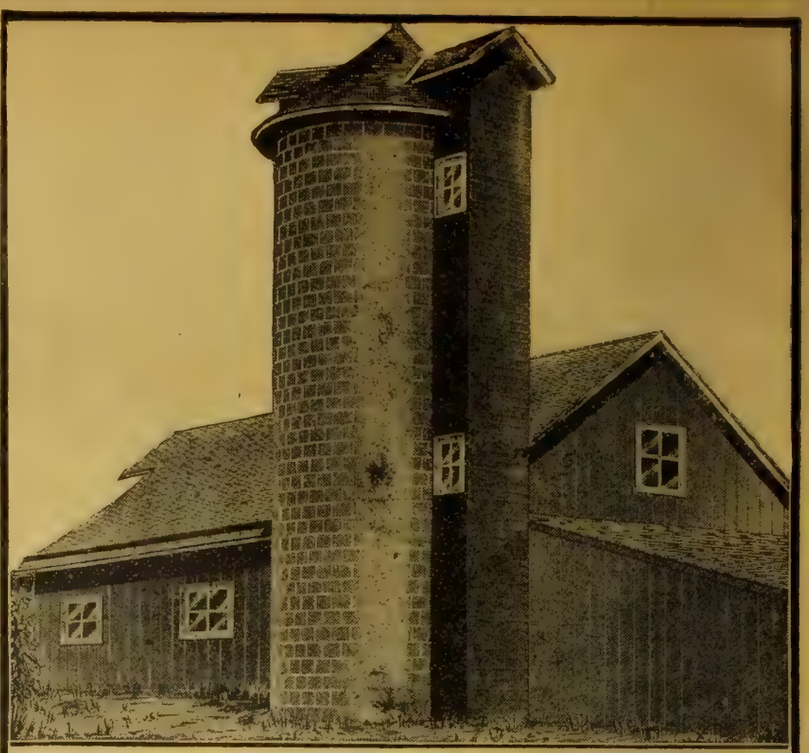
The average of the whole cows and heifers is 8,850 pounds of milk, 351.21 pounds of fat, equal to 408 pounds of butter, with an average of 4.04 per cent. fat.

The report of the work for the past year shows the largest official records for the different classes in the world for Ayrshire cattle.

Sensible Cold-storage Regulation.

The Cold-storage Commission appointed by the Governor of Massachusetts last year to carefully look into the cold-storage business has sent in its report to the Legislature. It is a document of several hundred pages, and goes into details in regard to the effects of storage on food products. Its findings are on the whole favorable to the cold-storage system as practiced in the state. Its recommendations are by no means radical, and for the most part quite reasonable. First, it would place the whole cold-storage business under the supervision of the Board of Health, and that a time limit of twelve months be placed on holdings. Second, products should be marked with date of receipt and withdrawal. Third, reports of holdings should be made at stated times.

The commission is of the opinion that cold storage is not detrimental to public health and is not a factor in the high cost of living, but rather the reverse. It is a regulator of prices, and tends to steady values, which is what the friends of cold storage have always argued, and if the Legislature adopts most of the recommendations and makes a law to carry them into effect, there will be little or no complaint. However, it must be kept in mind by lawmakers that the least restrictions put on the handling of food products the better for consumers. Every restriction adds to the cost of the product, and the consumer has to pay it in the long run. Some of those interested in cold storage believe that it would be better to let the business alone altogether; but if laws must be enacted they should be national in their application and uniform all over the United States. Different laws in each state make a great deal of trouble.—Boston Correspondence New York Produce Review.



The A. P. Grout Vitrified Tile Silo

THE cheapest and best because *absolutely indestructible.* Proof against Fire and Wind; proof against warping and wear and weather. Tile filled with concrete and otherwise reinforced. Guaranteed for 25 years.

Send for the Book which will open to you a mine of facts on the Silage and Silo questions. It will explain to you the extraordinary advantage in this Silo over any other style now made.

"Silo Profits"—FREE

This book will be a big help to you whether you are going to buy now or not. We do not ask you to take our plain statement; we back it up with the facts—with the "reasons why."

The book, "Silo Profits" tells *why* the ensilage is kept sweet and sanitary; preserving the highest possible per cent of nutrition; *why* the rats are kept away from the fodder; *why* our Vitrified Tile Silo has greater strength than any other; *why* there is no possibility of shrinkage, leaks, or other damage; no need of the expense for repairs, painting or insurance.

And the book tells *why* you do not need to pay a high-priced mechanic to erect the Vitrified Tile Silo. Let us send you this valuable information.

Agents Wanted: It is no trouble to sell this Silo; write today.

Good and Bad Care of the Dairy Cow.

Ideals have changed in fifty years as to the methods that should be employed by dairymen and farmers in the care of dairy cows. Formerly it was believed that the dairy cow needed a summer temperature and that she was very susceptible to wintry blasts. But in the last fifty years there has been a good deal of experimentation, out of which has come much valuable information.

Tests have been made in midwinter of giving the dairy cows the chance to lie in a place protected from the winds or in the sweep of the winds. More than one dairyman has found his cows at such a time lying in the draft rather than in some corner protected from the wind.

To coop dairy cows up in close barns heated to summer temperature is the surest way of spreading tuberculosis among them. Dairy cows cannot stand as much cold as can beef cows, but they can stand a good deal, more than can human beings and yet be comfortable. It is being gradually learned that the dairy cow loves fresh air as much as do other animals and the fresh-air cranks among humans.

Cement floors are of the greatest service in the care of dairy cows. They make cleanliness more possible than before cement floors came into use. Cleanliness is essential for the health of the cows and for the health of the human beings that consume the products of the dairy cow—milk, cream and butter.

There are those that object to the cement floors because they say cement floors are cold for the cows to lie on and are slippery for them to stand on. But both objections are easily met. The coldness can be done away with by an abundance of bedding, and the slipperyness by making the cement rough instead of smooth where the cows are to stand. The roughness is only enough to remove the excessive smoothness complained of.

Too many dairy cows are kept in semi-darkness in the winter for months at a time. If stables such as these must be used, the cows should be allowed to remain out of them a great deal, both summer and winter; but it is far better to make light and dry cow stables. Light does not cost very much, generally only the cost of the extra windows, and light is a help to health and happiness.

Good, succulent food summer and winter is a great help to the health and productiveness of the cow. Good silage is the best food for this purpose in winter and may also be advantageously fed in summer. It is an all-around-the-year feed. There is no succulent food that is as cheap as silage. It is nearer the normal food of the cow than any other except green grass. Happy is the dairyman that has a good silo filled with good silage.

Feeding cows on timothy hay is one of the very wasteful methods that should long ago have gone out of use. Timothy hay is badly balanced, and is still worse when balanced with corn meal. It is comparatively low in protein, as is corn meal. Moreover, it is worth too much money on the market for horse feed to make it advisable to feed it to dairy cows. Clover hay is far better, as it has in it more protein. Clover hay and silage tend to balance each other and are logical feeds for dairy cows.

The Butter-fat Demand.

With butter-fat now selling higher than it ever sold before and with a general shortage of real good milch cows throughout the country it is advisable for farmers to milk all available cows, to separate the cream from the milk and to sell the cream at the nearest and best market. To raise the calves on skim milk is an easy matter, and there is absolutely no reason why butter-fat should not be marketed from farms having but few cows. Butter-fat is easily separated from the milk by the farm cream separators advertised in this publication. See that these advertisements receive your attention.

Helps For Dairymen.

The Southern Railway has appointed Mr. Carlton Ball Assistant Dairy and Poultry Agent, with headquarters at the Western agency of the Land and Industrial Department, Chemical Building, St. Louis, Mo. Mr. Ball is a graduate of the Kentucky Agricultural College and is experienced as a specialist in dairy and poultry husbandry, and his appointment is in the pursuance of the policy of the management of the Southern Railway in the development of the territory served by it. Mr. Ball will devote his entire time to advising dairymen and poultrymen along the St. Louis-Louisville lines as to different problems that confront them in their work as well as assisting in every way the development of these important industries.

DE LAVAL Cream and Butter Triumph as Usual At National Dairy Show

Cream and butter produced through the use of DE LAVAL CREAM SEPARATORS made the usual clean sweep of all Highest Awards at the great 1911 National Dairy Show (including the annual convention of the National Buttermakers Association) held in Chicago October 26th—November 4th, just as has always been the case since the organization of the National Association in 1892.

WHOLE MILK CREAMERY BUTTER

The sweepstakes or highest award in this class was won by A. J. Anderson; Otisco, Minn., with a score of 97.50, who says: "I have been using De Laval separators for ten years and would not think of using any other."

FARM SEPARATOR BUTTER

The sweepstakes in the gathered cream factory made butter class was won by R. O. Brye, of the Readstown Creamery Co., Readstown, Wis., with a score of 97.33, this prize winning butter being made from the cream of farm patrons using De Laval separators exclusively.

Mr. Brye says. "I was raised on a dairy farm, where my father used a De Laval separator, and my own separator experience covers a period of twenty years. I have found the De Laval machines everything that is claimed for them."

HIGHEST PRIZE CREAM EXHIBIT

The highest award for cream was made to Nichols Bros., Bloomfield, Ky., with a score of 98.80, who say: "If we didn't use the best separator we could not have made this record. Our experience has proved the De Laval the only separator that 'delivered the goods'."

DE LAVAL PRODUCTS ALWAYS SUPERIOR

Would-be competitors are naturally forced to make many claims for their separators. But the superiority of De Laval cream and butter, as evidenced by the winning of all highest prize awards the world over for twenty years, is something so overwhelming as to be indisputable and unanswerable even by the most reckless would-be competitor.

THE DE LAVAL SEPARATOR CO.

NEW YORK CHICAGO SAN FRANCISCO SEATTLE

[Please mention National Farmer and Stock Grower.]

During the month of January cold-storage creamery butter at wholesale reached 38 and 38½ cents a pound on the New York market, and finest creamery reached 42 cents, the highest point since January, 1883.

RAW ROCK PHOSPHATE.

Not a Fertilizer, Although It is Sold as Such.

In our January edition we stated how raw rock phosphate had been pronounced absolutely worthless as a fertilizer because it is not available as plant food in reasonable time. In continuing the subject we desire to say that we see no reason why raw rock phosphate should be sold and classed as a fertilizer when it is really nothing of the kind.

We have before us a card issued and endorsed by the Raw Rock Phosphate Propaganda, which is entitled "What Fertilizers Are Worth," and purports to show the real and relative value of one ton of each of several fertilizers as given by the Illinois College of Agriculture. The card graciously permits that one ton of fresh farm manure has a value of $2.34 a ton; acid phosphate (the available phosphate) has a value of $15.00 per ton; and the ton of raw rock phosphate is valued at $30.00 per ton.

The greatest advocate of raw rock phosphate does not claim that, standing alone, used by itself, it gives any practical immediate returns. It is only ground rock, and in our opinion its probably worth as ground rock is about the same as ground limestone. If the treatment by stable manure transforms it into a fertilizer, the manure is valued too low and the rock is valued too high.

We approached this subject for the purpose of advocating the use of raw rock phosphate as a fertilizer, if it was possible to do so. We had read much in its favor and considerable that was said against it. We found it listed in with fertilizer material in company with recognized fertilizers, and we put it up to the professor, who appeared to be responsible for the list, saying: "How long does it take to render these goods available as plant food?" and then, being held responsible for advocating it, he said: "In my opinion it has no practical value. The experiments showing gains in crops would very likely show just as well without it, the highest authorities do not regard it as a fertilizer, and only under special conditions can the raw rock phosphate be used to any advantage, and, generally speaking, it is not a fertilizer until it is treated to change its form."

That is not all we had read and heard but it suffices for the present. It is a case for appeal to higher authority. Raw rock phosphate is being sold at $8.00 to $9.00 per ton—say that it costs $9.00 per ton distributed on the farm by the manure spreader. It is being sold under representation that it is worth $30.00 per ton. One writer stated that in Ohio experiments the profit on it was estimated at $50.00 per ton. The claims of the salesmen know no limit. When it comes to demonstration they are backed by voluminous evidence, which generally rests upon the better tillage, the manure, the green crops, the other fertilizer.

We have an Agricultural Department at Washington. We have no doubt raw rock phosphate has been considered there and experimented with. A Farmers' Bulletin issued by the United States Department of Agriculture advising farmers to pay $8.00 to $10.00 per ton for raw rock phosphate would have some standing with farmers and certainly would with at least one farm paper editor who will gladly advertise it freely.

We brought this subject up to get it decided. We are tired of reading one authority saying this, another saying that, another silent, and interested parties making all kinds of extravagant claims. So far as we have gone we take this position: Raw rock phosphate is to an available fertilizer very much the same as pig iron is to the steel rail; raw rock phosphate is not generally high enough grade to be a commercial product when treated in the usual way; therefore is still an unavailable crude product, and its transformation into a fertilizer, except by chemical treatment, is still an open question and not by any means settled in its favor.

Extract From Bulletin No. 160, Vermont Agricultural Experiment Station, Burlington, Vt., June, 1911.

The ingredients with which the sundry kinds of deficient plant food (nitrogen, phosphoric acid, potash and often lime) are associated vary widely. There are many of them. Some may be useful, some harmless or inert, some, indeed, at times may be harmful. The form in which the plant food occurs, moreover, is important as an index of its availability, and, hence, of its service to plant life. Thus, for example, phosphoric acid, united with but one part of lime, is soluble in water and promptly assimilable by plants; and when associated with three parts of lime, as it is in raw rock phosphate, it is insoluble and available at best with extreme slowness. A fertilizer may carry its nitrogen in the form of crude leather, its phosphoric acid may be derived from undissolved rock and its potash from green-sand marl. Such a material would be almost useless to crop growth. The "forms" in which the elements are present in the above cited case are undesirable, in that they are unavailable, for the reason that the several solvents of the plants and soils are not strong enough to break down such combinations, as must needs be done before plant food can be used. When, however, the phosphate rock is treated with sulphuric acid and its phosphoric acid is thus made soluble, it becomes available and desirable, for plant roots can disintegrate the new union and use it. When this happens, the phosphoric acid has not been changed in any respect, but its "form" has been altered. "Form" then discloses character. An analysis which showed the gross amounts of the sundry plant foods without disclosing their forms would obviously fail in its mission.

THREE-YEAR SUBSCRIPTIONS.

We desire to invite attention to our three-year subscription proposition. It is practically a trial subscription, payable at the end of the first year. The subscription can be stopped at any time by paying for the period the paper is taken. This method of taking subscriptions is the invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper slips in a list of handy premiums for the subscriber to select one from, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

SUBSCRIPTION BLANK.

No Guesswork About This Planter

THERE'S foresight, economy and plain common sense in owning a Hayes. It's the only planter that leaves nothing to chance or luck, it's the only planter that can be depended upon day after day, season after season. It's a waste of time to plant with an old, worn-out machine, or a complicated new one full of fads and fandangles. It's worse than waste—you are risking your whole crop. Get the only reliable—the simple, but everlasting Hayes. No matter what you pay for a planter or what kind you buy, the Hayes is the only one that's good enough for you if you measure results in hard cash.

If the planter you used last year missed the hills, planted at an uneven depth, did not drop accurately, cut or cracked the kernels, scattered the seed, checked unevenly, clogged or was a constant source of trouble by getting out of fix, you will save its cost many times over by buying a Hayes Four-Wheel Planter.

No Other Planter Like This

THE HAYES is the only planter that plants every kernel exactly the same depth. Corn all comes up at the same time. Cultivation 2 to 4 days earlier. It is the only planter that covers in all conditions of soil—even wet or sticky ground. Leaves ridge over corn, preventing washouts on hillsides. Harrowing levels ridge, making clean corn row, thus gaining one cultivation over ordinary covering wheels. Guaranteed not to clog. No stringing or scattering of seed.

The Hayes is the only planter that drops all kinds and sizes of corn accurately. Never cracks or grinds the seed. Works perfectly all the time—lasts for years—cannot get out of fix.

It checks straighter than any other planter. Handles the easiest for man and team. Also shortest coupled, making it the lightest draft, and can be turned in shortest space.

You can plant from 3 to 5 more acres a day with the Hayes, drop your corn more accurately, check it straighter, cover it better and get a more perfect stand and larger crop than with any other planter made.

Consider Point By Point

COMPARE the Hayes with any other planter made. Note its simple construction. Note its strong frame. See for yourself that it has fewer cast parts than any other planter—malleable iron and steel are used almost entirely in its construction. Convince yourself that the money, time and trouble you'll save and the increased yield of corn you'll get in one season will more than pay for a Hayes Four-Wheel Planter. Stub Runners or Disc Furrow Openers furnished if preferred. Also a most efficient Fertilizer Attachment that may be bought with the planter or at any future time.

Write today for Free Booklet "Z" giving planter facts you ought to know.

Concerning Seed Corn.

Farmers' Bulletin No. 415, by Prof. C. P. Hartley, of the United States Department of Agriculture, can be had by any farmer who will take the trouble to write a postal card asking the Hon. Secretary of Agriculture, Washington, D. C., for a copy. In the line of illustration it contains: A field of corn showing a good method of selecting seed; an ideal method of treating seed ears by stringing them immediately after they are gathered; seed ears suspended by means of wire racks made from electrically-welded fencing; seed-corn racks made from electrically-welded wire fencing, showing the method of construction; also a wire crate for storing seed corn in winter; a good rack for drying seed corn.

The subjects treated upon are: "Small yields due to poor seed corn can be prevented." "The very best seed is available at ripening time." "Where to obtain the best possible seed corn." "Corn breeding a special line of work." "What constitutes good seed corn." "How to gather seed corn." "Make seed-corn gathering a special task." "Propagate only from the best producing plants." "Treatment of seed immediately after gathering." "Destroying weevils or grain moths." "Winter storage of seed corn." "Preventing injury from weevils and grain moths." "Testing the germination of seed corn." "Grading seed corn." "Method of shelling." "Seed ears should first be nubbed." "Hand shelling is the best method;" and "Summary."

We consider the Farmers' Bulletins to be the best work of the United States Department of Agriculture; and all who are interested in the subject of seed corn we earnestly advise to send for Farmers' Bulletin No. 415.

THE GREAT BOOK OF LIVE STOCK CHAMPIONS.

We are actively engaged in preparing the new edition of the Book of Live Stock Champions for publication, and it is now in the hands of the printer.

We have published several editions of this valuable book and intend to make the new edition far superior to all others.

We already have illustrations of eight hundred different champions, and in each case the picture occupies a half page of the book. We are now gathering the remaining two hundred pictures.

Each illustration is a special demi-tone engraving from a photograph taken from life. No drawings or fancy pictures appear in the book.

First and second-prize winners are not eligible unless they have also won championship prizes. It is a Book of Live Stock Champions, not simply a book of ordinary prize winners.

Champions of the beef cattle breeds are admitted by their showring honors. We have enough pictures of beef cattle champions to make a book by themselves.

Dairy cattle are admitted by showring honors, also by officially tested dairy records. We have the finest selection of dairy cattle in the world.

Trotters and pacers are admitted on track records or as noted sires. We have all the famous horses, going back thirty years.

Thoroughbred horses are admitted on account of track honors or as sire or dam of champions. Saddle horses and ponies are admitted as championship winners.

Jacks and jennets, also mules, are admitted on show-ring or market honors.

Hogs, sheep and Angora goats are admitted as winners of sweepstakes prizes at State, National or International Fairs.

Numbers of famous car-loads of cattle, horses and sheep which have won show-ring and market honors will be published in the book.

Every live stock champion is entitled to entry providing a first-class photograph can be obtained. We do not intend to disfigure the book with poor pictures. It is better to leave out the poor pictures than to apologize for an inferior book.

A number of live stock champions appear in this edition of The National Farmer and Stock Grower to show the character of the Book of Live Stock Champions.

We do not charge the owner for publication of his animal, but we do ask his co-operation in furnishing first-class photographs and the records of said animals.

It is worth something to a publisher to know how many books to print and bind. We therefore offer the first ten thousand copies of this edition at one dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies will be handsomely printed and elegantly bound in red cloth, with gilt title. This is an extraordiary offer.

HERE IS A SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement post free, safe delivery guaranteed, one copy of the Book of Live Stock Champions, cloth-bound edition of 1912, immediately after publication.

Edwards "REO" Steel Shingles
"Tightcote" Galvanized

No other steel shingles in the world are Edwards "Tightcote" Galvanized. It is our own special process and it makes Edwards "REO" Steel Shingles wear as long as the building.

Each and every Edwards "REO" Steel Shingle is dipped in molten zinc after the shingle is made. Each of the four edges is as heavily galvanized as the two sides.

Not a microscopic point of Edwards "REO" Steel Shingles is exposed to the weather. They are rust-proof and acid-proof. They last three times as long as shingles cut out after the galvanizing has been done, and thus leaving raw edges open to rain and snow.

Edwards Interlocking "REO" Steel Shingles are made of high grade Bessemer Steel in sheets 5 to 12 feet long and 24 inches wide. Either painted or galvanized. All ready to put on. Hammer and nails all that is required. Anyone can do it. Can be applied over wood shingles or on sheathing 12 inches apart.

We agree to refund the amount paid in every case where a roof covered with Edwards Interlocking "REO" Steel Shingles is destroyed by lightning. This guaranty is backed by our $10,000 Ironclad Bond and stands forever.

We have a special cash money-making proposition for the man who writes for it, in each community. If any of your buildings need roofing, you are the man. Send dimensions of your building and we will quote you cost of an Edwards Roof, freight prepaid. Write for offer now.

Send for Free Roofing Catalog No. 257.

Starting Plants.

While there are some plants in some localities which can be more cheaply bought than raised, there are a few which it pays to start in the kitchen window. If you have some special kind of tomatoes which are a favorite—and few have not—seeds should be sown in February, and then you will be sure of your plants. If depending upon the greenhouse stock, it is usually hard to find out what varieties they carry.

Old berry boxes which have passed their stage of usefulness for fruit are excellent, being small, furnishing drainage and air. They are about the size usually required for a single kind of plants, and the labels are easily made on the box with a lead pencil.

Select rich earth. Leaf mould, soil from an old fence row, mixed with an equal part of thoroughly decayed fertilizer from the cow stable, should prove satisfactory. Sift it if inclined to be lumpy, for the seedling may find it difficult to reach the surface otherwise. Warm it thoroughly and make it moist with warm water before putting in the seeds.

If you are in haste, soak the seeds in warm water for a few hours before planting, which will hasten the germination. Scatter them evenly over the surface, but strive to avoid any places where a bunch will struggle for existence on a single bit of earth. This stunts on the start. The seed should be sown thick enough that each plantlet will aid the others in lifting up the soil, but not so thick that they will be crowded for room. Cover with soil and firm it down. Keep in a warm place. The top of an incubator is an ideal spot for this, the machine furnishing the steady warmth at the roots, day and night.

When the plants appear they should be given all the sunlight possible, and kept moist. An oversupply of moisture may induce the fungus growth popularly known is "damping off."

When the plants have reached the stage of the third leaf they may be shifted to individual pots. The old way was to let them grow together in a thick mass. Then when the time for transplanting to the garden came they were more or less stunted and the roots closely intertwined. Modern culture finds it profitable to re-pot as the florists do; it may be several times.

If you have not the tiny pots of clay, hunt up some more of the berry boxes. Wet the soil thoroughly, and after a few hours remove a half dozen of the largest plants into each of the boxes. It may be that they will require shifting again before the final planting, one plant being eventually sufficient to fill a box or oyster can. Then when the time comes to plant out it can be done with little disturbance to the roots, which will by this time have filled the pot. Soak them well with tepid water for a few hours and plant deep, so deep that the point on the stem at the surface when planted shall now be well below it. This will give the deep rooting which defies summer drouth.

As the plants increase in size, gradually accustom them to the outside air during warm days. They should gain strength as well as size. Turn them daily to avoid their becoming one-sided in development in the effort to seek the light. And if the soil shows signs of exhaustion, a dose of liquid manure applied once a week may be used. This, however, should be made very weak at first and the results closely watched, for an overdose upon the tender rootlets would prove fatal.

Be generous in planting your seed. If you strive to sow only enough for personal use an accident or bad luck may leave you with scant supply. A few extra plants will serve to make a good neighbor a better one. And while you may not care to transplant for others, if those for your own use are duly removed, the remainder will thrive fairly well in the original bed.—Bessie L. Putnam.

The Horse and the Motor.

"You still stick to that old ten-year-old nag of yours, I see, Blithers," said Dubbleigh. "Why don't you get a motor?"

"Well," said Blithers, "I've sort of found that there is more style to a 1902 model horse than there is to a 1902 model car." — Harper's Weekly.

Good Work by the Rock Island.

The farm educational work being done by the Rock Island Lines is bringing good results. During July, 1911, a wheat campaign was conducted by the company's Agricultural Commissioner, Prof. H. M. Cottrell, in the state of Kansas. Eighty-five stops were made by the Wheat Special and lectures were given by experts on the proper methods of seed selection, soil preparation and other features of improving the yield of wheat. Particular stress was laid on the need for working the ground immediately after harvest, in order to prevent loss of moisture during the summer months. Result? A canvass made some time ago indicated that never in the history of wheat growing in Kansas had the ground been better prepared than it was during the past fall. The wheat came up with a fine stand and now the snows of a particularly severe winter give indication of a bumper yield. The railroad company, of course, isn't responsible for the snows, but even with ample moisture there would be no assurance of a good yield had not the ground been properly prepared in the fall. This indicates not only that the company's agricultural department knew when to strike the blow for better wheat, but that the farmers of Kansas realize that the wheat experts know their business, and they are willing to follow their advice. Let the good work go on. As stated in a previous issue, a copy of the book "How to Double the Yield of Corn" by Prof. Cottrell, can be had by addressing L. M. Allen, Rock Island Lines, 411 LaSalle Station, Chicago, Ill. See land advt. on page 9.

ATLAS PORTLAND CEMENT

"THE STANDARD BY WHICH ALL OTHER MAKES ARE MEASURED"

One thing is absolutely necessary to secure good concrete construction, and that is to use the right brand of Portland Cement.

There is one brand which stands for the best, which is pure, uniform and strong. That brand is Atlas Portland Cement.

It is the most widely used cement in the world. It has produced the most permanent buildings, bridges, viaducts and sea walls in the country. It is the brand that is being used exclusively in the construction of the Panama Canal.

Our Free Book, "Concrete Construction About the Home and on the Farm"

tells you how to build everything that you need. It tells why Atlas Portland Cement is the best cement to use. The success of concrete construction depends upon the quality of cement used. Atlas has the quality which makes concrete work successful. Write for this free book today.

If your dealer cannot supply you with Atlas, write to

THE ATLAS PORTLAND CEMENT COMPANY, DEPT. 165, 30 BROAD ST., NEW YORK

Largest productive capacity of any cement company in the world. Over 50,000 barrels per day

What He Thought.

"Well, I declare," said Lot, as he realized that his wife had been turned into a pillar of salt. "That's a strange phenomenon. I always thought the old lady was largely pepper."

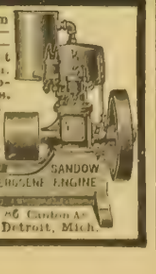
2½ H.P. Stationary Engine—Complete

Gives ample power for all farm uses. Only three moving parts—no cams, no gears, no valves—can't get out of order. Perfect governor, ideal cooling system. Uses kerosene (coal oil), gasoline, alcohol, distillate or gas. Sold on 15 days' trial. YOUR MONEY BACK IF YOU ARE NOT SATISFIED.



5-year ironclad guarantee. Sizes 2½ to 20 H. P., at proportionate prices, in stock, ready to ship. Postal brings full particulars free. Write for proposition on first engine in your locality. (110)

Detroit Motor Car Supply Co., 96 Canton Av. Detroit, Mich.

Where the Dairy Interests Stand on Oleomargarine Legislation.

The existing oleomargarine law was framed with a desire to promote commercial honesty and to protect both consumer and producer.

The food value of oleomargarine does not depend on its color, while the dishonest sales of the article are possible solely on its color being such as to counterfeit butter; the fallacy of the claim that oleomargarine is colored to make it more palatable is shown by the fact that different colors are natural to different products; that no color is—in and of itself—more palatable than another—the color desired for oleomargarine is the color of butter.

In consideration of these facts, the present law was enacted with the idea (1) of reducing the tax on natural oleomargarine from two cents per pound to a nominal figure for administrative purposes, so that the consumer could get it as cheaply as possible; and (2) of increasing to ten cents per pound the tax on oleomargarine when colored so as to be a counterfeit of butter.

The Commissioner of Internal Revenue asserts now that this law has been to an extent a disappointment for three reasons: (1) Adverse decisions of some courts as regards certain administrative features; (2) Adverse decisions of the courts through the presence of the word "artificial" before the word coloration; (3) The great disparity—forty to one—in the tax on colored and uncolored oleomargarine. The first objection has been removed by a recent decision of the Supreme Court. The Dairy Union Directors, after a full consideration of existing conditions, and taking counsel of those representing the National Grange, the Farmers' National Congress and other organizations, has decided to meet the other objections to the law, and also to show that the dairymen do not want "to tax the poor man's butter" or "to add to the cost of living" by favoring a reduction of all taxes to a nominal figure. But the dairy interests will insist that no oleomargarine shall be manuafctured or sold in imitation or semblance of butter of any shade of yellow.

The Dairy Union believes that the line between genuine and dishonest oleomargarine is based on color, and that some form of color regulation is necessary to maintain that line. A bill has been drafted expressing the ideas of the Union, and members of Congress should be promptly informed by letter and telegram of the wishes of the dairyman. Lose no time. GEORGE M. WHITAKER,
Secretary National Dairy Union.

JACKS AND JENNETS.

Visit to the Champion Breeding Establishment of the United States.

A visit to Limestone Valley Farm, two miles north of Smithton, Mo., in the month of January, was quite opportune, for the reason that the annual sale of jacks and jennets for the year 1912 is advertised for Tuesday, March 5th, and that date is approaching rapidly.

Smithton is on the Missouri Pacific Railroad, six miles east of Sedalia, and Limestone Valley Farm is in easy driving distance from either Sedalia or Smithton. Mr. L. M. Monsees, owner of Limestone Valley Farm, was born and reared in that vicinity, and his driving team knows the road to Sedalia

DON'T CONFUSE

the INTERLOCKING Style of

UNITED STATES CREAM SEPARATOR

with older models.

The U. S. Interlocking Cream Separator represents the highest attainment in cream separator construction and possesses every essential separator requirement in the highest known degree.

Here are some of its special advantages.

1. It has about half the bowl diameter of older models.
2. It intensifies the centrifugal force and prolongs the path the milk must travel.
3. It gives practically double the skimming surface and does about twice the work of older models.
4. It keeps the milk and cream entirely apart and affords a protected path for the cream.
5. It is operated with about half the power of older models.
6. It is easiest and quickest washed by the same centrifugal force which skimmed the milk.
7. It skims cleanest. For clean skimming the U. S. holds the World's Record.

We do not ask you to accept the above statements as final.
All we ask is that you give us the opportunity to prove them.

THOS. M. BROWN, Springfield, Mo.

better than they do to Smithton; in fact, Sedalia is the gathering point for those who attend the Monsees sales of jacks and jennets. Mr. Monsees always arranges for a special train from Sedalia to Smithton on the day of sale, and he carries out his friends and customers from Smithton to the farm.

The catalogue of the sale of jacks and jennets was in the hands of the printer at Sedalia when we called. We noticed from the proof sheets that the offerings will consist of thirty-seven jacks and twenty-eight jennets, all registered in the Jack Stock Stud Book. There are about a dozen of the offerings sired by Orphan Boy, the grand champion at the St. Louis World's Fair, and several by Limestone Monarch, a sire that Mr. Monsees values on a par or better than Orphan Boy.

The pictures in the catalogue show that the offerings look very much alike, black jacks, black jennets, black colts, black fillies with white points and mealy noses. Breeding on this farm is not chance work. Being asked in regard to the uniformity of the stock Mr. Monsees explained that the herd was built that way. He said: "We know what to expect from the breeding stock that we have, and so does everyone who has bought stock at Limestone Valley Farm. We are as sure of our colors and quality as the Hereford cattle breeder is of getting a white-faced calf."

Mr. Monsees said that the foundation of the Jack Stock Stud Book was imported stock, but it was no longer necessary to import jacks or jennets for the reason that in the hands of American breeders the stock has been improved 25 to 40 per cent. This has been done in fifty years since the first importation.

The business of raising jacks and jennets is not overdone and very likely never will be. The very best of the jacks are used for stud farm improvement and the others to raise mules. The demand for jacks for mule raising alone is sufficient to insure good sale for all available jacks. According to the census of 1910, there are now 4,027,000 mature mules at work on farms and in cities and villages of the United States, and only 427,000 mule colts growing up to replace those that are worn out. In a year or two there will be a shortage of work mules which will be difficult to fill, especially with superior mules from the best class of jacks and from good mares.

In speaking of the quality of the jacks and jennets of Limestone Valley Farm, it is only necessary to refer to the St. Louis World's Fair. The exhibit of jacks and jennets was the greatest the world has ever seen, the prize awards were the most generous, the competition the keenest, the judgment the highest.

Limestone Valley Farm not only received 75 per cent. of the prizes, including four championships and two grand championships; Limestone Valley Farm received the largest amount in dollars and cents paid to any one exhibitor of any class of stock. Such an endorsement ought to be sufficient, especially when it is stated that the march of improvement still goes on, and Orphan Boy and Belle of Limestone, the grand champions at the St. Louis World's Fair, are surpassed by jacks and jennets since raised on the farm.

For the catalogue of the sale to be held at auction Tuesday, March 5th, 1912, address L. M. Monsees & Sons, Smithton, Mo.

ELLWOOD FENCE & GATES

MADE OF TOUGH SPRINGY STEEL

SOIL fitness determines profits in farming. If the soil is not fit, the finest seed in the world will produce but an indifferent crop. Soil condition is the most important soil fact, last and always.

A fit soil is mellow, penetrated to the innermost recesses with air. Natural manures are there. Weeds are absent.

Fertility is maintained by watchfulness; by replacing the foods taken away by crops. Woven wire fence surrounds it, protecting and adding to the profits.

ELLWOOD FENCE is elastic, tough and springy. Horizontal wires twisted into steel cables with the diamond mesh or stay wires interwoven in triangle form like a bridge truss—the strongest form of construction known. Thoroughly galvanized, inspected and guaranteed.

Look for Ellwood Dealer in Your Place

He buys in large quantities and gets lowest carload freight rates and gives you the benefit. You will get from him the most for your money.

Send for copy of "Ellwood Fence News," also book "How to Make the Farm Pay," profusely illustrated, devoted to the interests of farmers and showing how fence may be employed to enhance the earning power of the farm. Furnished free upon application.

KIRKWOOD, St. Louis County, MO

Some Things That Count in Poultry Keeping.

The matter of roosts does not receive enough attention generally. In many poultry houses the number of roosts is not enough, and the result is that some of the fowls form the habit of roosting in undesirable places, such as on the edge of the nests or even in the nests. The roosts should be more than the poultry need, and this will eliminate the habits of roosting in other paces than on the roosts.

Roosts should be movable. The writer has tried various kinds of movable arrangements with varying success. The simplest has proved the best. It consists of a discarded ladder across two pieces of upright planks. The planks are only three feet long and have cross pieces nailed to the bottom to keep them upright. The fowls seem to enjoy roosting on the ladder, and it can be easily removed for cleaning out the house, which is done periodically.

Clean nests are an absolute necessity, if the fowls and eggs are to be kept clean. Even if no disease or lice are present, the straw should be often renewed. It is better to do this than encourage the multiplication of possible germs that get into the nests. Where lice and mites are present in a flock it is probable that the nests prove helps to the distribution of the pests and frequent renewal of the nest material will greatly help to prevent the spread of the pests.

Lice and mites are looked upon by many poultry raisers as inevitabe. But this is an error. It is possible to have flocks entirely free from mites and lice and keep them so. There are many poultry establishments with hundreds of fowls existed. If one starts with an incubator and builds up a flock entirely free from these pests there is no great danger of introducing them, except in the purchase of new fowls. In the purchase of new fowls, see that the flock from which fowls are to be taken are also free from lice and mites, or do not buy the fowls. In this day there is no reason why professional poultry raisers should send out fowls from flocks infested with lice or mites.

Fowls are great drinkers and should be kept constantly supplied with water. In cold weather there is some difficulty in doing this, but it can be done. There are appliances on the market that can be purchased, but there are also home-made arrangements that are good. One poultry raiser has quite a large dish, which, when full of warm water, is set in a bed of hay, which protects it on the bottom and around the sides. It acts like a hay stove to a limited extent, and the water keeps free from ice during an entire day. This scheme can be modified to meet any condition. Of course the cold gets at the top of the water, but its effect is slow if the dish is quite deep; the deeper it is the slower the effect of the atmosphere on it.

Fowls that have been sick with contagious disease are dangerous to well fows. It is often safer to kill them at once and lose them than to attempt to cure them.

Sent on Trial.

If you are sick you can get a full-size one dollar box of Bodi-Tone on twenty-five-days' trial. If it benefits you, you pay $1.00 for same. If it does not help, pay nothing for it. This is the way Bodi-Tone is being offered to the sick in the large announcement on the last page of this paper and the way thousands have already been cured by it.

To Produce the Perfect Egg.

How to produce the perfect egg is explained in Feathered Life as follows:

"When the white of an egg is watery it shows that one is not feeding a good, well-balanced ration. The lack of protein in feeding does it. Fourteen and one-half per cent. of the egg is protein. This can be remedied by feeding plenty of clover, wheat bran and wheat middlings. As a result, the white of the egg is thick and attractive. Ten and one-half per cent. of the egg is fat; that is the yellow. If the yellow is pale, it can be colored by feeding.

"How often an egg in the winter is found with the shell so brittle that it won't stand shipping. Sometimes one finds an egg with nothing but tissue—no shell at all. What is the matter with that hen? The shell is composed of lime, and it is a great drain on the hen's system to produce the shell. Clover is rich in protein, and it is rich in lime, but in addition to this slake a little lime and put it in the shell box; the hens will go there if they require it, and the result will surprise one if he tries it. Break an egg in a saucer and see the result of proper feeding. The white of the egg is thick, heavy, it is attractive, nutritious; the yellow is the golden hue desired and the shell is firm and strong and will stand shipment. There is the perfect egg, just brought about by thinking the matter over carefully and feeding intelligently."

The Slater (Iowa) Creamery is disposing of by-products and skim milk by feeding hogs for market.

There Should Be A Copy Of This Book On Every Farm

You need it for the information it contains on the care and use of saws and tools. It points the way to greater economy and satisfaction through the use of

DISSTON

SAWS TOOLS FILES

It broadens your knowledge of tools and the purposes for which they are intended. It is by understanding what tools to use and where to get the best that you can accomplish the greatest amount of good work with the least labor and expense and at the time the need arises.

This book illustrates and describes the saws and tools made by Henry Disston & Sons in the largest and most efficient plant in the world devoted to such manufactures.

It shows how you can install and maintain a tool equipment on your farm that will not only make pleasant the ordinary sawing and work with tools, but also add greatly to the money saving and even money making opportunities—all for a very small investment.

The DISSTON book is free —write for your copy at once.

Brilliant Light From Coal Oil.

The Home Supply Company, 278 Home Building, Kansas City, Mo., are offering one person in each locality to whom they can refer new customers one of their Beacon Burners free. It gives a better light than gas or electricity at one-sixth to one-tenth the cost. Drop them a post card to-day, mentioning The National Farmer and Stock Grower, and secure the free burner for your district.

First Colorado Lambs.

First Colorado lambs to arrive at the Chicago market this season made their bow to the packers January 15, and comprised a two-double-deck consignment from the feed-lot of Henry Seth, of Monte Vista, in the San Luis valley district. They averaged eighty pounds and sold at $7.15 per 100 pounds. The first Colorado lambs last year arrived January 3 and sold at $6.60 per 100 pounds. This item is from Clay, Robinson & Co.'s Live Stock Report.

How Many Eggs Will a Hen Lay?

Experts state the hens of the United States lay an average of 60 eggs each a year. Take an ordinary flock, cull out the old, the weak and the poor ones, saving only the pullets and yearling hens that are active layers and the average can be brought up to 120 eggs a year per hen. Thorough culling will double the egg production without increasing by a single cent the cost of production. There are many large flocks that average 12 dozen eggs per year per hen, and every poultry raiser should determine to keep his flock up to or above this standard. A few flocks average 175 to 180 eggs and the best breeders are trying to establish flocks of hens that average 200 eggs per hen a year. They have not succeeded as yet.—From the Southwest Trail.

Have You a Chronic Illness?

If you have, you will surely be interested in the Bodi-Tone trial offer, which is printed on the last page of this paper. Bodi-Tone, which is now three years old, has made a great record in such cases. The manufacturers believe in it, for they will send you a box to try, no matter how old, hard or obstinate your case may be. If it does not help you, you need not pay for it.

We learn from the Milk Reporter that after January 1, 1912, all creameries that ship milk to New York City will have to possess a permit to do so, and unless the condition of the plant scores a certain number of points, no permit will be issued until the plant's score is raised to the standard.

Horse Secrets and Horse Sense

A Liberal Supply of Both for a Dollar

The "Horse Secrets" are told by Dr. A. S. Alexander, the celebrated veterinarian, in a book of that name. This book is the only one in existence which exposes all the tricks that unscrupulous horse dealers and "gyp" traders are up to—such as "shutting a heaver" and "plugging a roarer," the "Bishoping" Trick, the "Widow Dodge" and all the other ways of "fixing" a horse. Saves you from being "stung" by professional dopesters, and gives you the laugh on these slick scamps. Also contains many valuable secrets for feeding and conditioning stock, curing evil habits, etc.

Seven editions of "Horse Secrets"—75,000 copies in all—have been distributed by Farm Journal in the past two years, to the great discomfiture of horse-trading swindlers. We will send out many thousand more this winter.

"Horse sense"—as applied to farming, fruit growing, poultry raising, stock breeding and household economy—is imparted through the pages of Farm Journal.

Edited by men who, most of their lives, have had roosters for alarm clocks and learned farming by making a living at it, there's no flub-dub or hothouse theory in Farm Journal—just sound, practical, common-sense teachings which are coined into cash by those who study and apply them.

If you ever buy, sell, trade or own a horse, you need Horse Secrets, and in whatever branch of farming you are engaged you need Farm Journal. They will save and earn you many dollars—yet

For only $1.00, we will send you "Horse Secrets," postpaid, at once, and Farm Journal every month for four years.

This is the most liberal combination offer (quality of book and paper considered) ever made. You'll do wisely to take advantage of it today.

If you order promptly, we will send, absolutely free, "Poor Richard Revived"—our splendid new Almanac for 1912.

FARM JOURNAL, 257 N. Clifton St., Philadelphia

Poultry and Farm Paper Club.

Two first-class papers can be had for the price of one. **The National Farmer and Stock Grower** is one, and the **American Poultry Journal** is the other. There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is the **American Poultry Journal.** We have made arrangements whereby we can send **The National Farmer and Stock Grower** and the **American Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

POULTRY AND PET STOCK.

A turkey dealer in Vermont tells the American Cultivator that the practice of marketing turkeys in droves has not wholly disappeared from the East. He says it is still a common practice to collect droves of turkeys in Canada and drive them over the border, when they become "Vermont turkeys."

At the greatest English Poultry Show the three largest number of individual entries were: Orpingtons, 918; Wyandottes, 763; and Langshans, 238.

At Madison Square Garden, New York, in December, there were 684 Plymouth Rocks exhibited, 572 Wyandottes, and 634 Orpingtons.

E. B. Thompson, of Armenia, N.Y., who has been breeding Barred Plymouth Rock chickens for thirty years, sold eggs and birds to the total of $52,430 during the year 1911. If this is not success in poultry raising we would like to know what is.

In the year 1909 Russia produced 1,594,000,000 pounds of flax, and all the other countries of the world produced a total of 278,000,000 pounds.

15.95 AND UPWARD

W. F. SCHADE,
Jackson, Cape Girardeau County, Mo.

REPLACES THE GRINDSTONE.

Everybody hates the grindstone. For centuries it has been a symbol for back-breaking work. Emery farmers have tried and found far from satisfactory. Emery spoils more tools than it is worth by drawing the temper and leaving a rough cutting edge.

The discovery of the new sharpening substance Dimo-Grit has changed all this. It is as hard as the diamond itself. In fact, it was discovered in the course of experiments to produce artificial diamonds. Its extreme hardness is what makes it possible to cut steel rapidly without heat. Emery and the grindstone produce heat and cause it to wear away fine particles of steel, whereas a substance as hard as Dimo-Grit cuts it away in minute shavings. It is particularly adapted to steel and leaves a smooth cutting edge.

This new grinding substance is mounted on a foot power machine and makes it the ideal sharpening device. The machine is made entirely of steel, with shaft drive, enclosed gearings and dust-proof bearings. It can be run by either foot or engine power.

This machine is put up by the Luther Grinder Mfg. Co., of 357-A Stroh Bldg., Milwaukee, Wis. We feel sure that any of our readers who deal with them will find them responsible and reliable in every way.

When last heard from at St. Louis, fancy Red Globe onions were selling at $1.55 to $1.65 per bushel; white onions at $2.00; and yellow Californians at $1.30.

ALBERTA'S GRAIN CROP

Reports from the grain fields of Alberta, Western Canada, show splendid yields of wheat, oats and barley.

Many farmers have paid for their land out of the proceeds of the crop of 1911.

At exhibitions throughout the U. S. wherever the grain from this Province has been shown it has received the highest commendation.

Free Homesteads of 160 acres and adjoining pre-emptions of 160 acres (at $3 per acre) are to be had in the choicest districts. Schools convenient, climate excellent, soil of the very best, railways close at hand, building lumber cheap, fuel easy to get and reasonable in price, water easily procured, mixed farming a great success.

Write as to best place for settlement, settlers' low railway rates, pamphlet "Last Best West," and other information, to Supt. of Immigration, Ottawa, Can., or to Can. Gov. Agt.

Canadian Government Agent,
125 W. 9th St., Kansas City, Mo.

A Very Successful Prescription.

The combination of remedies used in the manufacture of Bodi-Tone is proving a wonderfully successful prescription for old,chronic ailments. The makers of Bodi-Tone publish this prescription broadcast, so all may read and judge it for themselves. Bodi-Tone contains Iron Phosphate, Gentian, Lithia, Chinese Rhubarb, Peruvian Bark, Nux Vomica, Oregon Grape Root, Cascara, Capsicum, Sarsaparilla and Golden Seal. Read the trial offer on last page No one need pay a penny for Bodi-Tone until they have tried it.

DEAFNESS AND HEAD-NOISES.

Joyful News For Sufferers — Interesting Book Given Free.

Those who have tried in vain to regain good health are the persons that are strongest in their praise of a new remarkable home treatment. After being wholly or partially deaf for many years, and after trying numerous medicines, apparatus, treatments, ear-devices and aurists' prescriptions in vain, legions who are now cured unite in telling of the wonders being accomplished by Dr. George E. Coutant, 228 A, Station E, New York, N. Y. He describes his method in a very interesting illustrated treatise which he will send without cost, to anyone who writes him, merely asking for the free book.

We advise all who are troubled with their hearing or with ringing noises in the head, to take advantage of this liberal free offer.

"There is only one way to get ready for immortality, and that is to love this life and live it as bravely and cheerfully and faithfully as we can."—Van Dyke.

BLOODED STOCK NOTES.

Right in the heart of the Illinois milk-producing district is Mr. J. W. Farrell, owner of "The Pines" Herd of Holstein Cattle, and he will furnish pure-bred and high-grade Holstein calves at reasonable prices. His card is in our breeders' columns.

Sheehy Bros., R. F. D. 1, Hume, Mo., have a coming three-year-old Percheron stallion for sale in addition to their Poland-Chinas. Hume, Mo., is in Bates county, on the western border of the state, a junction point of the 'Frisco Line and the Kansas City Southern. The herd is headed by a first-prize boar at the Missouri State Fair.

Scotch Collies are offered for sale by R. Fleming, Cuba, Kas. He has advertised in this paper before. Collies are true farm dogs and can be trained to be very useful, especially with sheep.

This is a good time to write Trumans' Pioneer Stud Farm, Bushnell, Ill., for catalogue. A splendid consignment of Shire horses is arriving, also a special consignment of Percherons. Messrs. Trumans are absolutely reliable, and a visit to the farm is a revelation to those who are looking for first-class draft horses.

Kirby Stock Farm, Marmaduke, Ark., advise us that again there are more fine pigs for sale that are ready for shipment and can be bought at bargain prices. This is a very good herd—a pioneer herd of pure breeding of Poland-Chinas in Arkansas.

Chas. Ford, of Mortonsville, Ky., breeder of Tamworth swine, has all sizes for sale. He is owner of a premium herd, having won 100 ribbons in one season.

Attention is again invited to the card of Mr. T. C. Kimber, breeder of Yorkshire swine, whose card will be found on page 20. He has a splendid breeding herd of improved large-style Yorkshires. His postoffice address is Pilot Knob, Mo.

Attention is invited to the advertisement of Mr. W. F. Schade, of Jackson, Cape Girardeau county, Mo., who is advertising the sale of twenty-five head of high-class, registered jacks and jennets on Wednesday, February 14th, 1912. This advertisement arrived just before publication and had to be squeezed in small space on page 21. This is Mr. Schade's third annual sale. He is a representative breeder and Sheriff of the county.

International Crop Information.

A cablegram dated January 20th, 1912, from the International Institute of Agriculture, Rome, Italy, has been received by the United States Department of Agriculture, giving the following information:

"The area sown to winter wheat in Belgium this season is 104 per cent. of last season's area; in Spain, 95 per cent.; in France, 112 per cent.; in Great Britain, 106 per cent.; in Canada, 97 per cent.; in British India, 99 per cent. The weather conditions in the countries named are favorable for winter cereal crops and their germination is regular.

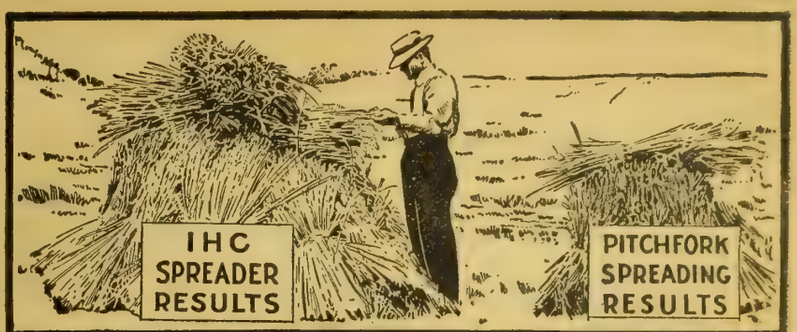
"The production of lint cotton in Mexico, this season, is 347,000 quintals (76,500,000 pounds); in British India 5,628,000 quintals (1,240,750,000 pounds); in Egypt, 2,860,000 quintals (630,500,000 pounds).

The combined production of lint cotton of the three countries named. this season, is 115.8 per cent. of last season's production."

Apple Market at St. Louis.

On January 31st, at St. Louis, Ben Davis apples were selling from $1.50 for common to $2.25 per barrel for fancy, and other varieties accordingly. Willowtwigs at $2.50 to $3.25; Roman Beauty and other fancy varieties (No. 2), at $3.00 to $3.50 per barrel; No. 1 at $3.00 to $3.75; Winesaps at $2.75 to $3.75; Geneting at $2.00 to $2.75; Baldwin at $2.50 to $3.25; Spy at $2.90 to $3.25; Greenings at $3.00 to $3.25.

New York Danish cabbage were selling at $26 to $39 per ton at St. Louis on opening day of February.



How Do YOU Spread Manure

THE above illustration shows the difference in crops, between the I H C way of spreading manure—and the pitchfork method.

The pitchfork way is slow, hard, and disagreeable, wastes much of the value of the manure, and the results hardly justify the labor and time invested.

The I H C Spreader cuts the manure into fine shreds, spreads it evenly, and makes the work easy. Spreading manure the **I H C way** is bound to result in better soil, bigger crops, and more profits.

I H C Manure Spreaders

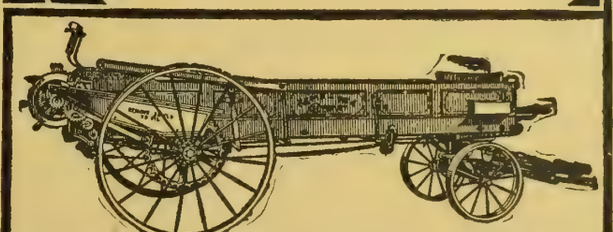
Kemp 20th Century, Corn King, Cloverleaf

are simple, strong, and durable. They have many advantages that make them superior to other spreaders.

All working parts are extremely simple and wonderfully strong. The beater driving gear is held in a single casting, so that there is no binding—no cutting of parts caused by the gears springing out of alignment. The roller bearing support for the apron reduces the draft. The levers are convenient. The feed changing device can be shifted quickly and easily. The wide range of adjustment allows you to spread manure heavy, medium, or light, as your judgment tells you is best for the soil.

Whether you have a large or small farm, or want a spreader for orchard use or truck gardening—there is an I H C that will suit your requirements. Why not see the I H C local dealer at once? Get a catalogue from him, or, if you prefer, write direct.

International Harvester Company of America
(Incorporated)
Chicago USA



I H C Service Bureau

The purpose of this Bureau is to furnish farmers with information on better farming. If you have any worthy question concerning soils, crops, pests, fertilizers, etc., write to the I H C Service Bureau, and learn what our experts and others have found out concerning these subjects.

Dried and Evaporated Fruits.

Not much evaporated fruit is arriving at St. Louis, therefore quotations are not very close. Evaporated apple rings—Fair, 5½ to 6c.; choice, 7 to 7½c.; fancy for facers more; evaporated quarters at 5½ to 6½c.; cores and peelings at 1 to 1½c.; chops, 1 to 1½c. per pound. Sun-dried apples—Prime quarters, 8c.—fancy worth more; poor to fair at 6 to 7½c.—rings and irregular cuts less than quarters. Peaches—Prime choice sun-dried halves at 9 to 9½c. per pound.

1912 Pratt-Forty

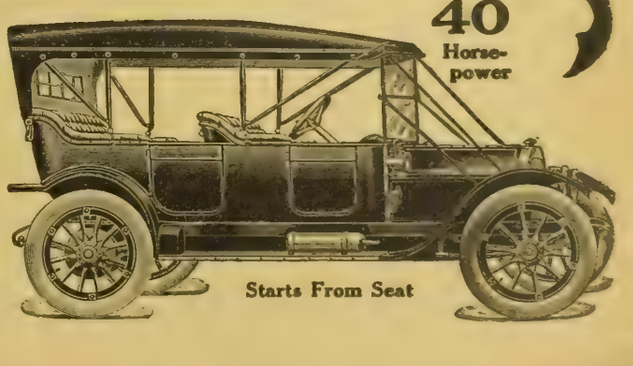
Fourth Successful Year

Backed by 39 Years' Manufacturing Experience

Guaranteed for one year. Self-Starter, 120-inch Wheel Base, Unit Power Plant, Three-point Suspension, Bosch Magneto, Demountable Rims, 36x4 inch Tires, Inside Control Levers, Electric Side and Tail Lamps. List price Model "H," $2,000, fully equipped, Mohair Top, Windshield, Speedometer, Prest-o-lite Tank, etc.

There are many localities where we have no agent, and if you will write us, we will send you our catalog and interesting proposition on a car for your own use. We also make a full line of carriages and harness.

ELKHART CARRIAGE & HARNESS MFG. CO.
Elkhart, Indiana



Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

To Club Raisers:—Anyone getting up a club of four subscriptions and sending in $2.40 will be credited with one book and one-year's subscription free.

Presents a Girl Can Make.

Christmas is over, but the occasion for giving small gifts is continually coming up. Birthdays, removals, visits from friends, these and other things make the small gifts fit in nicely. And the girl who can fashion these trifles herself is gaining a lesson in self-dependence.

A beautiful handkerchief case is made by using a handkerchief with an edge embroidered in scallops. Turn the four corners toward the center, making them meet at that point. Baste the edges of the smaller square thus formed and work a row of feather stitching in light pink or blue a seam from the edge. Fasten three of the corners together and weave a bit of half-inch ribbon the color of the feather stitching alternately above and below the points where the edges come together, these having first been caught together at each point in the scalloped edge with a thread of white. To the remaining point attach a small bow of the ribbon, and this serves as the flap for the neat little envelope intended for the safe keeping of handkerchiefs. If a new kerchief is placed therein as a part of the gift, the use of the article becomes self-evident.

A yard of fine linen for handkerchiefs will make six, and if there is a narrow border left along one side it may be used in ties, jabots or some of the other fashionable neck wear. A narrow hem-stitched border gives an edge always in favor. Select some fancy letter or letters and place your pattern under the cloth, carefully drawing the design upon the thin goods with a pencil, to be embroidered later. A single initial is best for the first attempt. Later, one may combine into a monogram, using a different stitch in embroidery for each letter. This gives a touch of distinction which the stores are not able to furnish.—Bessie L. Putnam.

Selecting Flower Seeds.

If you want to attain the highest results in floriculture, make it a point to specialize along lines with which you have the most marked success, and then gradually increase your field. There are certain plots which seem well adapted to the sweet pea, while others are just the surroundings for the pansy. Yet neither would do its best in the ideal plot of the other.

Remember that florists are continually growing better strains of every species. The pansy of to-day is not the one of twenty years ago, and the modern sweet pea has several advantages over its ancestor. Besides, nature requires the introduction of new strains. If you cling to your own seed, saved year after year, you will in time find that it has "run out," as surely as your poultry. Make it a point to get a new stock occasionally. You certainly allow yourself some luxuries, and there are none more cheap or satisfactory to the flower lover than an occasional new packet of seed.

Study the needs of certain species. If you have a sunny exposure next to a glaring white wall, try scarlet salvia or California poppy; but if your flower bed is perpetually shaded, pansies and ferns would be more suitable. A sandy or gravel soil will be a nice foundation for a lily bed. and the petunia will thrive almost anywhere if it can get the sunshine.

Start fine seeds in boxes. Asters and cosmos will repay this extra labor, the latter rarely coming into flower much in advance of the frosts unless some such precaution is taken. If you want to combine flowers and shade for a porch screen, the old-fashioned morning glory still has many advantages; while for a hanging basket or the edge of a porch box the ice plant is unique and cool looking. Avoid cheap seeds and "novelties." Standard sorts offered by standard firms are most trustworthy.—Bessie L. Putnam.

Value of Soil Surveys.

Many of the states in the Union are paying considerable sums of money for the survey of the soils of the different localities found in them. The labor performed is large in amount and is expensive. In the state of Illinois the work of surveying the soil began about eleven years ago and is far from being completed. It has been carried on by money appropriated by the state. The beginning was $10,000 a year, but the appropriation is now $60,000 a year.

The work is expensive, because only first-class men can be employed. The men that go out to make the surveys have to be men who can be depended on to do their work in a manner that can be relied on. Every little way, samples of soil are taken at different depths, and records have to be made of the location and contour of the land.

When these samples are taken to the one place in each state, where they are analyzed, they have to be carefully labeled and classified, for their number has to be legion.

The men that analyze these samples must necessarily be those who have had courses in chemistry and whose experience is such that they will not make a mistake. Such men cannot be secured at a nominal price, and have to be fairly well paid.

The value of soil surveys is not fully apparent to the masses of the people, because it is a matter requiring a long time to perfect, and it will take other years to enable even our best farmers to lay hold of the truths brought to light and utilize them for what they are worth.

A soil survey is as necessary as a geological survey or a geographical survey. The soil survey corresponds to the survey that mariners make of the depths and shallows of the sea. That is a work that has been going on for hundreds of years and is still in progress by the maritime nations of the world. It seems like doing a great deal of work for small results, but it is one of the absolute necessities.

Our soil surveys are as necessary to agriculture as the sea surveys are to our commerce. Many a farming enterprise has made shipwreck because the possibilities of the soil were not understood.

The soil survey maps are interesting things to study. They show many things about the soils that throw a flood of light on the agricultural operations to be pursued.

As fast as the counties are surveyed for soil formations and soil contents the farmers should make a study of the soil maps and learn the deficiencies of their soils. In many cases the analysis shows just what fertilizers should be applied to each kind of soil. In time this information will mean the saving of very large sums of money now wasted in the purchase of fertilizers unsuited to the soil on which they are used.

The soil survey means more intelligence in farming in the future. By the information thus gained it will be possible for a man to know in advance by actual experiment what kinds of crops are likely to do best on his soils.

E. Myers, President, E. Myers Lye Company.

Let Me Show You How Merry War Powdered Lye Cures Sick Hogs

All the talk in the world won't kill one single hog worm—won't cure one single sick hog—but if I, by personally presenting these facts to you, can but persuade you, Mr. Hog Raiser, to give MERRY WAR POWDERED LYE a fair, common sense feeding trial, I will have done you the greatest favor any one man can do another by putting you in touch with the best hog conditioner, cholera and worm cure the world has ever known.

This sounds like "big talk", but I know whereof I speak because I have spent years in untold experiment and test after test has resulted in unanimous, enthusiastic praise from thousands of Farmers and Hog Raisers all over the United States who have fed MERRY WAR POWDERED LYE regularly every day with their hog rations—and with wonderful results—proving beyond all shadow of doubt that MERRY WAR POWDERED LYE WILL DO THE WORK—AND THAT NOTHING ELSE WILL.

The Cost is But a Trifle

Merry War Powdered Lye is NOT ONLY the BEST protection against hog losses ever discovered—preventing Hog Cholera; killing worms; rendering hogs immune from infectious diseases; keeping them on their feed, with hearty appetites; toning them up; making them fat and sleek; insuring prime condition in the shortest possible time for top notch prices—BUT it is the LEAST EXPENSIVE AS WELL.

For Hog Cholera

The following letter is but a sample of hundreds that come every week, telling how happy hog raisers are with Merry War Powdered Lye.

H. G. Acker, Chickasha, Okla. "I have been feeding Merry War Powdered Lye some two months, and it expelled worms after the first few feeds."

I can show you all the proof you want—as many letters like this as desired.

Feed Merry War Powdered Lye Daily

—and begin today—the sooner you begin, the sooner I will prove to your complete satisfaction that Merry War Powdered Lye makes good every claim—and 10c will make the test.

Important Warning

Some commercial lye makers try to persuade dealers and hog raisers that any lye will do what Merry War will for hogs—but it will not, it can't—because no other lye maker knows the secret process that makes Merry War Powdered Lye safe to use in Hog Feed—they don't know the combination in Merry War Powdered Lye that produces the fat, healthy hogs.

Merry War is the only Lye which is absolutely safe to feed your hogs—the greatest Hog Remedy the world has ever known, and Hog Raisers who make the mistake that any lye will do the work claimed for Merry War Powdered Lye—fail to obtain results—pay the penalty in loss of hogs and are sorely disappointed.

Merry War Powdered Lye comes in 10c cans; full cases of 4 dozen cans for $4.80—at Grocers', Druggists' and Feed Dealers'—there are no substitutes.

Follow These Directions

Mix one tablespoonful Merry War Powdered Lye with slop for ten hogs, or a half can with barrel of swill. Stir well and feed EVERYDAY, night and morning. If your hogs are on a dry feed ration, mix a half can Merry War Powdered Lye to each barrel drinking water.

Kettle Powdered Lye For Soap Making

If you want the best lye, exclusively for Soap-Making, scouring, cleaning, disinfecting, etc., use my famous Kettle Powdered Lye—it makes the best soap you ever used—but DON'T feed it to your hogs. Feed Only Merry War Powdered Lye To Your Hogs.

At All Leading Dealers

Most dealers handle Merry War Powdered Lye. If yours can't supply you, write us, stating dealers' names—we will see that you are supplied and will also send you, free, a valuable booklet, on "How to Get the Biggest Profits From Hog Raising."

E. MYERS LYE COMPANY, Dept. 22 ST. LOUIS, MO.

"Keep busy," says a book on self-help; that is, wind the eight-day clock every day, if you can't think of anything else to do.—Exchange.

$3.50 Recipe Free For Weak Kidneys.

Relieves Urinary and Kidney Troubles, Backache, Straining, Swelling, Etc.

Stops Pain in the Bladder, Kidneys and Back.

Wouldn't it be nice within a week or so to begin to say goodbye forever to the scalding, dribbling, straining, or too frequent passage of urine; the forehead and the back-of-the-head aches; the stitches and pains in the back; the growing muscle weakness; spots before the eyes; yellow skin; sluggish bowels; swollen eyelids or ankles; leg cramps; unnatural short breath; sleeplessness and the despondency?

I have a recipe for these troubles that you can depend on, and if you want to make a **quick recovery**, you ought to write and get a copy of it. Many a doctor would charge you $3.50 just for writing this prescription, but I have it and will be glad to send it to you entirely free. Just drop me a line like this: Dr. A. E. Robinson, K-1174 Luck Building, Detroit, Mich., and I will send it by return mail in a plain envelope. As you will see when you get it, this recipe contains only pure, harmless remedies, but it has great healing and pain-conquering power.

It will quickly show its power once you use it, so I think you had better see what it is without delay. I will send you a copy free—you can use it and cure yourself at home.

Can you add $850 to your surplus, yearly?

The *average net* surplus of *every* family in the St. Francis Valley of Southeast Mo., is $850 *yearly*—the *highest* average in America.

If *you* had alluvial soil *fifty feet deep* to work with, it wouldn't take *you* long to get rich. Mr. Bennson, an Iowa man, planted his first crop in St. Francis Valley between thickly strewn stumps, yet made 90 bushels of corn per acre. Mr. Mahoney, an Indiana man, last year sold $2700 worth of clover seed from 150 acres of land which, the same year, had produce a *big wheat crop.* Along the

Cotton Belt Route in Southeast Missouri

you will find hundreds of farmers who have made enough from their *first* year's crops to pay for both land and *clearing.* Crops never suffer from drouth, for a turn of the plow brings up ample moisture. Pastures are green *every* month; seven months are without frost. The biggest, best-paying markets are *close by.* Lumber is so cheap that homes are built for $100 a room. Roads, schools, churches and society are of the best. *Right now* you can buy some of the *richest land* in the world, in this valley, at $20 to $30 uncleared, up to $50, cleared; land that will *pay for itself* the *first* year. The Government reports this the *fastest growing section* of America—if you delay going, you will not only miss out on the *best* tracts but pay *more* for what you get.

On the 1st and 3rd Tuesday of each month there are very low round trip excursions to this section via Cotton Belt Route, allowing 25 days for trip and *free stop overs.* Take advantage of the *next* excursion and *investigate* this fertile valley.

Get our new free book

—the most complete farmer's guide to this country ever published, written by a practical farm man, who personally went over every mile of this section and got the farmers' own statements about their success there. Scores of farm and stock pictures. Write today for your free copy.

COTTON BELT ROUTE

The Reo Trucks and Motor Cars.

R. M. Owen & Company continue to book a large number of orders for their light delivery Reo trucks which are on exhibit at the big Madison Square Garden Show, New York. R. E. Olds, President of the Reo Motor Car Company, says that one user of these popular trucks reports that for the last six months his Reo truck covered 4,553 miles, making 3,773 stops. His six-months' expense for gasoline, oil and repairs was $78.86—fifty cents per day, which is less than 1¾ cents per mile. He earned with the truck, during those six months, $900.54, or $150 more than he paid for the truck. This is but one instance of hundreds of others where the Reo truck has shown its supremacy over the horse, both in economy and efficiency. The Reo trucks are not alone money makers but are thoroughly reliable and efficient under all sorts of road and weather conditions. Where horses groaned and bled in the deep snow and on the slippery and icy pavements during the recent blizzards, and as a natural result thereof serious congestion of traffic followed, the Reo truck performed its strenuous duties with as striking regularity and dispatch as it does in more favorable weather. Unusual interest is being shown in these light delivery power wagons by wholesale and retail merchants whose trade demands prompt, economical and reliable delivery of goods. For particulars concerning Reo the Fifth Motor Car or Reo Truck please mention this paper and address R. M. Owen & Company, Lansing, Mich. See advt. on page 2.

Holstein-Friesian Records.

In the tests of Holstein-Friesian cows and heifers that were made in December, 1911, there were sixty-five animals, of which two-fifths were heifers with first or second calves, produced in 338 consecutive days 912,729.5 pounds of milk, containing 3,143.563 pounds of butter-fat, thus showing an average of 3.44 per cent. fat. The average production for each animal during the average period of 338 days was 14,042.0 pounds of milk, containing 483.63 pounds of butter-fat, equivalent to over 564.24 pounds of the best commercial butter per year. In this herd, in addition to the milk and fat, twenty-seven animals were tested for total solids. These twenty-seven animals produced 384,034.9 pounds of milk, containing 13,340.79 pounds of butter-fat and 46,118.89 pounds of solids, the average production for each animal being 14,223.5 pounds of milk, containing 494.10 pounds of fat and 1,708.11 pounds of total solids. The average per cent. fat was 3.47, and the average per cent. solids, 12.01; the proportion of fat to solids not fat being as 1 is to 2.46. That is, these cows produced 2.46 pounds of digestible food other than fat for every pound of fat produced. These figures are furnished by Malcolm H. Gardner, Superintendent of Advanced Registry.

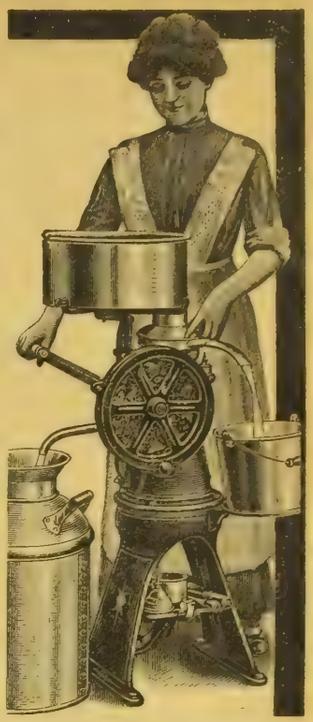
Keeping the Boys and Girls on the Farm.

To keep the farmers' boys and girls in the country is a problem affecting every agricultural district in the United States. The universal opinion of the farmers throughout the country, as voiced to the National Country Life Commission, was, that the present system of education in the district schools in a large measure is responsible for the exodus of the youth of the country to the city; that the curriculum, owing to its failure to instruct in the spirit of the farm is strongly influencing the children away from rather than toward rural pursuits.

Recognizing fully the importance of the problem of conserving for the country a larger portion of its young people and of directing them in childhood to appreciate the dignity and independence of farming as a profession, Secretary Fisher, of the Department of the Interior, has authorized the Reclamation Service to co-operate with the Department of Agriculture, the various state and county authorities, in a practical plan, which it is believed will materially promote a solution of this problem on the irrigation projects of the goverment.

On a number of these projects the old-fashioned one-teacher district schools have been eliminated and consolidated or centralized graded schools have been established. Sufficient land has been set aside or donated adjacent to these schools to permit the platting of small tracts for planting. A course in elementary agriculture is to be taught and an actual demonstration of irrigation and cultivation is to be given with prizes for the best results. To further these plans the Reclamation Service will furnish free of charge the water for irrigation; the Department of Agriculture and State Experiment Station will supply seeds and expert instructors. This Western experiment will be viewed with absorbing interest by the farmers all over the land.

$27.65 Buys a Big Business Cream Separator



Every Economy Chief Cream Separator is built for the business dairyman from the 300 pounds per hour machine priced at $27.65 to the 600 pounds per hour machine at $42.35. The frames are big and solid and extra heavy, mounted on a broad base and free from vibration when running.

Guaranteed to be the closest skimmers in the world on any kind of milk—new, old, warm or cold. The bowls have only five parts, are solid steel, light in weight, easily handled, and of enormous strength. Are self draining and practically self cleaning.

New models for 1912 are the best ever. We have no competition where quality and skimming capacity are considered. Our big fast skimming practical dairy machines cost you less money than the small toy household or table machines of other makes. Our guarantee is plain. It says that the Economy Chief will take more cream from any milk under any conditions than any other separator made. If it doesn't, send back the machine and get your money.

290,000 Economy Chief Cream Separators are now in use. Sixty days' trial to every buyer. Most liberal exchange offer for old separators of any make. Our terms suit everybody.

A Seven-foot Rain.

The Weather Observatory at Manila reports seven feet of rain. The Director says: "We do not know of any instance in which similar torrential rains have been registered in any other part of the globe." On July 11th thirty-two inches of water fell from the skies, and in three days the rainfall reached a total of over eighty-eight inches."

"In reading over the statute book you may notice that the language of the laws frequently dates from the sixteenth century, and sometimes the purpose of them is as far out of date."—Globe-Democrat.

LIGHT UP!

The Joke on Bill.

Bill Mink is a waiter in a small restaurant on Broadway, near Forty-third street and Bill is a great "kidder," declares the New York Telegraph. He never loses an opportunity to "josh" somebody, and once in a while he springs a joke that is really good. But recently Bill Mink's exuberance received a slight setback. It was like this:

A vaudeville actor entered the restaurant, accompanied by his father, a tall, lanky farmer from up-state. They took a seat at the counter, and Bill approached for their orders.

"Kin I have some water?" asked the farmer, first.

"Yes, indeed, and Nap-kin, too," replied Bill, smiling pleasantly.

It confused the farmer a little, but he quickly recovered. "Well, gimme some water first," he said.

"Wet or dry?" asked Bill.

The farmer became a little bit mixed up again. He didn't reply to that.

"Maybe you'd like it medium," Bill continued. "How would a little damp water do?"

The farmer was surprised. He had always been in the habit of paying anywhere from ten cents to half a dollar at the opry house to hear jokes cracked. Bill gave him the water.

"Now what are you going to eat?" asked Bill, as he juggled a salt cellar and a water glass. (Bill is quite a juggler, too.)

"What kind of pie you got?" asked the farmer.

Bill named the kinds over. There were nine of them.

"How's that?" asked the farmer, blandly.

Bill named them over again. There were still nine of them. When he finished the farmer got his revenge. He waited till all was still, in order that everyone near by might hear, and then said:

"Wall, I guess I'll take a little magpie. Got any?"

Well, sir, you should have seen Bill Mink.

International Information.

A cablegram from the International Institute of Agriculture, Rome, Italy, dated January 29th, 1912, received by the United States Department of Agriculture, gives the following information:

"The estimated production of wheat in Argentina this season is 91,374,000 cwt. (equivalent to 170,565,000 bushels of 60 pounds each); in New Zealand, 3,475,000 cwt. (or 6,487,000 bushels of 60 pounds each).

"The estimated production of wheat in the Southern Hemisphere this season is 105.5 per cent. of the production of last season, or 156,000,000 cwt. (equivalent to 291,200,000 bushels of 60 pounds each).

"The estimated production of oats in Argentina is 17,381,000 cwt. (or 60,833,500 bushels of 32 pounds each); in New Zealand, 5,342,000 cwt. (or 18,697,000 bushels of 32 pounds each).

St. Louis Live Stock.

St. Louis National Stock Yard receipts for the month of January were 73,255 cattle, 333,984 hogs, 78,316 sheep, 18,731 horses and mules. These figures show an increase of 97,624 hogs, 18,159 sheep and a decrease of 4,114 cattle and 11,591 horses and mules.

A car-load of wheat straw sold in St. Louis recently at $8.00 per ton.

I Guarantee to Cure

ECZEMA
TO STAY CURED!

It is also called

SALT RHEUM, SCALD HEAD, TETTER, ITCH, WEEPING SKIN, MILK CRUST, PRURITUS—these are different names, but all mean one thing—ECZEMA.

DR. J. E. CANNAD... THE DOCTOR W... TREATS NOTHI... BUT ECZEMA.

I prove every word that I have said—I give to every sufferer

A FREE TRIAL

just to show you that you need my treatment. It is yours for the asking. If you have been to other Doctors, if you have taken patent medicine, and used lotions and salves till you are disgusted, write to me—I will send you ABSOLUTELY FREE OF CHARGE, A TRIAL TREATMENT. There are no strings to this statement. There is not one cent to pay—not a penny accepted. I know what my trial treatment will do; I know that it will convince you more than anything else on earth that you need my treatment.

Don't Miss this Chance for a Cure

If you are SUFFERING FROM ECZEMA you can only be cured one way—REMOVE THE CAUSE. What is the cause? ACID IN THE BLOOD. How do you remove it? By cleansing the blood of the ACID.

My treatment is soothing—relieves the dreadful itching at once and cures the disease quickly. You don't have to take treatment for months and months. ONLY ONE CASE IN TEN needs the second treatment—ONE IN FIFTY needs the third—think of that!

What Eczema Is

Eczema is a disease of the blood and affects all parts of the body—the face, lips, ears, hands, feet, genital organ, etc.

SYMPTOMS.—Yellowish red eruption; the pimples or patches may swell and the itching is so great the person will scratch the top off, then they bleed and dark scales form; there is an oozing of matter. In some the skin cracks and bleeds. Itching is terrible; a person suffering will scratch till they bleed. Scales form on parts of the body, where the clothing comes in contact.

Reliable Beyond Question

This is a statement from the bank of my home town, where I've done business for years.

SEDALIA MO

Sedalia, Mo., Jan. 1-1910.

TO THOM IT MAY CONCERN:-

Dr. Cannaday, of our city is a physician, making a specialty of ECZEMA. We have handled his business exclusively for one year and eighty four days. His patients deposit their money with us, in their OWN HAND, to be paid to the doctor, if his treatment is satisfactory. If we remember correctly, we have been called upon by only FOUR of his patients for their money, and it seemed then, that the fault was more with the Express Companies than with the treatment failing.

Considering the number of cases he treats, we regard his success as remarkable. We consider him perfectly reliable, and assure those placing their money with us a fair, square, business deal.

Yours truly

Ten Years Guarantee

I positiveiy Guarantee that every case cured by me will stay cured **10 years! It must be good** or it could not be sold this way.

Strong as Rock of Gibraltar

I am a graduate from two leading medical schools. I am the holder of a GOLD MEDAL taken in Competitive Examination. Does this not show that I am fully qualified? I will send you my book, showing endorsements of business men of all classes. Also testimonials and pictures from cured patients everywhere. Some of them may be YOUR NEIGHBORS.

MY BOOK

is the most complete book ever sent out. I explain every form of the disease plainly and fully. I show pictures of many severe cases, which are extremely interesting. I send you names of thousands who have been cured and are grateful.

No Wonder He Blanched.

Wife—"Wretch! Show me that letter."

Husband—"What letter?"

Wife—"That one in your hand. It's from a woman, I can see by the writing, and you turned pale when you saw it."

Husband—"Yes; here it is. It's your dressmaker's bill."

She Counted Up.

She—"How could you do such a thing as kiss me while I was lying asleep in the hammock this morning?"

He—"I only stole one little kiss."

She—"Don't tell fibs—I counted up to seven before I woke up."—Fliegende Blaetter.

Empire Fertilizer Caused Gain.

"I purchased of Culberhouse & Salmons, dealers in Empire Fertilizer, one and one-half tons of the Cotton Grower. I put it on fifteen acres of upland as near 200 pounds to the acre as I could, and, taking in consideration the excessive rains in August, and then a little later the cotton worm that eat all the leaves and young bolls, my yield was 30 per cent. more than it had ever been before." — H. A. ZIMMERMAN, Jonesboro, Ark. For particulars address Empire Carbon Works, 421 Locust street, St. Louis, Mo.

YOU'R THE MAN

We Will Make You Prosperous

EVERY day of your life you can make from $5 to $10 selling our "Made-to-Order" Suits, Pants and Overcoats.

The Best Way to Cure Pork.

Prof. H S.. Mobley, Fayetteville, Arkansas, has used for years a system of curing meat that has been followed with success in his family in Virginia from generation to generation since Colonial days. It has been tested by hundreds of people in many Southern States and every one has found it more reliable for home curing than any other method. Professor Mobley furnished his method to the Agricultural Department of the Rock Island Lines for distribution.

A day should be selected for killing when the temperature is low enough to insure a thorough cooling by the following morning, the hogs being dressed and hung over night.

On the morning of the day the hogs are killed, for each 400 pounds of meat make a brine as follows: 20 gallons of rain water; 30 pounds of salt; 8 ounces of baking soda; 10 pounds of brown sugar; 1 gallon of molasses (use good molasses, not the adulterated kind). This fluid should be boiled and skimmed in the morning and left to cool in a shady place. When cool, add 5 ounces of saltpeter. Dissolve the saltpeter in warm water and stir thoroughly.

The following morning cut up the hogs as usual, and pack in barrels. Put the sides of the meat or middlings in the bottom and the shoulders next, and the hams on top of these, all with the skin side down. Weight the meat down well and pour the brine over until the meat is completely covered. Then cover the top of the barrel with some good thick covering that will prevent evaporation.

Look at the meat often enough to see that the brine has not evaporated so as to leave any meat exposed. If it should become exposed, more brine should be added. The meat can be left in the brine indefinitely, but if it is desired to smoke the meat, it should be taken out in about six weeks.

If our Southern farmers will use this method and cure their own meat at home, they will save a neat sum each year.

If it has been your custom to put up the supply of family meat by curing with dry salt, and do not care to risk all of it by another method, then try a barrel or two, using the above plan and compare the results.

Why the Fat Lady Sighed.

"Heigho!" sighed Mrs. Stoutly. "You used to sit with your arm around my waist, John, but you never do it any more."

"I'm sorry, dear," replied Stoutly, "but there are some things that are beyond my reach."—Exchange.

Fertilizer Doubled the Yield.

"I bought one-half ton of Empire Fertilizer from E. Falkner, of Clifton. On five acres of cotton land where I used it, I feel assured in saying that the crop was double in yield. It was longer lint and better in every way. The cotton opened earlier than the unfertilized cotton, and I was able to get my last picking off much earlier. In a season of early frost this early maturity means a saving practically of the whole of the third picking. I am satisfied with results." Yours truly, M. I. BROWN, Clifton, Tenn. For further particulars address Empire Carbon Works, 421 Locust street, St. Louis, Mo.

Oklahoma Cattle at St. Louis.

On January 31st, at the St. Louis National Stock Yards, J. I. Clare & Son, extensive feeders of Oklahoma cattle, marketed 1,247-pound steers at $7.00 per 100 pounds; also 1,231 and 1,235-pound steers at $6.90 per 100 pounds.

Top Cattle at Chicago.

At Chicago, on January 31st, twenty head of Aberdeen-Angus steers, 1,440 pounds average, topped the market at $8.75 per 100 pounds. They were shipped by J. G. Filey, of DeSoto, Iowa, and fed by M. J. Mullen, of Adel, Iowa.

Top of the Quarantine Market.

J. M. Dobie, of Live Oak county, Texas, shipping from Oklahoma feed lots, marketed six cars of 1,236-pound steers at $6.30 per 100 pounds, and a load of 1,030-pound steers at $6.00. H. M. Stonebreaker, shipping from Tulsa county, Oklahoma, marketed a good string of steers weighing a little under 1,050 pounds at $6.00 per 100 pounds.

Hog Prices at St. Louis.

On January 31st, at the St. Louis National Stock Yards, the top of the market for hogs was $6.50 per 100 pounds, and the bulk of the hogs sold at $6.15 to $6.35 per 100 pounds. A. T. Nelson, of Linn county, Missouri, topped the market with hogs averaging 251 pounds.

When you buy good paint you buy protection

Your farm buildings require protection, and anything that is worth protecting is worth protecting well. Poor paint even when renewed frequently fails to protect, therefore, good paint is a good investment.

You know this, but you may ask how you are to know that Sherwin-Williams paints are the best paints. Our answer is, because they have made good for the last forty years and because during that time we have built up the largest paint and varnish business in the world—a result which could never have been accomplished without **right quality products.**

Again, we use only the best raw materials, most of which we secure from our own mines, smelters and oil mills, and develop ourselves, in order that absolutely good quality may be assured. The right proportions of these materials are selected from time tried and tested formulas and ground thoroughly together by powerful machinery.

Whatever it is about your farm that needs painting, there is a Sherwin-Williams product made especially for it that will cover more surface at less expense in proportion to durability than any other surface covering material.

Our free book tells just what paint to buy

for every surface on the farm and just how to apply it. This book is free. It should be in the hands of every farmer. Send for it today.

SHERWIN-WILLIAMS PAINTS & VARNISHES

Sold by dealers everywhere. Ask for color cards. Address all inquiries to
The Sherwin-Williams Co.,689Canal Road, N. W., Cleveland, O. In Canada, to 639 Centre Street, Montreal

DISEASE GERMS.

The distemper germ is a deadly enemy to healthy, growing colts. And just as sure as you do not take steps to stop the ravages of this germ just so sure will your colts come down with distemper, pink-eye, coughs, influenza and catarrhal diseases. The above diseases may be prevented by using Frazier's Distemper Cure. It purifies the blood, kills the germs and cleans the system of all contagion. Send postal card to-day for free horse booklet. $1.00 size bottle holds eight ounces, three times the quantity of the 50 cent size. Sold by druggists, or prepaid from the manufacturers, Binkley Medical Co., Dept.H, Nappanee,Ind.

The January supply of cattle at Chicago was 8,400 less than January of last year; hogs increased 239,000; sheep increased 150,000; horse receipts decreased 1,100.

WONDERFUL FAT REDUCTION.

Mis A. Smith lost 80 pounds of excess fat, A. M. Burch lost 56 lbs., Miss Susie Evans lost 105 lbs., J. G. Fromm lost 50 lbs., Mrs. Elizabeth Jessup lost 75 lbs., Mrs. Ed. Hall lost 61 lbs., Mrs. C. M. Finch lost 54 lbs., F. F. Parsons lost 58 lbs., Mrs. Dora Harrison lost 73 lbs., Mrs. J. H. Wooldridge reduced waist measurement 10 inches. Miss Bockner lost 55 lbs., L. Kraxberger lost 97 lbs., and these are but a few of hundreds of marvelous cases of fat reduction of which printed testimonials are published, with full addresses and mailed free upon request to any over-stout person. Moreover, a free proof treatment of a remarkable remedy will be given. All will be sent free, postpaid, under plain cover, confidentially. It is only necessary to write to Dr. H. C. Bradford, 20 E. 22d St., 287 E, New York, N. Y., and ask him to mail his free treatment with testimonials which proves how fat can be quickly, easily and permanently reduced, the form beautified and vigor and health restored. What it has done for others, it can do for you.

Please send all orders for these embroidery patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Sister Woman!

READ MY FREE OFFER

My Mission is to make sick women well, and I want to send you, your daughter, your sister, your mother, or any ailing friend, a full 50-cent box of Balm of Figs Compound absolutely free. It is a remedy for the treatment of woman's ailments, and I want to tell you all about it—just how to use it yourself—right at home without any inconvenience—and the best of it is that it will not in the least interfere with your work or pleasure. Balm of Figs Compound is a remedy that has made sick women well and weak women strong, and I can prove it—let me prove it to you, and I will gladly do it, for I have never heard of anything that has, according to the abundance of testimonials at hand, so quickly and surely cured women's ailments. No internal dosing necessary—it is a local treatment, yet it has to its credit some of the most extraordinary cures on record. Therefore I want to place it in the hands of every woman suffering with any form of female weakness or diseases so common to women.

This 50c box of Balm of Figs Compound will not cost you one cent

I will send it to you absolutely free, to prove to you its splendid qualities, and then if you wish to continue further, it will cost you only a few cents a week. I do not believe there is another remedy equal to Balm of Figs Compound, and I am willing to prove my faith by sending out these 50-cent boxes free. So, dear reader, irrespective of your past experience, write to me at once — today — and I will send you the treatment entirely free by return mail, and if you so desire, I can readily refer you to many, who can personally testify to the great and lasting cures that have resulted from the use of this remedy. But after all, the very best test of anything is a personal trial of it, and I know a 50-cent box of Balm of Figs Comcound will convince you of its merits. Nothing is so convincing as the actual test of the article itself. Will you give Balm of Figs Compound this test? Write to me today, and remember I will gladly send you a 50-cent box of this remedy absolutely free. Address,

MRS. HARRIET M. RICHARDS, Box E 18, JOLIET, ILLINOIS

A Beauty Recipe.

Unlike most beauty recipes, this one is guaranteed to bring beauty to whomsoever will persistently try it and will use it without fail on every possible occasion. And the older the user becomes the more noticeable will be the good effects of carrying out this beauty hint.

A German-American woman about forty years old gave it to me. The little woman has one of the most beautiful faces I have ever seen. Her nose is not a classical one, and her hair is neither abundant nor is it of an unusually attractive color. Nevertheless you will look long at her face and then turn to look again. You will decide that it would be a most desirable face to have near you all the time. And the more you see it the more you will admire it.

One day I said to her: "Matilda, you have the best-looking face I have ever seen. How does it happen that your face wears the same sweet look every minute of the day and even under the most trying circumstances?"

She laughed her delightful laugh as she replied: "I have never dared be anything but pleasant in my thoughts or words or actions. When I was a very little child my mother one day said to me: 'Tilda, if you are cross; if you fret and worry, and if you think hateful thoughts about other people, you will grow into an ugly-acting and a very homely-looking old lady, and the older you grow the uglier you will be, for each unkind thought and word and deed will help to make you ugly. But every kind thought you have, every good word you say and every helpful deed you do will help to make you beautiful.'" — Janet Thomas Van Osdel.

ASTHMA CURED TO STAY CURED

No relapse. No return of choking spells or other asthmatic symptoms. Whetzel system of treatment approved by best U. S. medical authorities as the only system known to permanently cure the disease. **FREE TEST TREATMENT** including medicines, prepared for any one giving a full description of the case and sending names of 2 asthmatic sufferers. Play the Piano In One Hour

Without Lessons or Knowledge of Music You Can Play the Piano or Organ in One Hour.

Wonderful New System That Even A Child Can Use.

FREE TRIAL

She Doesn't Know One Note From Another, But Plays Like a Music Master.

Impossible, you say? Let us prove it at our expense. We will teach you to play the piano or organ and will not ask one cent until you can play.

A musical genius from Chicago has just invented a wonderful system whereby anyone can learn to play the Piano or Organ in one hour. With this new method you don't have to know one note from another, yet in an hour of practice you can be playing the popular music with all the fingers of both hands and playing it well.

The invention is so simple that even a child can now master music without costly instruction. Anyone can have this new method on a free trial merely by asking. Simply write, saying, "Send me the Easy Form Music Method as announced in The National Farmer and Stock Grower. The complete system together with 100 pieces of music will then be sent to you Free, all charges prepaid and absolutely not one cent to pay. You keep it seven days to thoroughly prove it is all that is claimed for it, then if you are satisfied, send us $1.50 and one dollar a month until $6.50 in all is paid. If you are not delighted with it, send it back in seven days and you will have risked nothing and will be under no obligations to us.

Be sure to state number of white keys on your piano or organ, also post office and express office. Address Easy Method Music Company, 2738 Clarkson Building, Chicago, Ill.

Dirty-air Diseases.

Julia hates to get a whiff of fresh air in winter. She would gladly sleep with her window closed at night if she were allowed to do it. She hates to venture out to school when it is cold weather. One day I placed a bowl of very dirty water before her when she was about to make her toilet and said: "Here, Julia, is the water for you to wash your face in. I am sure it is the kind you will enjoy!" She looked at me in horror, for the maid is a very dainty one, and then she cried: "Why, auntie, what do you mean by bringing me this dirty water. It is somebody else's dirty wash water, I am sure."

"Oh, your sister Margaret did wash in it," I replied, "but of course you would not mind that. I don't think that is really as bad as to insist on breathing all night the dirty air that has come from Margaret's lungs as well as your own, for that air is full of poisons, and this water is hardly that. You know Margaret begged to have the window open, but you refused, so you both had to breathe air that was more foul than this wash water, and that poisoned air will do you far more harm than a bath in this water."

Then Julia had a little lecture on the dirty-air diseases. She may still shrink from the fresh air until she has so accustomed herself to it that she learned to really enjoy it, but her lesson has been learned and she will sleep with closed windows and huddle in an ill-ventiated house all day, only with a troubled mind and the dread that she is contracting some dread disease.

She was much surprised and thoroughly shocked when she learned that the dread consumption of the lungs and pneumonia, besides several other diseases, are due chiefly to a lack of clean air in abundant quantities.

We are having a cold winter that will do much toward killing germs in the air. If people live rightly this winter there should be little sickness during the coming spring and summer. But here is where many are going to err: They will seal their house against the slightest draught of fresh air. They will stay in the house for days together and will go out only when it is absolutely necessary. Over and over again will they breathe the air polluted by many members of the family all housed together in this almost air-tight house. Then by the time spring comes on there will be illness abroad, or it may run on for months before tuberculosis or some other dread disease shows. But so surely as men and women insist upon taking foul air into their lungs and refuse to breathe the life-giving oxygen, in some way they must feel the bad effects from such ill-treatment of their bodies. Pure air is never the cause of disease. It is the lack of it that is bringing many to early graves. And just as much pure oxygen is needed in the coldest winter weather as in the hot days of summer.—Janet Thomas Van Osdel.

"Affinity" Fiction.

Any person who pays the least attention to the present-day fiction is aware that a large per cent. of the popular books deal with an "affinity." The term has largely lost its original meaning and is now popularly used to designate a third person who comes between husband and wife and usually is the cause of a divorce.

A favorite theme with the least thoughtful of popular fiction writers is to have a couple wed, presumably with love as the foundation of the marriage, then later on they drift apart, a third person comes in, and the wife or the husband is cast off like a worn-out shoe for a new one.

Young people, and many older ones, too, devour these stories. They weep with the wife who has lost her husband's love. They rejoice when she is freed and takes another husband. Such reading is harmful in more ways than one, but the great, big evil that it is doing is in making the young people take a light view of marriage. They are beginning to consider divorce as no disgrace or sin. Why, divorced persons are allowed in the best society! Divorced and re-married, sometimes several times, they still remain members of the church and best society, at least in much of the fiction they do, and it is from the world of fiction that young people are gleaning many of their views of life.

A Wisconsin librarian is making an effort to have this "affinity" fiction barred from the circulating libraries. She is also planning to visit the publishers of popular fiction with a view to placing before them a few facts as to the harm which much of the reading matter they are putting on the market is doing. There is a hope that such stories will be "turned down" by the publishers of repute, and in their place will be accepted wholesome, worth-while reading matter, that will help the young people to sane, natural views of life at the same time that it furnishes them the entertainment they seek in the world of fiction. In the meanwhile, every reading person is to some extent responsible for such stuff being placed on the market. Book houses do not publish what is not read, and when people refuse to purchase and to read this class of story, the publishers will soon enough refuse to accept it for publication.—Janet Thomas Van Osdel.

Strawberry Plant Bears Monthly.

A strawberry plant, imported from Siberia last spring by Edward Dixon, of Forest Grove, Ore., bears fruit every month in the year, the berries being white in color when fully ripe. The berries are not so large as the Oregon berry. The flavor resembles that of a pineapple. Blooms and fruit are found on the plant every day in the year. However, the best season for bearing is from August 1 until about the end of the year.

The berries hang in clusters on a long, slender stem. Each plant has several stems, on which the fruit grows. The stems with leaves bear no fruit. Instead of propagating new plants from runners, as is the case of native strawberries, in this species the parent plant is broken up, the several fruit-bearing stems are separated and planted individually.

Mr. Dixon predicts that the plant in a few years will become of commercial value to the state.—New York Sun.

Be sure to read about our hardy rose premium offer which will be found on page 31 of this paper.

FAT is Dangerous

It is Unsightly, Uncomfortable, Spoils the Figure, Causing Wrinkles, Flabbiness and Loss of Vigor.

Let me send you my Proof Treatment absolutely Free; I Have Safely Reduced Many of Excess Fat, a Pound a Day.

Note what my treatment has done for others; let me reduce your weight.

Lost 51 Pounds. Mrs. W. D. Smith, Box 34, Abbott, Me., writes: **"I have lost 51 pounds** by your treatment. I used to have heart trouble and shortness of breath; now I am well and can walk and work with ease."

Permanent. M. E. King, 5634 Spaulding Ave., Chicago, writes: "By the Dr. Bradford Method **I reduced 35 lbs.** eight years ago; haven't gained an ounce since. Rheumatism also cured."

Lost 112 Pounds. W. C. Newburn, Contact, Nev., writes: "I have lost 112 lbs., am **wonderfully benefited** in heart and general vigor. Can climb mountains easily now."

Lost 98 Pounds. Mrs. J. H. Wooldridge, Galena, Mo., writes: "My figure and appearance have been wonderfully improved; have lost 98 lbs. **Friends amazed."**

Many other testimonials from well known persons will be mailed with **FREE PROOF TREATMENT.**

I could fill every page of this journal with testimonials from grateful patients.

It is dangerous, unsightly, uncomfortable, and embarassing to be too fat. Excess fat weakens the heart. The liver, lungs, stomach and kidneys become diseased, the breathing becomes difficult and the end may come in **HEART FAILURE** and sudden death. You may save yourself from these **DANGERS.**

I want to prove to you that my treatment has positively reduced legions of persons to normal, no matter where the excess fat was located, stomach, bust, hips, cheeks, neck. Weight is quickly and safely reduced without tedious exercise or starving. Eat what you like. **Your figure will be beautified; wrinkles disappear.** Rheumatism, asthma, shortness of breath, kidney and heart troubles usually leave as the fat goes away. I will send you without a cent of charge to you my PROOF TREATMENT FREE.

FREE

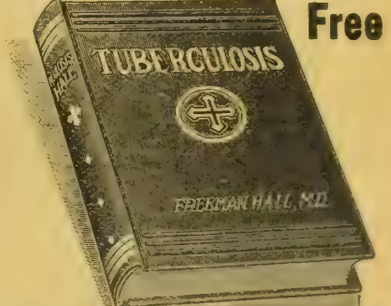
Don't miss this offer. My PROOF TREATMENT is FREE. It should make you feel better at once. I will also send you **Free** my **new book of advice,** together with testimonials from many well known people. **Write to-day. DR. H. C. BRADFORD, 287-I Bradford Building, 20 East 22d St., New York**

NOTE.—Dr. Bradford is a diplomated, practising physician, licensed and registered by the State of New York; famous many years as a specialist in reducing fat and improving health by scientific, gentle, home treatment.

Consumption

Its Diagnosis, Treatment and Cure

Free



NEW TREATISE ON TUBERCULOSIS

By FREEMAN HALL, M. D.

This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you. Even if you are in the advanced stage of the disease and feel there is no hope, it will instruct you how others, with its aid, cured themselves after all remedies tried had failed, and they believed their case hopeless.

Write at once to The Yonkerman Co., 5254 Water St., Kalamazoo, Mich., and they will gladly send you the book by return mail Free and also a generous supply of the New Treatment absolutely Free, for they want you to have this wonderful remedy before it is too late. Don't wait—write today. It may mean the saving of your life.

STOMACH SUFFERERS

Avoid Dangerous Operations. Let Me Send You a

Free $1.00 Bottle

of My Wonderful STOMACH REMEDY

I will guarantee it to cure the most chronic cases and I want every one suffering from **Stomach, Liver or Intestinal Troubles** and **Gall Stones** to send at once for a **Free Bottle.**

Don't allow your Stomach Trouble to become so bad that an operation is necessary. Don't permit an operation until you have at least tried this FREE Bottle.

It is a postive and permanent cure for

STOMACH, LIVER AND INTESTINAL TROUBLE, GASTRITIS, INDIGESTION, DYSPEPSIA, PRESSURE OF GAS AROUND THE HEART, SOUR STOMACH, DISTRESS AFTER EATING, NERVOUSNESS, DIZZINESS, FAINTING SPELLS, CONSTIPATION, CONGESTED AND TORPID LIVER, YELLOW JAUNDICE, SICK HEADACHE, APPENDICITIS AND GALL STONES.

The above ailments are mainly caused by the clogging of the intestinal tract with mucoid and catarrhal accretions, backing up poisonous fluids into the stomach, and otherwise deranging the digestive system. I want every sufferer of any of these diseases to test this wonderful treatment. **You are not asked to take this treatment for a week or two before you feel its great benefits—only one dose is usually required.** I say emphatically it is a positive, permanent remedy and I will prove it to you if you will allow me to, and I again repeat I will send the complete $1.00 treatment to you absolutely **Free** so you can try it in your own home at my expense.

The most eminent specialists declare that 75 per cent of the people who suffer from Stomach Trouble are suffering from Gall Stones. I firmly believe that this remedy is the only one in the world that will cure this disease. Sufferers of Stomach and Liver troubles and **Gall Stones** should not hesitate a moment, but send for this **Free** treatment at once.

I have watched sick people for years and have reached out my hands to thousands in the great depth of the Valley of Dispair and brought them into the light of life and happiness. I want you, and each one suffering to know the full joys of living with every part of your system in beautiful accord and in absolute perfect harmony. This is possible if you will take this wonderful remedy. A FREE BOTTLE will positively prove it.

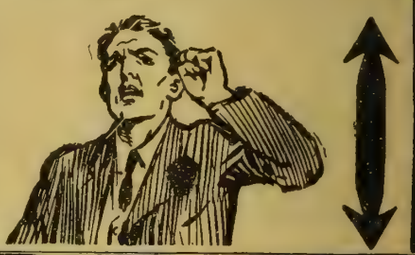
Don't Lose Hope

Why suffer with stomach trouble? Why give up hope—and despair of ever being cured? If other treatments have failed and you feel disheartened, don't allow it to discourage you from sending for this **Free** bottle. Don't say to yourself that it will not help you, before you have tried it, as it costs you nothing to take this wonderful remedy and judge for yourself its marvelous powers. You will, like the thousands of others who have been cured, bless the hour and offer fervent thanks for this wonderful remedy that has brought back your health.

Don't suffer all this pain; don't dose yourself with every medicine and try every treatment, when Mayr's Wonderful Stomach Remedy, which has cured and made thousands and thousands of sufferers happy is offered to you. Mayr's Wonderful Stomach Remedy is absolutely pure and harmless. It is guaranteed under the Pure Food and Drug Act—Serial No. 25792. This medicine has been successfully taken by children of nine years of age, and by old people of eighty-eight years and will not harm you in any way.

Why suffer with those horrid griping pains that cut like a knife? They rob you of all the sweets of happiness. Each morning means another day of torture and agony; each meal is looked forward to with pain. No matter what you eat, you suffer. Life is one continual round of "Don't eat this and don't eat that." You can't sit down to a table, spread with necessities of life and know that you are going to enjoy them; that they are going to be turned into rich, red blood and strength which will give you vitality, health and happiness.

Below we show an exact Photograph—actual size of Poisonous Catarrhal Mucoid and Bile Accretions removed by my remedy. They are the causes of about 99% of all Stomach, Liver and Intestinal Ailments.



Almost every one who takes it declares that they have not felt so well in years **since they have taken the first bottle, and this benefit is an entirely natural one, as the remedy contains no opiate, stimulant or any poisonous or injurious ingredients whatever.** They are able to eat anything they want—even forget they have such a thing as a stomach. No more of the gnawing, aching dull sensations, no more paroxysms of pain, belching of gases, and other symptoms of indigestion that stomach trouble produces.

A Few Names of People who have taken My Wonderful Stomach Remedy—and who state they have been CURED of various Stomach, Liver and Intestinal Ailments and Gall Stones.

Read These Letters

WHAT A PROMINENT PHYSICIAN HAS TO SAY OF MY WONDERFUL STOMACH REMEDY.

Sept. 12th, 1911.

Mr. Geo. H. Mayr, Chicago, Ill.

Dear Sir:—My wife received your letter and treatment a few days ago. She took the medicines as per directions Saturday with wonderful results, as she passed a large quantity of gall stones of various sizes. I will send you a money order herewith for balance of treatment. Have recommended you to several that I know need your treatment. I have practiced medicine 20 years and have used Olive Oil treatments for a long time for my wife, and I can assure you that your combination greatly surprised me. You shall hear from me again soon.

Yours gratefully,
ERNEST VINCENT, M. D.

WHAT A TRAINED NURSE HAS TO SAY.

Aug. 24th, 1911.

Mr. Geo. H. Mayr, Chicago, Ill.

Dear Sir:—To begin with I am a trained nurse, and I had two patients that the doctors seemed unable to reach with their medicines and were trying to persuade the patient to submit to the knife. A friend who has tried your Wonderful medicine proposed that I recommend it to my patient, so I did. They agreed to try the medicine if I would try the sample on myself. To please my patients was why I sent for the sample. I know that your medicine is wonderful because it has cured Mrs. Clark Fitzsimmons of Orofino, Idaho and Mrs. Charley Frear of the same place. I am very glad that I was able to recommend your medicine to them.

LIBERETTE HAVEL, Trained Nurse,
Box 284, Orofino, Idaho.

CURED AFTER FIVE YEARS SICKNESS.

Mr. George H. Mayr, Chicago, Ill.

I am pleased to inform you that I ordered a full treatment the latter part of March. It cured me after a five years spell of sickness. I ordered a free bottle for a neighbor. Now I must tell you it is through me you are getting so many orders from Willard and Yellon Post Offices. I sojourned through Eastern Colorado and sang your praises and left your address wherever I went. I have not written you at an earlier date as I have just waited to see if I stayed cured before I let you know. Your remedy is surely a wonder. The Doctors told me I had appendicitis and would soon die if I were not operated on, I was lying in bed about all the time with misery most of the time for five years. I took treatment during March, have been busy ever since. It is the only medicine that hit the sore spot.—L. C. MOREHEAD, Willard, Oklahoma.

Doctor Said Cancer of the Stomach

July 22, 1911.

Mr. Geo. H. Mayr, Chicago, Ill.

Dear Sir:—I write you this morning that I took my last drop of medicine yesterday morning and am now free from gall stones. It has made a new man of me. Sleep well, eat what I want and feel fine. No soreness left but I have some large boils. I think it drove them out. The Doctors said I had cancer of the stomach, and nothing would do but to be operated on, but they were mistaken. I have spent lots of money before and only got temporary relief, but I assure you I feel all right now. Passed about 400 gall stones.

Yours truly, WM. CAMPBELL,
Denver, Missouri

More Benefit Than From a $100 Treatment

May 31, 1910.

Mr. Geo. H. Mayr, Chicago, Ill.

I rec'd the treatment you sent and can truthfully say I got more benefit from it than from a hundred dollar treatment I took last winter.

Very Respectfully,
MISS F. A. HARNESS,
1020 Pacific Ave., Bremerton, Wash.

Fill out this FREE coupon now and mail to me. The full $1.00 bottle will be sent you without delay. Send no money—your name and address on the coupon is all—MAIL IT TODAY—WRITE PLAINLY.

My last word to you—Don't permit a dangerous operation. Not until you have tried this **FREE BOTTLE.** I care not how long you have suffered or how severe your case may be, I am confident my wonderful and harmless remedy will entirely and quickly restore you to perfect health without any ill effect. It has saved thousands from operations. It should you. I believe that eighty per cent of the operations are unnecessary and the knife could be avoided if the proper method of treatment was administered. Quite often sufferers of Stomach and Intestinal ailments or Gall Stones are told they have cancer of the stomach and other rare diseases.

MAY MANTON PATTERNS.

Very Elegant Pattern Service, With Full Instructions For Ordering and Making.

This is the best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original. In this edition we present for consideration very seasonable patterns, absolutely up-to-date, with directions for ordering.

PRETTY NIGHT GOWNS FOR ALL AGES.

No. 6620.—One-piece night gown for misses and small women. It is made in one piece, there being only the under-arm seams to be sewed up. It is slipped on over the head, and the size is regulated by means of ribbon threaded through eyelets.

No. 7080.—Square-yoke night gown for misses and small women. It is full below a square yoke and includes sleeves that are sewed to the armholes.

No. 6746.—One-piece night gown. It is made in one piece; the sleeves can be made with or without openings.

No. 7085.—Girl's square-yoke night gown. It is full below the yoke and can be made high or square and the sleeves in full or three-quarter length.

No. 7104.—Girl's chemise night gown. It is drawn on over the head, and the size is regulated by ribbon threaded through beading. The sleeves are separate and sewed to the armholes.

The above patterns will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents for each.

FROCKS FOR YOUNG GIRLS AND LITTLE CHILDREN.

No. 7270.—Blouse for misses and small women. No. 7134.—Two-piece skirt for misses and small women. A simple blouse and skirt combined to make a most attractive frock. The blouse is cut in one piece with the sleeves. The skirt is made in two pieces that are lapped onto side panels and can be made with a high or natural waist line.

No. 7263.—Fancy blouse for misses and small women. No. 7184.—Three-piece skirt for misses and small women. A simple straight-gathered skirt finished with hem and tucks combined with a blouse that shows the very newest sleeves that can be made in three-quarter or full length.

No. 7247.—Fancy peasant blouse with tunic for misses and small women. No. 6835.—Two-piece skirt for misses and small women. This tunic frock is as simple as it is charming. The skirt is made in two pieces.

All the above patterns are cut in sizes for fourteen, sixteen and eighteen years of age.

No. 7251.—Child's dress with bloomers. A simple one-piece dress with sleeves sewed to the armholes. The opening is cut at the front a little to the right of the center, and there are bloomers to match.

No. 7257.—Child's dress. A pretty little one-piece frock with kimono sleeeves. There are two sections that are lapped onto a panel and finished with a yoke.

The above patterns will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents for each.

PROTECTIVE APRONS FOR GROWN-UPS AND LITTLE GIRLS.

No. 6922.—Work apron. It is made with sleeves in raglan style that are extended to the neck edge. The backs are held in place by means of a belt.

No. 7193.—Work apron with body and sleeves in one. A plain apron with either short loose sleeves or long or three-quarter sleeves gathered into bands and with round, square or high neck.

No. 7088.—Work apron. It can be made either with or without sleeves, with square, high or round neck.

No. 7235.—Girl's yoke apron. A pretty little model that is simply full below a square yoke. It can be made with or without sleeves and with high or square neck.

No. 7143.—Child's apron. It can be made as illustrated, or with high neck and long sleeves. The closing is made at the back and the apron can be worn with or without a belt.

The above patterns will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents for each.

Please address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial: and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young, To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

DR. M. NEY SMITH, 302 N. 12th St., St. Louis, Mo.

Paint Without Oil

REMARKABLE DISCOVERY THAT CUTS DOWN THE COST OF PAINT SEVENTY-FIVE PER CENT.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much. Write to Mr. A. L. Rice, Manuf'r, 66 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write to-day.

Valentine Suggestions.

Children may be kept busy and at the same time educating the fingers to handiwork through the home-made valentine. It is now a very pretty custom to introduce the valentine box into the school, with the two provisos emphatically given: The valentines must all be of home manufacture, and there must be nothing to hurt the feelings of another. The names of all the pupils are then written on slips of paper, placed in a box, and each pupil draws one, to whom he is to give a valentine.

The requirement that nothing be given to detract personally from the enjoyment of another is a rule, the justice of which is self-evident. Happily, the old penny caricature is becoming more and more a thing of the past. While the comic postcard tends in some measure to keep step with it, this is as a rule less harmful. But you do not want the cards which cost money, even though only a penny. There are always some pupils who have a necessary use for all the pennies. And besides, the skill and taste developed in the valentine made by the child should not be underrated.

A few suggestions and some sheets of fancy paper will give the child employment for a few winter evenings and result in some very creditable valentines. One of the simplest and neatest is made of white paper cut into hearts of two or three different sizes and each with scalloped edge bordered with a line done in blue crayon, a dot or other ornament being placed in each scallop and the pieces held together with blue baby ribbon. The words "To My Valentine" in fancy letters may appear across the face of the upper heart.

Red cardboard and a bit of gilt paint will furnish material for the hearts seen in the fancy stores. Dainty heads cut from the magazines may adorn the center of each. Cupids are easily transferred, and darts may be gilded in various forms and fancy designs. A stencil pattern of hearts and darts could be made of thick paper, and made to do service for a number of valentines.

Tissue paper in white and colors admits of wondrous possibilities at very small cost. If you use the plain finish paper, fold a strip in quarter-inch folds, leaving a half inch plain for attaching it. Then cut across the folds in strips an eighth of an inch wide. When the slashing is completed you have a very dainty crimped fringe. Use three rows of this around the edge of a piece of oval cardboard, the middle one being preferably of some delicate tint. In the center paste a dainty picture—a photograph of yourself would be admirable; but the magazine advertisements supply a host if the photo is not at hand.

Crepe paper in delicate tints may be the foundation for numerous designs. Take a piece of cardboard of any convenient size, say three or four inches square. Cut a sheet of white crepe paper of the same size and a sheet of pink a half inch larger on each side. The margins may be plain or scalloped, as preferred. In the center of each slash two two-inch lines which cross at right angles. In the center of the cardboard paste a dainty picture. Bend the four corners of the paper forward at the points slashed and attach the sheets to the pasteboard with touches of paste or mucilage. The open portion in the center should be just large enough to show the picture.

If you have access to a fancy store, study the valentines displayed and adapt the patterns to your own materials and ability. A box of water-color paints and a sheet of drawing paper cut into small hearts, each bordered with and ornamented in some one color will require very little practice to obtain good results. And even though the first attempts may show the fingermarks of the novice, there are the larger ones of good will; and every honest and faithful attempt along any line of work gives skill for better things.—Bessie L. Putnam.

Water-drinking With Meals.

Pursuant to a tradition of long standing, it is a common custom to forbid the drinking of water at meal time. There was a time when such advice appeared most reasonable.

Professor Hawk and his pupils at the University of Illinois have been investigating, during the past few years, the correctness of the current attitude toward this question, with results quite at variance with the traditional idea. When the influence of water-drinking with meals was examined by direct experiment on man the alleged direful consequences were found missing. There were no apparent ill-effects. On the contrary, the general conclusion from all the findings was, that if water is taken with meals there is a better digestion and a more complete utilization of food. A pronounced improvement in the digestibility of fat was also observed.

Since there is a constant tendency, at least among persons whose knowledge of the given subject is slight, to carry to extremes conclusions derived from experiments, it seems worth while to add a warning against the indiscriminate and excessive use of large quantities of water. Furthermore, nothing that has been said is intended to lend any support to the American custom of drinking water that is ice-cold. The experiments of Hawk and his pupils indicate that our ideas with regard to the drinking of water must be revised, but we must wait for reports of observations from a larger body of observers. In the meantime, says The Journal of the American Medical Association, we may allow water more freely with meals, subject to the individual exceptions which experience brings out.

Regain Your Health.

You ought not to wait another day before trying Bodi-Tone, which many of your neighbors have used to the great and lasting improvement of their health. You ought to test it, because you can get it on trial and need not pay a penny unless it greatly benefits you. Read the liberal Bodi-Tone trial offer on last page of this paper and send for a box.

HEARS CHURCH BELLS AFTER LONG DEAFNESS.

For the first time in years this good lady, who has been deaf, hears the church bells. She is in ecstasy. Only this morning has she been able to hear the prattle of her grandchildren and the voice of her daughter. Twenty-three years ago she first found herself becoming deaf, and, despite numerous remedies, medical advice, hearing devices and specialists' treatments, she found it more and more difficult to hear. Of late years she was harassed by peculiar noises in the head, which added to her misery. At last she was told of a book which explains how to regain perfect hearing without costly apparatus or drugs. She got this book and learned how to quickly become freed from deafness and head noises. Observe her delight in this hypothetical illustration! Any reader of The National Farmer and Stock Grower who desires to obtain one of these books can do so free of cost by merely writing to the author, Dr. George E. Coutant, 228 A, Station E, New York, N. Y. He will be pleased to mail it promptly, postpaid, to anyone whose hearing is not good. This offer will bring joy to many homes.

The Kingman Implements.

The Kingman Plow Company, of Peoria, Ill., whose advertisement appears in this issue, are pioneers in the manufacture of labor-saving farm machinery of high grade, having been in business upward of forty years. Every Kingman machine can always be depended upon to be strictly up-to-date and made of the best steel and seasoned hickory. This firm prides itself especially on the quality of its output. A distinctive feature of this firm's business is to ship its machines as nearly set up as possible, which saves the buyer trouble and expense. The company has branch establishments at Omaha, Kansas City, St. Louis, Denver, Los Angeles, Stockton, Dallas, Milwaukee, Des Moines and Spokane. Address all inquiries to Kingman Plow Company, Dept. 101, St. Louis, Mo.

BLUINE MFG. CO.,
565 Mill Street,
Concord Junction, Mass.

THE GOOD OLD DAYS.

The good old days, the good old days,
When Adam and Eve wooed.
Eve did not yearn for taxicabs
Or want expensive food;
And after they were man and wife,
She did not turn her head
And point to some chap passing by
As one she might have wed.

The good old days, the good old days,
In Eve and Adam's time,
They do not keep a fourth-floor flat,
With marble stairs to climb;
He did not have to wake at five
And quit some pleasant dream,
And toddle to the basement cold
To get a little steam.

The good old days, the good old days,
Of Mother Eve's romance,
She never dragged poor Adam out
At night unto a dance;
No operas Metropolitan
E'er took him from his door.
There were no high-brow stunts like that
Good Adam's life to bore.

The good old days, the good old days,
When all the world was young;
Eve never made poor Adam eat
Boiled ham or potted tongue;
They knew not then cold-storage eggs
Or predigested chaff;
The safety razor wasn't known,
Nor was the phonograph.

The good old days, the good old days,
When Eve and Adam dwelt
In peace, he never had to wear
His trousers with a belt;
There was no woolen underwear
Or e'en a fuzzy hat,
And Eve was never known to say:
"Am I as fat as that?"

Detroit Free Press.

THE OLD EMOTIONS.

Blest be the old emotions—gladness, sorrow and care;
Tears from the heart upwelling in sympathy with despair:
Joy in a noble action, grief at another's loss,
The knightly nature of bearing with patience a heavy cross;
Scoff at the sentimental, but long as the world is true
There are hearts that will fell their pity for souls in the depths of rue.

Blest be the old emotions—the sob in the throat when men
Feel touched with the lofty pathos in music or word of pen;
The surging of happy feeling in the joy of another's life
When crowned with success at the summit of long and patient strife.
Scorn as you will the idea of softness of tear and smile,
There's something yet in the beauty of life that is not all guile.

Blest be the old emotions—and blest be the hearts that feel
The pang of a little sorrow, the leap of a joy made real;
Be not ashamed of weeping, and honor the tears that rise
From the deeps of a tender feeling when the mist-drops fill the eyes.
Be not ashamed of gladness, for a manlier thing than joy
Ne'er filled the world with beauty nor lifted it from alloy.

Blest be the old emotions—that they live and are constant yet
In an age of the rush and rumble, the worry and strife and fret;
That they claim us ever and ever and hold us true to the strong,
Sweet sense of the sentimental in picture, music and song.
Scorn it as idle fancy, but the wealth of a race is told
By the depth of its human feeling, and not by its minted gold.

—Baltimore Sun.

THE GAY LIFE.

He hurries every morning to catch a certain car;
He goes to work where hundreds of other toilers are;
His course is never varied; he has no time to stray;
The route that is the shortest he takes day after day;
He works upon a schedule that changes not at all
In winter or in summer, in springtime or in fall.

He starts in every morning, just as he did before,
To do a certain duty and never any more;
He has his thirty minutes at noon to rest and eat,
And when the day is ended he hurries to the street
To start his journey homeward, night after night the same,
Jammed in with other people who do not know his name.

He does not know his neighbors; to them he is unknown;
Beyond his little orbit his face is never shown;
He hurries every morning to catch a certain car;
At night he clings where other sad-faced straphangers are,
And wonders how the people exist out on the farms,
Deprived of social pleasures and all the city's charms.

—Chicago Record-Herald.

THE CHILDREN'S SONG.

Land of our birth, we pledge to thee
Our love and toil in the years to be,
When we are grown and take our place
As men and women with our race.

Father in heaven, who lovest all,
Oh, help thy children when they call—
That they may build from age to age
An undefiled heritage.

Teach us to bear the yoke in youth
With steadfastness and careful truth;
That, in our time, thy grace may give
The truth whereby nations live.

Teach us to rule ourselves alway,
Controlled and cleanly night and day,
That we may bring, if need arise,
No maimed or worthless sacrifice.

Teach us to look in all our ends
On thee for judge, and not our friends;
That we, with thee, may walk uncowed
By fear or favor of the crowd.

Teach us the strength that can not seek,
By deed or thought, to hurt the weak;
That, under thee, we may possess
Man's strength to comfort man's distress.

Teach us delight in simple things,
And mirth that has no bitter springs;
Forgiveness free of evil done,
And love to all men 'neath the sun.

Land of our birth, our faith, our pride,
For whose dear sake our fathers died—
O Motherland, we pledge to thee
Head, heart and hand through the years to be.

—Rudyard Kipling.

AN AMBITION.

To do my little day by day,
To help my neighbor if I can,
To strive with all my strength to play
My part as well befits a man.

To feel, no matter how I try,
My best has never been attained;
To keep an ideal always high
To see, but never to be gained.

To fail in deed, but not in thought,
To wish and strive with all my soul
For glories men have ever sought,
To sound life's depth, but not its shoal.

To live among the stars and dream,
Unwilling to be sordid clay,
And still keep hope when troubles seem
To make impossible my way.

—Detroit Free Press.

"Even the most up-to-date histories of this country say nothing about base ball; yet every history of Greece devotes approximately a chapter to the Olympian games."
—Exchange.

FARM with a TYPEWRITER

IT PAYS TO BE UP-TO-DATE

Pen-written letters are decidedly out of date for a live, wide-awake farmer.

WITH A TYPEWRITER YOU CAN

Sell your apples, potatoes, butter, eggs or stock—Typewritten Letters Bring Better Prices.

Order your 1912 grain, seed, machinery, repairs—Typewritten Letters Command Attention!

Trade. Work up a direct trade with town or city people by typewritten letters giving lowest prices.

Typewrite all your results. Know exactly what pays, what you spent, what you receive. Typewrite all accounts for easy reference!

Correspond. Typewritten letters look business-like and trustworthy. No better introduction than a good typewritten letter.

Copy Letters. A Typewriter will make a copy of your letter same time it writes. Copies protect you, remind you!

Educate the children. A Typewriter helps your boy or girl to spell, punctuate, write good English; fits them for good positions in city or town.

Improve the long winter evenings. Get busy with a typewriter. Let the boy or girl help you in your correspondence, etc.

Typewriting Easy to Learn

You can learn to work the typewriter in an evening and end by writing a letter. Speed comes with use.

NOW'S YOUR OPPORTUNITY!

In all the 25 years we have been selling Standard typewriters we do not know of such a Big Bargain as this Standard $100 Machine for $27.

The Remington Typewriter Co. recently put on the market a new model and took these No. 6 machines as part payment.

By an extraordinary deal we secured all they had. They have been thoroughly rebuilt, refinished, renickelled in our own factory. Now they Look Like New, Work Like New and will give perfect satisfaction.

Our Guarantee is equal to the manufacturer's original guarantee.

This No. 6 $27

Don't Pay

Feel It First

You must be sure first, by feeling its power in your own body. You must be sure before you say a word or pay a penny. You must know *it is right*, must know *we are right*, must know *you are right*. You can be sure, can see, feel and know, by testing it for twenty-five days *at our risk*. Each day tells its own plain story, a story that has won the hearts of thousands. If you want to get well, here is your chance. Here is your chance to try, *without paying a penny*, a successful treatment which makes health by getting down to the first principles of the body, by following the only method which makes permanent health possible.

Don't pay a penny until you feel its benefits. Don't pay until you feel better all over your body. Don't pay until you feel stronger, more vigorous, eat better, sleep better, are better. Don't pay until your organs act more naturally, your pains are leaving you. Don't pay until you are sure this is the RIGHT MEDICINE for you.

This is how Bodi-Tone is being offered to every reader of this paper; this is how it is making health and saving money for the sick. If you want to stop the use of medicines, if you want to quit the doctors, if you want to stop the strain and drain of continual dosing, *tone your body and make it healthy with Bodi-Tone*, for healthy bodies need no medicine. The decision is all left to you. *You judge for yourself*, in your own time, in your own home, and judge it by what it does. It is often possible to judge within a few days, for when Bodi-Tone does its work there is a remarkable difference between the old and new body. Friends notice it, neighbors remark it and relatives rejoice in it. But Bodi-Tone wants you to take your time, *to see, feel and be sure*, to know its work is good, before you pay. Bodi-Tone does just what its name means—*cures disease by toning all the body*, and we want you to try a box at our risk and see what it will do for *your* body. Bodi-Tone is a small, round tablet, that is taken three times every day. Each box contains seventy-five of these tablets, enough for twenty-five days' use, and we send you the full box without a penny in advance, so that you can try it and learn what it is, so you can learn how it works in the body, how it *cures stubborn diseases* by helping nature to tone every organ of the body. Tone is a little word, but it means a great deal, everything in health. When all the organs are doing their part, when each is acting in a perfectly natural way, when all the functions are healthy and performed with natural vigor, when the energy, strength and power of resistance to disease are all at a n tural point, then the body is in proper tone. When disease has attacked any part, the tone of the entire physical body should be raised to the highest possible point, to make all the body help in the cure. This is the power which underlies all of Bodi-Tone's great work for the sick, this is the power it offers you to help you get new health and strength.

Not a Secret

The composition of Bodi-Tone is not a secret. Each ingredient that is used to make this splendid remedy *is fully described* in the Bodi-Tone book, sent free to every Bodi-Tone user. When you use Bodi-Tone you know just what you are using, know it is good and safe and know you are taking the kind of medicine to provide real help for the body. It is a pure remedy that satisfies the most exacting. It contains no narcotics or habit-forming drugs, nothing that can injure the stomach; it contains no ingredient that your own family doctor will not endorse and say is a good thing. It does not depend on killing pain with opium, cocaine, morphine, or other dangerous drugs It does not excite the body with alcohol, but it tones the body and cures its disorders with remedies Nature intended to tone and cure the body when that power was given them

Among the ingredients which give Bodi-Tone its great power, are Iron, to give life and energy to the Blood, Sarsaparilla, to purify it, Phosphate, to nourish the Nerves, Lithia, for the Kidneys, Gentian, for the Stomach, Chinese Rhubarb and Oregon Grape Root for the Liver, Cascara, to restore tone to Bowels and Intestines and Peruvian Bark for the General System.

Each ingredient Bodi-Tone contains adds a needed element from nature to the body. Each has work to do and does it well. We claim no credit for discovering the ingredients in Bodi-Tone, each of which has its own well-deserved place in the medical books of most of the civilized world. We simply claim the credit for the successful formula which we invented, for the way in which these valuable ingredients are combined, for the proportions used, for the curative force which thousands of sick have found in Bodi-Tone. Most of these ingredients are as old as civilization itself, for the curative forces Bodi-Tone uses are the forces which have always existed in nature for the restoration of the body. Many of its ingredients are regularly prescribed by the medical profession for various diseases and irregular conditions, being used either separately or in combinations with such drugs as each doctor may favor, for there are wide differences of opinion among the doctors of various schools. The *exact combination used in Bodi-Tone* is what makes Bodi-Tone's success in fighting disease, what makes it cure where doctors' treatments have failed. There is no other remedy made from this exact formula, which is Bodi-Tone's own, and which gives Bodi-Tone the curative and restorative power that makes possible the remarkable cures experienced by Bodi-Tone users, cures which prove the difference between Bodi-Tone and common remedies. That is why we want to send you a box of Bodi-Tone on trial, as soon as you write for it, for we know you will find it different and superior.

You Need It

If you are tired of ceaseless doctor bills and wearied of continual dosing without results, *you need Bodi-Tone right now*. If your local doctor is doing you no real good, if you have given him a chance to do what he can and the ordinary medicinal combinations he used have failed, give this modern, scientific combination of special remedies a chance to show and prove what it can do for you. Its greatest triumphs have been among men and women with chronic ailments who had tried physicians at home and elsewhere without getting permanent benefit, and for this reason all chronic sufferers are invited to *try it at our risk*.

Bodi-Tone offers its valuable services to you right now, right from this page, if you are sick, if you need medicinal help, if your bodily organs are not acting as they should, if your body is not in right and natural tone. That is what Bodi-Tone is for—to restore health, vigor, vitality and strength by restoring tone to the body.

If there is anything wrong with your Kidneys, Bodi-Tone helps to restore tone to the Kidneys, helps to set them right. If there is anything wrong with your Stomach, Bodi-Tone helps to tone the Stomach, helps to set the wrong right. If there is anything wrong with your Nerves, your Blood, your Liver, your Bowels or your General System, the health-making ingredients in Bodi-Tone go right to work and keep on working day after day, exerting always a definite action that produces curative results of the kind sufferers appreciate. If you have Rheumatism, Bodi-Tone helps to eliminate the Uric Acid from the system while it restores tone to the Kidneys, Stomach and Blood, thereby preventing a continuance of Rheumatic poison and putting new activity into muscles, nerves and joints. Bodi-Tone should be used by all women suffering from any Female Ailment, for its toning properties have been found especially valuable in such ailments. Men and women who are weak and run down from overwork, worry, or causes unknown to them, who feel their reserve force slipping away from them, and are losing their fight against the body's inefficiency, find new life in Bodi-Tone, as hundreds testify.

Easy To Get

Why delay another day, when a trial of this proven medicine is yours for the asking. Why keep on suffering, when by clipping the coupon, filling in your name and address and mailing it to us, you can get a twenty-five days' treatment of this great remedy which has already restored thousands to health, which folks everywhere are talking about. It just costs a stamp and you don't pay a penny unless it benefits you. You take no chances, for the value and curative powers of Bodi-Tone have been amply proven by three years of glorious cures. It is no longer a new remedy, but a remedy with a history—a history of cures that has astonished the doctors and delighted the sick. It has been tested in thousands of cases, covering a great variety of ailments in both sexes, at all ages.

Persons suffering from Rheumatism, Stomach trouble, Kidney, Liver and Bladder Ailments, Uric Acid Diseases, Female Troubles, Bowel, Blood and Skin Affections, Dropsy, Piles, Catarrh, Anaemia, Sleeplessness, LaGrippe, Pains, General Weakness and Nervous Breakdown, have tested Bodi-Tone and fully proven its great remedial value in such disorders.

Many who have for years been in poor health and tried most all of the prominent medicines, have found that *one single box of Bodi-Tone* did more good than *all* the others combined. Bodi-Tone makes up and repays for past sickness with a *strong and virile health* that is often better than the sufferer knew for a long time before sickness began to trouble. It makes the body right, with its maximum strength, vigor and vitality, which it may not have possessed for years previous, even when in fair health. Bodi-Tone works what seems a miracle by *putting tone where tone was needed*. Read the reports, send the coupon today, get a box promptly, and try it.

Reports of Cures

FRIEDENS, PENNA.—Bodi-Tone has done much for me. I was just all worn out and was not able to walk more than a mile before I was so weak and out of breath. I could get but little solid sleep for years and felt tired in the mornings as if I had done a hard day's work. I tried patent medicines until I was disgusted and doctor's medicines without lasting benefit. I had Catarrh and Throat trouble and my Heart, Liver and Kidneys were all more or less out of tune. When I I would lie down to sleep my nerves were all on the go with such an uneasy feeling. When I first saw the big Bodi-Tone advertisement I thought it was simply another patent medicine, but the name was attractive and I read it and sent for it. I am glad that I did, for it is the best medicine that I have ever used. I can sleep like a healthy child, walk, eat and do light work I am gaining in weight and strength every day. I am past my seventy-third milestone and am now well, cheerful, happy and contented, thanks to God and Bodi-Tone. I am feeling many years younger and am told by my neighbors that I am looking remarkably well. Mrs. ROSA SPANGLER.

COOPER, TEXAS.—I was down with Muscular Rheumatism for nine long weeks and came very near dying. My physician pulled me through, but when I got up out of bed I was so weak that I could hardly do anything. The Rheumatism had left me in such a condition that I was almost a physical wreck. My limbs and body were swollen terribly, and I was so nervous and so weak that I could not stand to do any kind of work, nor did I seem to get any better. At this time I learned about Bodi-Tone and sent for a box to try. The swelling began to leave my body within a short time after I began its use and the nervousness and weakness gradually disappeared. I could ride and plow all day before I had used two boxes, and do all of my work about the place without feeling the least worried. I feel like a different man since I began to use this remedy, and cannot praise it too highly. W. N. ROGERS.

GYPSUM, KANSAS.—When I sent for Bodi-Tone I suffered severely, and could get no relief for two years, even while taking treatment from the doctor. I thought the trouble was in my stomach, but the doctor said my Liver was enlarged. I also had Female Trouble, which was very bad. My doctor said if I did not quit work I would have to have an operation sooner or later. I was so nervous I could not sleep at night and could not settle myself to work at any one thing but a short time. I had no appetite, in fact I was so discouraged that I cared very little whether I lived or died, I was in such misery. I had not taken many more than a dozen doses of Bodi-Tone when my terrible backache all left me and the distressing bloating in my stomach disappeared. After I had been taking Bodi-Tone a little while my troubles all seemed to leave me at once, as if by a miracle. I went to bed and slept like a babe and could work all day and never feel tired. It is a wonderful medicine and so handy to take, always ready. My friends say I look as fresh and young as a girl, which shows how wonderfully Bodi-Tone has helped me. EFFIE E. DUELBISS.

Trial Coupon

Clipped from Nat'l Faamer and Stockgrower

Bodi-Tone Company, Hoyne & North Aves., Chicago, Ill.

I have read your offer of a dollar box of Bodi-Tone on 25 days' trial, and ask you to send me a box by return mail, postpaid. I will give it a fair trial and will send you $1.00 promptly when I am sure it has benefited me. If it does not help me I will not pay one penny and will owe you nothing. Neither I nor any member of my family have ever before used Bodi-Tone.

A GARDEN OF ROSES—FINE, STURDY PLANTS.

The Most Delightful Subscription Premium Offered By Any Farm Paper.

The National Farmer and Stock Grower has again decided to send out a collection of eight choice ever-blooming Rose Plants to our patrons who will send in a special subscription. They are one-year plants and will give good satisfaction. We guarantee plants to reach you in good growing condition and with each package we send complete directions for planting, care and culture.

The collection, briefly stated, is: **Etoile de France,** the acme of perfection of hardy red roses; **President Taft,** an ever-blooming pink rose of superior merit; **Yellow Kaiserin,** rich canary yellow, that will thrive under most unfavorable conditions; **White Killarney,** the wonderful new "Irish Beauty," of surpassing elegance; **Helen Gould,** vigorous growing velvety red; **Marigold,** a most valuable variety for outdoor planting, producing

deep, full, saffron-yellow flowers; **Clothilde Soupert,** the premium bedding rose with white, pink-tinted flowers, which always appear charmingly fresh and sweet; **Ever-blooming Crimson Rambler** is the eighth of the collection, making a total of the grandest collection ever grown.

OUR SPECIAL OFFER.

Send us **sixty (60) cents,** by money order preferred. We will send you **The National Farmer and Stock Grower** for one year. We will send you direct by mail, postpaid, the full set of **Eight Hardy, Ever-blooming Roses.** We will also send you a 16x20-inch picture entitled **"The American Beauty Rose."** The picture is most beautiful. There is a great bunch of roses resting on the white linen cloth of a table. It is glorious, magnificent. Send us **sixty (60) cents.** The paper can go to one address, the picture to another and the roses to another, or all three to one address. The roses are sent out directly it is safe to dig them in the spring. Send in your order at once with sixty (60) cents and it will receive prompt attention. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

and Stock GROWER

Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husks and prevent clogging. As this is the most approved husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions for a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of

hand and prevents chafing. The strap passes through the leather tongue and the first ring and over the hand to the opposite ring and back through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch-lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle; the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Seedtime and Harvest.

The Secretary of Agriculture directed an investigation to be made concerning the dates of sowing and harvesting, and that the results be published in a series of bulletins. The first of these, entitled "Seedtime and Harvest; Cereals, Flax, Cotton and Tobacco; Dates of Planting and Harvesting in the United States East of Meridians 102-104," has just been issued.

"Because southern latitudes are first to feel the advance of spring," says the bulletin, "it is quite natural to suppose that planting and harvesting always move northward with its advance. As a general fact, the progress of sowing and harvesting is northward, but there are interesting exceptions. Of cereals sown in the spring, sowing and harvesting always move in a northward direction, while of those sown in late summer or fall the sowing movement is always southward. Harvesting progresses northward in the case of all cereals except buckwheat. Corn planting progresses northward; winter-wheat sowing moves southward. The harvesting of corn and of winter wheat progress northward, but the sowing and harvesting of buckwheat progress southward."

The sections of the United States wherein corn planting begins simultaneously are shown by means of a map crossed by lines extending from east to west. As shown by this map, corn planting begins in Southern Florida and in Southern Texas about February 15 in normal years. Fifteen days later it is in progress in Northern Florida, Southern Louisiana and Central Texas, and by May 15 it has progressed as far north as Southern Maine, New Hampshire and Vermont, Central New York, Northern Wisconsin, Minnesota and North Dakota.

"In interpreting the map," to quote further, "it should be remembered that there are many causes which influence the times of sowing and harvesting, and, while a line connecting places which sow or harvest simultaneously will run in the main from east to west, there are curious irregularities, deviations here and there, depending primarily upon altitude, rainfall and character of soil. An increase in altitude is analogous to an increase of latitude, and therefore when these lines cross the higher altitudes they will naturally bend toward the south. In regions of great annual rainfall, the line will also bend southward, due to physiological peculiarities of plant growth. While the waters of the Great Lakes undoubtedly mitigate the severity of the continental climate in that vicinity, yet they also delay seasonal changes and thus retard spring growth and hence cause a later harvest. This explains why the lines in the vicinity of the Great Lakes are bent southward."

Relative to the rate of progress of corn planting, the bulletin says: "At the starting point, near Brownsville, Tex., planting begins on the average date of February 10. The movement reaches the Texas-Oklahoma line on the mean date of March 12, and, therefore, crosses Texas in thirty days, or at the rate of eighteen miles per day.

"From the time this movement starts at the Texas-Oklahoma line until it reaches the Oklahoma-Kansas line twenty-five days elapse. The distance from one state line to the other is 220 miles. Planting, therefore, moves northward through Oklahoma at the rate of nine miles a day. The rate of progress through Kansas is ten miles; through Nebraska, nineteen miles; through South Dakota, fifty miles; and through North Dakota, forty-four miles per day."

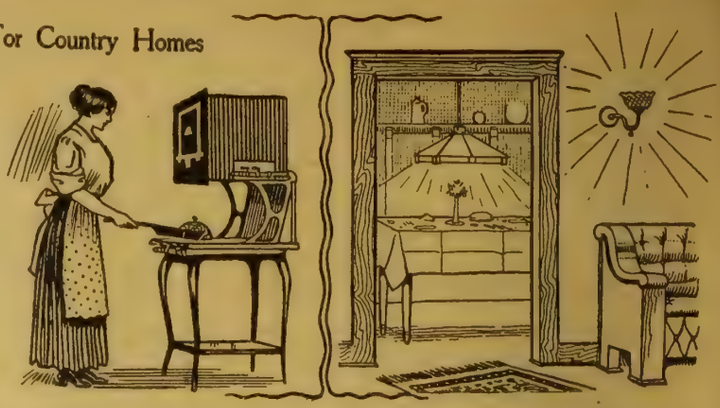
The soil temperature at which corn germinates has been ascertained by numerous tests in field and laboratory. The air temperature at which corn planting takes place in actual practice, however, has not heretofore been established, but from data assembled in this bulletin it is believed to be approximately fifty-five degrees Fahrenheit. Air temperature records at corn planting time in the vicinity of 127 cities east of the Rocky Mountains are given in tabular form.

Compilations of dates of sowing and harvesting by states, by sections of states and units (tracts of seventy miles square) are given for corn, wheat, oats, rye, barley, buckwheat, flax, cotton and tobacco; maps and illustrations explain the text; and interesting discussions are given of the phenomena of seedtime and harvest.

Mr. L. A. Snyder, of Twin Falls, Idaho, raised 430 bushels of potatoes per acre in 1911 and 644 bushels in 1910. In each year he won a $500 prize offered by the Oregon Short Line for the best yield of potatoes on one acre in Idaho, Montana, Oregon, Wyoming and Utah.

All the sheep in the state of Oklahoma would not make a large day's run for the Chicago market.

For Country Homes

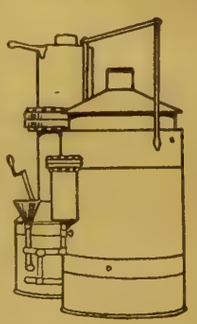


Cooking Fuel and Illuminating Gas
Made at Home with a Little Machine Like This

ABOUT once a month this machine must be refilled with gas-producing stone and wound up like a clock.

When obediently it stands idle until you start to cook or turn on the lights.

Then, with no attention whatever, it gets busy and makes gas automatically—just enough to keep your stove and your lights going.



The stone, known commercially as "UNION CARBIDE," gives up its gas when the machine drops a few lumps into plain water—a little at a time as the gas is wanted.

The gas is genuine Acetylene. Burned in handsome chandeliers it gives a flood of brilliant pure white light.

Burned in the kitchen range, it makes a hot blue fire that can be instantly turned up or down, on or off.

For both cooking and lighting it is used exactly as city gas is used by over twenty million city people.

As a fuel, it flows right into your stove without handling and burns without soot or ashes.

As a light, its white, sunlike beauty is unrivaled. Reflected from handsome globes suspended from brass or bronze chandeliers, it supplies the up-to-date city-like appearance of refinement and elegance which the average country home lacks.

Moreover, it is not poisonous to breathe, and the flame is so stiff the wind can't blow it out.

* * *

The UNION CARBIDE you dump in the machine once a month won't burn and can't explode.

In a nutshell, one of these gas machines installed in the cellar or an outbuilding of a country home solves the *lighting* and *cooking* problems for all time.

And they are so easy to install in any home without injuring walls or carpets that there are now over 180,000 Acetylene Gas Machines in actual use.

We manufacture and our agents arrange for installing thousands of them every month in all parts of the world.

There are, of course, many crude imitations of our machine on the market, but the genuine is easily distinguished by its name and our trade-mark

"Pilot" Acetylene Generators

On the first return mail we will send you free literature telling how Cornell University has been growing plants by our light — why oculists recommend it for eye-strain — why the Insurance Engineers pronounced it much safer than kerosene — how the lights can be placed in barns and outbuildings — how they can be equipped to light up without matches — and how the gas range shortens kitchen hours and makes cooking a pleasure.

With these booklets telling all this wonder story, we will send figures showing how little a "PILOT" lighting and cooking equipment will cost in your case.

Just write us how many rooms and buildings you have to light and where you are located. Address your letter to the ACETYLENE APPARATUS MFG. CO.— 68 Adams Street, Chicago, Ill.

BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

STEEL ROOFING Of All Kinds,
Stock and Storage Tanks, Wagon Tanks, Etc.

Health and Comfort on the Farm.

A very successful city attorney was telling the writer a few days ago about an orange orchard of his from which he is now gathering about $5,000 worth of oranges yearly. But the orchard is a long distance from the present dwelling place of the owner, and so all the work has to be done by proxy. The owner was asked why he did not go to the place where the orange grove is located and settle down there. He replied that he had no desire to live in the sub-tropical climate of that region, but that he hoped some time to get back to the soil. This was a surprising statement, for this man has a very beautiful home in an ideal location, and has all the comforts that modern conveniences can give. Yet he was looking forward to farm life as being better than all the luxury that the modern city can give him.

Health and comfort may be found in the city, but they are more certainly to be found on the farm. In the growing of plants and animals many a city man finds more of interest than of the dull routine of business affairs in the city. He, the city man, looks forward to the time when he can do the very things that many a farmer wishes he could escape from doing. But the city man knows that there is a ruddier health and a solider comfort to be found in the country than elsewhere.

A great many of the city men that are longing for farm life are men that were brought up on farms and learned the business of farming while they were still young. They are not inexperienced dreamers. They have tried both ways of living and know that on the farm it is possible to find the ideal condition of life.

The city man, no matter how successful he may be, cannot escape certain unhealthful conditions that surround the people in all congested localities. The rich city business man must breathe into his lungs the soot-laden air, impregnated with the vomitings of ten thousand chimneys. The examination of the lungs of some city men have shown them blackened with the coal dust so thinly intermixed with the atmosphere that it is hardly observable by the eye, when it is still making up a part of the air. On the farm the air is pure and human lungs retain their natural tints.

To the man in the great city the sun rises late and sets early, because his sky is narrowed by the towering buildings. At nine o'clock he sees the sun rise over the tops of the roofs to the east of him, and at three o'clock it sets in the west of his sky, slipping out of sight behind the roofs. His day has six hours of sunlight and eighteen hours of obscurity. On the farm the sun in the summer time is shining above the dewy hilltops early in the morning and goes down late, giving the farm dweller sixteen hours of sunlight and only eight hours of obscurity. The country sky is bounded by green fields and splendid trees, and these make a part of the comfortable conditions in the country.

Poverty and Waste.

One of the great tasks of a growing civilization is to utilize properly the things that nature produces for the use of man. The inability to avail itself of the usable things has been one of the chief causes of the poverty of the race, for poverty has been found in every nation.

What one section of the country cannot afford to buy another section has to throw away because there is no market for it. Even to-day in Washington and Oregon there are sections of land where stately trees are being cut down and burned, because it would cost more to get them to the saw mills than they would be worth.

The waste of wood is one of the wastes that is most striking, for it is observable in almost all parts of the country, with the exception of the arid and semi-arid plains. If we take a stroll through almost any private forest we will find fallen trees or the ground strewn with great branches and limbs of trees, with other limbs and branches and trunks of trees just disappearing into mold, the process of decay having well advanced.

Where mountain sides are hard to climb will be found all kinds of dead and decaying fragments of wood, over which one must climb with difficulty. The amount of wood thus going to waste in this one nation is beyond all calculation; certainly it is more than enough to warm all the houses where people every year suffer from cold. This thought is impressed more when one walks through a forest where lumbering operations are going on. The ground is littered with great, substantial chips produced by the labors of a multitude of choppers; yet they must go to decay or be consumed by the flames that run riot over them sometimes in a dry summer.

We have not yet solved the problem of preventing the decay of all kinds of food elements. The loss from the decay of fruits amounts to an unguessable figure each year. There are two parts to this loss: The loss of fruits not gathered, as the wild fruits like blackberries and blueberries, and the loss from decay of fruits that are gathered. Our canning factories do something to prevent this waste, but they do not affect the fresh fruits that are annually lost in large quantities as well as in small lots. A walk down South Water street, Chicago, the great fruit-distributing center of that city, will show at the close of any day a very large amount of decaying fruit and vegetables hauled out to be carted away. The writer remembers seeing a barrel of apples among this garbage, each apple of which had begun to rot some, but of which most of each apple was still sound. Yet there was nothing to do but dump such a barrel of fruit into the garbage heap, as it could not be sold to any retailer and no stock was available to consume it. Passing from the methods of distribution into the homes, we can each note how much waste of good material goes on through rotting and decay in various forms. Multiply this loss by twenty millions and we can form a slight estimate of what the grand total must be.

This waste has been going on since man existed in the world, and at the same time people have been suffering from hunger, cold and lack of clothing. The problems how to save and to utilize what we have is of such magnitude that it is worthy the best thoughts of our best intellects. The solution of the transportation problem is a big factor in the solution of how to prevent waste.

Household Repairs.

A good way to completely transform a bedroom when the furniture has become old and shabby is to give every piece of furniture several coats of paint. The first thing to do is to sandpaper it smooth, and while this is tedious, it is very necessary. Then give each piece a coat of white-lead paint, and when this is dry it must be followed by a second coat, and the third coat must be an enamel finish. A lovely polish may be obtained as effectually as if the most expensive workmen were employed.

The brass top of a lamp can be fastened to the bowl by applying melted alum. Melt the alum and while it is hot cover the inside of the brass top with melted alum, put in position and your lamp will be as good as new. If the brass part of the lamp has become dull or discolored, get some bronze at the drug store and put it on your lamp as you would bronze any article.

A good way to mend cracks in the floor and wall is to fill with soft putty and work it in well with the fingers; then use a knife for making it perfectly level with the boards and the wall; and the putty can be used for filling cracks in nice furniturn before painting and for mending the kitchen table, and the weekly scrubbing will have no bad effect upon it.

When hemming a table cloth, save the ravelings for darning the linen, and when a table cloth or any table linen begins to wear thin, it should have a very light rubbing in the laundry or it will soon go to pieces.

The best way to clean the old soft linen as well as the nice new pieces is to dissolve some soap chips in hot water, then stir this into warm water, put in the pieces and let them soak for an hour, then a very little rubbing and a good rinsing will leave them beautifully white.

If there are worn places in pieces of lace or nice white waists, darn them neatly and wash them in suds made with the Twenty Mule Team Soap Chips, as they soften the water and whiten the fabric, and the articles need no rubbing, as they can be cleaned perfectly by pressing and squeezing between the hands.

When table cloths become too worn for further use, cut the best parts into small cloths, and the worst worn-out pieces are invaluable in cases of illness or for wounds.—A. M. H.

Two expert poultrymen, C. B. Ford and D. W. Tobey, have started a station for milk feeding chickens at Rochelle, Ill., on the C. & N. W. Railroad, seventy-five miles west of Chicago. The plant will provide for handling 25,000 chickens.

Beautiful Style Book FREE!

Big Bargains Like This for YOU

THE really wonderful, complete "NATIONAL" Style Book, containing 200 pages of the newest New York fashions, is FREE to you—FREE for the asking—just write for it. It shows you page after page of amazing bargains—it shows you

Waists, 98 cents to $6.98
Skirts, $1.49 to $9.98

SPLIT HICKORY WHEEL CO., 567 F St., Cincinnati, Ohio.

St. Louis Hog Prices.

On February 29th, the St. Louis hog market had a top price of $6.60 per 100 pounds for choice loads, 248 to 296 pounds average. Mixed hogs went to the packers at $6.00 to $6.25 that classed as fair, while the better ones sold at $6.25 to $6.45. Butcher and good heavy hogs sold at $6.45 and higher. A good many lightweight hogs sold at $6.00 to $6.45 per 100 pounds.

Ten-car Shipment of Texas Cattle.

A ten-car shipment of handyweight steers that averaged a little over 1,000 pounds sold at $6.25 per 100 pounds in the quarantine division at St. Louis. They were shipped by Mars & Marshall, well-known and extensive cattle feeders of Commerce, Tex. They were two-year-olds and were meal-fed and of very good quality.

Arkansas Steers at $5.80.

The top of the Arkansas steer trade for some time was paid to R. A. McCain, of Prairie county, Arkansas. This sale was made February 28th. There were twenty-one head, 1,060 pounds average, and the price paid was $5.80. On February 29th another load of Arkansas steers, 1,013 pounds, sold at $5.45 per 100 pounds.

St. Louis Horse Quotations.

The following quotations for the general run of horses sold on the St. Louis market represent average views of the trade, as follows: Heavy draft, good to choice, $200 to $235; Eastern chunks, $165 to $200; Eastern chunks, lacking quality, $135 to $160; Southern horses, good to extra, $125 to $150; Southern horses, fair to good, $100 to $125; Southern horses, common, $40 to $65; drivers, choice, $150 to $175; plugs, $20 to $30.

GOOD BOOKS AND PAPERS.

THE SPANISH PEANUT AS FEED by H. M. Cottrell, Agricultural Commissioner Rock Island Lines. This is a very valuable contribution to agricultural literature, specifying the good points in regard to the production of Spanish peanuts, describing the country where they can be raised profitably as feed for dairy cows, cattle, hogs, sheep and horses, poultry, also a crop for dry sections. To get a free copy, write to L. M. Allen, Passenger Traffic Manager Rock Island Lines, 411 LaSalle Street Station, Chicago, Ill.

POULTRY GROWERS' GUIDE FOR 1912.—This is published by Cyphers Incubator Company, Buffalo, N. Y., and although it is for the main purpose of illustrating their incubators and brooders, it contains eight of the best poultry articles ever written. This book weighs a pound; it will cost them 16 cents to mail a copy to you, but they will send every reader of The National Farmer and Stock Grower a copy who will simply address Cyphers Incubator Company, Dept. 56, at Buffalo, N. Y., and ask for Poultry Growers' Guide for 1912.

AMERICAN FENCE NEWS.—This contains a large amount of instructive matter concerning fencing; how to buy and erect it properly in a very effective manner. Write to F. Baackes, V. P. & General Sales Agent, 72 West Adams street, Chicago, Ill., and ask for a copy. It also includes a fine line of instruction concerning steel posts and gates.

DISSTON SAWS AND TOOLS FOR THE FARM.—This is published for the purpose of showing farmers what first-class tools are like, and it is an elegant work of art. Henry Disston & Sons, of Philadelphia, have been making Keystone Brand Tools for seventy-two years. These tools are sold all over the United States. We advise our readers to address Henry Disston & Sons, Box 1537-M, Philadelphia, Pa., and ask for a copy of their Free Book of Saws and Tools.

SEED AND PLANT GUIDE.—This is a splendid seed catalogue for use of general farmers and for vegetable growers. It is handy in size and contains 160 pages of illustrations of Buckbee's "Full of Life" Seeds." Information concerning Buckbee's New Masterpiece Tomato alone is worth writing for. Free copy can be had by mentioning this paper and writing to H. W. Buckbee, Rockford, Ill.

FENCING CATALOGUE. — Kitselman Brothers, fence manufacturers of Muncie, Indiana, have just completed their large catalogue of fencing. Their prices are extremely low when you consider the high quality of their fencing. Prices range from 11½ cents a rod up. See their ad. in this issue and write them for free catalogue. Address, Kitselman Brothers, Box 261, Muncie, Ind.

HOW TO KILL QUACK GRASS.—The Department of Agriculture has issued Farmers' Bulletin No. 464 on "the eradication of quack grass." Quack grass is well known to most farmers all the way from the Atlantic to the Pacific in latitudes north of the Ohio and Potomac rivers. It is one of the most serious weed pests known in America. The grass grows under a great many different names, among them couch grass, witch grass and twitch grass. The author of this bulletin has spent a number of years making a close study of the grass under field conditions all over the Northern United States. Based on this thorough knowledge of the field habits of the grass, experimental work was started, which quickly resulted in a complete, cheap and practical method of eradicating the pest. Farmers' Bulletin 464, embodying this work, can be had by applying directly to the Department of Agriculture at Washington, D. C.

BETTER FARM IMPLEMENTS AND HOW TO USE THEM.—This is the title of the agricultural implement catalogue recently issued by the John Deere Plow Company. It is a remarkable book of 147 pages, giving illustrations of forty-two different classes of implements and including a good dozen of special articles on the use of farm implements. This particular book is the one advertised on page 7. It is included in Package No. X-7, which all farmers can obtain by writing for it to John Deere Plow Company, Moline, Ill. The chapter giving historical reference to the invention by John Deere of the first steel plow is alone worth writing for.

You Will Succeed in the Texas Panhandle

There is money there for every energetic man who is willing to do his best.

Are You?

This splendid new country is waiting *for you.*

Settlers are wanted—real men and women who will help develop the tremendous resources and make the country what it is bound to be—a great farming community. You will find a hearty welcome there and you will share in the profits that a new country always enjoys.

We want *you* to be one of the elect.

We want *you* to reap the reward of the man who sees ahead.

We want to show *you* where you can take a small capital and in a few years make the land earn for you a fine farm, a good home and a bank account besides.

The soil in the Panhandle is deep, rich, durable. It is well adapted to general farming and successfully grows all of the cereals, garden and (where they have tried it) orchard crops as well. Where irrigation is practiced alfalfa is a staple and there is a ready market for all that can be grown.

Land may be bought to-day at from $10 to $25 an acre, and on terms that allow the man with a little money to make good.

We want to show you how those now there have prospered and how you also may get on in the world.

Write to me this week. I will mail you our Panhandle and South Plains booklet. It tells about this great new farming country that has been prospected for years but only now is being seriously developed.

A post-card or this coupon will do.

GOVERNMENT JOBS FOR FARMERS.

On May 4th, Railway Mail Clerk Examinations will be held everywhere. Several thousand appointments, commencing at $800 with rapid advancement to $1,100 or $1,200, will be made from these examinations, as it is a year and a half since the last examinations. Railway Mail Clerks usually have every second week off duty with full pay. The work is very pleasant, traveling continually. Interested readers should write immediately to **FRANKLIN INSTITUTE, Dept. W 107, Rochester, N. Y.,** for schedule showing examination places and for free sample questions.

Corn Prizes For Boys.

The Missouri Corn Growers' Association, co-operating with the Missouri College of Agriculture and the State Board of Agriculture, has perfected plants for organizing a statewide corn-growing contest among Missouri farm boys during the season of 1912. Every farm boy in Missouri between the ages of 10 and 20 is eligible to membership in this contest and should join. He will not only learn much about growing corn, but his attention will be directed to many opportunities that intelligent effort affords along other lines of good farming as well.

It is planned to enroll as many boys as possible in this contest and to give them practical instruction in growing corn. Circulars telling how to select seed corn, how to test it for germination, how to plow and prepare the ground, and how to plant and cultivate corn according to the most approved methods will be sent to each boy enrolled.

At the State Corn Show held at Columbia next January by the Missouri Corn Growers' Association valuable prizes will be offered to those boys who grow and select the best samples of corn and to those who grow the most corn on an acre of ground with the greatest profit. Last year three boys each grew over 105 bushels of corn on an acre of ground. One of these won $56 in cash prizes and sold his corn for $85. It cost him about $20 to grow his corn, which left him a net profit of $121 for his acre of corn. Prizes will also be offered at the State Fair at Sedalia and at many local Corn Shows all over the state next fall for corn grown by boys in this contest.

In many localities local corn-growing contests are being organized by County Superintendents, bankers, merchants and other business men, local Corn Growers Associations and Farmers' Clubs of various kinds, and the boys enrolled in these become members of the State Contest when their names are sent to the Secretary of the Missouri Corn Growers' Association. Where these are organized the boys should join them, but where none is organized, a boy can join the State Contest by sending his name, age and address to the Secretary of the Missouri Corn Growers' Association, Columbia, Missouri, who will enroll him and send him circulars on corn growing. This is an opportunity that no boy who wants to learn more about farming can afford to miss. Write to-day for any further information desired.—C. B. Hutchinson, Secretary Missouri Corn Growers' Association, Columbia, Mo.

Hog Raisers' Insurance.

The purpose of Merry War Lye is not to bring dead hogs to life, or even to cure the hog that has reached the dying condition, but rather to prevent disease and to restore those hogs that have begun to show signs of sickness. Merry War Lye costs but 10 cents a can, and by writing to E. Myers Lye Co., Dept. 22, St. Louis, Mo., for the booklet "How to Get the Biggest Profits From Hog Raising" you get an instruction book that is worth having. Do it now before your hogs are in danger.

Our readers will do well to read the advertisements in this paper. One or two issues every spring this publication is a little crowded, but the advertising is worth just as much to our readers as anything else we could publish at this season of the year.

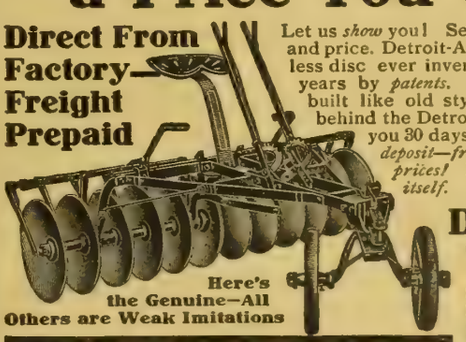
Quality You Can't Equal —a Price You Can't Beat!

Direct From Factory—Freight Prepaid

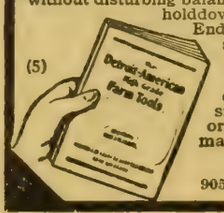
Let us *show* you! Send name on postal for book and price. Detroit-American is first *genuine* tongueless disc ever invented! Features protected for 17 years by *patents*. All other "tongueless" discs are built like old styles with tongues cut off. Years behind the Detroit-American. No one else will give you 30 days' trial with *money in your pocket—no deposit—freight paid, cash or credit* and *factory prices!* No other harrow *good enough* to *sell itself.*



Here's the Genuine—All Others are Weak Imitations

Detroit-American Tongueless Disc

Sold Direct from Factory Complete, with Hitch Free. The only all steel tongueless disc made. Practically no chance of breakage—no repairs—no delays—no waiting for new parts—no express bills. Steel wheels have wide tires. Steel axle is high arched and gives good clearance. Trucks are flexible. Wheels pass over uneven places and stones without disturbing balance. Double levers—each section works independently. Adjustable holddowns insure uniform depth of cut. Disc sections do not strike together. End thrust taken up by a hard maple ring bearing. Only harrow with steel separators between blades. Hitch free to suit size of harrow.



Mail Postal Now! Get our big book which fully explains the above and many other features. Detroit-American All Steel Harrows are made in sixteen sizes, cut from 4 ft. to 10 ft. in width, 16, 18, or 20 inch blade as ordered and cutaway style if desired. Book also shows world's best manure spreaders, engines and cultivators. Send your postal now.

AMERICAN HARROW COMPANY
9055 Hastings Street Detroit, Michigan

Parcels Post Letter Day.

March 18th falls on a Monday, and it is the day set apart for farmers to write to their Congressmen and Senators to work and vote for a good, substantial, general parcels post law. There is nothing wrong or revolutionary in this. Pretty nearly every other country has it, and there is absolutely no reason why this country should not adopt it. What is needed is a general parcels post law for the good of every citizen, no matter whether he lives in a big city, a town, a village, or on a farm. The packages should have reasonable limitations as to size and weight, and there should be no attempt to turn the mail wagon into a freight wagon.

A bill before Congress now, which has the practical endorsement of the President and the Postmaster General, appears to provide for a good beginning—beginning at the rural route. Up to date there are more petitions in Congress against parcels post than for it; it is therefore up to the farmer to put his weight and influence in the scale; therefore be sure to mail at least three letters on Monday, March the 18th, one to the Representative from your own district and one to each of your United States Senators. A sample letter would be as follows:

Sample of Letter.

Hon.....

U. S. Senator, Washington, D. C.:

My Dear Sir:—I have the honor to address you in favor of the Postoffice Department being required by law to institute a parcels post for the use and benefit of the people at large, beginning with small towns and rural carrier routes. I believe the time has come when a parcels post law is absolutely necessary for the benefit of all American citizens. With best wishes for your health and continued success as a legislator, I am, My Dear Sir,

Very Truly Yours,

Signed.....

Postoffice.. .....

Date.. .....

Such a letter, or any letter a farmer may see fit to write on the parcels post, should not be neglected. The voice of the farmer should be heard in the land and especially in Washington, D. C.

GRAND SUBSCRIPTION OFFER.

A Splendid Magazine One Year—The Ladies' World—National Farmer and Stock Grower One Year—Eight Standard Grapevines—All For One Dollar.

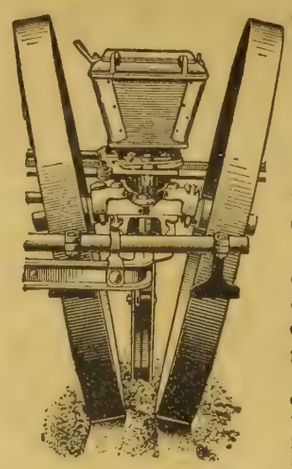
This is a startling subscription offer, especially valuable to farmers' families and to anyone who owns a home. **"The Ladies' World"** is a monthly magazine, forty-eight pages, four columns to the page, highly illustrated, cover in colors, beautiful, delightful, splendidly edited, lovely stories, instructive articles, lessons in housekeeping, domestic science, dressmaking, music, amusements, etc. The National Farmer and Stock Grower is a monthly paper; contains practical information, clean-cut, instructive, up-to-date news of markets. Collection of **Eight Two-year Standard Grapevines.** These grapevines are ready for planting. They are two-year-old vines from the best Chautauqua vineyards. The collection consists of **Moore's Early,** a black grape; **Catawba,** dark red when fully ripe; **Diamond,** a large white; **Concord,** black early; **Agawam,** red or maroon; **Niagara,** large and handsome white; **Delaware,** compact red; and **Worden,** a large black grape. We offered this premium last year with great success. The vines are taken up in the fall and held in storage for spring planting. A booklet giving complete directions for planting, pruning, etc., is sent with each set of grapevines.

We will send **The Ladies' World** one year; **The National Farmer and Stock Grower** one year; and the **Collection of Grapevines,** nicely packed, postage paid—all for one dollar. Address, **HALE PUBLISHING CO.,** 3550 Vista Ave., St. Louis, Mo.

Why Farmers Can Buy Motor Cars.

When the Reo Motor Car, which is advertised in The National Farmer and Stock Grower, was advertised at $2,200 it was not such a splendid car as it is now. And right now it is sold for $1,055. We advise our readers to study the proposition on the double page 16 and 17. The automobile is a practical necessity on every farm, now that the highest-grade cars can be bought worth the money. For five years The National Farmer and Stock Grower refused to solicit automobile advertisements for the reason that the cars were not perfect and the cost was too much. Since then the cars have become reliable and the prices reasonable.

The most independent farmer of all farmers is the stock farmer, who can market his crops on their own feet.



Why Four Wheels?

BECAUSE the wheels running on an angle **pack** the dirt around the corn leaving a loose ridge on top. **They will cover where all others fail**—even in wet and sticky ground. They open at the top and clean almost automatically; they will not clog or carry the corn over in any condition of soil.

Because the runners set back between the wheels within 10 inches of the covering point. This regulates depth of planting to the fraction of an inch. **The Hayes is the only planter made that will plant every kernel exactly the same depth.** Corn all comes up at the same time—allows cultivation 2 to 4 days earlier.

Because the ridge left over the corn prevents washouts on hillsides, gives greater sun surface and the loose soil on top permits corn to sprout and come up several days quicker. Harrowing levels this ridge and makes a clean row where the corn comes up, **saving one cultivation over the ordinary wheel.**

Because the planter is the shortest coupled and the load is carried closer to the horses, the Hayes is **the lightest draft planter made.**

You Can't Buy a More Satisfactory Planter

That's why we want you to take time to get all the facts before you make your choice. There are over 150,000 Hayes Planters in use—**every one of these machines is giving satisfactory, time-saving, money-making service,** and we can prove it.

The more you compare the Hayes with other planters, the more you will realize why it is the only perfect machine of its kind—and why there isn't any other that can compare with it when it comes right down to hard facts and results.

Investigate now, send for free booklet 'Z' that gives reasons backed by proof of use, also valuable planter facts you ought to know. A postal brings it.

The Drop That Never Fails

The Hayes Drop never fails. It is the simplest, most durable and most efficient ever made. Always in plain view of the operator—works perfect all the time and lasts for years. Never cracks or grinds the seed—over 40 sizes of seed plates, ground by special machinery, and the cells do not vary 1-1000 of an inch. Will drop accurately any size or shape kernel.

Checks With Absolute Accuracy

No matter how fast you drive the Hayes always plants in perfect check, the corn comes up straighter the cross rows than the way you drive. The result is that you can plant from 8 to 5 more acres a day with the Hayes, get straighter rows in perfect check, easier to cultivate and no missing hills. Besides, the Hayes will plant your corn all at an even depth, drop it more accurately, cover it better and get a better stand and larger crop than any other planter made. **These are not idle boasts, but actual facts that every Hayes user knows from his own experience.**

Stub runners or discs furnished if preferred, also a most efficient Fertilizer Attachment that may be bought with the planter or at any future time.

The Coming Vegetable Garden.

The seeds that are to be planted in the house should be planted as soon as possible. The pots or boxes in which they are planted should be kept out of the sunlight till the little seedlings are up. This is because the sun will bake the top of the soil or dry it out so that the sprouting seed will be deprived of moisture. This drying out of the surface is one of the most common causes of seeds not sending up plants.

Put the manure on the soil early that the early rains may be working it into the soil. It is not the solid manure that is used by plants, but manure that has been reduced to a liquid. Plants do not eat; they drink their food, and fertility is not always available fertility. It takes time to get the manure into a state where it can be used.

Heavy fertilizing is profitable on the garden for more than one reason. It assists the growth of plants and enables them to withstand drouth. If the manure is applied early and the rains wash the soluble portions deep into the soil the roots will follow and get into strata of earth where drouth will have little effect.

The vegetables we grow have originated in different ages and in different countries and are very different in the requirements for their growth. Therefore, if a garden has in it two different kinds of soil, so much the better. Some must have sandy soil and some clay soil; and if one has but one kind of soil he should not be surprised if he fails to have the best of success with certain kinds of plants.

Most plants do well in sandy loam, but a few thrive best in the very heavy clay soils. Among these are parsnips and cabbages, cauliflower and turnips. In planning for cabbages, select the heaviest clay soil available and manure it very heavily. It is surprising what heavy clay soils the cabbage finds to its liking, and it is also surprising how much manure it can use. It is a very gross feeder. The parsnip seems to have the power to drive its long root through very compact clay and get its food and moisture far below the surface of the ground. Cauliflower, turnips and Brussell's sprouts are of the same family and mature as the cabbage and thrive under the same conditions.

One cause of failure in seed germination is due to late planting. The small seeds should be planted early so they will have their struggle for life while the sun's rays are not hot enough to dry out the surface soil. The larger the seed the less does it seem to feel the effect of the drying out of the surface soil. This is probably due to the fact that larger seeds are naturally planted much deeper than small seeds.

If there is well-rotted manure about the barn-yard it should be saved for the early crops in the vegetable garden. Manure is best when applied fresh if there is time for it to decay; but if the soil has not been thus fed, well-rotted manure or acidulated fertilizers or fertilizers especially adapted to quick action are the only things to be applied for early looked-for results.

Our Industrial Policy.

The National Farmer and Stock Grower is in favor of the United States collecting a reasonable range of customs duties upon all foreign farm products and all foreign manufactured goods admitted into the United States from foreign countries, said duties to be applied to the support of the national government.

Every farmer in the United States is taxed by his county and by the state, and he pays indirect taxation for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal service the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. By collecting these customs duties the United States government receives the income that is necessary and must be collected for the public service and the farmer has a very moderate degree of what is called protection. In times of scarcity caused by drouth or other unavoidable influences the foreign farm productions can come in on a fair basis, and in times of abundance the country thrives better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmers' products the manufacturer would have to shut his doors. Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. It will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out.

Sandow $37.50

2½ H.P. Stationary Engine—Complete

Gives ample power for all farm uses. Only three moving parts—no cams, no gears, no valves—can't get out of order. Perfect governor—ideal cooling system. Uses kerosene (coal oil), gasoline, alcohol, distillate or gas. Sold on 15 days' trial. YOUR MONEY BACK IF YOU ARE NOT SATISFIED.

Jack Colt Measurement.

Editor National Farmer and Stock Grower:

Dear Sir:—Within you find exact measurements of an extra good yearling jack colt that you may have space to publish in your paper. His measurements are as follows. Height, 62 inches standard or 64 inches jack measure; heart girth, 63 inches; arm, 22 inches; foot, 14¼; knee, 14¼; cannon bone, 8½ inches; crown of head to lip, 31 inches; tip to tip of ears, 34½ inches; hock, 18 inches; flank, 69 inches; belly 73 inches; length from mouth to root of tail, 116 inches. This colt was foaled March 20, 1910; was exhibited at the Appalachian Exposition, Knoxville, Tenn., also at Tennessee State Fair at Nashville, and won first prize at both Expositions. He is jet black with white points, and styles up like a fine mule; is not fat, but in good growing condition. THOS. H. EZELL, Mill Creek Stock Farm, R. F. D. 7, Nashville, Tenn.

The Howard Watch

The HOWARD owner is ready to match seconds with all comers. He tells you what time it *is*—and his word is authority among his associates.

Why will any practical man carry a timepiece that cannot be trusted out of sight of a jeweler's window?

Why should the prosperous farmer or stockman, of all practical folk, have to depend on "setting" his watch when he comes to town?

As a matter of fact, in the progressive farming sections of this country you will find thousands of men who carry the HOWARD Watch—just as they own the most commodious buildings and the finest stock and equipment to be had.

They will tell you that the HOWARD runs absolutely true—in spite of the extremes of heat and cold; the jolt and vibration of driving a harvester or traction plow.

The HOWARD is the finest practical watch in the world.

A HOWARD Watch is always worth what you pay for it.

The price of each watch is fixed at the factory and a printed ticket attached—from the 17-jewel (*double roller*) in a Crescent *Extra* or Boss *Extra* gold-filled case at $40, to the 23-jewel at $150—and the EDWARD HOWARD model at $250.

Find the HOWARD jeweler in your town. When a man makes a permanent investment like the purchase of a HOWARD Watch he naturally wants to *see* what he is buying—he wants to get the benefit of expert advice. The HOWARD Watch is sold only by legitimate jewelers—and not every jeweler can sell you a HOWARD. The jeweler who can is a representative merchant—a good man to know.

Send us your name on a postal card and we will send you—FREE—our pamphlet, THE STORY OF EDWARD HOWARD AND THE FIRST AMERICAN WATCH. It is a chapter of History that every man and boy in this country should read.

Marketing Cattle, Hogs and Sheep.

Considering that the combined markets of Chicago, Kansas City, St. Louis, Omaha, St. Joseph, Sioux City and St. Paul to be capable of indicating the changes in the marketing of cattle, hogs and sheep from year to year, the Crop Reporter of the United States Department of Agriculture shows the combined total of cattle, hogs and sheep at those markets, and we will take those figures and look at them with an eye to future marketings.

The Number Marketed.

Year.	Cattle.	Hogs.	Sheep.
1900	7,179,344	19,160,210	7,061,466
1901	7,707,839	20,952,691	7,798,359
1902	8,375,408	17,791,341	9,177,050
1903	8,878,789	17,288,256	9,630,692
1904	8,690,696	19,072,231	9,604,512
1905	9,202,083	20,270,009	10,572,259
1906	9,373,825	19,812,594	10,864,327
1907	9,490,710	20,066,388	9,857,877
1908	8,827,360	23,481,442	9,833,640
1909	9,189,312	19,286,936	10,284,858
1910	9,265,408	15,982,648	12,407,418
1911	8,768,456	21,297,735	13,556,107

The largest number of cattle marketed was 9,490,710, in the year 1907, which was reduced to 8,768,456 in 1911. In view that government reports indicate a decreased number of cattle in the country, it will be difficult to keep up the run of 1911.

In the matter of hogs, the largest marketing was 23,481,442 in 1908, reduced down to 15,982,648 in 1910, and increasing to 21,297,735 in 1911. The government reports indicate a considerable increase in hogs, therefore we may expect good runs for the next two or three years.

Sheep marketing reached 13,556,007 in the year 1911, gaining 3,500,000 in 1911 over the year 1908. Government reports do not indicate any increase in sheep in the country in the past ten years, therefore it will be difficult to maintain the record of 1911 so far as sheep are concerned.

Greatest Book of All.

The work of printing the Book of Live Stock Champions is going on deliberately. It ought to have been issued before now, but we are printing a large edition of a fine, artistic volume, and it cannot be hurried. More than half of it is done and we hope to announce the work ready for delivery in our April edition. During the month of March we will continue to enter up a two-year subscription to The National Farmer and Stock Grower for one dollar, payable in advance, and we will send a copy of the Book of Live Stock Champions, cloth-bound, gilt title, 320 pages, as a free premium immediately after publication.

Work of Men and Women.

Lloyd George told an English audience that men make the best soldiers and women the best nurses, but that women tried being soldiers first and gave it up, thinking that such work was best suited to the intellect of men. After all, he said, the healing of wounds is a nobler work than the inflicting of them.

National Corn Exposition Prizes.

The Fifth National Corn Exposition will be held in Columbia, S. C., January 27th to February 8th, 1913. The National Farmer and Stock Grower will pay a special prize of ten dollars in cash to any and to all of our subscribers in any state who may win a first or second prize at the National Corn Exposition at Columbia, S. C. This applies to paid-in-advance subscribers of record August 1, 1912.

We will pay the prizes as they are won to boys or girls, men or women, if they exhibit a single ear or ten ears in any corn class and win a first or second prize. If they win a first or second prize at the National Corn Exposition, all that is necessary to receive one of our special ten-dollar cash prizes is to claim it by sending us the certificate of the Secretary of the show and reminding us of the subscription payment and we will look it up, and, if found to be correct, will remit the money promptly.

This offer applies equally well to exhibits of wheat, oats or barley for which the National Corn Show offers prizes. Heretofore in offering prizes we have required that the seed corn or oats or other grain from which the exhibit is grown be furnished by us. This time no such qualification is necessary. We place no limit upon the number of prizes. We will pay one hundred or one thousand of them. Our purpose is to encourage farmers, farmers' sons, farmers' daughters and farmers' wives to produce crops good enough for selections to be made to exhibit and good enough to win prizes at the National Corn Show. It is done to advertise The National Farmer and Stock Grower, to get us more subscribers than we would otherwise obtain, to advertise the National Corn Exposition and to encourage improvement in growing corn, wheat, oats and barley. Our subscribers are all eligible, providing their subscriptions are paid up from August 1, 1912, to February 8, 1913. It applies to all who have already paid their subscriptions covering these dates and to all who pay their subscriptions before August 1, 1912.

The National Farmer and Stock Grower was the first paper in the United States to offer cash prizes for grain exhibits, and we find that the more prizes we pay the more we prosper. The National Corn Exposition is a great, beneficial enterprise, wisely conducted, and we intend to do our part in our own way to help it along and to help ourselves and our subscribers at the same time.

Silo Facts

Free: This book tells the reason why you can immensely increase the profits from the same amount of feed by use of the cheapest, best and indestructible

A. P. GROUT Vitrified Tile SILO

Acknowledged to be the only perfect silo material. Proof against fire, wind, weather and decay.

Rat-proof and sanitary: filled solid with concrete and otherwise reinforced. Vitrified Tile will not absorb nutriments of silage. No expense for shrinkage, insurance or repairs. Easy to erect; cannot collapse.

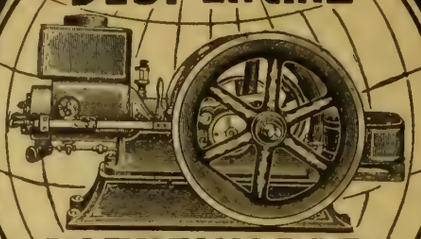
THE BEST ENGINE IN THE WORLD



WATERLOO BOY

Two gold medals, at two International Expositions, in open competition with the leading manufacturers, not only of this country, but of every nation of the globe. THAT is real proof that the **Waterloo Boy Gasoline Engine** is the best engine built today. And the real importance of this great double victory is the fact that it was won, not by a specially designed engine prepared and primed particularly for the contest, but by a regular Waterloo Boy TAKEN FROM STOCK.

Thousands of these engines are in regular daily use on farms all over the world, and **you** can buy an exact duplicate of this medal winner for your own work. This supreme make-good quality of the

WATERLOO BOY GASOLINE ENGINE

is built into it—it is best from foundry to testing room. **Best** and **simplest** in **material, in workmanship and in many important features of design which are found on no other engine in the world.**

The speed lever which works like the throttle of a locomotive and regulates the speed while the engine is running, is an **exclusive Waterloo feature**, and it alone adds $20.00 to $50.00 to the value of your engine. Many other features are just as important—our patented mixer which does away with the expense and bother of a pump; new type igniter that never misses a spark; automatic fuel regulation making it the cheapest to run; frost proof construction.

Burns either Kerosene or Gasoline starts easy in the coldest weather. All parts are interchangeable and it is so simple that a child can run it.

The Waterloo Boy is no experiment—it is the oldest successful farm engine on the market and has made good for nearly 100,000 farmers for over 19 years—some of your neighbors among them. Built in one of the biggest engine factories in the world, with a capacity of 130 complete engines per day, nearly 40,000 per year.

Let the other fellow experiment—you use his experience and buy a **Waterloo Boy** in the first place. Get the certainty of absolute satisfaction at the *lowest price ever made on a reliable engine.*

5-Year Guarantee. Catalog and full details FREE. Write today.

Is Your Straw Stack Green?

Then Your Threshing Was Not Done by a RED RIVER SPECIAL

All threshing machines are not alike. There is one different from all others. It has a different way of taking grain out of the straw. *It beats it out* just as you would do by hand with a pitchfork. All other machines depend upon its dropping out.

This one different machine is the RED RIVER SPECIAL and you should insist upon having it do your threshing. It will save all your grain and waste none of your time.

IT SAVES THE FARMER'S THRESH BILL.

It has the Big Cylinder, the "Man Behind the Gun," the patented separating grate and check plate, the greatest separating device ever built.

The Big Cylinder drives the intermingled straw, chaff and grain against the separating grate, *beating* the grain through where the check plate catches it and delivers it to the grain pan and mill.

Ninety per cent of the grain is taken out right there.

The straw goes over upon the shakers which hold it and BEAT it until all the grain is BEATEN OUT.

In all other kinds the straw is hurried out of the machine and the grain is expected to drop out.

It doesn't. Thousands of green straw stacks every year loudly say it doesn't.

The RED RIVER SPECIAL saves all this. Insist upon its doing your work this year. ***It will save your thresh bill.*** Write us for the proof.

THE SEWING AWL.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Our Grapevine Premiums.

We are crowded for space in this issue, therefore saying very little about our grapevine premiums advertised on page 6. But the offer is tremendous value for the money. The only way anyone can lose by it is by failing to take advantage of it.

Acetylene Light Apparatus.

The acetylene light includes cooking also. There is no better light, no cheaper light, no safer light, no healthier light, and none other that is as helpful to the eyes. Read page 2 and then write to the Acetylene Apparatus Mfg. Co., 68 Adams street, Chicago, Ill., asking for the "Pilot" Booklets.

Native Cows and Heifers at St. Louis.

Included in good-size lots of native cows and heifers sold to butchers at St. Louis, February 29th, were forty-four heifers, 591 pounds, at $5.90; twenty-six heifers, 761 pounds, at $5.65; sixty-six heifers, 620 pounds, at $5.55; twenty-two cows, 994 pounds, at $5.15; eighteen cows, 951 pounds, at $5.25; and sixteen cows, 832 pounds, at $3.50 per 100 pounds.

Test Your Seed Corn.

Professor L. Hegnauer, of the Illinois Agricultural College, says: "The shortage of seed corn and the poor quality of seed is universal this year. We are advising strongly that every farmer should test his seed ear by ear." This condition, however, is not limited to Illinois, as it is reported to be general.

Ladies' Style Book Free.

Beautiful styles, perfect fit and superior goods at bargain prices are the characteristics of the National Cloak and Suit Co., 280 West 24th street, New York City. See page 3 and send in the coupon.

You can take the rent money you are paying for corn land in the northern corn belt, make the first payment on a rich bottom land farm in Arkansas or Louisiana and the crops will take care of the other payments.

The big plantations are being cut up—they want good northern farmers down there—men who know how to grow corn. To such men they offer the very finest kind of corn land, at anywhere from $25 to $50 an acre. In the northern corn belt such land would be worth $150 to $200, but down there you can get all you want of it on the easiest possible terms—and it will grow two big money crops every year.

Potatoes, Corn, Cowpeas and Oats—4 Crops in 1 Year

Mr. J. T. Compton, who lives on a fine farm near Alexandria, Louisiana believes in diversified farming. He keeps every acre of his big farm working all the time. On one field he planted Irish potatoes in February and got 125 bushels to the acre. In June he planted corn, with cowpeas in between the rows, for hogs and fertilizer. He picked 40 bushels of corn to the acre and then, on October 15, he planted oats—the fourth crop on the same land. He also had one field of sugar cane that yielded 30 tons to the acre worth $3.25 to $4 a ton and one field of cotton that yielded a bale to the acre.

Such returns are not unusual, for the land is so rich, the growing season so long and the rainfall so certain that *these farmers have never had a failure from drought.*

Not only do these corn growers get big yields, but they get big prices, too. The big export market of New Orleans is near at hand, and Louisiana corn brings about 10¢ a bushel more than northern corn because it contains less moisture and is ready for export as soon as it is harvested.

Prof. H. M. Cottrell, an expert of national reputation, formerly Professor at the Kansas and Colorado agricultural colleges, and now Agricultural Commissioner of the Rock Island Lines, has made a very careful inspection of many of these corn lands. It is Prof. Cottrell's expert opinion that no where in America is there a better opportunity open for corn growers to make money than there is in these Arkansas and Louisiana corn lands.

Better look into this proposition at once. If you are renting, your rent money will quickly pay for a better farm in Arkansas or Louisiana; if you want a place for the boys you can buy them one of these rich river bottom farms, as good or better than yours, for one sixth the cost.

You will find this southland a delightful and exceedingly healthful place to live. The people are good neighbors. Rural Free Delivery, Telegraph, Telephones are everywhere; good markets are accessible and are shipping in farm produce because the local supply is not equal to the demand.

You owe it to yourself to investigate this at once. If you are interested, drop me a line saying how many acres you would want; whether you own a farm at present, and how many acres. You will be given careful, personal, individual attention, and the best unprejudiced advice as to where and how to get one of these splendid corn land farms at a price much below its actual worth.

Book on Scientific Corn Raising, FREE.

Rock Island

Prof. Cottrell's book, "How to Double the Yield of Corn," is the result of years of experience, experiment and study. It is worth dollars to any farmer who will read it and follow the advice it gives. You may have a copy free, if you will write me today. I will also send you a book written by Prof. Cottrell, telling more about these wonderful corn lands.

The statements herein made have been fully investigated and can be absolutely relied upon.

DAIRY AND CREAMERY.

At a Minnesota butter scoring under supervision of the State Dairymen's Association the highest quality butter from whole-milk cream was scored 96, exhibited by A. L. Radke, of Plato, and the highest scoring butter made from gathered cream was 95¼, the butter being exhibited by Chris. Jenson, of Dunnell.

On March 26th an auction sale of Holstein cattle will be held, it being the Third Annual Sale by Brookdale Stock Farm, I. J. Case, Proprietor, at Alta, Peoria county, Ill.

At North Benton, Ohio, on March 28th, Sam Werren will hold his Second Annual Sale of 100 head of Holstein-Friesians.

At the meeting of the Indiana Dairymen's Association at Lafayette, in January, the highest score in the dairy butter class was 93, an exhibit of Mrs. May Rhyan, of West Lafayette, and the highest score for creamery butter was 95, awarded to John Grosser, of Clinton Falls, Minn. Hugo O. Perner, of Bargersville, had the highest Indiana butter score, which was 94.

At the Illinois State Dairy Meeting held at Effingham in January, the highest score, 95, was received by Ed Alderman, of Capron; 94.83 by P. J. Peterson, Round Lake; and 94.66 by Van Camp at Effingham. Nineteen entries out of forty averaged 90 or better.

The pure-bred Holstein cow, Carlotta Abbekerk, 52,826, owned by the Kansas Agricultural College, has just completed a yearly official record, making 15,773 pounds of milk and 515 pounds of butter-fat, equivalent to 606 pounds of butter.

New York City received 2,404,643 packages of butter in 1911, which is 137,783 packages more than were received the previous year.

Any farmer who is not selling cream is now losing one of his greatest opportunities. Butter-fat is a great revenue producer under present circumstances.

At Elgin, on February 12th, the Butter Board of Trade voted to increase the territory covered by the organization. It was decided to include six states—Indiana, Michigan, Iowa, Minnesota, Wisconsin and Illinois. The action was taken by a vote of twenty-six favoring the proposition and nine against it.

At a recent competition by Wisconsin buttermakers the quality was the best ever scored. Out of 155 entries only four fell below 90, and twenty-nine of them scored 95 or higher. The average was 93, and the first-prize score was 97.50, by I. W. Stryker, of Nashotah.

The 155 entries of butter exhibited by the Wisconsin Buttermakers' Association at Green Bay were sold at auction at 40⅞ cents per pound to H. C. Hansen, of P. F. Braun & Co., of Philadelphia, Pa.

A train-load of cheese left Plymouth, Wis., on January 17, 1912, which is believed to break all records for size of a single day's shipment. According to the Milwaukee Free Press, there were sixteen full car-loads of cheese, containing about 480,000 pounds and valued at $64,000. The shipment followed a weather blockade, but was a remarkable shipment for all that.

St. Louis Milk Situation.

Speaking of the St. Louis milk situation Dr. Wm. Cutler, Commissioner, said in his quarterly report:

"It is a noticeable fact that some of the large distributing companies in St. Louis showed a disposition to co-operate with the Department in the matter of inspection, and where the supply was from Missouri, insisted that the milk producers comply with the orders of the Department. Much of the good work in cleaning up is due to this co-operation. In a few instances, at the order of the Department, pasteurizers were installed."

This statement as quoted accounts for the distributors of over 80 per cent. of the St. Louis milk supply supporting the pure-food laws.

Missouri gained considerable in sheep in the past ten years, but now the number is decreasing again.

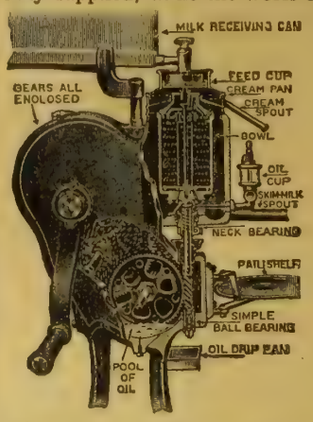
The demand for milk and cream is increasing very fast.

Our Competitors Recognize the Superiority of the INTERLOCKING

United States Cream Separator

by their recent attempted imitation of its long used oiling system.

The automatic lubricating system of the Interlocking U. S. Cream Separator represents the **most advanced ideas** in separator lubrication. Its gears and spindle bearings are **constantly bathed** in a **spray of fresh, clean oil,** automatically supplied; while the **worn out, dirty oil in turn is drained off** through the overflow tube. There is no danger of the bearings running dry. There is no necessity of using the dirty oil over and over after its lubricating qualities are all used up. **All the possible oil value is automatically secured in the most thorough yet economical manner.**



This extraordinary oiling system which is superior to all others—plus **strong accurately made gears** of the very best material and design—**explains why the U. S. Interlocking Cream Separator runs easier and has longer wearing qualities** than any other cream separator made.

If these are the qualities **you would like to have in your cream separator** ask us to give you a free, practical demonstration so that you can see for yourself that our claims are fulfilled in every particular.

To investigate is to be convinced.

Phelps' Big Show-Room Buggy Book for 1912 Is Now Ready

It's the best one I have ever gotten out. It has more styles to select from, both in vehicles and harness. Why try to select a buggy from two or three shop-worn, dust-covered samples, when I will send right to your home a book that shows in big, actual photographs more vehicles than you can find in 25 stores. Local dealers carry only a few styles to select from. I make 125 styles of automobile seat buggies, surreys, phaetons, road carts, etc., and a full line of harness. All made-to-order to suit your taste.

H. C. Phelps, Pres.

Save Big Money on Split Hickory Vehicles Direct From the Factory

All explained fully and illustrated with big photographs in my big new book. It is only a question of good sound judgment to send for this free book no matter where you buy. It will cost you only one penny but it will cost me many pennies to send it to you, but I will take the chance if you are willing, because it is my only salesman and I am sure that I can not only give you a better buggy, but save you a lot of money. Will you write for the book? You are invited to do so. I will pay the postage.

Ventiplex PADS

The Dairy Calf and the Dairy Cow.

A good many calves are saved for the purpose of developing them into dairy cows, but out of the multitude of dairy calves come but few good dairy cows. Many of the calves die before reaching maturity. Of the rest many are partly spoiled by bad methods of feeding and do not develop the possibilities tied up within them.

Naturally, most of the calves are brought up by hand, as milk and cream are too valuable to be fed to growing calves. This is especially true, as the skim milk with a little oil meal easily takes the place of whole milk.

Bad feeding brings on the "scours," which is probably the greatest cause of mortality among young calves. But scours are not necessary and can easily be avoided. In the feeding of young calves the milk should not be fed cold and should be given in small quantities. This will mean more care and the giving of a feed more times a day, perhaps, but the extra work will more than pay for itself in the health of the calves. The aggregate amount of milk given in a day is usually too great, and even if the calves are fed twice a day, the aggregate amount of milk should be kept down to what a calf will fully digest. The mistake comes in giving a calf all she wants to drink. This also results in the pot bellies we see on many calves and cows.

A dairy calf should not be fed in the same way as the calf intended for beef-making purposes. The constant feeding of food rich in starch tends to give the animal the qualities of the beef cow. Therefore a well-balanced ration should be fed rather than a ration overbalanced on the part of starch.

The growing calf can be fed some kinds of grain that would not be profitably fed to a mature cow. A calf under one year of age will digest grains that pass through a mature cow undigested. This is because the mature cow has four stomachs that she uses. One of these is for the first reception of the food, and nature bases it on the rough grass that a cow finds in her pasture. Corn and other grains, not being of so coarse a nature, do not incorporate with this for digestion. But the young calf does not use four stomachs and her digestive system is working on the basis of concentrated foods, such as milk and grains.

As the calf matures into a heifer she should be gently treated and frequently handled with the idea of teaching her to be milked. A heifer so accustomed to being handled will make no objection to the milking process when it has to be really begun.

Gentleness in dairy cows is a desirable quality, and it cannot be obtained without gentle treatment by the persons having the handling of the dairy cow from the time it is born to the time of motherhood. Every dairy cow should be brought up a pet and made to feel that she is loved by those having the care of her. This will make her a faithful and gentle creature.

With a score of 97½, J. J. Bruner, of Strawberry Point, won the sweepstakes prize in the whole-milk class at the butter contest of the Iowa Buttermakers' Association, and T. E. Sadler, of Oelwein, was a fine and close second with a score of 97. In the gathered-cream class, W. J. Chapin, of Woodbine, was first with a score of 96 points, and Henry Hanson, of Cylinder, was second with a score of 94½.

Butter or Oleo.

Dr. Cutler, Pure Food Inspector for the state of Missouri, endorses the following methods for finding out whether you are buying butter or oleomargarine:

Method 1. Put it in a dish over a fire. Butter will foam; oleo will crackle, sputter and give an unpleasant, greasy odor.

Method 2. Put a little of it in a glass of cold, sweet milk and stir with a paddle. Butter will divide and spread itself over the milk's surface; oleo will stick in a lump to the paddle.

Effect of Close Inspection.

The Missouri Pure Food Commissioner states that in consequence of his campaign in and around St. Louis in the interest of pure milk the conditions were improved at least 50 per cent. That is to say, improvements and sanitary methods of dairying have made better the milk supply by at least that much. Since the first inspection, separate milk houses have been built in many instances; approaches cleaned; better, cleaner feeding is now practiced; the milkers are more cleanly when milking; cobwebs have been swept away, and the barns whitewashed. In several instances sanitary pails are new used. One large supply house informs the writer that he had sold in two weeks in St. Louis more Gurler Sanitary Pails than he had sold in many years previously. Most of the remarks of the Commissioner relate to dairies in and close to St. Louis.

DE LAVAL CREAM SEPARATOR

NEW AUTOMATIC OILING

The most important Cream Separator improvement since the introduction of the present type of De Laval machines.

The new automatically oiled De Laval Cream Separators are now being supplied in all sizes, and this improvement constitutes another great step forward in cream separator construction—the one thing possible in betterment of the previous De Laval machines of the present type.

The new system of De Laval automatic oiling is distinctively different from any other splash or spray system in that there is a constant regulated feed of fresh oil and discharge of used oil. Other splash systems use the same oil over and over, until it soon does more harm than good.

In the new automatically oiled De Laval machines all gears, shafts and bearings practically float in a mist-like spray of oil and literally never touch each other during their operation.

De Laval agents will be glad to exhibit the new machines and demonstrate the working of the new automatic oiling system, which more than ever enhances De Laval superiority in every feature of cream separator practicability.

THE DE LAVAL SEPARATOR CO.

Enumeration of Farm Animals.

The United States Department of Agriculture estimate of the number of domestic animals on farms and ranches of the United States is 20,699,000 milch cows and 37,260,000 other cattle; 65,410,000 hogs; 52,362,000 sheep; 20,508,000 horses and 4,362,000 mules. Since the census enumeration was made cattle are estimated to have decreased about 4,000,000 head, hogs to have increased 7,225,000 head; sheep, no change; milch cows, no change; an increase of 672,000 horses, and mules at a standstill. It is a year and a half since the census enumeration.

A Holstein cow in the state of Washington, Gerben Queen by name, has just made a seven-day record of 654.6 pounds of milk, containing 29.1 pounds of butter-fat; and in thirty days her record was 3,192 pounds of milk, containing 107.04 pounds of butter-fat.

"EVERYBODY"

Can Afford a Gasoline Engine With Galloway's New Low Prices

1½ HP $27.50

Other Prices in Proportion

You've never before heard of such startling values—I've never offered anything like them and you know full well that no one else has ever come anywhere near my regular prices. But this time I've a startling reason—*I want 10 men in every township in the county to own and operate a Galloway Engine*—I've decided to double my factory capacity by increasing the sales twice and sell two where I formerly sold one—this calls for unusual values—hence, the greatest offer I have ever made. I can save you from $25 to $300 on an engine according to the H. P. needed. It doesn't matter what sized engine you want I've got the one to fit your wants and do more work and better work at less actual cost than any other engine in the world. Write at once for full information of the Greatest Offer Ever Made To American Farmers—don't delay but send me your name and address now, before you do another thing. Let me prove to you in cold facts why I can put $25 to $300 in your pocket.

ELDER'S SANITARIUM, Dept. 519, St. Joseph, Mo.

The Market For Oats.

The oats market is not excited. Cash oats at St. Louis, on February 29th, at 53 cents a bushel, is 23 cents better than a year ago. There are not too many oats available and values are practically in line with the statistical situation. Farmers who are inclined to raise oats need not fear raising too many.

The two options in front of us are May and July. The coming crop has no influence on the May option, but it has upon the July quotation. On Januray 29th the Chicago May option for oats closed at 51⅞ cents, and on February 29th the same option closed at 52¾ cents. It will be seen from this that until the May option is closed and delivered no decline is expected. The July option is different. The trade expects a good, big crop, and the Chicago July oats option was quoted February 29th at 48½ cents a bushel. When we consider that the last July option was closed out at 38½ cents a bushel the anticipated 48½ cents a bushel for July to come does not look so bad.

Wholesale Flour Quotations.

St. Louis, Mo., February 29th, 1912: Patents at $4.40 to $4.75 in wood; straight at $3.80 to $3.90 in jute; extra fancy at $3.50 to $3.60 in jute; fancy at $3.25 to $3.35 in jute; low grades at $2.85 to $3.00 in jute. Hard winter in jute—Patents, $4.50 to $4.70; straights at $4.30 to $4.40; clear and first bakers at $3.25 to $3.60; low grades and second bakers at $2.80 to $3.00; spring patents at $4.50 to $5.00 in jute. Foregoing prices for lots from first hands on track or at depot; special brands on orders more.

Chicago Cash Grain Sales.

Chicago, February 29th: Wheat—No. 2 red, $1.01½ to $1.02½; No. 3 red, 97½ cents to $1.01½; No. 2 hard, $1.02½ to $1.05; No. 3 hard, $1.00½ to $1.02; No. 1 Northern, $1.10 to $1.13; No. 2 Northern, $1.02 to $1.10; No. 2 spring, $1.00 to $1.08; No. 3 spring, 99 cents to $1.07; No. 4 spring, 90 cents to $1.03; velvet chaff, 90 cents to $1.06; durum, 90 cents to $1.07. Corn—No. 3, 64¾ to 65 cents; No. 3 white, 63½ to 65 cents; No. 3 yellow, 63½ to 65c.; No. 4, 60½ to 62 cents; No. 4 white, 61½ to 62½ cents; No. 4 yellow, 61¾ to 63 cents. Oats—No. 2 white, 52¼ to 52¾ cents; No. 3 white, 52 to 53 cents; No. 4, 48½ cents; No. 4 white, 47 to 52 cents; standard, 52¾ to 53½ cents.

Native Cattle at Chicago.

At Chicago, late in February, native steers of the various classes were selling at $6.00 to $8.85 per 100 pounds; steers, 1,000 to 1,100 pounds, at $5.70 to $7.05 per 100 pounds; 1,200 to 1,290-pound steers at $6.75 to $7.80 per 100 pounds; and 1,300 to 1,500-pound steers, plain to choice, at $7.35 to $8.85 per 100 pounds. On February 29th the steers bringing the top price weighed 1,595 pounds.

Top of the Hog Market.

Hog sales at St. Louis, February 29th, included for D. B. Mayfield, Cooper county, Missouri, 249-pound hogs at $6.60; Richard Cook, of Audrain county, Missouri, 214-pound hogs at $6.60; and N. J. Merriott, from Fulton county, Illinois, marketed 259-pound hogs at $6.60 per 100 pounds, which was the top of the market.

what fertilizers?

"Empire" fertilizers offer the best answer, because they are so made, of available materials, as to supply growing crops, of whatever kind, **all** the plant food they require for perfect maturity.

"Empire" Fertilizers

have been standard for 28 years—prepared by practical farmers and soil scientists who know. There is an "EMPIRE" Brand for every need of every soil and every crop.

Write today for booklet giving complete facts about fertilizers, their use, results, cost, etc.—suggesting ways to make MORE money from LESS land. You'll say "The most valuable book I ever read."

EMPIRE CARBON WORKS
421 Locust St., St. Louis.

AGENTS WANTED in unoccupied territory. Many farmers as well as dealers make money selling "EMPIRE" fertilizers. Write for particulars and terms.

PEERLESS

GALVANIZING OR PAINT WHICH?

Think of the years galvanizing has added to the life of fence wire. Galvanized Peerless Gates will give the same additional service—carry a heavy rust-proof coat. Big, massive frames of high carbon steel tubing; filled with close spaced Peerless Fencing of all No. 9 wire. Fitted with a handy double latch—a barb wire top for safety.

SELF-RAISING GATES lift themselves—no dragging or lugging—raise and swing over snow, grass or rubbish. Save time, temper and trouble. The "hurry-up" gates—always on the job—always work. If there is no Peerless dealer in your town, write direct.

PEERLESS WIRE FENCE CO., 242 Michigan St., Adrian, Mich.

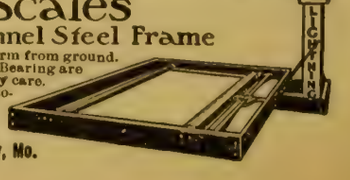
Lightning Pitless Scales

New Pattern. Solid Channel Steel Frame

Channels are seven inches which is the height of platform from ground. Levers are octagon in shape giving greater strength. Bearing are Toolsteel. This scale will last a life time with ordinary care. Equipped with compound Beam Free. Furnished absolutely complete except platform planks. Guaranteed accurate and tested to more than its capacity. Write for our prices and description before buying.



KANSAS CITY HAY PRESS CO., 425 Mill St., Kansas City, Mo.

Availability of Fertilizers.

If nature did not hold back some of the plant food in the soil it would soon be exhausted, simply because constant cropping would exhaust it. And we would crop it constantly just so long as there remained any available plant food to be turned into crops.

The soil may be regarded as a mass of matter containing more or less plant food, of which some is available to-day and some available later and some available still later on. One will be surprised to learn how small a percentage of plant food the earth contains; one will also be surprised to learn how long that small percentage will be made to last by reason of the wise provision which prevents rapid exhaustion. The soil contains 70 to 84 per cent. of insoluble earth which is only the holder of the more valuable plant food, just the same as water is 80 per cent. of the liquids, solids and fat that make up the total of milk. The valuable plant-forming elements of the earth are expressed in figures not amounting in each case to one per cent. of the total mass.

Average soils, however, do contain amounts of fertilizing material far in excess of what can be removed in many years of cropping, for the simple reason that nature has locked those materials up and they are so slowly available as to almost appear to represent yearly interest on the store in bank. In other words, nature provides for posterity as well as for the living, and the present wasteful generation cannot completely exhaust the soil.

But mineral fertilizer materials are found in bulk deposits which can be added to the soil under certain conditions and which can be made readily available for plant foods. These are called commercial fertilizers. There is no question concerning the availability of potash as sold on the market; neither is there any question of availability of nitrogen derived from nitrate of soda, cotton-seed meal, blood, etc. But there are two kinds of phosphoric acid now sold upon the market, one of which is available as plant food and one that is not. The acid phosphate as sold under that name is the rock phosphate treated with strong acids in order to release it quickly as plant food in the soil. This process is a violent one and it is actually forcing nature. The other form is the natural raw rock, containing phosphoric acid simply ground to various degrees of fineness; but most scientists contend that this raw rock is not available as plant food. It represents a first-class example of nature locking up valuable constituents which can only be quickly released by the forcing process.

Soils have in the main been derived from the solid rock of the earth's crust. We are told by scientists that it has taken hundreds of thousands of years of heat and cold, chemical action of air and water and the action of animal and vegetable life, including the action of micro-organisms, to turn rocks into soil, of which only a small fraction of the fertilizing content as soil is now available, and it is clearly proven that raw rock, ground or unground, although it does contain phosphorus, does not contain any plant food that is available. It is rock and nothing but rock, and the plant food can only be made immediately available by breaking it down by chemical process, which, to say the least, is expensive, and it is to avoid this expense that the rock phosphate in its raw state is sold to the farmer.

If the raw rock was available as plant food, fertilizer manufacturers would use it in their combinations and complete fertilizers to the exclusion of the acidulated rock; but they do not and cannot use it in that manner and sell their goods under the laws of different states. Neither could such combinations produce the results that would hold their trade. But the raw rock phosphate ground to various degrees of fineness is put on the market as a fertilizer and compared with fertilizers and credited with some extraordinary powers as a fertilizer. A trade has been built up on the sale of the raw ground phosphate rock upon the assertion that it does become available by certain processes of disintegration supposedly brought about by mixing it with manures, etc., and claims are advanced for it that in its unavailable form it produces greater results than if it were actually available.

It is put on the market as a fertilizer, but it is put up to the farmer that it is his business to take this crude (ground) rock and then take upon himself the matter of changing it from its natural form into that of a true fertilizer. The rock is ground, but that does not change its character. The rock may be changed in time into a fertilizer, but there is no decisive evidence to prove that with any farm process of mixing it with barn-yard manure or in acid soil that it will or does become plant food within a reasonable number of years. What has the farmer on his farm or in the soil strong enough to do what nature refused to do since the creation of the world?

Notwithstanding the rock phosphate has no immediate value as a fertilizer, its commercial agents are delivering to farmers a comparative statement, supposedly issued by the Illinois College of Agriculture, valuing acid phosphate and raw rock phosphate on the same par value, which is equal to asserting to the farmers of Illinois that ground rock known to be unavailable for plant food is worth just as much as the treated rock which has been brought into availability by the chemical process. The same statement claims that a ton of raw rock phosphate is worth 12½ tons of barn-yard manure. In consequence of these representations farmers are buying raw rock phosphate, believing that it will change its nature in a year or two, whereas it may be a hundred years before the rock phosphate is rendered available. In our opinion, the farmer who would trade a ton of barn-yard manure for a ton of raw rock phosphate would lose by the exchange, and the statement that the phosphoric acid in a ton of raw rock phosphate is worth $30.00 to a farmer should be surely divided by ten.

Look Out DA...

Read These Four Letters

I'll Stop Your Worm Losses I'll Prove It Before You Pay

Don't let worms breed **contagious diseases** among your hogs this year. Don't let them kill off the young pigs and rob you of your season's profits. You can **prevent it** if you will just take "a stitch in time." **Now** is the time when worms begin to get in their **deadly** work. **Now** they are breeding, multiplying by the millions in the stomach and intestines, and if you don't get the best of them, they will surely get the best of you. Let me show you how. I'll get rid of stomach and free intestinal worms in your hogs, sheep, horses and cattle and prove it to your satisfaction (not mine) before you pay me a cent. I'll do it with

TRADE MARK

SAL-VET

REG. U.S. PAT. OFF.

The Great Worm Destroyer and Conditioner

I've done it for thousands and in addition they write me they never had stock thrive better, look better and bring them such profitable returns. Here is my offer to you.

Send No Money—Just the Coupon

Simply fill in the coupon, tell me how many head of hogs, sheep, horses and cattle you have. I will then ship you enough Sal-Vet to last them 60 days. You pay the small freight charge when it arrives—put it where all your stock can get free access to it—**and they will doctor themselves.** They eat it as they do salt—just as they need it, and at the end of the 60 days if you don't feel **satisfied,** write me and I'll cancel the charge. I take your word as final—I let you act as judge of its merit—I put everything up to you. How can you risk loss—how can you let your stock drag along when they should be thriving, growing into profit when such a fair, open offer like this is put at your disposal? You have all to gain—nothing to risk. Fill out and mail the coupon **now.** Don't put it off—lest you forget. Read the letters above.

Sidney R. Feil, Pres.—*The S. R. FEIL CO.*—Dept. NF8G, Cleveland, Ohio

Prices: 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00; 500 lbs., $21.12

Sal-Vet always comes in original "Trade-Marked" Packages. Never sold loose in bulk or by the pound. Look for the "Sal-Vet" trade-mark—it is your protection against imitations and substitutes

(37)

I have been in the hog business for 30 years and have tried every known remedy for hogs, but have never found anything equal to your Sal-Vet. It certainly does the work and is easy to feed. I feed it to little pigs, boars, pregnant sows and find it O. K. I will never be without Sal-Vet.

C. F. MARSHALL & SON,
Per G. F. M. Monroe, Ia.

"I had a lot of sick hogs and I lost five of them. I began feeding them Sal-Vet, my losses stopped and the hogs soon got into a fine, healthy condition.

V. P. UNDERWOOD,
R. D. No. 1, Roachdale, Ind.

While I cannot say positively Sal-Vet kept my hogs from having Cholera, I had no such sickness while my neighbors almost without exception lost hogs from Cholera. I certainly have great faith in Sal-Vet and it is all and more than you claim for it.

J. C. CONOVER,
Chrisman, Ill.

I used your Sal-Vet regularly while feeding a bunch of fattening hogs and can say it is just the article. It made my hogs double their weight in 50 days. It is a great conditioner and worm destroyer.

E. E. SHULL,
LaCynge, Kansas.

We have hundreds more like these

Sidney R. Feil, President, The S. R. FEIL CO., Cleveland, Ohio

Ship me enough SAL-VET to last my stock 60 days. I will report results in 60 days and will then pay for it if it does what you claim. If it does not, you are to cancel the charge.

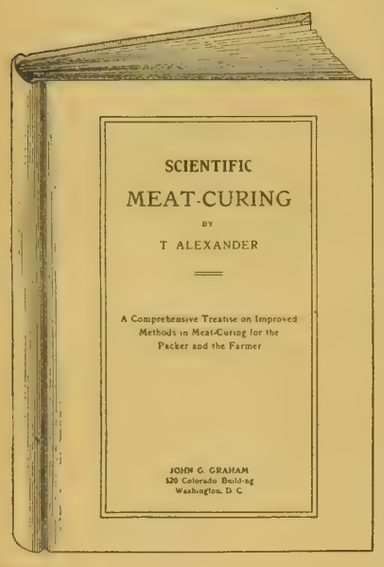
SCIENTIFIC MEAT CURING.

A Booklet For All Farmers, Stockmen, Butchers and Packers.

There is a book on meat curing. It is descriptive of the methods used by the most expert of all the butchers and packers. It is actually a text book for the curing of all meat products.

We have adopted the booklet "Scientific Meat Curing" as a subscription premium to be furnished subscribers to The National Farmer and Stock Grower. Send us sixty (60) cents by money order and we will send you The National Farmer and Stock Grower for one year and you can select one copy "Scientific Meat Curing" as a premium, to be sent postpaid, safe delivery guaranteed. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



American Apples in Norway.

United States Consul P. M. Emerson Taylor at Stavanger, a seaport in Norway, reports the following to the United States Department of Commerce and Labor:

"Approximately one-half of the apples imported into Norway are American. The exact amount imported is not ascertainable, owing to the large quantities transshipped from Germany and England and not in all cases credited to the United States.

"Statistics show that in 1910 there were imported into Norway 3,279,056 pounds of apples and pears, mostly apples, pear imports being small. From Great Britain there came 1,425,732 pounds, valued at $104,215; from the United States direct, 1,099,538 pounds, valued at $80.373; from Germany, 676,236 pounds, valued at $49,417; from Denmark, 41,206 pounds; from Australia, 14,102 pounds; and from Canada, 5,610 pounds.

"The total amount of apples and pears, mostly apples, imported into this consular district in 1910 was 264,220 pounds. Apple imports are restricted, owing to the cheapness and general use of oranges, which during most of the winter season sell for 6½ to 16 cents per kilo (2.2 pounds). This makes the grade of oranges most used cost less than one cent each. The imports of oranges into this district in 1910 were 1,309,286 pounds, and into Norway 13,791,008 pounds.

Most of the American apples coming to Stavanger are purchased by local importers in Hull and Liverpool, through agents who generally buy the apples at auction and supply the Stavanger firms as the demand requires, most of the Stavanger orders being sent by telegram, the apples reaching here in two days. The price paid wholesale to the English firms for the American apples is 20s. to 25s. ($4.86 to $6.07) per barrel of sixty kilos (134¼ pounds). The duty is 0.12 crown ($0.03) per kilo, or about $1.97 per barrel.

"American apples sell at retail in Stavanger at 11 to 16 cents per kilo, the choicest varieties selling later in the season at 21 to 29 cents per kilo. Importers all state they have lost money (some report losses of $100 to $400) on American apples this season because so many failed to keep. Notices are appearing (January 17) in the local papers offering American apples that are not choice and have begun to decay at 2½ cents per kilo.

The varieties of American apples sold in largest quantities on this market are the Baldwin, Kingston, Ben Davis and Russet."

Pear Tree Pruning.

In pruning the pear tree, at least for the first three years, we follow the same rule as we do for pruning the young apple tree. In this country I think it is advisable to have more or less of an open center. We give this shape to the tree by cutting back the leader, at the time of transplanting; this induces the side branches to grow. I believe that a tree should not have more than three to five scaffold limbs, and they should not grow from about the same place but should come out from different places along the stem from two to three or four inches apart. The first year's growth should be pruned back quite severely; ordinarily, we cut considerable of this growth back leaving about six to eight inches on the limb. Always cut to an outside bud. The following year's growth as a rule is very vigorous and ordinarily there are two or more limbs growing from each of the three or four scaffold limbs that have been started. The following season, at pruning time, we should remove all of the limbs with the exception of one on each of the scaffold limbs, and the one that remains should be again cut back half or more of its growth. Cut to an outside bud. This method of pruning tends to keep the center open and at the same time strengthens the main trunk of the tree and the base of the scaffold limbs. One should also make an effort to have the lowest of the scaffold limbs come out at the southwest side of the tree. The third pruning should be similar to the second; that is, thin out the branches on each of the scaffold limbs, leaving the leader, but cutting it back again. After this pruning, pears or apples should not be cut back any more. Simply thin out the interference and those limbs that may be coming out where they are not needed. From this time on we should encourage what we ordinarily call the feathering out of the limbs, or, in other words, the formation of fruit spurs. The more the tree is cut back the more we encourage a vigorous growth, and the more the vigorous growth is in young trees the less fruit spurs there will be.

Another reason why we recommend that pear trees should have three or four or even five scaffold limbs is, that in case of blight should start, we could have some recourse in the treatment of such trouble. As a rule, the blight begins at the top of the limbs on the succulent growth. If the disease should attack the tree on any one of the limbs, we could easily remove the branch without materially affecting the size or form of the tree.—Fabian Garcia, Horticulturist, New Mexico College of Agriculture.

Farmers who can attend the Cement Show at Kansas City, March 14 to 21, will find it to their advantage to do so. Information about concrete will be easily and satisfactorily obtained that way.

MANURE FORK
No. K504 Price $ 1.25

Go to the nearest Keen Kutter dealer and see some of these forks. You'll enjoy handling them—there's fine "heft" to them—they've got the right hang and balance—enabling you to heave a big load with ease and quickness. This can be truly said of every Keen Kutter tool. because they are adjusted perfectly. Note the quality and flexibility of the tines—how thorough the workmanship and finish.

KEEN KUTTER
Quality Tools

must stand the most rigid tests for quality, efficiency and durability before they can bear the famous trade mark. No matter what you want in tools, buy by that trade mark—it stands for dependability and thoroughness.

Edwards "REO" Steel Shingles
"Tightcote" Galvanized

LAST FOREVER because all four edges as well as the weather side and under side are galvanized by the famous Edwards "Tightcote" process. Each and every Edwards "REO" Interlocking Steel Shingle is dipped in molten zinc—*after the shingle is made.* Not a particle of the shingle but that is thus protected by the heavy coat of galvanizing. The lowest priced roof NOW and for years to come.

We Have a Special Cash Money-Making Proposition for One Man in Your Community

If any of your buildings need roofing, you are the man. Send dimensions of your buildings and we will quote you cost of an Edwards roof, *freight prepaid. You get your roof at agent's price. Write for the offer today!*

The shingles are made of high-grade Bessemer steel in sheets 6 to 12 feet long and 24 inches wide. Either painted or galvanized. Ready to put on. Hammer and nails all that is required. Anyone can do it. Can be applied over wood shingles or on sheathing 12 inches apart.

$10,000 Ironclad Bond Lightning Insurance
We agree to refund the amount paid in every case where a roof covered with Edwards Interlocking "Reo" Steel Shingles is destroyed by lightning. This guaranty is backed by our $10,000 Ironclad Bond and stands forever.

Injuries by Parasites.

Human beings, animals and plants are subject to attacks by parasites, and each species seems to have some particular parasite, which can live on no other species.

Parasites are injurious in two ways: They draw substance from the person, animal or plant on which they happen to be, and in many cases at least they transmit diseases. This latter is often the more serious phase of the attacks by parasites.

There is no doubt that several of the most dangerous of our poultry diseases are spread by the mites and lice that abound in some poultry yards and houses. At night time the insects pass freely from one fowl to another. If there is a fowl that has the roup or any other disease of a contagious nature, the germs of the disease are thus conveyed by the little marauders. It is therefore the part of wisdom for every poultry raiser to keep his poultry houses, yards and fowls free from the parasites. If they have already come into the flock, extraordinary measures should be taken to eradicate the pests. This will prove a means of checking any disease that may be in the neighborhood.

Sometimes, too, fowl parasites are on the birds in such numbers as to sap their vitality. The writer has known of sitting hens to be killed by the little red mites that infest the fowls by day and hide on the roosts and in straw at night.

Among hogs, the presence of hog lice is a detriment to thrift. They also spread hog cholera and its companion diseases from animal to animal. A great veterinary surgeon says that in the treatment of hog cholera cases he always insists on a war of extermination being waged on the lice, for in this way only can he make any progress against the disease. In fact, with the lice present there is a constant re-inoculation of animals being treated. This may not be serious after the animals have become immune to the disease, but before that time it is doubtless a serious obstacle in efforts to cure the sick animals.

Among cattle, the terrible cattle tick has kept cattle raising out of whole states in the South and has led to the yearly quarantine against Texas fever, which is a disease produced entirely by germs carried to the cattle in the bite of the ticks. The Bureau of Animal Industry has been making war on this tick for a great many years and hopes ultimately to rid the Southern States of this deadly pest. In this case, as in others, the real salvation is found in the eradication of the insects.

The physicians have found that the germs of the yellow fever are carried by a certain mosquito, and that extermination is the only way of preventing the disease. So the breeding places of the mosquito are covered with kerosene and the wet places are drained to remove the last refuge of the death-dealing insects.

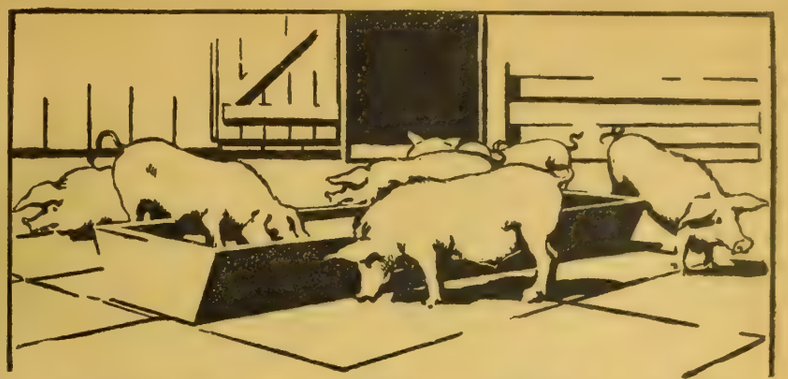
Everywhere the problem is, in principle, the same. The insects must be obliterated, and this can generally be brought about by the application of energetic measures. Sloth is the greatest ally of such pests.

More Phosphate Lands.

According to the United States Geological Survey, during the month of January, 1912, 214,749 acres of land in the state of Idaho believed to be underlain by phosphate rock were withdrawn on recommendation of the United States Geological Survey. This makes a total outstanding withdrawal in Idaho of 1,167,137 acres of phosphate land. In Wyoming 1,266,668 acres are now withdrawn as phosphate land, in Utah 107,745 acres, in Montana 33,950 acres, and in Florida 35,640 acres, a total of 2,617,140 acres. Partial detailed surveys of these areas made by survey geologists show a very large quantity of this important fertilizer, the value ranging up into the billions of dollars. The Director of the Survey, in his latest annual report, calls attention to the need of the enactment of a law that will permit development of this resource, which is coming more and more into use as an agricultural soil stimulant. The United States is believed to have the greatest phosphate deposits in the world.

A Milk-can Factory.

The Le Sieur Vacuum Milk Can Manufacturing Company has purchased a tract north of East St. Louis and will erect a large factory in the spring. Temporary arrangements will be made to manufacture the cans. St. V. Le Sieur, President, went to Chicago recently for this purpose.



ATLAS PORTLAND CEMENT

"THE STANDARD BY WHICH ALL OTHER MAKES ARE MEASURED"

You're wrong—one Portland Cement is not as good as another. If this were true why is the Government using ATLAS brand exclusively in building the Panama Canal? Or why was ATLAS brand selected for the great Mississippi dam now being constructed at Keokuk, Iowa?

All brands were tested, and ATLAS had the desired quality—a quality as necessary to the success of your concrete work around the farm as to the success of these great engineering enterprises.

When you buy Portland Cement, insist on ATLAS. This trademark, on every bag or barrel, is your guide in getting the best.

"Concrete Construction About the Home and on the Farm" A free book for the farmer

is a mine of practical information. It is not a catalog. It is a text-book. Send for the book today. It is free.

If your dealer cannot supply you with Atlas, write to

THE ATLAS PORTLAND CEMENT COMPANY, DEPT. 165, 30 BROAD ST., NEW YORK

Largest productive capacity of any cement company in the world. Over 50,000 barrels per day

Please mention National Farmer and Stock Grower.

The can is the invention of Le Sieur, and is made on the same principle as the thermos bottle. The company claims it will keep milk at the same temperature for twenty-four hours, enabling country dairymen to furnish milk to the cities even in the hot summer months without it being soured by heat. Theodore Soellinger, an East St. Louis City Councilman, is Vice-President of the company; and C. A. Summers, also a Councilman, Secretary and Treasurer.

Genuine greatness is marked by simplicity, unostentatiousness, self-forgetfulness, a hearty interest in others, a feeling of brotherhood with the human family."—Channing.

California cauliflowers are selling in St. Louis, wholesale, at $2.25 to $2.75 per crate.

Reo the Fifth—$1,055

The Car That Marks My Limit

By R. E. Olds, Designer

I have no quarrel with men who ask more for their cars—none with men who ask less. I have only to say that, after 25 years—after creating 24 models and building tens of thousands of cars—*here's the best I know.* I call it My Farewell Car.

I don't wish to surround this new car of mine with any intangible glamour.

Glamour is always expensive.

I am simply a shop man, engineer and designer. In my earliest memories I was puttering around my father's engine works.

On leaving school I began engine building. And the Olds Gas Engines—famous half the world over—gained their place by actual merit.

For 25 years I have built automobiles. I began with single-cylinder, six-horse-power machines. And I've run the whole gamut to six-cylinder sixties.

Tens of thousands of men, in those 25 years, have used cars of my designing. Just because they relied on me, year after year, to build the best of the current cars.

I recite this to show that I am essentially practical. I shall never attempt to create any illusions. So what I say here about Reo the Fifth will be simple, plain, every-day fact.

No Sensations

Reo the Fifth is no great innovation. The time has gone by for that

Thousands of good men, for two decades, have worked at perfecting cars. Together they have brought the modern automobile pretty close to perfection.

I believe that this new car embodies the best that all these men have accomplished. I searched the whole world for ideas for it.

It represents, in addition, the best I have learned through 25 years of continuous striving. So it comes, I believe, pretty close to finality.

The worth of a car, in these days, depends on no exclusive devices. It depends on facilities, on experience, on honesty of purpose, on the genius for taking pains.

Here I offer you all those—each in the extreme. And no motor car maker, whatever his price, knows how to offer more.

The Lessons Taught by Tests

My chief advantage lies here:

I was among the first to start learning the needs of automobiles. And I learned faster than others, because I had more cars out.

Experience is our greatest teacher. The inexperienced designer, however well-meaning, is bound to make countless mistakes. One learns only through errors the need for infinite pains.

One cannot anticipate every possible weakness. He must watch how cars, under some conditions, fall down. Then make the fault forever impossible.

In this way we learn to multiply margins of safety. We learn the need for exactness, for careful inspection, for laboratory tests. What once seemed sufficient becomes recklessness later.

Thus I have been learning for 25 years, through the myriads of cars I have built. And the flawless construction of this Reo the Fifth is due to that boundless experience.

Common Weaknesses

I might mention a thousand points which have thus been perfected, but I'll deal with the leading essentials.

The main source of weakness in motor cars is steel. It is due to ignorance, to carelessness or skimping.

By countless tests I have learned the best alloy for each purpose. And, to be sure that I get it, I analyze each lot of steel.

For the axles and drive shaft I use Nickel Steel. I use Vanadium Steel for connections.

For the gears I use the most perfect alloy ever worked out for this purpose.

To test these gears, which others test with a hammer, I have built a crushing machine of 50 tons' capacity. There I submit the gears to a crushing test, to measure exactly what each gear will stand.

The Nickel Steel axles are much larger than necessary. Every year I have built them stronger. Now my margin of safety in this vital part is considered extreme by most makers.

For the bearings on axles and on the transmission I use Timken Roller and Hyatt High Duty. Lesser bearings have led to trouble.

I have found that magnetos differ immensely. So I devised a test where, for ten hours a day, the magneto must act under tremendous compression. I have found only two makes which stand it.

Half the troubles with cars are due to a carburetor incapable of dealing with low-grade gasoline. So I adapted a carburetor to the commonest grades. And I doubly heat it—with hot air and hot water—to facilitate evaporation.

I add about one-fifth to the power of my engine by putting intake valves on top.

The long-stroke motor, the cylinders in pairs, the dust-proof transmission, the system of oiling, all simply accord with the best modern practice.

I carry inspection to the farthest extremes. Every part is inspected—every vital part tested. That is essential. Without it, flaws will creep in which only use can discover.

Good Measure

Another thing I have learned is that buyers enjoy good measure.

My wheel base is long, my wheels extra large, my tonneau is roomy. The car is over-tired. The springs are much stronger than necessary.

The design of the car, as each can see for himself, has the last touch of up-to-dateness.

The upholstering is deep, the filling is hair, the covering is genuine leather. I avoid all the petty economies.

The body finish consists of 17 coats. The lamps are enameled, as per the latest vogue. Even the engine is nickel trimmed.

The most perfect car will fail to satisfy buyers unless its appearance is perfect.

Exclusive Features

In addition to all this, Reo the Fifth has two or three features found in no other car.

One is the center cane-handle control. See the picture. All the gear shifting is done by moving this handle not more than three inches. It moves in four directions—for low speed, intermediate, high speed and reverse.

Another unique feature is the absence of brake levers. Both of the brakes operate by foot pedals. One of the pedals operates the clutch and the service brake as well.

So the front of the car is clear. The driver dismounts on either side as easily as you dismount from the tonneau.

This arrangement permits of the left side drive. The driver sits, as he should sit, close to the cars which he passes. He sits where he can look back in making a turn. He is on the up side of the road. This has only been possible heretofore in electrics.

These are features to which other cars must come. But you find them today only in Reo the Fifth.

Price—the Only Sensation

The only sensation in this Reo the Fifth is the price at which we shall sell it.

All the rest results from an earnest desire, in this my final achievement, to give the best that a car can give.

If I have done that—and I believe that I have—the price of $1,055 is both unique and sensational.

Most other features are found in some other cars. But no price like this—nor any price near it—can be found elsewhere in any car of this class.

Now I wish to explain the reason.

Paring Down Cost

For the past several years, my chief effort has been to cut down the cost of my cars.

I have felt that my place in the future depended as much on paring of cost as on skill in designing.

I have been helped in this by an enormous demand for my cars. Our multiplied output has cut overhead cost.

I have also been helped by the good-will these cars created. Each has helped to sell others. So selling cost is a fraction of what it was.

I have helped myself by inventing special machinery. The parts are now made by automatic machines, invented and built in our shops. Labor cost, on some parts, has been divided by fifty. And we get the utter exactness which hand work never gave.

Fixed Month by Month

We now make in this whole shop only one style of chassis. That saves in itself nearly $200 per car.

We have standardized the car, so that changes aren't necessary. Our tools and machinery last until we wear them out.

The whole car is now built in this one model factory, so we pay no profits to parts makers.

This year, in addition, we have cut a big slice from our profits. This new car, we figure, will more than double our output. And our profit hereafter will be a trifle per car.

Price Not Fixed

We have also adopted a changeable price. The price of today is based on today's price for materials—the lowest they have been in years. But our contracts with dealers provide for instant advance.

The price of $1,055 is the minimum. It can certainly never go lower. But, if cost advances, the price must be advanced. Price cannot be fixed for six months in advance without leaving big margin, and we haven't done that.

This initial price is the minimum. It is the lowest price, in my estimation, which an equal car ever will cost. But that is today's price only. I very much doubt if Reo the Fifth can long be sold that low.

My Supreme Effort

A hundred makers will argue that their higher-priced cars offer more than does Reo the Fifth.

I don't wish to dispute them. Judge that for yourself. It isn't hard to make actual comparisons.

Whatever the verdict, I can only say that this car marks my limit. I would not know where to add a single iota if paid a doubled price.

Better materials I know are impossible. Better workmanship is out of the question. Better features and devices, if they exist, are still unknown to me.

More power is possible, but not economical. More size, room and weight can be had, of course, if one thinks them worth the price. But more of care or skill or quality is totally out of the question.

This Farewell Car is my finest creation. If others do better, they are better men than I.

Ask for Catalog

This car with roadster body sells for $1,000. With close-coupled body or touring car body the price now is $1,055. Our catalog shows the various body designs.

It also gives complete specifications. It enables comparisons, part by part, with any other car.

The book is ready for mailing. Ask for it now, as this car at least is worth investigation. When we send the book we'll tell you where to see the car. Address

Poultry and Farm Paper Club.

Two first-class papers can be had for the price of one. **The National Farmer and Stock Grower** is one, and the **American Poultry Journal** is the other. There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is the **American Poultry Journal.** We have made arrangements whereby we can send **The National Farmer and Stock Grower** and the **American Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Hatching Out Chicks by Wholesale.

The Hastings Hatchery at Muskogee, Oklahoma, is fixed up to hatch out 30,000 chicks at one time. The intention is to hatch eggs for farmers and ship back the day-old chicks, the hatching to cost one cent an egg.

Mr. Milo Hastings, formerly an investigator of the United States Department of Agriculture, is at the head of the enterprise.

The principle of the hatchery, as stated, is the use of a fan to drive the heat and gas burners down and through the eggs, instead of allowing it to rise to the higher elevations, as hot air will always do if left to itself. The fan principle enables the placing of the eggs in the hatchery twenty layers deep, instead of one or two, as in the small incubators. Therefore, one man can attend to the hatching of the entire contents of the hatchery, as thermostats and other scientific attachments positively control the heat in the incubator to 100½ degrees, which is the exact heat for hatching eggs. In case a stronger or lesser flow of gas in the heater is required, the thermostat controls it automatically.

Mr. Hastings built his hatchery in Muskogee because it is the one state where the great grain and chicken belt crosses a field of natural gas; that is, the logical point for the development of a great chicken industry.

Visitors are welcome at the hatchery, which is about the size of a large room. They can even enter and watch the chicks hatch from the eggs, because double and insulated walls and doors insure perfect protection from cold and draughts.

New Way to Fill Turkeys.

The New York Produce Review and American Creamery says: "Jacob Ginsberger, a butcher of 1594 Third avenue, New York City, was sentenced to three months in the penitentiary for inserting one to two pounds of lead in each of his Thanksgiving turkeys. Ginsberger's customers complained to the Bureau of Weights and Measures and Inspector Albert Lutz bought a turkey and with a small axe cut it open before the butcher, exposing a two-pound sinker. Investigation showed that nearly every turkey in the place was freighted.

The city of Cleveland, Ohio, has decided to go into the poultry business and 2,000 chickens will be purchased and a poultry plant established at the state farm at Warrensville with a view of at least raising enough poultry and eggs for the city institutions. At 30 cents per dozen the city now spends $72 a day for eggs. And when all salaries and expenses are paid very likely the eggs will cost the city of Cleveland a dollar a dozen.

Live Poultry Quotations.

Live poultry quotations on the St. Louis market towards the end of February (quote by the pound): Turkeys — Choice large dressing stock, 16c.; small and culls, 10 to 11c. Chickens — Springs, average run, at 13c.; springs, stags, 8c.; springs, broilers, 18c.; fowls, 11½c.; cocks, 7c.; capons, eight pounds and over, 17c.; do. six and seven pounds, 16c.; slips, 12c. Ducks, 14c. Geese, 8c. Guineas, young, per dozen, $4; old, per dozen, $2.

Blood Will Tell.

Charlie, aged eight, brought home a slinking yellow pup, bow-legged, drooping-tailed and shamefaced. He cared for it tenderly, fixed a dry goods box in the back yard for a kennel, and on every possible occasion exhibited the animal proudly. His sister, Ella, aged eighteen, asked [illegible] ctiously:

"Where did you get that dog?"

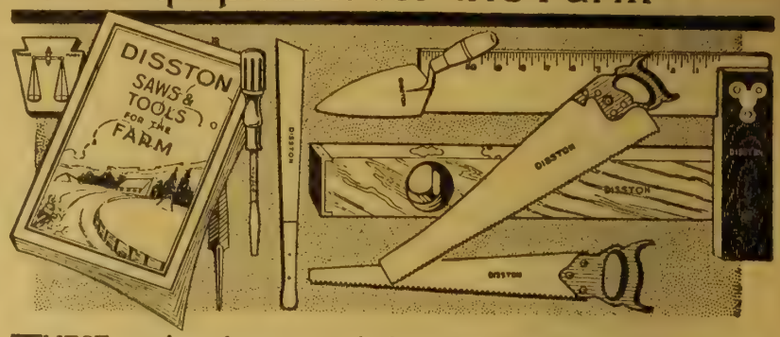
"I bought him from a man for 25 [illegible] with the pride of ownership.

"Ugh! The idea of paying 25 [illegible] that horrible beast!"

Charlie's eyes flashed indignantly. "He's not horrid. That shows how much you girl knows. The man told me he's a full-blooded cur."

[illegible] of Kansas had 3,000,157 [illegible] when the census was taken, and [illegible] increased now to 2,808,000 head.

This Free Book is the last word on Tool Equipment for the Farm



THESE are days of progress on the farm. The old rusty saw, hammer and hatchet days are long past. Is your tool house equipped right up to date as it should be? Before you decide "it's good enough," write for this free elaborate book on

DISSTON

SAWS TOOLS FILES

Especially Adapted to Farm Requirements.

You can do more for the welfare of your property at less expense by having the right tools and enough of them than you can by any other investment.

This book will give you many suggestions for adding tools that will save you money and even make you money.

It's worth getting for its information on the care of saws and tools alone.

Write for it today and study out how you can bring your tool equipment up to 100% efficiency. Any dealer can supply the Disston tools you need. Any dealer knows the unequalled quality of Disston Saws, Tools and Files.

But first write for this free book—the most practical tool book ever published for the farm.

PRATTS POULTRY REGULATOR

YOU Can't Go Wrong In Ordering a World's Championship Belle City Incubator and Brooder

Right From This Advertisement On 1, 2 or 3 Month's Home Test

MAYBE you want to get your machine quick—maybe you want to be ready for early hatches. If you do, you take no risk whatever over any risk you take when ordering from anywhere else. In ordering direct from this advertisement, you save time and trouble **and I guarantee everything to be satisfactory.**

Here is my proposition—for only **$7.55** I will ship to you, all freight prepaid East of the Rockies, my 140-Egg Double World's Championship Belle City Incubator—the machine that has won the World's Championship in over five thousand hatches. Read description—

My **140-Egg Belle City World's Championship Incubator** has simple, perfect self-regulator correct hot water heating system, copper tank, and boiler, safety lamp, double walls and double door, with dead air space all over, with roomy nursery and strong egg tray. Of course the thermometer is right; I use the "Tycos." I also supply egg-tester, burner, funnel, everything you need including valuable instruction book on operation, hatching and care of chicks.

The **Belle City Brooder** is as perfect as the Incubator—140-chick size—and my price is **$4.85.**

It's double-walled, hot water, top-heated, metal safty lamp and burner, wire runway yard with platform. Absolutely the most perfect chick raiser made today.

Combination Offer, Only $11.50 = Freight Prepaid East of Rockies

Ordered together, my **140-Egg Belle City Incubator** and **140-Chick Brooder,** will cost you only **$11.50** all freight prepaid East of the Rockies. This saves you 90c which will furnish all the oil you will need for this season hatches. I guarantee to ship orders received from this advertisement on the same day received either from my warehouse nearest you or Racine. This insures quick action—insures your getting started early.

Remember I guarantee to refund your money if you are not satisfied with your home test.

Read the letter below from the Commercial and Savings Bank of Racine as to your protection. Why not order now or let me send my portfolio, **"Hatching Facts"**—the most unique piece of poultry literature published—different from all the rest better than the best. This Portfolio sent with each machine ordered, or I will mail it to you **Free** for your name and address, on a postal card.

140-Chick Brooder **$4.85**

JIM ROHAN, President

We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Co-operative Creamery Routes.

In the New York Produce Review and American Creamery Mr. M. Sorenson, Creamery Manager of Minnesota, said:

"In the majority of our creameries the milk and cream are brought to the creameries by individual patrons and co-operative routes. I think the co-operative routes are preferable to almost anything or any system in use. For one thing, each and every patron gets a chance to get acquainted with the creamery management and feels as one of us. His interest is turned towards the creamery and he will have more confidence in the affairs conducted there. What I mean by co-operative routes is this: A number of farmers join together and exchange hauling their milk or cream to a creamery, taking their respective turns. We have found that we get the highest grade of cream this way also, besides it economizes along the lines of cutting down hauling expenses. Where a farmer milks about four cows it would almost be out of the way to ask him to come to town with his cream two to four times per week, whereas if he goes with a route he can come once every other week if the route is large enough."

Small Farms in Great Britain.

According to the investigations of United States Consul General John L. Griffiths of London, there is a decided increase in the number of small rural holdings, it being stated that at the close of 1911 there were 292,500 such holdings in England and Wales, as against 288,000 in 1910, and that in the last three years there has been a gain in number of 5,312, or nearly two per cent.

The economy of water transportation is shown by the Tariff Board investigations. It costs less per pound to transport wool from Australia to Boston than it does from the Rocky Mountain ranch shipping points to Boston. It was also shown by the investigators that it costs 31 cents per pound more on an average to produce one pound of scoured wool in the United States than in Australia, the greatest competitor of our country.

Parcels Post in South Africa.

The United States Consul at Johannesburg, South Africa, reports the rates of the parcels post in that country, saying that a parcel up to 11 pounds in weight will be carried to any part of the Union for 24 cents. The scale of postage is as follows: Up to 1¼ pounds, 6 cents; over 1¼ pounds and not more than 3 pounds, 12 cents; up to 6 pounds, 16 cents; up to 9 pounds, 20 cents; up to 11 pounds, 24 cents.

In a hatching contest Geo. W. Black, an Indiana poultry raiser, succeeded in raising two one hundred per cent. hatches. The contest was instituted by Successful Farming.

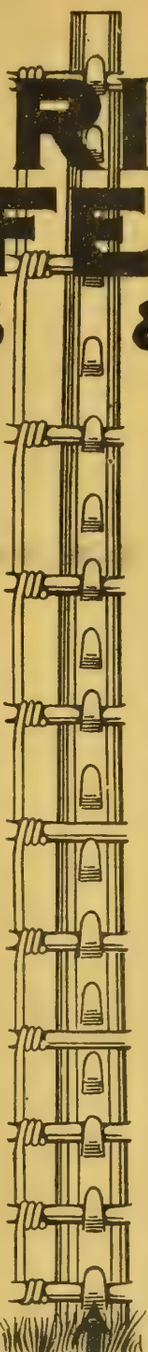
AMERICAN FENCE

ORIGINAL & GENUINE STEEL POSTS & GATES



THE pasture is the mother of the farm. The permanent pasture should be divided into fields by the use of woven wire fences.

Fields should be of such size that each one will be pastured off in from 8 to 10 days. The number of fields will depend on the growth of the grass. By dividing the pasture the grass is evenly cleaned up and an intense use is made of the whole pasture. To save time the pasture should be provided with gates, handy, easy to open and not too small. Pasture is the mother of the farm, and live stock must have freedom.

American Fence is made of large, stiff wires, galvanized heavily, having the American hinged joint (patented), a fabric most flexible and wear-resisting. A square mesh fence of weight, strength and durability—three great needs in farm fences.

We appeal to the scales as the judge between American and other fences. Its decision shows weight of metal; and as fence is sold by the rod, the buyer gets more for his money.

Dealers in Every Place

where farm supplies are sold. Shipped to them direct from mills in carload lots, thus saving freight charges and enabling dealers to sell at lowest prices, giving buyer the benefit.

F. Baackes, Vice Pres. & Gen. Sales Agt., AMERICAN STEEL & WIRE COMPANY, Chicago, 72 W. Adams St.; New York, 30 Church St.; Denver; U. S. Steel Products Co., San Francisco, Los Angeles, Portland, Seattle.

American Steel Fence Post Cheaper than Wood and More Durable. Get Catalog.

Send for copy of "American Fence News," also book "How to Make the Farm Pay," profusely illustrated, devoted to the interests of farmers and showing how fence may be employed to enhance the earning power of a farm. Furnished free on application.

Please mention National Farmer and Stock Grower.

3 MINUTES SHARPENS DULL AX

"It took just 3 minutes to put a very dull ax in perfect shape," writes J. A. Sudan, Newark, Del.—Another letter says: "My ten year old boy ground several chilled plowshares—he sharpens all the tools on the place," writes J. O. Smith, Woodville, Ky.

Over one-half million farmers know this to be true and sharpen their sickles, discs and all farm tools with the

Luther Farm Tool Grinder

It is a wonderful tool grinder—the only all steel frame grinder made—has shaft drive like an automobile—enclosed bearings—gravity lubrication. Has 30 different attachments for doing all kinds of difficult tool sharpening, also rip saw, jig saw, drill, milk tester attachment, lathe, forge, etc.

Fast Sharpening Wheels Save Time. Luther Tool Grinders have Dimo-Grit sharpening wheels. 25 times faster than the grindstone—10 times more efficient than emery. Will not draw temper.

FREE TRIAL ON YOUR FARM

Send for special offer which permits you to use this outfit on your farm 30 days free without advance payment; also 40 page book which tells everything and hundreds of letters from satisfied users.

H. T. BROWN & CO., Lexington, Ky.

BLOODED STOCK NOTES.

The Twenty-seventh Annual Meeting of the Dutch Belted Cattle Association of America will be held at the Hotel Imperial, Broadway and Thirty-second street, New York City, May 9, 1912, at 12 o'clock noon. At this meeting officers will be elected to succeed President, H. W. Lance; Vice-President, Wendel Andreas; Executive Committee, D. Lewis Downs, Mrs. Norvilla Dunham, Northrup Fowler, S. S. Rasey, F. E. Stevens; also the Secretary and Treasurer, G. G. Gibbs. Representatives of the Press and non-member breeders receiving this notice are invited to be present as guests of the association. The call is signed by G. G. Gibbs, Secretary, Marksboro, N. J.

A total of eighty-one head of pure-bred Shorthorn cattle were sold at Toronto, Canada, at public auction, in February, for an average of $244.50 per head. The sixty females averaged $265, including one at $1,300 and one at $1,535. The bull average for twenty-one head was $162, the best price being $450 for a 1911 calf.

The Cloverdale Farm of Lexington, Ky., has thirty-five Kentucky mammoth jacks, all registered or subject to registry. Among the jacks are five by the great Dr. McChord, 1,766; two by Greatland, 1,470; three by King Giant, 683; two by Clark, 1,891; four by Paymaster, 819. Two of the greatest jacks in their barns are Nathan, 3,138, and Gen. Boyle, 3,662, brother to the great Ben Franklin, who was one of the greatest show jacks ever raised in Kentucky. You should write H. T. Brown & Co. for their circular, or visit the Cloverdale Farm at Lexington, Kentucky.

Mr. J. H. Truman, in England, has purchased from the noted Sandringham Stud owned by His Majesty, King George, the celebrated Shire stallion, Golden Rock, II., and at the urgent request of a number of the leading breeders in the Whittlesea District, he will retain the horse there for their use and at the end of the season will be shipped to Bushnell for exhibition at the leading State Fairs. He is described as a horse of extreme size, standing on the best of feet and joints, 13½ inches of bone below the knee of the very finest quality; beautiful silky hair; oblique shoulders; strong back and loin with deep, well-sprung rib and extreme width; weighing in his three-year-old form a little over an English ton. At Trumans' Pioneer Stud Farm Bushnell, Ill., they can show right now 110 imported Shire, Percheron, Belgian and Hackney horses, and the 1912 catalogue can be had by writing for it.

Mr. J. Q Murphy, proprietor of the Meramec Dairy at Kirkwood, Mo., who has a fine herd of pure-bred Holstein cattle, has also two elegant young bulls of his own breeding for sale. His original stock came from Mr. Moore, of Cameron, breeder of Shadybrook Gerben, the World's Fair Demonstration Cow. Anyone who may wish to buy a bull to head a Holstein herd will find it worh while to write to Mr. Murphy.

Mr. J. P. White, of Butler, Mo., who is advertising Tamworth pigs of all ages, is located in Bates county, south of Kansas City, on the Missouri Pacific Railroad, with express facilities in any and all directions.

The Cook Farms at Lexington, Ky., sold recently six registered Kentucky mammoth jacks to Senor Joaquin C. Ballina, of the City of Mexico. Senor Ballina owns a ranch near there and the jacks are for his own use. They also sold to Cuban parties he saddle mare Daisy Rex, 5,763, a Shetland pony stallion and six pure-bred Berkshire hogs which were shown at the Havana Fair in February. Messrs. J. F. Cook & Co. do a large export business.

AFTER READING THIS LOOK AROUND THE BARN AND STABLES.

As this is the time of year, a few suggestions may interest our subscribers.

We wish first to sound a warning against the buying of so-called cheap tools. They are invariably cheap—in quality—and prove expensive in the end. Let quality guide your every purchase.

Tool buying should no longer be a hit-or-miss proposition with any farmer from a standpoint of quality, for the Simmons Hardware Co., Inc., of St. Louis and New York—a firm of sterling integrity and over forty-five years' reputation—stands ready to back up its goods with a positive guarantee as to quality of material and workmanship.

To help the farmer distinguish its line of tools readily the Simmons people have branded them with the famous Keen Kutter trademark, and the farmer who asks his dealer for all his tools under that name—and sees by the trademark that he gets them—needn't bother his head about quality. It's there all right.

Take Keen Kuttter Manure Forks, for instance, as you will probably need one just at this season. The tines are particularly strong, yet have great elasticity. The handles are straight-grained, denoting great strength. Next time you are in town just call in at your dealers and handle one of these Manure Forks—you can almost feel how easy it would be to pitch manure with them.

Among other seasonable suggestions could be mentioned Keen Kutter Garden Rakes, Hoes, Spades, etc., but whatever your needs may be in the tool line, buy by the Simmons trademark. Write to Simmons Hardware Co., St. Louis, Mo., for Booklet No. 1331 and study it.

O. L. CHASE, THE PAINT MAN.

On page 28 will be found an advertisement of O. L. Chase, the Paint Man. He has been in business at St. Louis and has established a new standard of paint worth. He sells a made-to-order paint, a fresh paint, with its life intact, instead of the old-style stale paint. Over 50,000 customers now testify to the durability of O. L. Chase Paint and the reliability of O. L. Chase. Address him Dept. 16, St. Louis, Mo., or Dept. 16, Chicago, Ill.

Why Rent a Farm

and be compelled to pay to your landlord most of your hard-earned profits? Own your own farm. Secure a Free Homestead in Manitoba, Saskatchewan or Alberta, or purchase land in one of these districts and bank a profit from $10.00 to $12.00 an acre every year.

Land purchased three years ago at $10.00 an acre has recently changed hands at $25.00 an acre. The crops grown on these lands warrant the advance. You can

Become Rich

by cattle raising, dairying, mixed farming and grain growing in the Provinces of Manitoba, Saskatchewan and Alberta in Western Canada.

Free homestead and pre-emption areas, as well as land held by railway and land companies, will provide homes for millions.

Adaptable soil, healthful climate, splendid schools and churches and good railways.

For settlers' rates, descriptive literature "Last Best West," how to reach the country and other particulars, write to Sup't of Immigration, Ottawa, Canada, or to the Canadian Gov't Agent.

Canadian Government Agent,
125 W. 9th St., Kansas City, Mo.

TEXAS.—Many of the very best farms and farm lands are to be found on the line of the Cotton Belt Route in the state of Texas. A reference to that country will be found on page 2 of this paper. Send in your name and receive free books concerning the rich land bargains to be had on this line. Address, **E. W. LaBeaume,** 1419 Piecre Bldg., St. Louis, Mo.

The Wheat Market Situation.

A speculator in grain was quoted to have said a few days ago that pretty soon flour (meaning patents) would sell for ten dollars a barrel. If so, flour will have to advance immensely, because patent flour is selling as we write, on February 29th, at $4.75 a barrel, containing 196 pounds. We have No. 2 wheat selling at one and seven-tenths cents a pound, and the best flour selling at two and four-tenths cents a pound, and the extra fancy flour, such as bakers use, is selling at $3.60 per barrel, or one and eight-tenths cents a pound. There appears to be no high cost of bread, although it is practically a dollar market for wheat when it arrives on the wheat market. Wheat could advance another 20 cents a bushel without being higher than it ought to be every day in the year.

On February 29th, on the St. St. Louis market, No. 2 wheat was quoted at $1.02 to $1.02¾ a bushel, the highest closing price of any month in over a year.

Last September 30th, the Chicago trading in wheat closed at 94¾ cents; the December option was closed out at 93 cents; and on February 29th the May quotation for 1912 was $1.02⅛.

"To be or not to be, that is the question." March is the month in which the grain broker wakes up. On March 8th, Uncle Jim Wilson, Secretary of Agriculture, issues his report of grain in farmers' hands, etc., practically a show-down of supplies here, there and everywhere. Let no one suppose that the Board of Trade is leaving Uncle Jim the sole privilege of knowing what there is in sight. They also do some investigating, and his statements, figures and conclusions are taken for what they are worth and no more. Uncle Jim Wilson issued a "bull" report once and thought it was a "bear" report; the judgment of the market was a surprise to the Secretary, but the market judgment is something that is backed by dollars and cents every day and hour, and "money talks."

The speculative trade is now (February 29th) looking for May wheat to be closed out at $1.02⅛ a bushel, that being the last blackboard record of a sale. That figure cannot be disturbed until trading begins again, but before the end of March it may change materially. We would not be surprised to see the market develop strength, and it would if business conditions were to improve. The supply of wheat is moderate.

The July option was quoted (February 29th) at 96⅞ cents, and it is influenced by the crop of 1912, and that as we write is an unknown quantity.

An I H C Manure Spreader Will Save Your Farm

THE whole future of American farming depends upon the farmers' attitude toward fertilizing. Already Middle Western farm lands are issuing a warning to their owners by producing smaller and smaller average crops. If the warning is not heeded, and fertility immediately restored to them, the lands of the West will soon be in the same list as some of those of the East—worn-out farms.

Immediate action is imperative. If your farm has not yet shown signs of reduced production you are fortunate; you can save it without a long, tedious system of upbuilding. Whether your farm is "as good as new" or not, your duty to the soil and to your children—the farmers who will follow you is: Practice rotation of crops, begin using an I H C Manure Spreader and spread enough fresh manure each year to replace the plant food drawn from the soil by the previous crop.

I H C Manure Spreaders

Kemp 20th Century, Corn King, Cloverleaf

are best for the work because they get 100 per cent efficiency out of the manure. When spread by an I H C Spreader, one ton of manure will produce more and better results than two tons spread by hand.

I H C Spreaders are constructed to completely pulverize manure and to spread it in an even coat, light or heavy as may be needed, over all the soil, at the same time requiring the least effort on the part of driver and horses. They are simple but effective, strong, but not too heavy; and exceedingly durable.

The beater gears are held by a single casting which keeps them in line under every strain. The beater teeth are long, strong and chisel pointed. They pulverize the manure and do it thoroughly. The beater is long enough to prevent winding. The teeth do not rim the bars. These are only a few of the mechanical advantages of I H C Spreaders; every one a reason why you should buy.

The I H C local dealer will show you the I H C Spreader and help you select the machine best adapted to your needs. Made in many styles and sizes. Get catalogues from the local dealer, or, write

INTERNATIONAL HARVESTER COMPANY OF AMERICA
CHICAGO (Incorporated) U S A

I H C Service Bureau

The purpose of this Bureau is to furnish, free of charge to all, the best information obtainable on better farming. If you have any worthy questions concerning soils, crops, land drainage, irrigation, fertilizer, etc., make your inquiries specific and send them to I H C Service Bureau, Harvester Building, Chicago, U. S. A.

The Two Concrete Books.

We sell a cement book that is well worth buying, as will be seen on page 22; but there is another book which is on the same subject, and it is sent absolutely free. It is entitled "Concrete Construction About the Home and on the Farm." It is not a catalogue; it is an illustrated, instructive book whereby you first learn to do little things with concrete and then greater and still greater as you get better posted. Write to Atlas Portland Cement Co., Dept. 165, 30 Broad street, New York, and ask for the free Cement Book. You will get it and you will find it very satisfactory.

1912 Pratt-Forty

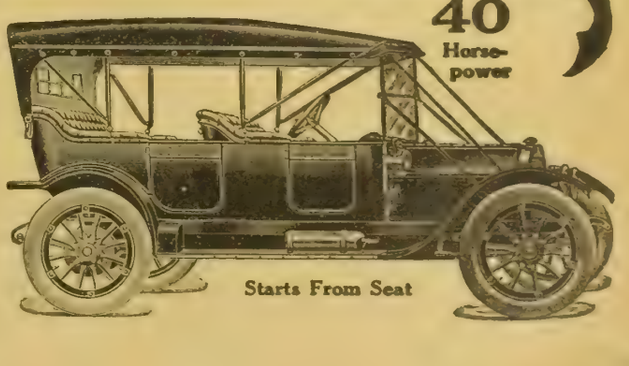
Fourth Successful Year

Backed by 39 Years' Manufacturing Experience

Guaranteed for one year. Self-Starter, 120-inch Wheel Base, Unit Power Plant, Three-point Suspension, Bosch Magneto, Demountable Rims, 36 x 4 inch Tires, Inside Control Levers, Electric Side and Tail Lamps. List price Model "H," $2,000, fully equipped, Mohair Top, Windshield, Speedometer, Prest-o-lite Tank, etc.

There are many localities where we have no agent, and if you will write us, we will send you our catalog and interesting proposition on a car for your own use. We also make a full line of carriages and harness.

ELKHART CARRIAGE & HARNESS MFG. CO.
Elkhart, Indiana



Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the Cement Workers' Handbook. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Boundless Possibilities of the Southeast.

Now that lands have advanced in the Western and Northern States to their present high values, the Southeast, with its millions of low-priced acres, is just beginning to receive the attention it deserves.

Modern agricultural methods are working wonders in the Southeastern States and accomplishing the following wonderful results: Two and three crops from the same land in a season; four to six crops of alfalfa, with a ton to the cutting; raising beef and pork at three to four cents a pound; clearing from $100 to $500 an acre on apples; producing 60 to 100 bushels of corn per acre, then sowing wheat on the same land, harvesting 20 to 25 bushels per acre the next spring; clearing $200 to $400 an acre on truck crops—accomplishing all of these marvelous records on land that can now be purchased for $10 an acre and up.

$3.50 Recipe Free For Weak Kidneys.

Relieves Urinary and Kidney Troubles, Backache, Straining, Swelling, Etc.

Stops Pain in the Bladder, Kidneys and Back.

Wouldn't it be nice within a week or so to begin to say goodbye forever to the scalding, dribbling, straining, or too frequent passage of urine; the forehead and the back-of-the-head aches; the stitches and pains in the back; the growing muscle weakness; spots before the eyes; yellow skin; sluggish bowels; swollen eyelids or ankles; leg cramps; unnatural short breath; sleeplessness and the despondency?

I have a recipe for these troubles that you can depend on, and if you want to make a quick recovery, you ought to write and get a copy of it. Many a doctor would charge you $3 to put up a prescription, but I am glad to send it to you entirely free. Just drop me a line like this: Dr. W. J. Thompson, K-1174 Luck Building, Detroit, Mich., and I will send it in a plain wrapper. As you will see when you get it, this recipe contains only pure vegetable remedies, but it has great healing and pain-conquering power.

It will quickly show its power once you use it, so I think you had better see what it is without delay. I will send you a copy free; you can use it and cure yourself at home.

To those especially interested in knowing more of the Southeastern United States, its fine climatic conditions, mild winters and enjoyable summers, we would suggest they write to Mr. M. V. Richards, Land and Industrial Agent, Southern Railway, Room 71, Washington, D. C., mentioning this paper and asking for a free subscription to the "Southern Field," a very interesting publication issued bi-monthly, covering all the agricultural, mineral and geographical conditions of this interesting part of our country south of the Ohio and east of the Mississippi rivers.

Undeniable Hatching acts.

Jim Rohan, of Racine, Wisconsin, who makes the Belle City Complete Hatching Outfit of both incubator and brooder at a combination price of $11.50, gives one, two or three-months' home test and prepays the freight east of the Rocky Mountains. His 1912 big portfolio folder giving valuable "hatching facts" will be sent free to any reader who writes Jim a postal. Belle City Incubators cost $7.55 and Brooders $4.85, so in the combination price, besides saving 90 cents, you get all freight prepaid, too. The Belle City is 140-egg capacity and has won in several championship hatching contests.

Mrs. M. J. Clifton, of Oklahoma, won first prize in the 1910 Successful Farming Contest, hatching 140 chicks from 140 eggs.

Mrs. Laura J. Clark, of Illinois, was prize winner in the Missouri Valley Farmer and Nebraska Farm Journal Great Contests, 2,000 hatches for 1911. Her winning hatch was 140 chicks from 140 eggs.

Mrs. F. H. Osman, of Ohio, won the solid silver, gold-lined cup offered in contest by the maker of "Tycos" Thermometers.

The proof of these facts and full details, prices, descriptions, etc., about Belle City machines, illustrated in colors, is all in "Hatching Facts," sent free if you write Jim Rohan, Box 74, Racine, Wisconsin.

Swine-raising Statistics.

The United States Department of Agriculture estimates that we have now 65,410,000 hogs on farms in the United States, against 58,185,676 enumerated a year and a half ago, when the census was taken. There is a gain in every district, the largest being 3,138,491 in Minnesota, Iowa, Missouri, Nebraska, Kansas and North and South Dakota. The next largest is 1,281,449, in Kentucky, Tennessee, Alabama, Mississippi Louisiana, Texas, Oklahoma and Arkansas.

The next largest increase is 1,220,941 hogs in Ohio, Indiana, Illinois, Michigan and Wisconsin.

Iowa shows a notable increase of over two million hogs, and Nebraska gains nearly a million.

The states showing over two millions of hogs are Iowa, 9,689,000; Missouri, 4,491,000; Nebraska, 4,267,000; Illinois, 4,640,000; Indiana, 4,031,000; Ohio, 3,578,000; Kansas, 2,808,000; Texas, 2,544,000; Georgia, 2,098,0000; Wisconsin, 2,051,000.

The states with a million hogs or more are Pennsylvania, 1,141,000; North Carolina, 1,405,000; Michigan, 1,382,000; Minnesota, 1,702,000; South Dakota, 1,104,000; Kentucky, 1,724,000; Tennessee, 1,574,000; Alabama, 1,533,000; Mississippi, 1,577,000; Louisiana, 1,642,000; Oklahoma, 1,410,000; and Arkansas, 1,738,000.

The Improvement of Timothy.

Dr. H. J. Webber, Professor of Plant Breeding in the New York State College of Agriculture, in his address on the "improvement of the hay crop," before a general audience in attendance at Farmers' Week, gave the results of important investigations in the breeding of timothy.

In 1910, seventeen new varieties gave an average yield per acre of 7,451 pounds, and seven check plats planted with good, ordinary timothy in the same year and under the same conditions gave an average yield of 6,600 pounds per acre. The seventeen new varieties thus gave an average increase per acre of 851 pounds.

Ordinary timothy usually begins to deteriorate very soon after planting and meadows run out, so that fields are rarely kept in timothy more than two or three years. The new sorts, on the other hand, have been selected for their great vigor, rust resistance and length of life. They would, therefore, be expected to improve for several years rather than run out. This factor is shown in the second-year crop. In the season of 1911 the seventeen new varieties gave an average yield of 7,153 pounds per acre, while the seven check plats only gave an average yield of 4,091 pounds per acre. The average increased yield of the seventeen new sorts in 1911 was thus 3,062 pounds per acre, being an increased yield of over one and one-half tons per acre. Four of the highest yielding sorts in 1911 gave the astonishing increased yield of over two tons per acre, or practically double the average yield of the check plats of ordinary timothy. The best of these new varieties is being propagated as rapidly as possible to obtain seed for distribution to farmers of the state. A bulletin describing these experiments is now in press and may be obtained by writing to the Director of the New York College of Agriculture, Ithaca, New York.

Don't forget the Rose Premiums.

How to Get All the Pork Profits—Merry War Powdered Lye Makes Fat, Healthy Hogs

E. Myers, President, E. Myers Lye Company

I have spent more than 20 years making all manner of tests, and I know what I am talking about when I claim that *Merry War Powdered Lye* is the most wonderful hog remedy, worm exterminator, conditioner and fattener the world has ever known. And my claim is amply backed up by the experience of thousands of hog raisers everywhere, who have fed *Merry War Powdered Lye* with remarkable results.

Don't wait till your hogs are sick—"an ounce of prevention you know—keep them well, hungry and on their feet all the time, feeding *Merry War Powdered Lye* with their daily rations. Then you'll be able to finish off pork in the shortest possible time and at least expense, making every day's rations put weight on the porkers—then all the pork profits that should be yours—*will* be yours—and *Merry War Powdered Lye* alone will give them to you—and I can prove it.

I am constantly receiving enthusiastic letters of praise from thousands of hog raisers who are getting their full share of pork profits with *Merry War Powdered Lye*. Many of these letters are published in my *free* literature—read them—then there will be no excuse for you if *you* do not get *all* the pork profits coming to you, because you, too, can buy *Merry War Powdered Lye* at the nearest dealers.

Read These Convincing Letters From Hog Raisers:

A. W. Davis, Hamlin, Ia., writes: "Merry War Powdered Lye is the stuff to cure cough and thumps and put hogs in a thrifty condition, and I will never be without it while I raise hogs."

B. S. Row, Gracemont, Okla., writes: "I have fed Merry War Powdered Lye to my hogs and have had good results. It is a sure worm killer."

Elvis Potter, Junction, Ill., writes: "Have been using a great deal of Merry War Powdered Lye. Find it the best medicine for hogs I have ever used."

Adam Schultz, McLouth, Kans., writes: "I consider Merry War Powdered Lye the best hog remedy I have ever used, and the cheapest. It has made a marked improvement in my herd."

Follow These Directions

Follow these directions carefully: Mix one tablespoonful *Merry War Powdered Lye* with slop for 10 hogs, or a half can with barrel of swill. Stir well and feed *every day*, night and morning. If your hogs are on a dry feed ration, mix a half can *Merry War Powdered Lye* to each barrel drinking water.

Feed Merry War Powdered Lye Every Day

—and begin today—for the sooner you begin, the sooner I will be able to prove to your complete satisfaction that *Merry War Powdered Lye* makes good my every claim—and 10c will make the test.

Important Warning—Heed It!

Some commercial lye makers are trying to persuade dealers and hog raisers that any lye will do what *Merry War* will for hogs—but it will not, it can't—because no other lye maker knows the secret process that makes *Merry War Powderea Lye* safe to use in hog feed—they don't know the combination in *Merry War Powdered Lye* that produces fat, healthy hogs.

Merry War Powdered Lye is the only *Lye* absolutely safe to feed to hogs—and hog raisers who make the mistake of thinking that any lye will do the work which is claimed for *Merry War Powdered Lye*—fail to obtain results—pay the penalty in hog profits.

Kettle Powdered Lye For Soap Making

If you want the best lye, exclusively for soap-making, scouring, cleaning, disinfecting, etc., use my famous Kettle Powdered Lye—it makes the best soap you ever used—but DON'T feed it to your hogs. FEED ONLY MERRY WAR POWDERED LYE TO YOUR HOGS.

At All Leading Dealers

Merry War Powdered Lye comes in 10c cans; full cases of 4 dozen cans for $4.80—at grocers, druggists, and feed dealers. Don't allow yourself to be talked into a substitute for *Merry War Powdered Lye*—because there are no substitutes.

If your dealer can't supply you, write us, stating his name—we will see that you are supplied and will also send you, free, a valuable booklet on "How To Get the Biggest Profits From Hog Raising."

E. MYERS LYE COMPANY, Dept. 22 St. Louis, Mo.

Which Kind Do You Want?

$30 SAVED ON THIS STYLISH BUGGY!

An actual example of how you can save ⅓ to ½ on the price of any kind of vehicle or harness by sending today for this big Murray 1912 Catalog. Don't *think* of buying until you have seen it! Contains 251 illustrations with full descriptions of 138 up-to-date vehicles and 74 harness sets. Biggest selection in the country! Write for it *today*. **$30 saved!**

Every vehicle sold direct from factory at wholesale price—with 30 days' road trial—2 years' guarantee—and safe delivery assured.

For 28 years Murray vehicles and harness have set the standard for all others. If you want highest quality at rock-bottom prices. Get this big *free* catalog. Write *now*.

The Wilber H. Murray Mfg. Co.

717 Fifth Avenue, Cincinnati, Ohio

One can start farming here on less capital—

than anywhere," says Mr. H. V. Tull, who went to Jonesboro, Ark., from Naperville, Ill. "We paid only $25 per acre for this land and we get fine crops of corn, cotton, clover, etc. We have good roads, rural free delivery, telephones, schools, etc., *all we had in Illinois.*"

J. H. Cash went to Camden, Ark., with $140. He paid $100 on his farm, bought a second hand-wagon for $10 and a pair of cheap mules. In three years he paid all his debts and bought 80 acres *more.* All along the

Cotton Belt Route in Arkansas and Texas

you will find scores of men who started with practically nothing and are now well fixed. Six years ago, C. S. Martin landed in Mt. Vernon, Tex., with $8.50. He now has a splendid 200 acre farm and is one of the best fixed men in the county. It is *easy* to get ahead fast where fertile land is *so cheap,* and your own living costs *so little.*

There are many sections in Arkansas and Texas that are *just suited* for your line of farming—where you can buy *many* acres with the price of every *one* you now own—get the benefit of the *big* boost in land values sure to come—live in a mild climate where you can do money making work *every* month—without sacrificing *anything* in living conditions that you now have. Telephones, good schools, rural delivery, modern towns, close markets—you'll find them all through Arkansas and East Texas.

On the 1st and 3rd Tuesday of each month there are very low round trip excursions to Arkansas and East Texas via Cotton Belt Route, allowing 25 days for trip and *free stop overs.* Plan to go on the *next* one.

Get our new free books

—written by a practical farm man, who went from county to county and talked with the farmers themselves and got pictures of their places. 115 pictures and 100 pages of plain farm facts, describing every kind of farm opportunity Southwest. Nothing will convince you like these statements from your own people. Write today.

Second Rabbit—"I think they are trying to make game of us."—Philadelphia Record.

SEED CORN FOR 1912.

Very Poor Germination Average Throughout the Corn Belt.

An almost unprecedented wave of alarm concerning the condition of seed corn is at present sweeping the corn belt. In most localities the late fall rains caused the corn to be of late maturity, and, in a great number of instances, to be injured by excess of moisture. On account of this condition, the rush of fall work kept many farmers from field gathering seed corn, and, consequently, seed corn was not selected until husking time, and far too often not even then.

In order to determine the actual condition of the seed corn, and thereby advise the many inquirers, the Missouri Experiment Station had collected in three different sections of the state—Central, Southwestern and Northern—representative samples of corn. These samples were collected from corn which the owners said would be used for seed in the spring. In some cases the corn was field gathered, others selected at the time of husking, some taken from the crib, and in extreme cases taken from corn still in shocks in the field.

These samples of corn were brought to the Experiment Station and germinated with the following results:

	Per Cent. Germination.
Field gathered seed, carefully stored	96.00
Seed selected at gathering	89.10
Seed selected from crib	83.30
Seed selected from shock	53.70

The above table may be somewhat misleading, inasmuch as the average for the field gathered seed corn, which was carefully stored, represents but two germinations, while that for seed selected at gathering represents a considerably larger number, as does that selected from the crib. In some cases the crib selected corn ran as low as 15 to 20 per cent., while in others, where the cribs had been well protected and where the corn was well matured when harvested, the germination was much higher.

These figures show clearly that unless due precaution is taken, much poor seed corn will be planted this spring. As it is possible for one man to test enough corn to plant twenty-five acres in one day's actual time, it can easily be seen that such work would be highly profitable during the bad days of February and March. The value of such work becomes at once apparent when we realize that an increase of 5 to 10 per cent. is frequently secured in the yield.

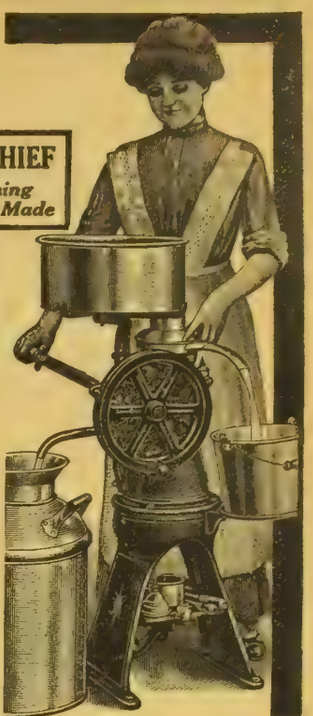
The testing of each ear that will be used for seed is not such a difficult task, and may be accomplished much more easily than might be imagined. This is done by securing a box about thirty inches square and three or four inches deep, filling the box full of sand. Then drive nails or tacks 2½ inches apart all the way around the edges of the box and over these nails stretch a string back and forth so as to mark the box off in 2½-inch squares. The squares are then numbered on the edge of the box.

The ears of corn to be tested are then laid on the floor, if no rack is available, numbered, and ten kernels removed from the various parts of the ear. These are placed in the sand point downward so as to be about one-half inch below the surface. A very good method of numbering the ears is to pin bits of paper to the butts of the ears. This can be done very easily with ordinary pins. The kernels from ear No. 1 are now put in square No. 1; ear No. 2 in square No. 2, etc. The box of sand containing the corn is then thoroughly saturated with water at about blood heat, covered with old sacks or carpet and placed near the stove or open fire, where it is moistened down daily so as to hasten germination. The temperature should be kept at between 75 and 90 degrees, if possible.

This method will in five or six days enable one to detect the poor ears by their failure to germinate, and they can be discarded, leaving only the good ones for seed. In case your seed seems too poor and you cannot get field selected seed near home, write to the Agricultural Experiment Station at Columbia for the list of reliable seed corn breeders of the various varieties.—J. C. Hackleman, College of Agriculture, Columbia, Mo.

$27.65

THE ECONOMY CHIEF
The Closest Skimming Cream Separator Ever Made



Actually Buys the Highest Grade, Closest Skimming Cream Separator

Ever Manufactured

Think of it! Only $27.65, full and complete purchase price for the big Economy Chief Cream Separator, absolutely proven by expert tests and thousands of testimonials to be the closest skimming and most durable cream separator ever put on the market. This is our wonderful brand new 1912 model, equipped with our marvelous patented purifying and aerating bowl and the celebrated double opposed disc system. A regular $70.00 big business cream separator for only $27.65, and with a capacity of 300 pounds per hour, and absolutely guaranteed for twenty years.

You Buy Direct From the Factory

That's the secret of our amazingly low prices. You simply pay one small profit—the actual factory profit. No big agent's commissions for you to pay; no extra dealers' profits; no so called factory distributers' profits. You pay only the rock bottom factory price. We actually save you from $40.00 to $50.00 on any capacity machine you want. For instance, a 400 pounds per hour capacity separator for only $34.90; a 600 pounds per hour capacity machine for only $42.35. We fill your order direct from the largest and most completely equipped cream separator factory in the world.

You Can Buy on Sixty Days' Trial

We will positively ship you THE ECONOMY CHIEF CREAM SEPARATOR on SIXTY DAYS' TRIAL. We want you to give this separator sixty days' good hard test on your farm before you decide to keep it. Compare it with any and all of the overpriced machines you can find around. Try it on warm milk, cold milk, new, mixed or old milk; it makes no difference. Then, after two whole months' trial, if you are not ABSOLUTELY CONVINCED that THE ECONOMY CHIEF is the greatest cream separator you ever saw at any price, simply return it to us and it won't cost you a penny. We will even pay the freight charges both ways.

Old Separators Taken in Exchange

If you have an old cream separator of any make that is out of repair, hard to run or will not run at all, we will take it off your hands as part payment for a brand new 1912 model Economy Chief. Furthermore, we will make you a good liberal and fair proposition.

Send Today for Book No. 69N73 and Full Particulars of This Wonderful Bargain Offer.

Simply send your name and address today, at once, postal will do, and we will promptly send you the Economy Chief Book No. 69N73 free and postpaid, explaining our great bargain offer in detail.

SEARS, ROEBUCK AND CO., CHICAGO, ILL.

Best Watch in the World.

One hundred and eighty of the leading railroads have adopted the Howard Watch as the standard of excellence. It is because the Howard Watch has no actual competitor. There is an interesting story about this watch which our patrons will take pleasure in reading. Just write a postal card to Dept. 122, Howard Watch Works, Boston, Mass., and ask for the story of The First American Watch. See page 7 and read about the best watch in the world.

Oklahoma has decreased in hogs from 1,899,000 a year and a half ago to 1,410,000 on the first of January, 1912.

The Corn Market Situation.

On February 29th, 1912, the corn market was 20 cents a bushel higher than it was the year before. At St. Louis, cash corn sold at 64 to 65½ cents a bushel, against 44 cents a bushel a year ago.

The speculative corn market has little in view to disturb it for the next five months. The May option was quoted on January 30th at 67⅞ cents, and by February 29th, at the close, it had advanced to 69⅜ cents a bushel, and the July option was quoted at 69½ cents.

Whenever the politicians start ranting about the farmer they generally wind up the oration by saying the farmer is the only man who does not know in advance what he is going to get for his crop, whereas in truth the farmer can say that he is very well informed. The largest number of the most important dealers in grain are of the opinion that we are pretty close to seventy-cent corn in market, at least until July 1st, 1912. Next month will develop quotations that will show the estimated value of the new corn crop.

Jokes on Banking.

"There seems to be quite a draft in here," said the paying teller, as the man who had drawn twenty thousand dollars went out.

"Yes; I must do something to check it," answered the cashier.

"I'll make a note of it," murmured the bookkeeper, and a thirty-day loan drew 10 per cent. interest.

Another Pioneer Gone.

James Metcalf, formerly a live stock commission man at the St. Louis National Stock Yards, died at Mexico, Mo., on February 27th, in his 79th year. He and A. C. Cassidy and E. B. Overstreet, both recently deceased, were three of the pioneers of the St. Louis market, a trio of great and noble business men, who fought the early battles to make St. Louis the strong competitive market that it now is. As the Daily Live Stock Reporter truly states, Mr. Metcalf was known for his strict attention to business and was considered by all who had the pleasure of knowing him as a man in every sense of the word, and many words of praise were heard around the yards when the sad news was being circulated. He was a firm believer in the Golden Rule and practiced it both in business and social life.

Active Horse Market.

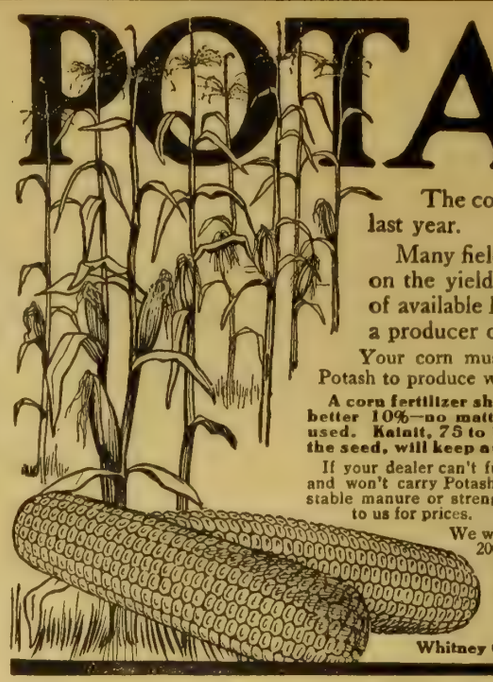
Holland, Nugent & Maxwell Bros., horse commission salesmen at the National Stock Yards, closed up the month of February with the best market thus far this season. We quote from their circular:

"Big draft horses are showing some improvement in price. Good chunks are selling fully as strong as they have any time this season. There was some demand for hearse teams and good, useful driving teams that would weigh 1,100 to 1,200 pounds that are broke. Southern horses are selling about steady. The Southern dealers will not pay the prices that they did in September and October."

Grand Cattle Feeding Example.

Brundage & Cleveland, a popular shipping and successful feeding firm of Ogle county, Illinois, had fifty spayed yearling Hereford heifers on the Chicago market which averaged 1,084 pounds and sold at $6.90 per 100 pounds. They were bought as feeders at Kansas City, October 31st, at $4.90, averaging 803 pounds. Fed around 100 days, they showed an average gain of a little over two and one-half pounds a day. Their ration was seventy scoop shovelfuls of shelled corn and five bales of alfalfa hay once a day, with one pound of cotton-seed meal per head per day the first thirty days and after that two pounds per day.

POTASH



The corn crop fooled lots of farmers last year.

Many fields looked good but fell down on the yield. This was owing to a lack of available Potash, for Potash is primarily a producer of grain.

Your corn must have enough quickly available Potash to produce well-filled ears as well as stalks.

A corn fertilizer should contain at least 8% Potash—better 10%—no matter in what form the fertilizer is used. Kainit, 75 to 100 lbs. per acre, drilled in with the seed, will keep away cutworms and root lice.

If your dealer can't furnish brands rich enough in Potash and won't carry Potash Salts so you can supplement your stable manure or strengthen the brands he does carry, write to us for prices.

We will sell direct in any amount from a 200-lb. bag up. Write for free book of fertilizer formulas and directions.

Continental Bldg., Baltimore
Monadnock Block, Chicago
Whitney Central Bank Building, New Orleans

The Increase in Hog Receipts.

A large increase in the number of hogs marketed so far this year is accounted for in Chicago by high-priced corn, bad weather, fewer cattle on feed, and the fear that packers are able to depress the market. The fact of the matter is that there are more hogs in the country than there were three years ago by seven million head. See page 22.

Colorado Lambs at St. Louis.

On February 29th, at the St. Louis National Stock Yards, Gates & Spencer, well-known sheepmen of the San Luis Valley, Colo., had in a consignment of their lambs. The string consisted of 803 head that weighed 75 pounds and sold at $6.70 per 100 pounds.

S-M-A-S-H—
Go Roofing Prices!!

Never before have you been able to participate in a Roofing sale such as this. This opportunity came about in an unusual manner. It is out of the ordinary channels of manufacturing and selling possibilities. We only have a limited quantity at this slaughter price, and subject to prior sale or reservation.

Corrugated Steel Roofing 1¼ Cents Per Square Foot

Now every one knows, who knows anything about Roofing, ceiling and siding that there is nothing in all the world that can come anywhere near comparing with the wonderful qualities of steel for a covering. It many times outlasts prepared roofing, shingles or slate. It is fire-proof, snow-proof—considerably warmer in Winter and cooler in Summer. It is in every manner superior to any other roofing.

Prepared roofing cannot be leak-proof. It cannot last. It peels, cracks, warps and the elements get to it sooner or later. Slate chips, cracks and is far too expensive in transit. Shingles blow off, warp and leak and the up-keep is entirely too expensive. There are no draw-backs to Steel Roofing. It lasts year in and year out with only ordinary care. You are absolutely safe and secure from the elements. It is insurance proof, and is the only real safe and sure roofing to use.

By one of those unusual occurrences, one in a lifetime we came into possession of this lot of Roofing, comprising all the weights and sizes, corrugated and crimped, which places us in a position to very materially undersell anything that we or anyone else has heretofore been in a position to offer. This is your opportunity to get your supply at a price that will net you a tremendous saving. But you must put in your reservation at once if you wish to participate. No need, however, to buy now. Simply write us for samples, then state about when you will want your supply and we will hold it for you without any deposit of any sort, or shipment will be made immediately.

But by no means overlook this opportunity. Get our samples at once and our complete prices. They will startle you. You will be surprised at what a trifling cost you can now throw away your troublesome shingles, slate and prepared roofing, and have for all time, complete shelter that will cause you no further trouble—will last a lifetime.

SPECIAL SALE We want it distinctly understood that this is a special sale and a special lot of Roofing, Siding and Ceiling guaranteed brand new, never been used, first class, "A" number one, as good as can be had anywhere on earth. We bought it at an unheard-of sacrifice price, add our small profit and let it go at an unheard-of price. Do not hesitate to thoroughly familiarize yourself with what this offer really means to you. Simply write for samples without any obligation whatever on your part to purchase. We will then protect you should you afterwards decide that you want a supply. But by all means write today, and remember that we stand back of every last bit of this Roofing to the fullest extent, guaranteeing it in every respect. We want to make it clear to you that never before have we or anyone else been placed in a position to offer such superior Steel Roofing at anywhere near this special price. No need writing a letter, simply use Special Roofing Sale Coupon by writing your name and address in same—we will understand that you simply want full information, samples, prices and specifications, which will be sent you at once, prepaid.

This book is mailed free to all who write Dr. D. C. Snoddy Co., of Nashville, Tenn. Dept. H.

Missouri Stock of Mules.

When the census was taken April 15, 1910, there were 112,285 farms reporting mules in the state of Missouri, and the total was 342,700 mules, against 283,519 mules reported when the census was taken ten years ago. The 342,700 mules on hand in 1910 consisted of 265,601 mature mules, 57,750 yearling colts and 19,349 spring colts; but the census was taken in April, and probably 50,000 more colts were following their mothers before July, 1910. According to the count as it was taken there was an average of 2,980 mules to each of the counties of Missouri. In Saline county there were 8,012 mules; in Calloway, 7,461 mules; in Johnson, 6,506 mules; in Boone, 6,772 mules; in Audrain, 6,389 mules; in Carroll, 5,365 mules; in Cooper, 5,671 mules; in Lafayette, 5,950 mules; in Monroe, 5,927 mules; in New Madrid, 5,063 mules; and in Pettis, 5,537 mules. Very few counties had less than 1,000 mules, these being Carter, 579; Schuyler, 987; and Iron, 826. Most of the prominent mule raisers of counties are very much together in the middle of the state; but there is an important mule-raising settlement in the southeast section, with New Madrid as the principal county.

HORSE AND MULE NOTES.

Men who are raising scrub horses and using grade sires of any breed are very foolish. Plug horses and those which fit nowhere may sell low in the future, but horses that have a trade will sell high. Any sound saddle horse, or any light harness horse, or big draft horse, or coach horse, any good chunk, any stylish Southern horse, any express horse, and we might say any cavalry horse, will sell well, while the unclassified horse will grade at the tail end and sell for the plug that he is.

It is now reported that the National Horse Show for 1912 and 1913 will be held at Madison Square Garden, New York City, as usual. By the way, it is a great place for Western exhibitors to get some easy money and ribbons. Usually half the classes are not filled because the management goes to sleep when the time comes for soliciting entries.

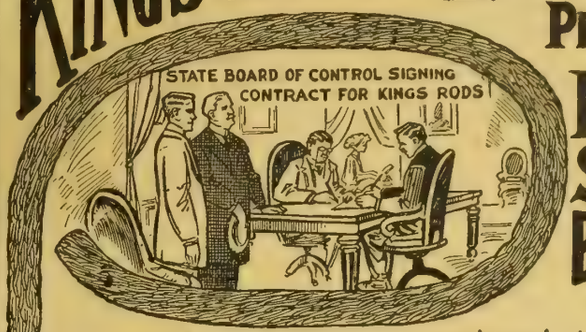
New York state is getting excited over the horse question. There were 590,000 horses on farms in that state in 1910, which is a loss of 38,000 head in ten years. The trouble with horse raising is that the colt does not reach maturity in less than five years; but a beef steer matures in two years, and a dairy cow will be giving milk and raising a calf in three years. A horse raised on high-priced land ought to be worth $500 at maturity.

Messrs. Holland, Nugent & Maxwell Bros., horse commission salesmen at the St. Louis National Stock Yards, sold 1,600 horses during the last week in February and cleaned them all up in good shape.

Grain Club Poster.

Being alarmed about the seed-corn situation, fearing that most of the seed will not germinate, and wishing to get a normal crop next year and an increase, if possible, the St. Louis Grain Club, composed of members of the Merchants' Exchange, has issued a poster, showing the method of testing all seed corn in a very simple and effective manner. We advise our readers to write to the St. Louis Grain Club, care of Merchants' Exchange, St. Louis, Mo., and ask for a copy. It is too large for us to publish, and it is well worth having as a free gift on any farm.

KING'S COPPER LIGHTNING RODS PREFERRED for IOWA STATE BUILDINGS



I ask you to take a good look at the two pictures in this space. They tell you something that you ought to know if you are thinking of protecting yourself and your property from destruction by lightning.

The upper picture shows *The State Board of Control of Iowa signing the contract for the King rods, after a thorough investigation of the different systems of Lightning Protection. This board chose the KING System over all others,* to be put up on a number of Iowa state buildings. A photographic reproduction of one of them is given below.

A hundred thousand or more men and women in all parts of the country have chosen the **KING** system and **every one will tell you it is a sure protection.**

I have the endorsement of *Thomas A. Edison,* the world's greatest electrician, for my rods; I have the endorsement of the Insurance Companies which make a **liberal reduction in rates on buildings protected by my Pure Copper Cable Lightning Arrester.** I have the endorsement of U. S. Government experts for my system, and give a **legally binding guarantee** that lightning cannot damage your house if you have placed it under my system of protection. I can give you the written testimony of hundreds. **20,000 buildings have been protected by the KING SYSTEM** in the last three years and not one dollar has been lost by lightning in the whole list.

And yet **the danger** from lightning, especially in rural districts is great. Government reports show that over 6000 buildings were destroyed, over 4000 head of stock and 563 people were killed by lightning in one year. Forty-three insurance companies of Iowa report that the losses in that state by lightning in 1910, on buildings not protected by **King's System,** was $35,077.89. *Can you afford to take the risk.*

KING'S COPPER CABLE LIGHTNING RODS are absolutely reliable. They are made and put up according to the best known principles of lightning control. They are composed of pure, soft copper wires wound into one continuous cable, which gives the very highest electric-conducting capacity. They are put up by my experts according to the Line System which is approved by experts of the U. S. Government. **You get what you pay for** when you buy a KING ROD—**Sure Protection. Get my prices. They will save you money.**

GEO. M. KING, PRESIDENT.

GEO. M. KING MFG. CO. 710 E. Walnut St. DES MOINES, IOWA.

I have some valuable information on lightning and its control, which I will send you for the asking—FREE. WRITE ME TODAY

LIVE AGENTS WANTED

I want a good man in every neighborhood to sell my rods. Will supply him with what is necessary and will make it interesting for him financially. Address me personally.

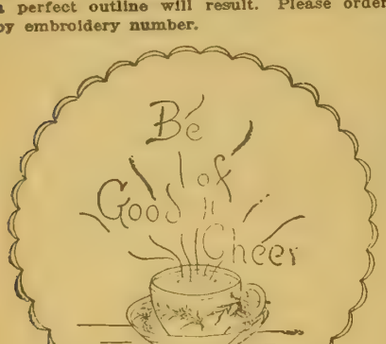
BICKMORE GALL CURE CO., Box 4820, Old Town, Maine.

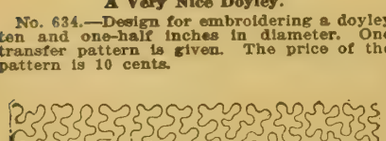
MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, press the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.



A Very Nice Doyley.

No. 634.—Design for embroidering a doyley ten and one-half inches in diameter. One transfer pattern is given. The price of the pattern is 10 cents.



Wide Border and Narrow Edge.

Please send all orders for these embroidery patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Money-making For Women.

The woman of to-day wants to earn her own pin-money. Fifty years years ago it was different, not that our grandmothers were less ambitious. By no means. They accomplished many tasks which the mere contemplation of would appall us. But their limitations were so much more that there was really very little which a woman could do to earn money and still have a part in the home making.

Yet still there is the feeling of unrest upon the farm; the belief that the woman who lives in the big city can so much more easily help herself to the luxuries. There are so few openings in the rural districts, so many in the modern sky scrapers. Then the wages are larger in the latter.

But there are many fallacies in these arguments, sound as some of them seem to be. First, the woman who cares to maintain her personal as well as financial independence may find a more promising outlook about the country home. Supposing that she has not the facilities for making money from butter, "schmierkaes" and cream; does not care to specialize along the lines of poultry, gardening, fruit raising or bee keeping; her case is still by no means hopeless.

She should look about her and strive to find something which the community needs. The necessaries of life are much more dependable sources for a living than the luxuries. And having found one such, she should try to furnish it to the best of her ability, on terms which she would herself consider fair were she to be the consumer instead of the producer. She may know how to make excellent cakes, and may happen to be in a community where there are those who will gladly buy them regularly in preference to making them. But she will be much surer of finding purchasers for home-made bread, if it is furnished of good quality. There are many who would gladly buy this necessary product, thus enabling them to dispense with hiring a girl possibly, were it not for the fact that baker's bread is not liked by the family or is found to lack the substance of the home product. Plain cookies may be often arranged for in the same way.

In many communities there is a dearth of dressmakers, and with lack of time or skill the housewife would gladly pay fair wages to the woman who is neat with her plain sewing. This could be done in her own home and at times which suit her own convenience, and yet in the end earn a neat little sum.

Automobile parties might be reckoned upon along certain roads as patrons of the cold lemonade during the summer months. As the trade grew, other light refreshments could be added, and that there was a rest place ahead in isolated neighborhoods would soon be published among local tourists. A bouquet of sweet peas or of flowers from the field might likewise find sale among the city visitors.

Every locality has its own possibilities, and it is for the enterprising woman to study her own surroundings and plan accordingly. The returns may be small at first, but if along wholesome lines they will grow. And though the city sister gathers in a larger income, before you waste time envying her consider her necessities and her real luxuries.

She may be required to spend many hours a day regularly, while if you want a day off you simply plan so that you can take it. Her work may be in the close office; yours can be under the blue sky. She may be in a sweat shop on a mere pittance, her board the cheapest fare, her home a small, illy-ventilated room. Look over the want columns of a city daily and note the large proportion of places which you could not or would not fill, and then be content with the best that your own community offers, feeling that your own home, your independence, your healthful surroundings are better than a little more spending money with many more places in which it is needed.—Bessie L. Putnam.

SisterWoman!

READ MY FREE OFFER

My Mission is to make sick women well, and I want to send you, your daughter, your sister, your mother, or any ailing friend, a full 50-cent box of Balm of Figs Compound absolutely free. It is a remedy for the treatment of woman's ailments, and I want to tell you all about it—just how to use it yourself—right at home without any inconvenience—and the best of it is that it will not in the least interfere with your work or pleasure. Balm of Figs Compound is a remedy that has made sick women well and weak women strong, and I can prove it—let me prove it to you, and I will gladly do it, for I have never heard of anything that has, according to the abundance of testimonials at hand, so quickly and surely cured women's ailments. No internal dosing necessary—it is a local treatment, yet it has to its credit some of the most extraordinary cures on record. Therefore I want to place it in the hands of every woman suffering with any form of female weakness or diseases so common to women.

This 50c box of Balm of Figs Compound will not cost you one cent

I will send it to you absolutely free, to prove to you its splendid qualities, and then if you wish to continue further, it will cost you only a few cents a week. I do not believe there is another remedy equal to Balm of Figs Compound, and I am willing to prove my faith by sending out these 50-cent boxes free. So, dear reader, irrespective of your past experience, write to me at once — today — and I will send you the treatment entirely free by return mail, and if you so desire, I can readily refer you to many, who can personally testify to the great and lasting cures that have resulted from the use of this remedy. But after all, the very best test of anything is a personal trial of it, and I know a 50-cent box of Balm of Figs Comcound will convince you of its merits. Nothing is so convincing as the actual test of the article itself. Will you give Balm of Figs Compound this test? Write to me today, and remember I will gladly send you a 50-cent box of this remedy absolutely free. Address,

MRS. HARRIET M. RICHARDS, Box E 18, JOLIET, ILLINOIS

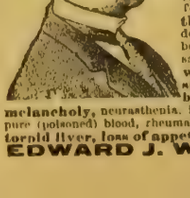
No Scratching in the Ark.

Willie—"Wonder what all the animals did during those forty days in the ark?" Tommy—"Oh, they just lay around and scratched themselves, I guess." Willie—"Scratched theirselves nothin'! What'd they scratch for when there was only two fleas?"



TOBACCO HABIT CONQUERED IN 3 DAYS

I offer a genuine guaranteed remedy for tobacco or snuff habit in 72 hours. It is mild, pleasant strengthening. Overcomes that peculiar nervousness and craving for cigarettes, cigars, pipe, chewing tobacco or snuff. Tobacco is poisonous and seriously injures the health in several ways, causing such disorders as nervous dyspepsia, sleeplessness, gas, belching, gnawing or other uncomfortable sensation in stomach; constipation, headache, weak eyes, loss of vigor, red spots on skin, throat irritation, catarrh, asthma, bronchitis, heart failure, lung trouble, melancholy, neurasthenia, impotency, loss of memory and will-power, impure (poisoned) blood, rheumatism, lumbago, sciatica, neuritis, heartburn, torpid liver, loss of appetite, bad teeth, foul breath, lassitude, lack of ambition, weakening and falling out of hair and many other disorders. It is unsafe and torturing to attempt to cure yourself of tobacco and snuff habit by suddenly stopping—don't do it. The correct method is to eliminate the nicotine poison from the system, strengthen the weakened, irritated membranes and nerves and genuinely overcome the craving. You can quickly and easily quit tobacco and enjoy yourself a thousand times better while feeling always in robust health. My FREE book tells all about the wonderful 3 days Method. Inexpensive, reliable. Also Secret Method for conquering habit in another without his knowledge. Full particulars including my Book on Tobacco and Snuff Habit mailed in plain wrapper free. Address:

Do You Know Aunt Harriet?

Aunt Harriet is a wholesome, sensible, sympathetic woman. She has never read "Three Weeks" and she doesn't know the first thing about Bridge. But she does know a whole lot about running a home successfully, raising children creditably and living with a husband happily.

Aunt Harriet writes to three or four million readers every month through FARM JOURNAL—gives them good advice and helps to solve their problems and smooth their troubles.

Farm Journal holds quite as much of interest for women as for men—whether they live in the city or the country. It's a great home paper—full of valuable hints that make for economy of time and money in the conduct of household affairs.

Thoroughly practical, but not a bit dry. Clean to the core, but never preachy. 75,000 homes are sweeter and better for its monthly visits.

Farm Journal is, and always has been, unlike any other paper. To prove this, and to make Aunt Harriet's gentle acquaintance, send a dollar for a five years' subscription, and if at any time you are not satisfied with your bargain, just tell us and we will send back every cent of your dollar not yet used.

FARM JOURNAL
257 N. Clifton St., Philadelphia

Aim For Variety.

There is a tendency on the farm, especially at this season of the year, to fall into a rut in cooking. The old way of meat and potatoes for dinner and potatoes and meat for supper, and the leavings warmed up for breakfast is as easy a path to tread for the cook as it is tiresome for those who eat. The tendency should be to use as much as possible the home products, and hence the rural resident is more apt to be a victim than those who depend upon the markets to give a renewed supply every week.

Yet those who have been forced to buy all that goes upon the table sometimes long for the crumbs from the old country table, well knowing that with their ways of making things go a long way they could convert the substance of the plain old dinner into a most enjoyable one.

The old-fashioned "boiled dish" may be too much of a greasy mixture to suit the modern taste, yet there are portions of it which deserve being perpetuated. There are several possibilities in the cheap soup bone. One woman of a large family finds it a pleasing variation when such a piece has boiled slowly for several hours to parboil enough pared potatoes for the meal. When just commencing to soften she removes them to the roaster or spider, in the center of which she places a part of the meat. One side is packed with stuffing, the remnants of a loaf of stale bread, flavored with just a suggestion of parsley or onions. On the other she places her potatoes and dips several spoonfuls of the rich soup over the whole, baking until the potatoes are done. If the material for stuffing is not available, she sometimes adds half of a cabbage or a few turnips, also parboiled, or onions. In these days of high-priced butter the rich soup baked into the potatoes is a kink as economical as it is pleasing for a change.

Some good housekeepers prefer never to put any herbs into their sausage, for the reason they can thus have a variety. One day a bit of sage goes in when cooking. Another, summer savory is added, and so there is no danger of getting tired of the flavoring. When you have only one kind of meat, perhaps only side pork, there is still more need of variation in cooking, though do not vary to the point of not thoroughly cooking it. Rolled in flour before frying, served with eggs fried in the gravy with it, baked with beans, or roasted and eaten with apple sauce, are but a few of the changes which are permissible.

At this season eggs are most plentiful. They are also a food which is most nourishing and wholesome. Yet some will tell you that they tire of eggs. Have you ever thought how many ways you know to prepare them nicely and yet how few you use? The plain boiled egg becomes new if it is boiled hard, the yolk removed and mixed with a teaspoonful of vinegar, pepper and salt to taste, with a dash of mustard if liked. Baked, scrambled, made into sandwiches — when the idea of change is once entered into each new variation will suggest others.

Take our most common fruit, the apple. How many ways do you know to make use of it? Sliced and fried is a very good and yet not common form. A teacupful of stewed apples stirred into any common cake in which soda and cream of tartar or baking powder are used is the basis of a delicious pudding to be eaten with whipped cream or hard sauce. If the recipe calls for baking powder, omit this entirely and add one-third as much of soda to insure lightness and counteract the acid of the apples. If soda and cream tartar, simply omit the latter. —Bessie L. Putnam.

Winning a Daughter's Confidence.

A mother writes that she has read so much about the need of having the confidence of her daughter, just entering womanhood. But, try as she will, she finds it impossible to gain this confidence. Upon questioning the girl, she is met with an offended silence or some retort, such as: "Now, mother, do you think I a two-year-old? You treat me like one." Then the mother confesses the whole secret of Margaret's attitude as she writes: Margaret has always had her own way about most things. When she was little I never had time to bother about her small affairs, and she grew out of the way of coming to me with them; but now I have more time, and besides I realize that Margaret is at an age where she is more in need of advice than a few years ago. Half of the time I do not know what she is about, and I have read of other girls who seemed good going wrong. Now, what shall I do about it?"

Poor mother! She made her mistake years ago when she was too busy to pay attention to her wee girl's affairs. There was a time years ago when Margaret eagerly sought some one one to whom she could tell her little secrets. And the one who should have been the recipient of them had no time. A child learns quickly, and, very naturally, that little girl soon tired of being told to hush up or to run away. Gradually she grew out of the habit of turning to her mother for sympathy until at the present she even resents any questioning on the part of her worried mother.

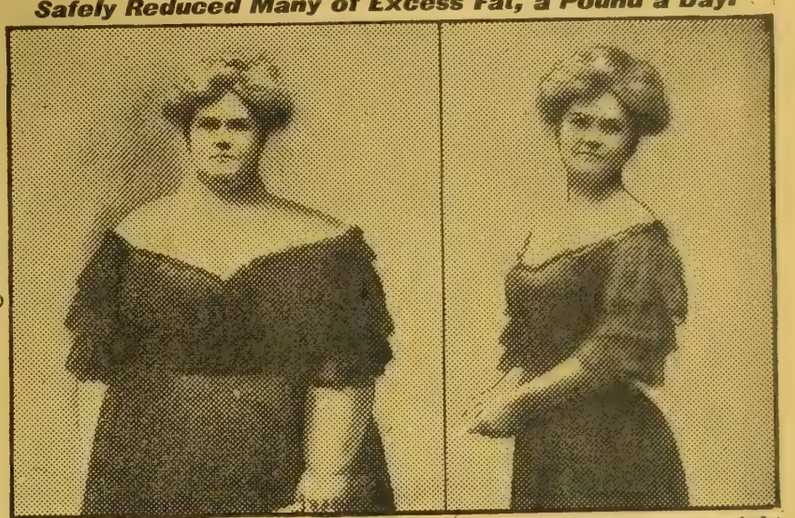
Now suppose the woman had always made time to take an interest in her child's affairs. Suppose they had in babyhood and early school days shared delightful secrets and planned happy little surprises, would the time ever have come when the daughter had any interest which she did not long to share with her mother? In all probability not.

Many a young girl who departs from the paths of virtue would be kept in the right way if she had a mother who lovingly expected and won her confidence—a mother who makes it plain that the young man whose thoughts run chiefly along the line of kissing and hugging and sitting in a room with lowered lights, is not a desirable companion for her girl; a mother who wishes her girl to have good times, assuredly, but not at the cost of her purity; a mother who abets her daughter in enjoying the good things of life, but teaches her that always when mingling with the opposite sex there must be no undue familiarity. "Hands off!" is a good slogan for the young girl to remember to carry with her in these relations.—Janet Thomas Van Osdel.

FAT is Dangerous

It is Unsightly, Uncomfortable, Spoils the Figure, Causing Wrinkles, Flabbiness and Loss of Vigor.

Let me send you my Proof Treatment absolutely Free; I Have Safely Reduced Many of Excess Fat, a Pound a Day.



Note what my treatment has done for others; let me reduce your weight.

Lost 51 Pounds. Mrs W. D. Smith, Box 34, Abbott, Me., writes: **"I have lost 51 pounds** by your treatment. I used to have heart trouble and shortness of breath; now I am well and can walk and work with ease."

Permanent. M. E. King, 5634 Spaulding Ave., Chicago, writes: "By the Dr. Bradford Method **I reduced 35 lbs.** eight years ago; haven't gained an ounce since. Rheumatism also cured."

Lost 112 Pounds. W. C. Newburn, Contact, Nev., writes: "I have lost 112 lbs., am **wonderfully benefited** in heart and general vigor. Can climb mountains easily now."

Lost 98 Pounds. Mrs. J. H. Wooldridge, Galena, Mo., writes: "My figure and appearance have been wonderfully improved, have lost 98 lbs **Friends amazed."**

Many other testimonials from well known persons will be mailed with **FREE PROOF TREATMENT.**

I could fill every page of this journal with testimonials from grateful patients.

It is dangerous, unsightly, uncomfortable, and embarassing to be too fat. Excess fat weakens the heart. The liver, lungs, stomach and kidneys become diseased, the breathing becomes difficult and the end may come in **HEART FAILURE** and sudden death. You may save yourself from these **DANGERS.**

I want to prove to you that my treatment has positively reduced legions of persons to normal, no matter where the excess fat was located, stomach, bust, hips, cheeks, neck. Weight is quickly and safely reduced without tedious exercise or starving. Eat what you like. **Your figure will be beautified; wrinkles disappear.** Rheumatism, asthma, shortness of breath, kidney and heart troubles usually leave as the fat goes away. I will send you without a cent of charge to you my PROOF TREATMENT FREE.

FREE

Don't miss this offer. My PROOF TREATMENT is FREE. It should make you feel better at once. I will also send you **Free** my **new book of advice,** together with testimonials from many well known people. **Write to-day. DR. H. C. BRADFORD, 287-F Bradford Building, 20 East 22d St., New York**

NOTE.—Dr. Bradford is a diplomated, practising physician, licensed and registered by the State of New York; famous many years as a specialist in reducing fat and improving health by scientific, gentle, home treatment.

In Japan, the largest fruit-growing interest is in oranges, then persimmons, peaches, pears, plums, apples and grapes, in the order named.

Don't Wear a Truss

FREE

STUART'S PLAS-TR-PADS are different from the truss, being medicine applicators made self adhesive purposely to hold the parts securely in place. No strap, buckles or springs—cannot slip, so cannot chafe or compress against the pubic bone. The most obstinate cases cured. Thousands have successfully treated themselves at home without hindrance from work. Soft as velvet—easy to apply—inexpensive. Awarded Gold Medal. Process of recovery is natural, so no further use for truss. We prove what we say by sending you Trial of Plapao absolutely FREE. Write TODAY.

TRIAL OF PLAPAO
Address—PLAPAO LABORATORIES, Block 57 St. Louis, Mo.

Agricultural Literature Free.

The Agricultural Department of the Rock Island Lines has issued a number of bulletins giving money-making information on many special lines of farming. These are meaty business write-ups, each one designed to help the farmer to immediately increase his profits. The titles are as follows:

How to Double the Yield of Corn.
How to Make Poultry Pay.
Money Making in Dairying.
Increasing the Meat Yield per Acre.
How to Raise Large Crops of Corn.
How to Grow Rice.
How to Grow Cotton.
Making Money in Poultry Raising.
The City Man on the Farm.
Farm Management.
The Spanish Peanut as Feed.

Any or all of these will be sent free upon request. Write to-day to L. M. Allen, Passenger Traffic Manager Rock Island Lines, 411 LaSalle Street Station, Chicago, Ill.

Caring For Boys' Clothes.

It is a good plan to keep a good cleaning fluid on hand for removing spots from boys' clothes, and there is none better for removing spots and for cleaning the garment all over, if it is not soiled enough to be washed. Take five quarts of soft water and into this put three ounces of castile soap shaved fine, four ounces ammonia, one ounce of ether and one ounce of spirits of wine. Put the ingredients in a bottle and shake well, and use one teaspoonful to a pint of warm water. Clean with a stiff brush, then rinse with clean water, and when dry rub well with a cloth before pressing.

Most boys are sensitive about patches, and an easy way to mend pants at the knees when they wear through is to cut out the ragged thin part and seam in a new piece above and below the knee, letting the sides come into the side seams, and it is wise to make the seat double, so that when they begin to wear through they are easily mended.

A fad to be commended is the wearing by both boys and girls of the little blue denim overalls, as they not only save washing, but allow freedom of movement.

If a coat or pair of pants is much soiled, it is easier to wash the garment than to try to remove the spots from the fabric, and there is nothing better for cleaning the soiled garment than warm suds to which a small cup of gasoline has been added.

If the boys have outgrown their blouse waists, they may be let down at the bottom two or three inches, and the bagging will conceal the piecing, and it is a good plan to use studs instead of buttons up the front of the blouse, as buttons are always tearing out.

One economical mother fashioned a stylish suit for her boy from a faded blue cloth suit of her own; but the pieces were first washed clean and then colored a rich dark blue with Diamond dye for wool, and it looked like new goods after a careful pressing.

The best parts of a rusty black cloth suit of the father's was recolored a jet black with black dye for wool and made into a serviceable suit for every-day wear, and in this way her boy was furnished with two nice suits with a very small outlay of money, and they were as nice and stylish as the high-priced ready-made garments. Good patterns can be bought for a trifle, and the made-over garments only need neat finishing and careful pressing to make them as nice as new, and they look much nicer than the cheap ready-made articles.—Martha.

Needle Notes.

Still the kimono and peasant waist lead the styles. And what a boon to the home seamstess who hates putting in sleeves!

The still popular combination of two different materials in a gown offers a good field for those who wish to remodel old gowns or have enough left over from some other gown to go a long way toward a new dress.

One-piece tub dresses are to be more popular (if possible) than ever the coming season. So the woman who finds it convenient to do her spring and summer sewing in the late winter months can safely proceed along that line.

In doing the summer sewing, make a couple of slips, that is, petticoat and corset cover combined, to wear under thin gowns. They vastly improve the appearance of the thin gown and are more comfortable than the separate garments.

The "shirt" for women is holding its own. This is a sensible blouse made after the lines of a man's shirt and similarly tailored. It has a soft French collar. Three yards of thirty-six-inch material are needed. The woman who adds a couple of these to her wardrobe will appreciate them.

The latest patterns give skirts neither too narrow nor too wide—just a good, sensible width for neat appearance and comfort.

The "bell" sleeve, in a very modest form, is seen in some of the spring coats, and occasionally in a blouse.

The most attractive models of gowns seen in the advance styles for the coming season are those devoid of frills and fussiness. A good opportunity for the home sewer to have plain, attractive clothes, elegant in their simplicity, and saving time, not only in the first making, but in laundering all through the summer.—Janet Thomas Van Osdel.

A Missouri Agricultural College Cow.

Carlotta Pontiac, a seven-year-old Holstein cow owned by the Missouri College of Agriculture, has beaten the record of Missouri Chief Josephine in butter production. She produced during the month of January 2,146 pounds of milk which tested 3.57 per cent. This makes the butter-fat yield for the month 76.6 pounds, or about one-tenth of a pound more than was produced by Josephine for her best month's fat production.

Carlotta Pontiac does not give the quantity of milk produced by Josephine, but her fat record is very much higher. She has been milking for 140 days and in this period of time has produced 9,268.6 pounds of milk, containing 305.1 pounds of butter-fat. This is equivalent to 381 pounds of butter. Her average daily milk yield is 66⅔ pounds. Her daily yield of butter-fat is 2 1-5 pounds.

How to Reduce Cotton Acreage.

Farmers are finding out that they can go too far with one crop, and they are finding also that to reduce one crop does not necessarily mean to reduce the cultivated acreage. Mr. O. F. Dornblaser, National Committeeman of the Farmers' Union, is quoted as saying: "We are getting splendid results all over the cotton belt, and the farmer is beginning to understand that it is not a matter of less cotton, but an increase in acreage of all crops, other than cotton."

$1 Worth of Mayr's Wonderful Stomach Treatment FREE

It is a positive remedy for all Stomach, Liver and Intestinal Trouble, Gastritis, Indigestion, Dyspepsia, Pressure of Gas around the Heart, Sour Stomach, Distress After Eating, Nervousness, Dizziness, Fainting Spells, Constipation, Congested and Torpid Liver, Yellow Jaundice, Sick Headache and Gall Stones.

The above ailments are mainly caused by the clogging of the intestinal tract with **mucoid and catarrhal accretions**, backing up poisonous fluids into the stomach, and otherwise deranging the digestive system. I Am the Paint Man

O. L. Chase, The Paint Man
St. Louis Chicago

O. L. Chase Made-to-Order Paint, Sold Everywhere Has Established A New Standard of Paint Worth.

YOU should get "My Fresh Paint Book." It's new — it's original — it's unique. It tells you all about paint—how you can know good paint—how you can make yourself a judge of what serviceable, worth-while paint really is. It will help you to avoid buying cheap, shoddy paint often sold at high prices on extravagant claims.

You can get O. L. Chase Made-To-Order Paint either direct from me or through a responsible accredited dealer in your town.
I Pay The Freight

After reading my book you can depend on your own best ideas—you can buy paint that will give you eye pleasure,—and will last longer than the ordinary paint—which will serve the real purpose of paint, namely: For **Protection, Appearance and Cleanliness.**

Read What the U. S. Government Says About Paint.

The U. S. Department of Agriculture, in Bulletin No. 474, issued Nov. 29, 1911, says, in part:

"It would probably not be denied by any one that a better paint can be made in a well equipped factory than by an individual at home in a small shop. Many ready-mixed paints are of the very best quality, but many are of poor quality, made of cheap materials and at the same time are sold with extravagant claims and for high prices."

Read What O. L. Chase Says In "My Fresh Paint Book."

"Most people know little about Paint. Too many of them . . . . either go to a store and lay down their money for 'any old kind' of *stale*—ready-mixed Paint the dealer may have on hand or try to mix some themselves. . . . . Any good painter—and they all are with us—we'll tell you that O. L. Chase *Made-to-Order Paint* gives you longer life and is the only kind of paint to use—Any good painter knows. . . . . Just a little practical knowledge will enable YOU to avoid all that—and practical paint knowledge is what I am giving in this book. I know paint from the standpoint of the painter—I know paint from the standpoint of the manufacturing chemist—I know paint from the standpoint of the manufacturer—and ALL my knowledge is YOURS FREE."

Study what the Government Says—Study What O. L. Chase Says. Isn't My Made-To-Order Paint the Right Paint?

Over fifty thousand users all over the country have enthusiastically decided it is.

When you receive your Made-to-Order paint, if it's six gallons or more, use two gallons. Then if you're not satisfied, return the balance to me. The 2 gallons you use won't cost you a penny.

You can't know paint till you have read "My Fresh Paint Book." It's the only book that tells of the new standard of Paint Worth, O. L. Chase Made-to-Order Paint. It's free. Write to nearest address.

O. L. Chase, The Paint Man, Inc., Dept. 16 St. Louis, Mo. or Chicago, Ill.

MISS LIFE.

Her tinkling feet go dancing by,
Her cheeks are sweet to woo;
Unto her rosy arms we fly,
Unto her bosom true.
She leads us to the morning mile
With dancing gay as hers;
The valleys 'neath her footsteps smile,
The wakening mountain stirs.

A butterfly of dew and dream,
From flower to flower she soars;
A light heart o'er the burning gleam
Where labor's mill wheel roars;
The verges of the battle lure
Her footsteps, and she stands
By her dear sister grief to hold
The lost sword in her hands.

Across the hills in morning light,
Through many a teeming street,
Her heart so curious, eyes so bright,
She toils on tireless feet.
Upon ships of joy and gloom
O'er oceans wide she sails;
And still along her path of bloom
The human army trails.

Even in our weariness of all,
At end of all we lie,
Stretching our shadows on the wall
To see her form go by.
Through the delirium of that sleep,
Ere worms destroy our clay,
We clasp the shadow we would keep,
We plead with her to stay.
—Baltimore Sun.

EVERYBODY MILKS IN IOWA.

Everybody milks in Iowa,
We all like the cow,
Pinning our faith to bossy
Has made our neighbors bow.
Everybody milks in Iowa,
Even Sister Rae;
Everybody does the milking
In I O A.

Everybody miks in Iowa,
Summer and winter time,
Makes no difference to Iowa,
They milk, rain or shine.
Soil is growing richer,
Debts are cleared away,
Just because they're milking
In I O A.

Everybody milks in Iowa,
Let me tell you that,
Buying auto-mobiles
With the butter-fat;
If the grain crops fail them,
They don't move away,
Just keep right on milking
In I O A.

Everybody miks in Iowa,
Hear me what I say,
Live on milk and honey
While the cows eat hay.
Mother's quit her washing,
So has Sister Ann,
Everybody's gone to milking,
Even my old man.
—E. T. Sadler, in Hoard's Dairyman.

THE AMIABLE MAN.

I've never found that speech profane has won a friend for me.
I've never found it paid me much to cuss.
And while I know a lot of words of sheer profanity,
I've never found they've helped me in a muss.
And so it is no mortal lives who's ever heard me swear,
Not even such a little word as "My!"
When things go wrong and seem to be completely past repair
I simply bang my foeman on the eye.

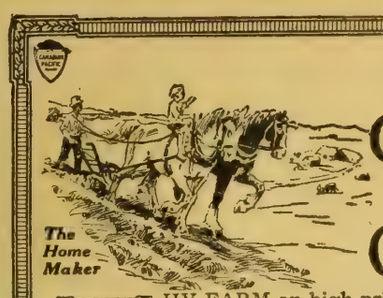
I've never found it paid to meet my trouble with a frown—
It doesn't pay to corrugate one's face.
Frowns only serve to drag a fellow's troubled spirit down,
And fill his mind with notions mean and base,
And hence it is my pallid brow of wrinkles all is free,
Nor gives an outward sign of inward cares.
When some one comes along by day or night to pester me
I simply smile and kick him down the stairs.

I don't believe it ever pays to lose one's temper o'er
The little slings and arrows of this life.
I don't believe an angry shout or loud and blatant roar
Will ever ease a fellow of his strife.
It's better far to go your way with fresh and happy mien,
As though you dwelled beneath a flag of truce.
And when the hosts of Trouble shall appear upon the scene,
Take off your coat and thrash 'em like the deuce.
—Lippincott's.

FAREWELL! IF EVER FONDEST PRAYER.

Farewell! if ever fondest prayer
For other's weal availed on high,
Mine will not all be lost in air,
But waft thy name beyond the sky.
'Twere vain to speak, to weep, to sigh;
Oh, more than tears of blood can tell,
When wrung from guilt's expiring eye,
Are in that word—Farewell! Farewell!

These lips are mute, these eyes are dry;
But in my breast and in my brain
Awake the pangs that pass not by,
The thought that ne'er shall sleep again.
My soul nor deigns nor dares complain,
Though grief and passion there rebel;
I only know we loved in vain—
I only feel—Farewell! Farewell!
—Lord Byron.



Get Your Canadian Home *from the* Canadian Pacific

The Home Maker

W HY FARM on high-priced, worn-out lands when the richest virgin soil is waiting for you in *Manitoba*, *Saskatchewan* and *Alberta*, the great Prairie Provinces of Western Canada? In many parts of the United States you have to spend as much money to fertilize an acre of your farm, as a fresh, rich, virgin acre will cost you in Western Canada. The first prize of $1000 for the best wheat in the world was awarded to a Western Canada farmer at the New York Land Show—farmers on our low-priced lands won first, second and third prizes for wheat in competition with the world.

Go where you too can prosper, where you will find perfect health, where you can earn a farm and a home in a few years' time at most—many farmers have paid for their farms with one crop—where it does not take a lifetime of drudgery to make a competence and where energetic efforts bring riches quickly.

Land from $10 to $30 an Acre Ten Years in Which to Pay

The Canadian Pacific Railway Company offers you the finest irrigated and non-irrigated land along its lines at low figures, and on long terms of payment—lands adapted to grain growing, to poultry raising, dairying, mixed farming, and to cattle, hog, sheep and horse raising—in the Prairie Provinces of Manitoba, Saskatchewan and Alberta. Select your own land. Decide what kind of farming you want to follow, and let the Canadian Pacific Railway put you on the road to fortune. Magnificent soil, good climate, good markets, excellent schools, good government, all are awaiting you in Western Canada; and a great Railway Company whose interest it is to help you to succeed, is offering you the pick of the best. *The best land is being taken first.* Don't wait. Ask for our handsome illustrated books and maps, with full information, free. Write and investigate this great proposition today. Address

THE COWGIRL.

When Mary drives the cattle home
She don't walk down the lane,
The way the farm girls do down East—
For walkin' is in vain
When one is livin' in a land
That 's level as your hand,
And when the fences of all sorts
Are scarce to beat the band.

When Mary drives the cattle home
She saddles up and hikes
For fifty miles, or mebbe more,
Before a trail she strikes;
It ain't no lazy farm-girl's job—
It's rough work, at the best,
When Mary drives the cattle home
Across the boundless West.

When Mary drives the cattle home,
She calls, clear up the road;
She never yet got losted,
And she never yet got throwed;
And she makes a purty picture
In the sunshine or the rain,
When Mary drives the cattle home,
Acrost the Western plain.
—Arthur Chapman, in Denver Republican.

THE RICH MAN.

Look at de rich man—
Money's hard to beat—
Plenty on de table,
But he can't afford ter eat!
He worry an' he worry,
De worldy way along.
You seldom hear him whistle,
An' he never raise a song!

An' w'en dey gits him yander
In de region of de sky,
Dey puts him thoo sich questions
Dat he mos' too weak ter fly!
—F. L. Stanton.

DO YOU WANT A GOOD Position as a Traveling Salesman or Saleswoman

Where You Can Earn From $1,000 to $5,000 a Year and Your Expenses?

ITCH-ECZEMA FREE TRIAL

(Also called Tetter, Salt Rheum, Pruritus, Milk-Crust, Weeping Skin, etc.)

ECZEMA CAN BE CURED TO STAY, and when I say cured, I mean just what I say—C-U-R-E-D, and not merely patched up for awhile, to return worse than before. Now, I do not care what all you have used, nor how many doctors have told you that you could not be cured—all I ask is just a chance to show you that I know what I am talking about. If you will write me TO-DAY, I will send you a **FREE TRIAL** of my mild, soothing, guaranteed cure that will convince you more in a day than I or anyone else could in a month's time. If you are disgusted and discouraged, I dare you to give me a chance to prove my claims. By writing me to-day you will enjoy more real comfort than you had ever thought this world holds for you. Just try it and you will see I am telling you the truth.

Dr. J. E. Cannaday, 684 Park Square, Sedalia, Mo.

Could you do a better act than to send this notice to some poor sufferer of Eczema?

If You Are Becoming DEAF

or are troubled with

Ringing Noises in the Head

My Illustrated Free Book Contains

JOYFUL NEWS

I do not offer you makeshifts such as artificial ear drums or other apparatus; **I do not approve** of saturating your system with habit-forming drugs. I am not content to merely give you a brief period of relief from deafness but my aim is

TO CURE YOU PERMANENTLY

I am a practising physician of 32 years' active, extensive, experience. I know the only satisfactory method of conquering deafness and head noises is in getting at the seat of the trouble and curing it.

I have published a book; it is written in easy, plain language and is **illustrated.** It tells you facts you probably never imagined and you may see just why you probably never succeeded in getting a real, lasting cure before. It is the one treatise you have been seeking and it tells all about **the one Method** you should adopt and which is comparatively inexpensive.

DEAFNESS IS DANGEROUS

There always was some danger in being deaf but with the invention of rapid speeding automobiles, no deaf or partly deaf person can feel safe. Accidents to those who could not hear well, are being recorded by thousands. **Moreover, deafness**

Annoys Others by Forcing Them to Shout at You
Prevents You from Enjoying Theatres, Concerts, etc.
Makes You Feel a Bore When in Company
Hinders Your Success in Business or Socially
Stops You from Hearing Sweet Sounds of Nature
Is usually Allied with Nervousness and Despondency

My book explains why it is very probably your own fault that you remain deaf and why you are becoming a little harder of hearing every year. Explains nervousness. Shows wherein the underlying causes of continued deafness or head noises are probably

SHORTENING YOUR LIFE

My book tells you how I have cured cases which have been given up as hopeless, it explains wherein you may gain **wonderful benefit** from the very outset. It is a book for **men and women of any age.** It fearlessly exposes the frauds that prey upon those who are deaf. It shows you how **Nature is patiently waiting** for you to give her a chance to help you. This book, you may say, is WORTH ITS WEIGHT IN GOLD to you, yet **it will cost you nothing** but the expense of a postcard or stamp in writing for it. Don't pass this by and say "it is like the rest of them—I am disappointed and discouraged," but get the book now and be surprised—joyous—at the prospect of a

BOOK ABOUT PERFECT HEARING FREE

SPEEDY, LIFELONG, HOME CURE

Throw aside your prejudice over past failures, no matter what bad luck you may have had even with skilled specialists. My book shows you why they so often fail and gives you simple directions for testing whether your own case is hopeless or **probably curable.** There are many genuine pleasant surprises in my book. **You will feel better** for having read it. Let me send it to you, in plain wrapper, **absolutely free.** Keep this adv't. Address:

Station E, 228 B, New York, N. Y.

Growing Wild Flowers.

Some morning you will rejoice to find the sun shining and the birds singing, and I will almost fancy that you can detect the faint odor of the early wild flowers. And then a cold spell comes which stops the swelling of the buds and sends your hopes zeroward. It is easy, though, to take advantage of those first genial days and thus have a bit of spring within doors when there is none without.

Procure a box of suitable size for the window, and on the first really warm day fill it with soil from the woods, covering with moss if you prefer. Also visit the sunny bank where you always find the earliest flowers, and if the ground is sufficiently thawed, a nice collection of roots of the various native plants are yours for the digging. Some of them may not have even sprouted. But take courage in the thought of how rapidly they grow when the warm rains and sunshine come. There will be some bulbs with which you are familiar, others you cannot name. But gather all that come your way, and thus have a miscellaneous collection just such as nature prepares.

Water thoroughly with tepid water, and the brief snatches of sunshine upon the glass will soon call forth buds and blossoms. One of the chief joys of spring is in noting just how fast the green leaves can grow. And here you have the pleasure of seeing every change. In the woodlands you have looked mainly for the flowers, but here you become familiar with every step leading to them.

Later, when the flowers have burst forth in their home places, you will have become so much pleased with this intimate way of knowing them as to want a wild garden, where you can have them every year. The notion that they are hard to grow is entirely wrong. The main thing is to give them as nearly as possible the soil and surroundings which they get in their natural home.

What shall you plant? That depends largely upon your location, for the plants which grow in your own locality will most surely thrive. But if there is a species which you know to be difficult to transplant, or which is almost on the verge of extermination, protect it in its native wilds instead of striving to remove it.

Violets may usually be depended upon to grow and thrive, and there are numerous species occupying a wild range of country. The common, blue, stemless ones which spring up in the pastures everywhere are easily transplanted when in full bloom and continue to flower for weeks as though nothing had happened. In fact, if you do not keep one eye open they are apt to crowd out the more delicate species.

It is remarkable how well plants transplanted when in full bloom endure the change. In the case of bulbous ones this is almost the only way one can secure them unless their exact location is previously known, for the period of growth above ground is brief, and only those who best know their habits would be likely to catch or notice them save when at their greatest glory. But they never mind it, adapting themselves easily to the new home and ready to surprise you another year with their beautiful blossoms.

Aquilegias are most easily grown and increase rapidly from seedlings as well as roots. The native varieties are many of them more graceful in outline than the exotics. Many of the lily family do even better than in their native haunts. A few of the orchids thrive for a year or two, but the majority are shy of being disturbed. Ditto as to the heath family. The trailing arbutus and mountain laurel seldom live in the hands of the novice. Study your own flora and note which members increase rapidly by seed or root, and then select in accordance with this, bearing in mind that the spring flowering bulbs, like the crocus and tulip, may usually be depended upon.—Bessie L. Putnam.

Who Deserved the Laugh?

One beautiful day, a few weeks ago, State street, Chicago, was crowded with shoppers and sightseers, when a diversion was caused by the appearance of a full-blooded Indian in his costume of the plains. For the moment all eyes turned from the attractive displays in the shop windows to view the Indian in his gay blankets, his bright head ornamentation of feathers, his brilliantly-painted cheeks and his strings of many-colored beads. There was a smile on the faces of most of the onlookers and a laugh came from the lips of many. In fact, that Indian passing through the down-town streets of the city caused a great deal of merriment and wonder. Of course, it was a cosmopolitan crowd, but at least seventy-five present of the women who came under my observation just then had their faces made up with powder and rouge; were wearing plumes or quills on their hats; had gay ornaments of all sorts about their necks and on their persons, and a few had on skirts too tight for comfort and scandalous as to looks, while some wore shoes so tight and so high of heel that they could not walk but rather minced along. Now, which was the more barbarian—the Indian in his paint and feathers and ornaments, or the women in their paint and feathers and divers ornaments and extreme clothing? Perhaps there was a smile on the Indian's stolid face beneath the paint, as he swung along the street, making full use of the feet nature had given him. And why not? Had he not as good a right to laugh at the painted, ornamented females mincing along beside him as they to laugh at him? Really, there are far more ridiculous things among us than that Indian from the plains.—Janet Thomas Van Osdel.

Strawberries from Florida in refrigerator carriers have sold in St. Louis, wholesale, at 40 to 50 cents a quart.

A Twin Automobile Seat Top Buggy

For Only

$33.65

Stylish, Strictly Up to Date

Sold on Thirty Days' Trial

This is just one of the hundred great bargains we show in our **1912 Price Reduction Vehicle Book,** the greatest printed vehicle showroom in America, describing in detail the most stylish, up to date line of buggies, phaetons, surreys, road carts and wagons ever manufactured.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial; and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H - - Notre Dame, Ind., U. S. A.

The above patterns will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents for each.

Please address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Homely Hints.

Sometimes the paper on the bottom of a cake is difficult to remove, but if the cake is warmed slightly it will peel off without trouble.

In polishing copper, sprinkle a little powdered borax on the cloth. It works like magic.

When you have dried currants to clean, pick out all the little stones and stems, fill a flour sifter half full of fruit, and set in a basin of water. Turn the handle as if sifting flour, and change the water often till it remains clear. Drain in the sifter. Then spread the fruit on a towel to dry.

It is said that if one-fourth of a teaspoon of ground ginger be added to each batch of doughnuts, the spice will never be detected and the doughnuts will not soak fat.

BEAUTY PINS—SOLID GOLD FRONTS.

Guaranteed to wear for five years. Send us your name and address for our illustrated catalogue with 25 cents in stamps to cover postage, packing, etc., and we will send you one pair of these beautiful pins postpaid. Write to-day.

C. E. BROOKS, 59 State Street, Marshall, Mich.

THIS GENEROUS TREATMENT AND 36 PAGE ILLUSTRATED BOOK FREE

Dr. F. W. Jiroch, of Chicago, who is regarded by many as perhaps the best specialist of modern times in his chosen field, makes you this liberal offer.

If You Are Sick Let Me Help You

Just mark with a cross X in the coupon below any of the different symptoms you have and send it to me, and I will send you the **Treatment Free** so you may make a personal test of just what my special medicine will do.

This Treatment Will Be Delivered By MAIL, POSTAGE PAID, Right to Your Own Door Without One Cent of Expense to You

This offer is made to any person who sincerely wants to be cured of Kidney and Bladder Ailments, Rheumatism, Stomach, Liver and Bowel Disorders, Heart Trouble, Nervous Weakness, Catarrh and all other diseases arising from impure blood, Uric Acid conditions, Etc.

SEND NO MONEY Simply put a cross X mark before the symptoms that you have, cut out the coupon, sign your name in full and complete address, and I will do the rest.

The Object of This Advertisement

is to reach the sick, weak and suffering; those who have failed with other treatments, those who have given up in despair, those in remote places who are not supplied with modern, up-to-date and successful methods of curing diseases.

I Want to Prove to Those People at My Own Expense That I Have the Real Remedies

I have perhaps the most successful method yet devised for the permanent cure of diseases of which I have made a specialty. I do not ask you to accept my word for this. I am a Specialist and I do not have one remedy that cures everything; no patent medicines; no "dope." My special treatments are made up of my own private prescriptions perfected after years of successful practice. My great success is due to knowing what remedies cure and treating my patients honestly. I count my cures by the hundred where a doctor in ordinary practice counts but one.

To Prove My Claims I'll Send a Treatment Free to Test

I want you to try at my expense, not yours. All I want to know is what you want to be cured of. I have made it convenient for you to tell me this by simply putting a cross X mark before the symptoms you have on the attached coupon or write me a letter in your own words about anything of a private nature (man or woman) that you want me to know. I realize that I must help you and get your good will if I expect you to recommend me to others. And you must believe that my remedies are genuine, and that I do cure, otherwise I could not afford this expense of advertising.

The Vast Majority of Patients I Treat Are Those who Have Failed With Other Treatments

You may feel discouraged on account of past failures; patent medicines may have proven worthless; your home doctor may have exhausted himself—even pronounced your case incurable—but this does not prove that I cannot help you and that I may cure you. The worst cases come to me. My treatment may be a surprise to you. Set aside your doubts; try once more. Try at my expense. You have nothing to lose.

Accept My Liberal Offer!

It Places You Under No Obligation Whatever To Me

I repeat—you are under no obligation to accept this free offer. No contracts; no express charges. I will pay the postage myself and deliver the treatment right to your own door without one cent of expense to you. Do not delay; do not argue. Just say to yourself "If Dr. Jiroch has so much confidence in his ability and his treatment to go to all this expense I am going to let him try." Put a cross X mark before the symptoms you have; sign your name and address to the attached coupon, cut it out and mail it to me to-day. It will obligate you to nothing. Just let me try to help you. Address,

Dr. F. W. Jiroch, Dept. 1225, 533-535 So. Wabash Ave., **Chicago, Ill.**

INDICATE YOUR SYMPTOMS HERE for FREE DIAGNOSIS

Cut Out and Mail This Coupon Today

I wish to avail myself of your offer to get a proof treatment free so I can test it in my own case, I have placed a cross X mark before the ailments for which I desire treatment and XX before my worst troubles.

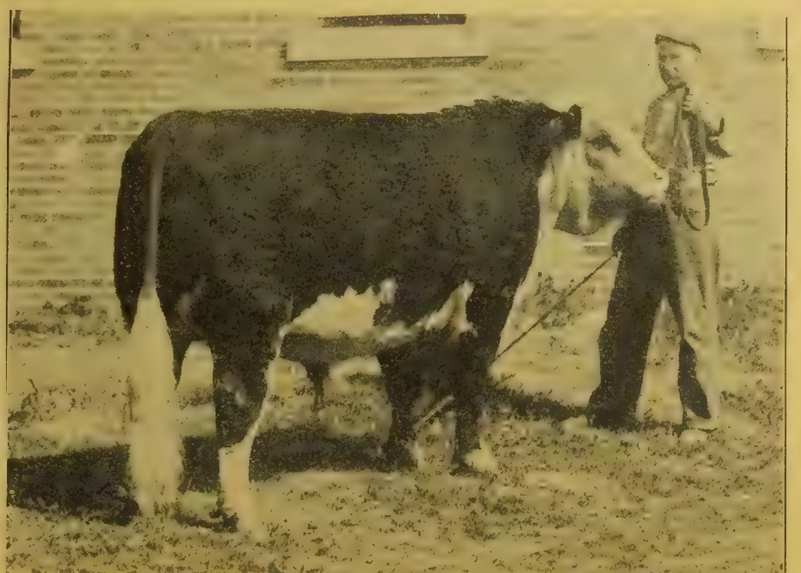
IOLANTHE, 40,925—PERCHERON MARE. Shown in exhibition thirty-eight times and thirty-six times first or champion, including championship mare two different years at the Chicago International Live Stock Exposition. Owned by Gregory Farm, W. S. Corsa, Proprietor, Whitehall, Ill. This is a sample of the half-page pictures appearing in The Book of Live Stock Champions advertised on page 23.



GAY LAD, 6th—HAS NEVER KNOWN DEFEAT IN THE SHOW RING. Has always won first in class, and as a yearling won three championships out of eight shows. In 1911, as a two-year-old, he won championships at State Fairs, American Royal and Chicago International Live Stock Exposition. This great Hereford bull was exhibited by Overton Harris, the Model Farm, Harris, Mo. This is a sample of 720 pictures which appear in The Book of Live Stock Champions advertised on page 23.

and Stock GROWER

My Ideal of a Car

By R. E. Olds, Designer

Reo the Fifth—My Farewell Car—in every detail marks the best I know. And I've built cars for 25 years. If any man can build a car better he's a better man than I.

To the Men Who Have Faith in Me

Automobile makers say it is simply impossible to give the best in a car for $1,055.

I agree with them.

This price, I believe, can not be continued. Our contracts with dealers provide for advance.

But I promise you this:

Reo the Fifth, while I direct the making, will embody the best of which I am capable, regardless of price or profit.

Men Look to Me

Tens of thousands of men, in the past quarter century, have used cars of my designing.

They have come to have faith in me. They believe that I know.

Reo the Fifth is my finest car, the cap-sheaf of my career. And myriads of men will remember me by it, whatever new cars the Reo plant may bring out.

You who look to me can rest assured that this car marks my limit.

The Final Touch

I have spent 18 months in designing this Farewell Car.

I searched the whole motor car world for ideas for it. In it I embodied the best I had learned from the 23 models which I built before it.

I never before gave such care to a car. Nor has any other man, I think.

Never have I stood for such big margins of safety—never insisted on such careful inspection.

Never before have I gone so far to get the final touch.

Look for Yourself

The lines of the car show its up-to-dateness.

The body is finished with 17 coats. The lamps are enameled. Even under the hood you'll find the engine nickel trimmed.

Note the deep upholstering, made of genuine leather, filled with genuine hair.

Note the car's roominess. Note the big wheels. The car is over-tired.

Note the absence of petty economies.

The Parts Which Tell

But the parts which tell in the long run are the hidden parts of a car. Men's final judgment will depend on them.

I use Nickel Steel in the axles and driving shaft, and I make them much larger than necessary. I use Vanadium steel for connections.

Each lot of steel, to make sure of it, is analyzed before I use it.

The gears are tested in a crushing machine of 50 tons' capacity.

The magneto is tested under conditions which very few can stand.

The carburetor is doubly heated, to avoid the troubles due to low-grade gasoline.

Roller bearings are used—Timken and Hyatt—where ball bearings once sufficed. There are only three ball bearings in this whole car, and two are in the fan.

So in every part. All the precautions taught me by experience are employed in this Reo the Fifth.

New Center Control No Side Levers

Then here, for the first time, is a cane-handle control. All the gear shifting is done by slightly moving this lever in each of four directions.

Both brakes are operated by foot pedals, and one pedal also operates the clutch.

So there are no side levers—there is nothing in the way of the front doors.

This arrangement permits the left side drive, heretofore possible in electric cars only. The driver sits as he should sit, close to the cars he passes and on the up side of the road.

These are conveniences fouhd today in Reo the Fifth alone.

Ask for the Book

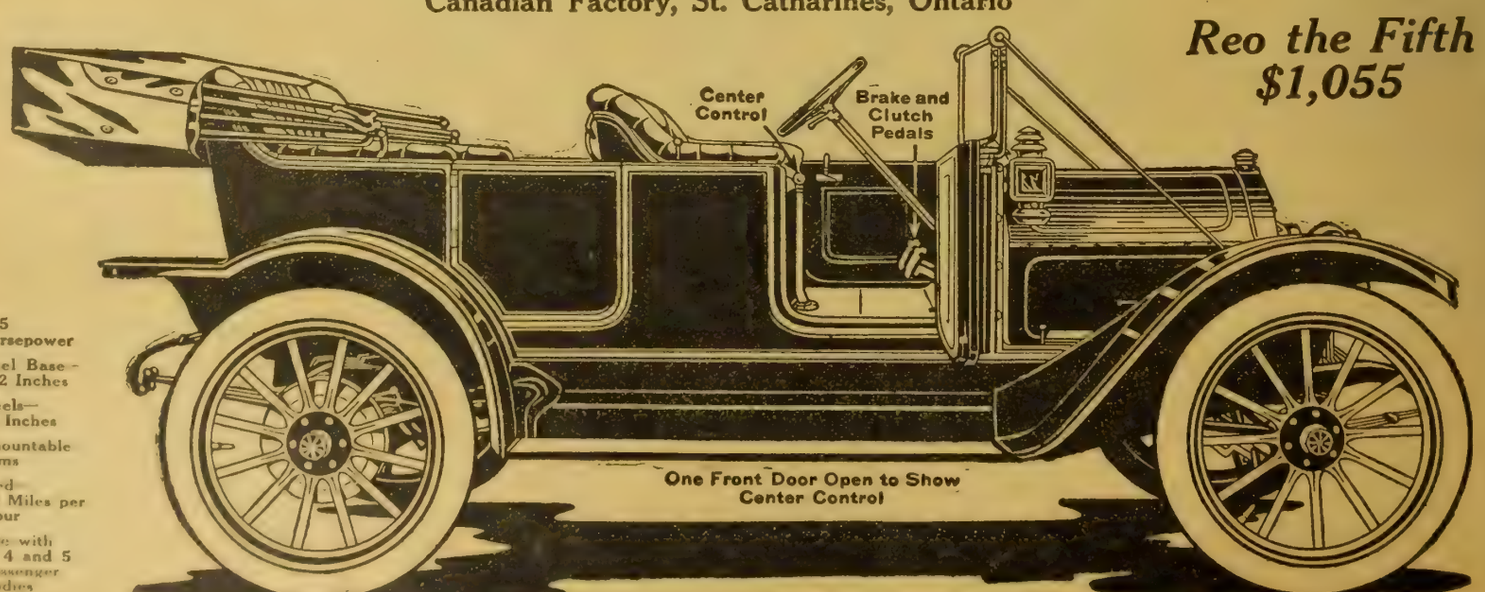
Our Book points out all the perfections, and pictures the various bodies. Every motor car lover should have it, for this is one of the interesting cars.

Write us to mail it—write us now—and we will also tell you where the car can be seen. Address

R. M. Owen & Co. General Sales Agents for Reo Motor Car Co., Lansing, Mich.

Canadian Factory, St. Catharines, Ontario

Reo the Fifth $1,055



30-35 Horsepower
Wheel Base—112 Inches
Wheels—34 Inches
Demountable Rims
Speed—45 Miles per Hour
Made with 2, 4 and 5 Passenger Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas tank and speedometer—all for $100 extra. Self-starter, if wanted, $20 extra.

Our Industrial Policy.

The National Farmer and Stock Grower is in favor of the United States collecting a reasonable range of customs duties upon all foreign farm products and all foreign manufactured goods admitted into the United States from foreign countries, said duties to be applied to the support of the national government. Import duties on various products as now collected amount to over three hundred millions of dollars a year, and if not collected that way would have to be collected by direct taxes upon our own productions.

Every farmer in the United States is taxed by his county and by the state, and he pays indirect taxation for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal service the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. By collecting these customs duties the United States government receives the income that is necessary and must be collected for the public service and the farmer has a very moderate degree of what is called protection. In times of scarcity caused by drouth or other unavoidable influences the foreign farm productions can come in on a fair basis, and in times of abundance the country thrives better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmers' products the manufacturer would have to shut his doors. Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. It will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out.

National Corn Exposition Prizes.

The Fifth National Corn Exposition will be held in Columbia, S. C., January 27th to February 8th, 1913. The National Farmer and Stock Grower will pay a special prize of ten dollars in cash to any and to all of our subscribers in any state who may win a first or second prize at the National Corn Exposition at Columbia, S. C. This applies to paid-in-advance subscribers of record August 1, 1912.

We will pay the prizes as they are won to boys or girls, men or women, if they exhibit a single ear or ten ears in any corn class and win a first or second prize. If they win a first or second prize at the National Corn Exposition, all that is necessary to do in order to receive one of our special ten-dollar cash prizes is to claim it by sending to us the certificate of the Secretary of the National Corn Show and reminding us of the subscription payment and we will look it up, and, if found to be correct, will remit the money promptly.

This offer applies equally well to first and second prizes won for exhibits of wheat, oats or barley for which the National Corn Show has classes. Heretofore in offering prizes we have required that the seed corn or oats or other grain from which the exhibit is grown be furnished by us. This time no such qualification is necessary. We place no limit upon the number of prizes. We will pay one hundred or one thousand of them. Our purpose is to encourage farmers, farmers' sons, farmers' daughters and farmers' wives to produce crops good enough for selections to be made to exhibit and good enough to win prizes at the National Corn Show.

This prize offer is made to advertise The National Farmer and Stock Grower, to get us more subscribers than we would otherwise obtain, to advertise the National Corn Exposition and to encourage improvement in growing corn, wheat, oats and barley. Our subscribers are all eligible, providing their subscriptions are paid up from August 1, 1912, to February 8, 1913. It applies to all who have already paid their subscriptions covering these dates and to all who pay their subscriptions before August 1, 1912.

The National Farmer and Stock Grower was the first paper in the United States to offer cash prizes for grain exhibits, and we find that the more prizes we pay the more we prosper. The National Corn Exposition is a great, beneficial enterprise, wisely conducted, and we intend to do our part in our own way to help it along and to help ourselves and our subscribers at the same time. Any subscriber who sends in a subscription before August 1, 1912, no matter what premium he may receive as a subscriber, will be eligible to receive a special prize in addition to the prize he may win at the National Corn Show. Look up our subscription premium offers. There are several advertised in the paper.

Garden Notes.

Are you planning for some new things in the garden, or is it to be repeated in the same old way, regardless of the fact that new varieties and methods are continually making your possibilities greater? "Novelties" we always shun. If they are really worth cultivating they will be down in price within two or three years to living figures. Meantime the moderate purse had best leave them with the experimenter and you may be sure that he will finally decide a large per cent. of them not worth perpetuating.

How about the bed of herbs? It is these which give the distinctive flavor to the soup, the roast or the sausage. A small patch of summer savory or sweet basil will be a help in many ways in giving the change so grateful to the average family. Sage is an agreeable flavoring to many, while its medicinal uses should render it worthy of a place. The old-fashioned lavender is still a most useful preventive against moths. If the seed is started in pots it will be found more easily started than when sown in the garden bed. It is very slow in germinating.

Spinach is a plant too little known. Said a well-educated woman: The puzzle to me is why more people do not cultivate spinach. It is so wholesome, so easily grown and so appetizing that every family should have it in abundance. We buy it on the market as soon as it appears, plant a large part of our little garden plot to it and then buy again after our own supply is exhausted." Anyone fond of "greens" will certainly find in this plant a continuous source of supply during the growing season. It is much more economical to grow it than to spend time ransacking the fields for dandelions or other substitutes, and it is more quickly made ready for the table. Sown in spring, it is soon ready for the table, though for the earliest use some prefer autumn sowing.

Salsify is another greatly-neglected plant, and it is strange how many people passionately fond of oysters are ignorant of the merits of this cheap vegetable substitute. True, not all recognize it as in any way like the favorite mussel, though others who never eat the latter find in the well-grown vegetable a source of real pleasure. Choose the larger varieties. Mammoth Sandwich Island is the best, as the roots incline to branch unless grown in light, rich soil; the varieties of smaller size are a plague to the housewife, requiring much time and patience in the cleaning. They may be left in the ground over winter, as freezing does not injure them, and the fresh roots, edible from late summer until they commence to grow again in spring, are a great help in furnishing variety for the table.

Cress is an agreeable relish, and if one has a spring near, it will practically grow itself if given a chance. The fresh leaves are a very pleasiag addition to the popular sandwich or salad, and the plant is an appetizer not to be ignored.

Horseradish may not be wanted in the garden, a low, wet piece of ground being usually chosen for it. Yet it is important enough to deserve some spot of perpetuation. The leaves are often of use in the sick room, and as a cover for the pickle crock they are unsurpassed, while pieces of root give an agreeable flavor to pickles of all kinds and aid in their preservation. But the grated root served with vinegar is the most pleasing form of the plant. This was the beginning of the great factories of Heinz, the man of the "Fifty-seven Varieties," and the man who made the nucleus of a fortune is now proud to show in his great group of buildings at Pittsburg the small dwelling house in which the industry was born. It is easy to have a supply of this relish by planting a few roots, as they increase rapidly. Grind in a small food chopper if you would save labor in its preparation. Put up in cider vinegar it will give an agreeable touch to the meats or sandwich.—Bessie L. Putnam.

Not Always Real Wisdom.

"Old people should never parade their superior wisdom, because it may not be so illuminating as they imagine."—Exchange.

Every Woman Should Get This If She Cares to Save Money

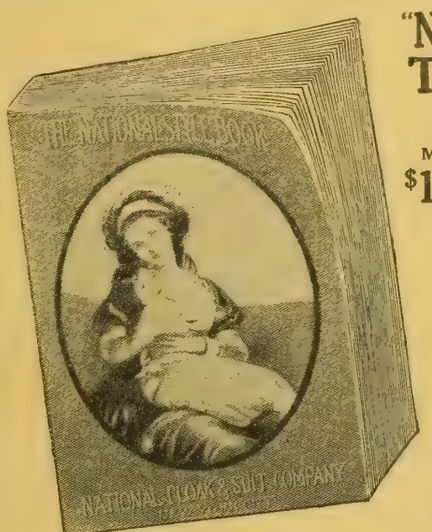
NEW YORK STYLE BOOK FREE

It's absolutely FREE to you right now—the beautiful, interesting, complete "NATIONAL" Style Book for this season—containing 200 pages of the very newest, advanced New York and Paris fashions—the latest advice from the real style centers—with many, many beautiful illustrations of the most up-to-date apparel.

It shows countless bargains—helps you to be one of the very best dressed women—at a *saving*, too. This handsome book is *free* to you for the asking. Send today.

Waists, 98 cents to $6.98
Skirts, $1.49 to $9.98
Lingerie Dresses, $2.98 to $15.98
Silk Dresses, $7.98 to $17.98
Ready-Made Suits, $10.98 to $17.98
Hats, $1.98 to $9.98
Misses' Dresses and Suits, $2.98 to $15.98

Also a full line of Underwear, Hosiery, Scarfs, Veils, Raincoats, Gloves, Sweaters, Leather Goods, Jewelry and a complete line of Boys', Misses' and Children's Wearing Apparel.



"NATIONAL" Tailored Suits

Made to Measure

$12.50 to $30

Samples of Materials Sent Free

Each Made-to-Measure Suit is actually cut and made to order. We guarantee each suit to fit perfectly and to be satisfactory in every way, or we will cheerfully refund your money.

The "NATIONAL" Policy

We prepay postage and express charges on all our goods to any part of the world. You may return any "NATIONAL" garment not satisfactory to you and we will refund your money and pay express charges both ways.

In writing for your Style Book, be sure to state whether you desire samples of materials used for "NATIONAL" Made-to-Measure Tailored Suits. Samples are sent gladly, but only when asked for—and they are well worth asking for.

Wheat Breeding Results.

The Nebraska Experiment Station has just issued Bulletin No. 125, on "Wheat Breeding Experiments." A brief historical sketch of wheat culture is given, together with charts showing the principal wheat-growing areas. The total yield for the last deacade was twice that of the preceding, and about four times that of the decade 1870-1880. The increase is largely due to increase in culture of Turkey Red wheat, which first came into the state about 1890. The improvement of Turkey Red wheat was taken up by the Nebraska Experiment Station in 1902, and has been continued since.

Single heads and plants were selected from large fields, and the product of each head increased until sufficient had been secured to plant test plats in the fields. Field tests with each strain were conducted for four years to determine the best. Quite marked variations were found in the different pure strains of wheat, both in yield of grain and in quality as well. Also, marked differences in lodging and winter killing were noted. The yield of twenty-six pure strains varied from 28.8 bushels to 40.7 bushels, as a four-year average, while the original Turkey Red wheat averaged 35.1 bushels under the same conditions.

Twenty-one farmers also grew eight-acre fields of the best selected strains in comparison with ordinary Turkey Red winter wheat and secured an average of 25.8 bushels, as compared with 21.9 bushels for their own wheat, or a gain of four bushels per acre.

This bulletin may be had free of cost by residents of Nebraska upon application to Prof. E. A. Burnett, Director Agricultural Experiment Station, Lincoln, Neb. Anyone interested in the subject of wheat improvement can safely make application for a copy.

The Corn Market Situation.

At St. Louis, on March 30th, No. 2 corn was quoted nominal, but No. 3 was sold at 74 to 74½ cents. The previous closing price in February wash 64 to 65½ cents. It will be seen from this that corn entering consumption advanced 10 cents a bushel in thirty days. It was a pretty strong market for corn.

The speculative trade, which is based on future deliveries and represents the world market, did not advance so much, but it surely reached equally high figures. We left the May option at 69⅜ cents a bushel on February 29th, and we find it closing at 74⅞ cents on March 30th. We left the July option at 69½ cents on February 29th, and we leave it again at 74¾ cents on March 30th. The corn market September option was quoted at 73⅞ cents on March 30th, indicating that traders do not expect much of a decline on account of the coming new crop.

The May option at 74⅞ cents, which is practically seventy-five-cent corn, was considered as partially due to strong bull influences rather than to absolute necessities of the market operators. The sixty days before the closing of the May option is ample time for all kinds of trading, that may show some fluctuation.

GOOD BOOKS AND PAPERS.

THE NAYLOR MANUFACTURING CO. has issued a catalogue setting forth the tools they manufacture, ranging from the light draft harrow, the single-row pulverator, to the Naylor Giant Pulverator, built for work behind a tractor. The guiding principle is to obtain the most perfect work without unnecessary draft. For catalogue and circulars address Naylor Mfg. Co., Box 43, Plano, Ill.

THE HORSE; HIS BREEDING, CARE AND USE, by David Buffum, is issued by the Outing Publishing Co., 315 Fifth avenue, New York City. It is one of the handy books published by the company issuing the Outing Magazine. Chapters are devoted to thirteen different subjects and all interesting to horsemen.

BLOODED STOCK NOTES.

At Kansas City, March 5th and 6th, a breeders' sale of Hereford cattle was held, resulting in an average of $100.55 for forty-six females and $180.70 for fifty-seven bulls. Mr. R. T. Thornton was manager of the sale. The highest-price female sold for $180, and the best price for a bull was $820, paid by E. E. & M. T. Young, of Lexington, Neb., for Tempter, 3d, a junior yearling.

Thomas Stanton and C. A. Steward sold pure-bred Berkshires at auction on March 6th, and fifty bred sows and gilts sold for $3,845, an average of $77 per head. The top price of the sale was $250, paid by Howard Willetts, of Great Barrington, Mass.

At a sale of Hereford cattle by Jones Bros. at Council Grove, Kas., held March 8th and 9th, 136 females averaged $121.60, twenty-two bulls averaged $172.50, and the total of 158 head averaged $128.70. The top-priced male was Simpson, an aged bull, sold for $600 to R. A. Morley, Olivet, Kas. The yearling heifer Sally topped the females at $320, paid by Glen Woods, of Kansas City.

At Sioux City, Iowa, H. G. McMillan & Sons and White & Smith sold at auction forty head of Shorthorn cattle for an average of $168.15. Nine bulls averaged $178, and thirty-one females sold at $165.20. The high price for a bull was $600, paid for Bandmaster, a calf of June, 1911. The top for females was $330 for the heifer Victoria, 12th.

Mr. E. L. John, breeder of pure-bred English Berkshire swine, is again offering some fine pigs for sale. He is at Broadway, Maries county, Mo., and his express office is at St. James, Mo., on the 'Frisco Route. His pigs are fully up to the standard.

Mr. D. F. Beauchamp, breeder of pure-bred Poland-Chinas, ran out of salable stock last fall, but he has some fine pigs of his own raising for sale now. His home is at Meredosia, Morgan county, Ill., and ships by the Pacific Express. He has good stock that gives satisfaction and the prices are moderate.

General Jose Miquel Gomez, President of the Republic of Cuba, has just bought the three-year-old stallion, Alican, 4,286, from the Cook Farms at Lexington, Ky., and six walk-trot mares. The Cuban Commission bought a number of jacks, stallions and Jersey cattle from the Cook Farms last September, and were so impressed with this great young stallion that negotiations were at once taken up between the President and the Cook Farms, and the deal was closed for the sale.

Volume 59 of the American Poland-China Record gives some idea of that great, popular American breed of hogs. The boars recorded in the volume are numbered from 169,131 to 174,949, and the females are numbered from 407,102 to 418,202. Thus we have a record total of 593,151 pure-bred Poland-Chinas of known breeding. The records show date of farrow, sire and dam, number of pigs raised in the litter, name of breeder and owner, also breeding of sire and dam. The office of the American Poland-China Record Association is at the Union Stock Yards, Chicago, Ill. Mr. J. M. Stewart, of Ainsworth, Iowa, is President, and Mr. W. M. McFadden, Secretary.

On March 14th, Trumans' Pioneer Stud Farm, Bushnell, Ill., reported as follows: "We have sold to Messrs. George M. McCray and D. M. Fowler, of Fithian, Ill., our noted International, Illinois and Iowa grand champion Shire stallion, Royal Grey, at one of the longest prices ever paid for a draft horse on this side. This horse will be remembered as the horse that caused such a sensation at the 1910 International as a two-year-old, being reserve champion to our $10,000 Dan Patch. He had the distinction of winning first and reserve champion at the different State Fairs that year, and last year, as a three-year-old, was champion at the Illinois and Iowa State Fairs and also at the International, and was pronounced by the leading judges of this country as being the greatest draft horse they had seen in the country."

The Holstein-Friesian Association of America has issued a list of prizes to be competed for at the Fairs of 1912, including $750 apportioned to the National Dairy Show. It is a very liberal list, and all competitors are invited to send for a copy to F. L. Houghton, Chairman of Committee, Brattleboro, Vermont.

At Jackson, Miss., March 4th, W. J. Davis & Co. sold at auction twelve pure-bred Hereford bulls at an average of $215.00 per head, and thirty females at $142.83 per head. The best price for a bull was $396.00, paid for Oracle, calved August, 1909, sold to K. H. Knox, Baton Rouge, La. T. L. Shepard, Vineyard, Ark., paid $380.00 for Helen's Ike, a long yearling. The best price for a female was $200.00, paid by W. J. Robinson of Gloster, Miss., for the cow Lizzie, and by H. A. Batterman, of Jackson, Miss., for Alma's Beauty, calved June, 1910.

Fence users will be pleased with Kitselman Brothers' prices—11½ cents a rod up. See their ad. in this issue and write them for free catalogue.

Better Farm Implements
and How To Use Them
JOHN DEERE PLOW CO.
A NEW JOHN DEERE BOOK NOW READY!
Mailed Free To Farmers
Describes and illustrates completely the latest improved farm implements CONTAINS special articles on the care, adjustment and operation of implements, interesting to progressive farmers.
It is a big book, 9"x11" in size, handsomely printed. There will be a great demand for this new big book, so write at once.
Deere & Mansur Line of
Corn and Cotton Planters, Disc Harrows and Hay Loaders.
The world's best. Gold medal winners at every exposition.
We have other beautifully illustrated special booklets. Which one do you want?
More and Better Corn—Booklet. Shows corn planters, etc.
Better Hay and How to Make It—Booklet. Shows hay loaders and rakes.
Alfalfa: Its Seeding, Culture and Curing—Booklet. Shows alfalfa cultivators, seeders, etc.
Bigger Crops from Better Seed-Beds—Booklet. Shows disc harrows, single and double action.
Tell us what implement you want to know about and which one of the special booklets you want, then be sure to ask for the big illustrated book—Package No. X-7.
Get Quality and Service—John Deere Dealers Give Both.

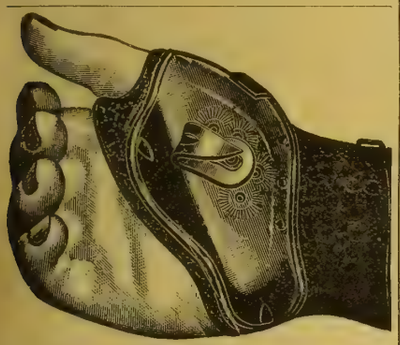
Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husks and prevent clogging. As this is the most approved husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The



strap passes through the leather tongue and the first ring and over the hand to the opposite ring and back through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch-lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle; the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Wheat Market Situation.

In the grain trade there was considerable activity during the month of March, 1912, but it was not in the wheat pit. The statistical position indicated a strong market, but when asked: "What is the matter?" a trader said: "Statistics alone do not make a market." Orders from Great Britain were retarded by the strike of coal miners. Considerable strike troubles were in prospect in this country and the market did well to hold up to former quotations and advance a fraction, which is far better than going backward. The Chicago May wheat option, which closed February 29th at $1.02⅛ per bushel, closed at $1.02 on March 30th. The July option, quoted at 96⅞ cents, February 29th, advanced to 97⅝ cents by March 30th. Another option has entered the trading field, which is September, quoted at 95⅞ cents on March 30th. There is the future wheat situation, Chicago basis, in a nutshell—the May option at $1.02½, and some excitement possible before May 31st arrives. July at 97⅝ cents and September at 95⅞ cents indicate that traders expect the coming wheat crop to be ample for all purposes. On March 30th, cash wheat at St. Louis, No. 2 red, sold at $1.03½ to $1.04½, against $1.02 to $1.02¾ on February 29th.

The Oats Market Situation.

The oats market situation has one spot on it indicating that a good crop would quickly reduce prices. The September trading of 1911 at Chicago was closed out at 45¾ cents, and on March 30th, 1912, this same September option for 1912 was quoted at 43⅜ cents. Let no one suppose that the market will be without changes from now on; indeed, there will be many changes, but the fact will always remain that on March 30th, 1912, oats were sold for delivery on September 30th, 1912, nearly two cents lower than the September option closed out last year. This reduction is brought about by the expectation that the crop of 1912 will be larger than the crop of 1911.

And yet oats as now bought and sold are higher than they were last September. Take cash oats, for instance: On September 30th, 1911, at St. Louis, the standard oats actually sold and delivered on that day brought 46½ cents a bushel, and on March 30th, 1912, also at St. Louis, the oats actually sold and delivered brought 55½ to 56 cents a bushel. There is a cash market for you with the goods sold by sample and delivered by car-load on track the same day.

But the great trading is now done upon the May delivery, Chicago basis, which has to be settled for on May 31st. All other options and all other dates stand aside to let May get into the spotlight. May is the last word on the old crop. May is the "clear up" of the speculative market, and on March 30th the May option of 1912 was quoted at 54⅞ cents, actually 24½ cents higher than on the same day last year for the May quotation. Until the May option is closed out by final deliveries on May 31st, there will be a strain upon every one holding oats unless they have a place for delivery by actual sale.

The July option, influenced by the possibilities of the new crop, closed on March 30th at 50¾ cents, which is 4⅛ cents lower than the May option was quoted. One year ago, from March 31st, oats were being sold at 30 and 31 cents a bushel.

St. Louis Native Cattle.

The following were St. Louis native beef cattle quotations on April 1st: Choice to prime steers, $8.00 to $8.50; good to choice steers, $7.25 to $8.00; medium to good steers, $5.25 to $6.00; choice to prime yearlings, $7.50 to $8.00; good to choice yearlings, $6.75 to $7.75; fair to good yearlings, $5.50 to $6.65; common steers, 850 to 1,000 pounds, $4.75 to $5.50—all quotations at the price stated per 100 pounds.

"There's a GOOD Job! I Used Amatite ROOFING"
"NOW I have the best roof in this township. One that will last—one that's waterproof—one that will resist the hardest storms—and I didn't have a bit of trouble laying it."
That's about what every Amatite owner says. Its superiority over all other ready roofing is apparent to anyone who uses it.
Amatite does away with all roofing troubles and unnecessary expenses because it is made with a real mineral surface that needs no painting. It is durable, fire retardant, practical, economical.
Don't buy any other roofing till you look up Amatite. Write to nearest office for samples.
Amatite ROOFING TRADE B MARK READY TO LAY MINERAL SURFACED NEEDS NO PAINTING DIRECTIONS INSIDE OF ROLL
Everjet Elastic Paint
Save money by using this black paint wherever the color is no objection. Elastic, heat-proof, durable. Use it for "rubber" roofings and all exposed iron and wood.

GRAND SUBSCRIPTION OFFER.

A Splendid Magazine One Year—The Ladies' World—National Farmer and Stock Grower One Year—Eight Standard Grapevines—All For One Dollar.

This is a startling subscription offer, especially valuable to farmers' wives and families and to anyone who owns a home. **"The Ladies' World"** is a monthly magazine,

forty-eight pages, four columns to the page, highly illustrated, cover in colors, beautiful, delightful, splendidly edited, lovely stories, instructive articles, lessons in housekeeping, domestic science, dressmaking, music, amusements, etc. No better, cleaner or more useful paper can possibly enter the farm home.

The National Farmer and Stock Grower is a monthly paper; contains practical information, clean-cut, instructive, up-to-date news of markets and instructive matter concerning general farming, stock raising, dairy, poultry keeping and all the especial features that keep a farmer posted on his own interests in dealing with the world of business.

The subscription offer includes a magnificent collection of **Eight Two-year Standard Grapevines.** These

grapevines are ready for planting. They are two-year-old vines from the best Chautauqua vineyards. The collection consists of **Moore's Early,** a black grape; **Catawba,** dark red when fully ripe; **Diamond,** a large white; **Concord,** black early; **Agawam,** red or maroon; **Niagara,** large and handsome white; **Delaware,** compact red; and **Worden,** a large black grape. We offered this premium last year with great success. The vines are taken up in the fall and held in storage for spring planting. A booklet giving complete directions for planting, pruning, etc., is sent with each set of grapevines.

We will send **The Ladies' World** one year; **The National Farmer and Stock Grower** one year; and the **Collection of Grapevines,** nicely packed, postage paid—all for one dollar.

SUBSCRIPTION COUPON.

Please Cut Out and Mail to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar ($1.00), for which send me **The Ladies' World** one year; **The National Farmer and Stock Grower** one year; and the **Eight Two-year-old Standard Grapevines** as advertised.

The Annual Grain Report.

Every year, on March 8th, the Crop Reporting Board of the United States Department of Agriculture issues a report, which is dated March 1st, and is a compilation from the reports of correspondents and agents and the quantity of grain unsold on farms in the country is estimated therefrom. The officials of the Department of Agriculture have experience in this class of work, and the reports are accepted as being reasonably reliable by the people who are engaged in the grain business.

The Wheat Estimate.

It is estimated that the amount of wheat on farms, March 1st, 1912, was about 122,025,000 bushels, or 19.6 per cent. of the 1911 crop, against 162,705,000 bushels, or 25.6 per cent. of the 1910 crop on farms March 1st, 1911, and 160,214,000 bushels, or 23.4 per cent. of the 1909 crop on farms March 1st, 1910. About 56.1 per cent. of the crop will be shipped out of the counties where grown, against 55.6 per cent. of the 1910 crop and 61.1 per cent. of the 1909 crop so shipped. Standing alone, it is a bull report, but short supplies have no effect when the principal foreign buyer has half the industries tied up with a strike of miners and another one in prospect in this country.

The Department of Agriculture endeavors to send out a memorandum of stocks of wheat in interior mills and elevators. This also is based on March 1st, and, standing alone, would be classed as a bull report. On March 1st there were 95,710,000 bushels of wheat on hand, against 98,597,000 bushels a year ago.

The Corn Estimate.

The quantity of corn on farms, March 1st, 1912, was about 884,069,000 bushels, or 34.9 per cent. of the 1911 crop, against 1,165,378,000 bushels, or 40.4 per cent. of the 1910 crop on farms March 1st, 1911, and 977,561,000 bushels, or 38.3 per cent. of the 1909 crop on farms March 1st, 1910. About 20.5 per cent. of the crop will be shipped out of the counties where grown, against 22.9 per cent. of the 1910 crop and 24.9 per cent. of the 1909 crop so shipped. The proportion of the total 1911 crop which is merchantable is about 80.1 per cent., against 86.4 per cent. of the 1908 crop. The corn estimate is also a bull report, but corn conditions have been no secret, and business influences are not good.

The Oats Estimate.

The quantity of oats on farms, March 1st, 1912, was about 289,988,000 bushels, or 31.4 per cent. of the 1911 crop, against 442,665,000 bushels, or 37.3 per cent. of the 1910 crop on farms March 1st, 1911, and 365,432,000 bushels, or 36.3 per cent. of the 1909 crop on farms March 1st, 1910. About 28.8 per cent. of the crop will be shipped out of the counties where grown, against 30.6 per cent. of the 1910 crop and 32.7 per cent. of the 1909 crop so shipped.

Estimating the Barley.

The quantity of barley on farms, March 1st, 1912, was about 24,760,000 bushels, or 15.5 per cent. of the 1911 crop, against 33,498,000 bushels, or 19.3 per cent. of the 1910 crop on farms March 1st, 1911, and 42,602,000 bushels, or 24.6 per cent. of the 1909 crop on farms March 1st, 1910. About 57.2 per cent. will be shipped out of the counties where grown, against 50 per cent. of the 1910 crop and 52.5 per cent. of the 1909 crop so shipped. Barley is a brewers' crop, and they claim that the crop could be doubled without hurting their fingers. The figures here given, emanating from the Department of Agriculture, will have an influence on all grain trading until the new crops come in.

Home-made Gas-Light From Crushed Stone

TWENTY years ago the oil lamp had already been driven out of the city into the country home, where gas could not follow—so we thought.

In those days we would have laughed at the idea of a country home lighted with gaslight.

But like the telephone and free mail delivery gaslight has finally left the city to become a common rural convenience.

In the year 1911, the up-to-date villager or farmer not only lives in a gas-lighted house, same as his city cousin, but when he drives home on a cold, wet night he actually lights up his barn, his barnyard or porches on his house with this gas-light by simply turning an "ignition" button on a post or wall.

CRUSHED STONE

* * *

And this change seems quite like magic when you consider that this rural gas-light is home-made— made by the family itself right on the premises.

Take fifteen minutes once a month to make all that can be used in a large house.

The magic is all in the curious manufactured stone known commercially as "Union Carbide."

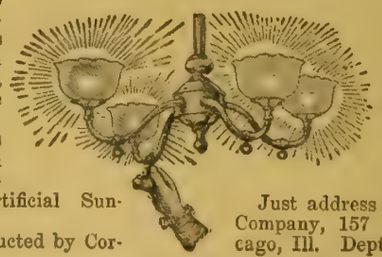
This wonderful gas-producing substance, "Union Carbide," looks and feels just like crushed granite. For country home use it is packed and shipped from warehouses located all over the United States in sheet steel cans containing 100 pounds.

Union Carbide won't burn, can't explode, and will keep in the original package for years in any climate. For this reason it is safer to handle and store about the premises than coal.

* * *

All that is necessary to make "Union Carbide" give up its gas is to mix it with plain water—the gas, which is then instantly generated is genuine Acetylene.

When piped to handsome brass chandeliers and fixtures Acetylene burns with an intensely brilliant, stiff flame, that the wind can't affect.



This flame makes light so white in color that it is commonly called "Artificial Sunlight."

Experiments conducted by Cornell University have proven that it will grow plants the same as sunlight itself.

Physicians recommend Acetylene as a germicide and a remedy for eyestrain, and it is used as an illuminant in fifty-four hospitals in New York City alone.

Then, too, Acetylene is so pure that you might blow out the light and sleep all night in a room with the burner open without any injurious effects whatever.

On account of its being burned in permanent brass fixtures attached to walls and ceilings, Acetylene is much safer than smoky, smelly oil lamps, which can easily be tipped over.

For this reason the Engineers of the National Board of Insurance Underwriters called Acetylene safer than any illuminant it commonly displaces.

In addition to all these advantages, Acetylene light is inexpensive.

An Acetylene light of 24 candlepower costs only about 4 cents for ten hours' lighting, while for the same number of hours regular oil lamps of equal volume cost about 6 cents in kerosene, chimneys and wicks on the average.

* * *

Consider this carefully and you will hardly wonder at the fact that there are today no less than 185,000 town and country homes lighted with home-made Acetylene, made from "Union Carbide."

Once a month some member of the family must dump a few pounds of "Union Carbide" in a small tank-like machine which usually sets in one corner of the basement.

This little tank-like machine is automatic—it does all the work—it makes no gas until the burners are lighted and stops making gas when the burners are shut off.

The lights located in every room in your house, on your porches, in your horse and cow barns, or barnyards and chicken yards if you like, will all be ready to turn on with a twist of the wrist or a touch of the button at any time of the day or night.

No city home can be as brilliantly or as beautifully illuminated as any one of these 185,000 homes now using Acetylene.

* * *

If you want to be up-to-date, enjoy modern conveniences, and keep the young folks at home, write us how many rooms and buildings you have. We will send you free an intensely interesting lot of facts, figures and booklets.

Just address Union Carbide Sales Company, 157 Michigan Ave., Chicago, Ill. Dept. A.—56.

The British Board of Agriculture, it is stated, is about to establish a national testing station, where all British-raised cattle will be examined before they are exported. The value of the live cattle exported from the United Kingdom in 1910 was $134,792, and in 1911, $160,582.

"Improvement in the quality of seed is the least expensive method of increasing the yield per acre."—From Seed Corn, by C. P. Hartley.

Be sure to read about the new edition of The Book of Live Stock Champions advertised on page 23.

Keeping the flap closed by a rubber cord, a Washington inventor claims to have devised a coin purse that is safer than the usual forms.

There's a 10 year Guarantee in every roll of

CONGO ROOFING

And the guarantee is in the form of an Insurance Policy issued by the National Surety Company.

This policy insures your Congo 2 and 3-ply Roofing for ten years at the manufacturers' expense. You simply fill in the blanks telling the date you lay the roof and the buildings you put it on.

If Congo should fail to last ten years, you get a new roof.

It is simply a device of the manufacturers to break through all the unfounded claims that are made for other roofings, with something specific and definite. It makes the buyer absolutely certain of what he is getting. Surely nothing could be fairer.

For a copy of this Policy and a sample of Congo, address

UNITED ROOFING & MFG. CO.

Philadelphia Chicago Kansas City San Francisco

Please mention Nat. Farmer and Stock Grower.

Some Data For Oat Growers.

An oats bulletin recently issued by the Iowa Agricultural Experiment Station does not approve the practice of using imported oat seed, even though it is expensive and has large yielding records elsewhere. L. C. Burnett, author of the bulletin, bases his statement upon experiments with imported oat seed, covering three to five years and including seventy-seven different samples. One of the best samples of oats ever seen at the Iowa Station, and from the sack of oats that won the championship at the Portland Exposition, yielded only 18.7 bushels per acre, weighing 17½ pounds per bushel, as against a yield of 28 bushels per acre, weighing 19 pounds, from a similar stock that has been grown at the Station farm for some years. In later years this championship oats did better. All imported oats in the test improved in yield after acclimation.

Mr. Burrett, the experimentist, also found that the fanning of oats may be overdone. He tested fanning methods for a long succession of years, and planted the seed and watched the yields and other conditions, with the result that oats fanned two times does better than oats fanned either one time or three times.

The seven-years' experimentation showed that as a rule farmers do not sow enough oats per acre. The Station has secured better results with a rate of from three to four and one-half bushels per acre than with only two to two and one-half bushels per acre, which is about the average rate for Iowa farmers. The average yield for four years from a two-bushel rate for Kherson oats was 49.4 bushels per acre; the average yield for the same time for a three-bushel rate was 53.7 bushels. In all the tests at the Station farm, the Kherson and Silver Mine varieties of oats gave the best yields, covering a period of seven years.

The bulletin is the most valuable publication on oat growing ever put out by the Iowa Station, both from the standpoint of the information it contains and the extensive work on which this information is based. It is timely, because there is no crop that is generally more satisfactory than the oat crop. At the present Short Course of the college it was the unanimous testimony of the hundreds of farmers in the agronomy classes that oats do not pay well, yet every farmer grows them because they fit into a rotation and they are valuable for a nurse crop. The bulletin points out some ways of making the crop profitable as well as useful. It will be sent to any address on request.

City and Country Population.

According to the census of 1910, the rural population is 49,348,883, and the town population is 42,623,383. The rural population feeds itself and the city population also. According to the census, 46.3 per cent. of the people live in towns and 53.7 per cent. live in the country.

In the New England division the average of town people is 93.3 per cent. of the total; in the Middle Atlantic States, such as New York, New Jersey and Pennsylvania, the town population is 71 per cent. In the states of Ohio, Indiana, Illinois, Michigan and Wisconsin the town people are 33.3 per cent. of the total. The town people in the Southern States are not over 23 per cent. of the total. In the mountain division or range town people are 36 per cent. of the total; and on the Pacific coast the proportion of town people is 56.8 per cent.

In the year 1890 the town population was 36.1 per cent.; in 1900 the percentage of people in towns increased to 40.5, and ten years later, in 1910, the town people are 46.3 per cent. of the total.

Home Vegetable Garden.

How to conduct a small vegetable garden in a city lot, a larger, 30x60-foot suburban garden, or a 90x200-foot vegetable garden on a farm, is fully and clearly set forth in Circular No. 154 issued by the Agricultural Experiment Station at Urbana, Ill.

The circular is by Prof. John W. Loyd, who lays out the gardens, gives quantity of seed to buy, the tools to work with, preparations for planting, how to do things without hurting your back, etc. He classes vegetables in five divisions: Those of easy culture; those requiring transplanting; those requiring special handling; those subject to insect attacks; and those requiring rich soil and much tillage. Then he has cool-season crops and warm-season crops. The circular offers a complete line of instruction. Write for the bulletin and you will not repent sending for it. The Director of the Agricultural Experiment Station at Urbana, Ill., will send a copy if you write for Circular No. 154.

Would You Save Your Thresh Bill?
Then Hire a Red River Special

IT'S up to you to say what thresher will thresh your grain this season. It's your grain. You worked hard to grow and harvest it. You pay your thresh bill. You cannot afford to hire an outfit that will waste your grain. You have worked hard for a profit and you should have it. You cannot afford to divide it with the straw pile. Your good business judgment tells you so. Every bushel that goes into your straw pile is money right out of your pocket.

You can save the amount of your thresh bill by hiring a *Red River Special* to do your threshing. It will save more grain for you. It will waste less of your time. It will do your job quicker. It will clean your grain better. It will pay you.

It is the only thresher made which uses the only true and sure method of separation. It *beats the grain out of the straw* just like you would do with a pitchfork.

The Big Cylinder, the "Man Behind the Gun" and the shakers which toss the straw up and *beat it* like you do with a pitchfork save all the grain for you whether it be wheat, oats, rye, barley, peas, rice, alfalfa timothy or any other grass seed.

You have seen many green straw stacks. They are positive proof of indifferent threshing—sometimes it is the result of careless handling but too often it is the result of work done by an incompetent, out-of-date machine, a machine which hurries the straw to the stack and does not *beat the grain out* of it.

The *Red River Special beats it all out.*

Have your threshing done this year by a RED RIVER SPECIAL. It will Save Your Thresh Bill, Write us for the proof.

NICHOLS & SHEPARD CO. Battle Creek, Mich.

Sole Builders of THE RED RIVER SPECIAL LINE—The Red River Special Thresher, N. & S. Traction Steam Engine, Oil-Gas Tractor, Wind Stackers, Self Feeders, Weighers, etc.

Advantages of Machine Shearing.

The Agricultural and Stock Department of Tasmania says: "This is the age of progression; the blade sheep shearers are giving place to machine shearers, as in turn the sickle passed away to be superseded by the reaper and binder. Machine shearing shortens the wool harvest, particularly when weather variations are in some seasons a delay and annoyance. There is no gainsaying the great advantage of machine over blade shearing; it is quicker, and in the case of wet seasons will enable the owner to have his wool in readiness to take advantage of the first favorable market, which on some occasions might make a great financial difference."

Decided to Stay Home.

"I thought you were going to take a holiday?"

"I had intended to."

"Wouldn't your employer let you go?"

"That's what's the matter. He was so enthusiastic about it that I grew a little suspicious."

King's Copper Lightning Rods
Endorsed by Insurance Companies

Let me ask you, Mr. Farmer: why do you pay $5 a bushel for your fine seed corn and a fancy price for your pedigreed stock, and then leave your harvested crop and your high-priced stock—*your home and your family*—at the mercy of lightning? You cannot say there is no danger.

A TERRIBLE RECORD OF DESTRUCTION is presented in Government reports, admittedly incomplete, showing that 6,256 buildings were destroyed and 563 people and 4,250 head of stock were killed by lightning in a single year.

You may have been fortunate enough to have not met with a part of this loss, but that is no assurance that you may not meet with a great loss during the next thunder storm. You cannot always hope to escape.

Consider the risk of loss you are taking as compared with the small cost of protection with KING RODS. The loss of a set of harness will cover the cost of scientifically protecting your buildings with KING RODS, which will last a lifetime. 60,000 buildings now have this protection—why not yours?

King Lightning Rods are scientifically constructed of thirty-two strands of pure, soft copper wires, woven into a continuous cable of the highest conductivity known to science; our points are all that high-grade material and first-class workmanship can produce; sold under a legal guarantee. That is why they are used on state buildings and the best farm buildings throughout the country. *Write us for further information.*

ONE-THOUSAND AGENTS WANTED to represent me in every community. You can earn from $3,000.00 to $5,000.00 during the season selling KING RODS. FREE booklet and catalog on request.

Acquittal of the Packers.

For nine years the legal officers of the United States government have been engaged in trying to prove that the packers, meaning Armour, Swift, Morris and the National Packing Company, were engaged in an unlawful and criminal conspiracy in restraint of trade.

Ten men, heads and managers of the different packing companies, were arraigned before the bar of justice with the prospect that if found guilty they would be sent to jail as common felons. The case made by the prosecution seems to have been satisfactory to those who presented it; the judge's charge to the jury was generally considered a just presentation of the legal situation, and the jury, after hearing the testimony for three months, the legal arguments, the judge's charge, after ample time for consultation and deliberation, unanimously returned a clean-cut verdict of acquittal. The prosecution did not attempt to prove any combination on the part of the packers in buying cattle and failed to prove any combination to divide profits or any of the main points which are generally understood as necessary to unlawful combinations. The prosecution did prove that the packers were associated for the purpose of avoiding glutted markets. If Boston was glutted all the packers knew it; the same of New York. The packers bought their cattle independently, shipped the meat to market independently and sold the meat independently. They wished to save themselves from shipping perishable goods where sacrifices would have to be made, the same as do the fruit shippers' associations, and that was the main case against them. We know that the Colorado melon growers have their "Rocky Fords" handled with due care so as not to place too many at the wrong time in one town, and action similar to that is all that was proven in this case. Packers were acting only within their rights as good business men; at least that is the view the jury took of it.

After the trial was over the leading attorney for the packers said: "There could be no other verdict. There was no illegal combination. The government's own case showed that. There is no law to-day and there never will be a law to punish anything these men have done. They used only legitimate business methods. Any other verdict than that returned would have meant a terrible blow to business — legitimate business in this country. It would have meant that business cannot grow; that it cannot expand. It would have meant that business would have to be so circumscribed that every citizen of the United States, even in the remotest parts, would suffer."

Another attorney for the packers said: "The verdict was a simple doing of justice to men who have been bitterly and unjustly assailed, and for whom justice has long been delayed. These men have been persecuted through years and years of attack upon themselves and their business."

We mention what these attorneys said because they placed in words our view of the case. When refrigerated beef was a new institution, all engaged in the sale of it were persecuted before it was used in handling a fraction of the business. To-day not a single wholesale butcher does business without it. From the very first the packing trade has had to contend with the half discoveries of the daily press, that, as a rule, never did get onto the facts. The reporters could not discover more than four great beef houses which they imagined controlled the trade and were awfully indignant when twelve companies, of which eight were not small, were consolidated under one name. The National Packing Company even then did not include the Cudahys or Schwarzschild & Sulsberger. The daily press did do the great packers considerable service by scaring away anyone who could be scared, who contemplated engaging in the meat-packing business.

The packers are but human; they are not angels; they buy as cheap as they can; they sell as dear as they can; they get all they can out of the by-products; they do not control the entire trade. The officials of the four companies who were tried and acquitted are not by any means the whole meat trade, and, in fact, there are more live stock markets in operation now than there were actual buyers on slaughter account thirty years ago. There may be a time when a few great packers will control the meat trade, but that time has not yet arrived. In the meantime the business atmosphere is clearer for the verdict.

Advertising the Reo Motor Cars.

Farmers and stockmen who wish to understand something concerning motor cars will find it to their advantage to read the advertisement on page 2 with the utmost care. The statements are written in the clearest of language and by an expert who has created more cars than any other designer in the business. When a man has led the procession of automobile designers for twenty-five years and has finally reached the car that satisfies him, then the buyer can safely study that car and the price tag upon it. Farmers are not slow in appreciating clean-cut statements with good reasons to support them, therefore we commend this advertising to their notice.

Hay Sales, April 1st, at St. Louis.

The St. Louis market had fifty-two car-loads on sale Monday, April 1st, which sold as follows: On St. Louis Side: Two cars light clover-mixed at $25 per ton; one car mixed afalfa and timothy at $23.50; one car part clover at $23 and part timothy at $27. Timothy—Three cars No. 2 at $24; four cars scant No. 1 at $25; four No. 1 at $25.50; five do. at $26; five do. at $26.50; five do. at $27, two delivered; one choice at $27.50. Clover—One car No. 2 at $18.50. Prairie — One car Arkansas at $17.50; one car No. 3 Northern at $18; one car Northern and one common Western at $20; one No. 2 Western at $23.50; one No. 1 do. at $24; one do. at $24.50. Alfalfa —One car hot at $21; part car at $22.50; three cars No. 2 at $23.50; one No. 1 at $24.50; three do. at $25; one high No. 1 at $25.50; three choice at $26. On East Side: Timothy—One car scant No. 1 at $25, delivered to St. Louis; two No. 1 at $26, one do.; one choice at $27.75, delivered. Prairie — One car at $23.50. Last sale of wheat straw at $8.00 per ton.

THE BEST ENGINE IN THE WORLD

WATERLOO BOY

Two gold medals, at two International Expositions, in open competition with the leading manufacturers, not only of this country, but of every nation of the globe. THAT is real **proof** that the **Waterloo Boy Gasoline Engine** is the best engine built today. And the real importance of this great double victory is the fact that it was won, not by a specially designed engine prepared and primed particularly for the contest, but by a **regular Waterloo Boy TAKEN FROM STOCK.**

Thousands of these engines are in regular daily use on farms all over the world, and **you** can buy an exact duplicate of this medal winner for your own work. This supreme make-good quality of the

WATERLOO BOY GASOLINE ENGINE

is built into it—it is best from foundry to testing room. **Best** and **simplest** in **material, in workmanship and in many important features of design which are found on no other engine in the world.**

The speed lever which works like the throttle of a locomotive and regulates the speed while the engine is running, is an **exclusive Waterloo feature,** and it alone adds $20.00 to the value of your engine. Many other features are just as important—our patented mixer which does away with the expense and bother of a pump; new type igniter that never misses a spark; automatic fuel regulation making it the cheapest to run; frost proof construction.

Burns either Kerosene or Gasoline= starts easy in the coldest weather. All parts are interchangeable and it is so simple that a child can run it.

The Waterloo Boy is no experiment—it is the oldest successful farm engine on the market and has made good for nearly 100,000 farmers for over 19 years—**some of your neighbors among them.** Built in one of the biggest engine factories in the world, with a capacity of 130 complete engines per day, nearly 40,000 per year.

Let the other fellow experiment—you use his experience and buy a **Waterloo Boy** in the first place. **Get the certainty of absolute satisfaction** at the *lowest price ever made on a reliable engine.*

5-Year Guarantee. Catalog and full details FREE. Write today.

Discing Land For Corn.

Comparatively few men realize the value of discing land before breaking, especially before breaking for corn. If corn is to follow corn, this practice is especially valuable, as the harrow works both as a stalk cutter and as a soil pulverizer.

The saving of the corn stalks, as compared with burning, is of much benefit for the amount of humus added and also for the increase in the water-holding capacity of the soil. By the use of the harrow the stalks can be chopped up and when turned under they will so thoroughly mix with the surface soil that they will rot quicker and will also be out of the way of the cultivators in cultivating the corn crop.

Still another benefit of no little importance is the pulverization of the surface soil which allows of more water being absorbed and also forms a mulch for holding moisture, which would otherwise be lost. This mulch formed on the surface tends to keep the soil much more mellow and consquently the breaking will be found to be much easier on disced than on crusted land. This mellow pulverized surface layer formed by the disc is also of considerable importance in establishing the connection between the surface soil and the subsoil after plowing, so that water may be drawn up from below.

Considering, then, three points in favor of the discing, there is no question of its value in preparation for a corn crop, and the many excellent reports from farmers in various places surely speak well for the practice. The Experiment Station strongly recommends the use of a properly-weighted disc harrow for stalk land before breaking. This is really best done in the fall or early winter, when the season will allow of it, but the advantages of discing in the spring are sufficiently important to permit of its being almost universally recommended.—H. C. Hackleman, College of Agriculture, Columbia, Mo.

Concerning Seed Potatoes.

Although home-grown seed potatoes are selling at high prices, foreign-grown potatoes should not be substituted for them. The following statement on the danger to the American potato crop from the use of imported seed potatoes is issued by the Secretary of Agriculture:

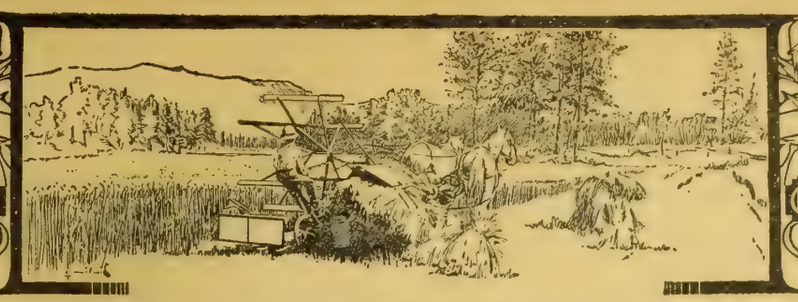
"Europe has several potato diseases not now known to exist in this country, which, if introduced, might be the means of greatly reducing our annual yield of potatoes. Should these diseases become prevalent throughout the United States, the cost of producing future crops might be greatly increased.

"Do not, therefore, under any circumstances, use foreign-grown potatoes for seed, either at the North or at the South. The sorts which are coming to this country at the present time are late sorts and are not adapted to planting in the South, where early potatoes are the main crop, neither are they adapted to planting at the North, for they will not produce a satisfactory yield.

"They are not adapted to our soils or to our climate, and will not yield profitable crops; but the danger of introducing diseases not now present is sufficient reason for refusing to plant them."

Again the Acetylene Light.

This light is made from crushed stone mixed with plain water. The stone looks like crushed stone and is called Union Carbide. The apparatus is simple and is easily understood. It produces a white light, steady and reliable. There are 185,000 homes now using acetylene and each one is an advertisement for the light. See page 6 and read about the acetylene light.



OUR EXPERIENCE IS YOUR SAFEGUARD

I H C Harvesting and haying machines and tools, as sold today, are the result of over fifty years of careful work by trained experts. Through every harvest season these men have followed our machines in the field in every grain-growing country, correcting all difficulties as they appeared or developed.

The binders which are the result of such thorough work are now offered to you with the fullest assurance that when you use these machines your harvesting will be well done. Whatever the conditions under which your crop must be harvested, whether the grain be short or tall, standing, down or tangled, there is an I H C machine which will reap and bind it all; easily, surely, and with no annoying and expensive delays.

I H C harvesting machines as sold today, are a finished product as much as any machine can ever be finished. All the difficulties that have developed up to date are overcome. Our experience is your safeguard. You have no experiments to make. You take no risk when you buy a machine bearing one of these famous names:

Champion
Deering
McCormick
Milwaukee
Osborne
Plano

Take plenty of time to consider, compare all the points of all the machines you know of, before you buy a binder. If you do this thoroughly, you will become convinced that an I H C binder will do the best work for you, be the most dependable, efficient, and durable of all the machines you investigate.

There is quality in the material and construction of I H C harvesting machines that only a half century of experience can assure. There is a simplicity in the design which makes the working of the machines easy to understand and makes it safe to trust them in the hands of unskilled help. Last, and most important, I H C binders are backed by an organization that insures your getting interchangeable repair parts—parts that fit where they belong—quickly in time of emergency. I H C harvesting machine owners know that if by accident any part of their machine should happen to break, an exact duplicate of that very part can be obtained quickly from the I H C local dealer. This point is of the utmost importance when the grain is ripening or the harvest begun. It does away with all delays, all risks, all possibility of losing part of the harvest profit.

Their many years of constant improvement place I H C harvesting machines in a class by themselves. Whether you choose a Champion, McCormick, Osborne, Milwaukee, Deering, or Plano binder, you are assured of getting a machine built right and tested under every condition that you will ever have to meet at harvest time.

The I H C local dealer handling these machines is the man for you to see. From him you can get information that will help you to make up your mind as to which binder will best insure the full profit of your season's work. Decide only after the most careful consideration and you will surely buy an I H C machine.

When you have decided upon your binder, you will need a supply of binder twine. To get through the season with the least waste and trouble, buy one of the seven perfectly dependable brands of twine—Champion, McCormick, Osborne, Deering, Milwaukee, Plano, or International—in Sisal, Standard, Manila, and Pure Manila grades.

Your most important work now is the selection of machines for this season's harvest. See the I H C local dealer handling these machines. He can help you decide. If it is not convenient for you to see him now, sit down and write for catalogues. A post card will bring you full information.

International Harvester Company of America
(Incorporated)
Chicago **U S A**

I H C Service Bureau

The purpose of this Bureau is to furnish, free of charge to all, the best information obtainable on better farming. If you have any worthy questions concerning soils, crops, land drainage, irrigation, fertilizer, etc., make your inquiries specific and send them to I H C Service Bureau, Harvester Building, Chicago, U. S. A.

The Paint Instruction Book.

The Sherwin-Williams Company, of Cleveland, Ohio, will send an instruction book for painters that is very valuable. To paint the barn, the house, the fence, the vehicles and the implements does not require much skill, but you need practical guidance, showing paints, oils, dryers, varnishes for each particular class of work. Messrs. Sherwin-Williams will surprise you with the amount of assistance they can render if you will write for their free paint book and address the post card or letter to Sherwin-Williams, 689 Canal Road, N. W., Cleveland, Ohio.

Moderate Price of Flour.

Flour quotations at St. Louis, April 1st, 1912, show that the people of the United States ought to be getting cheap bread. Quote: Soft winter—Patents at $4.00 to $5.00 in wood; straights at $3.90 to $4.00 in jute; extra fancy (bakers' goods) at $3.70 to $3.80 in jute; fancy at $3.25 to $3.40 in jute; low grades at $3.00 to $3.15 in jute. Hard winter (in jute)—Patents at $4.60 to $4.85; straights at $4.40 to $4.50; first clears at $3.50 to $3.75; second clears at $3.15 to $3.40; low grades at $2.85 to $3.05; spring patents at $4.90 to $5.10 in jute. Foregoing prices are for car lots from first hands, on track or at depot.

Good eggs, 50 cents a dozen; duck eggs, 25 cents; hens' eggs, 19 cents for the best. Receipts, 3,531 cases. These were the St. Louis egg statistics, April 1st.

How to Keep the Milk Clean.

One of the most difficult truths to impress upon many keepers of cows is the great necessity for keeping the milk clean. Every milk producer has a standard of his own as to what constitutes clean milk, but many of these standards would be regarded as impossible if submitted to any expert in the production of sanitary milk.

The invisible germs of the mold family are about the cow stable by millions and pour into the milk in an invisible stream, under conditions existing in most stables. We do not see the millions of things floating about us in the air, except when a ray of sunlight penetrates a dark room. Even then we do not see the smallest of the floating things. Many of these floating particles bear germs attached to them, which are thus conveyed hither and thither with every changing current of air.

If there are thousands of floating particles in a common room, how many more are there in a cow stable, where there are numerous things that produce dust? The manure dries on the sides of the cow and the dry particles are rattled off into the milk pail; the bedding under the cow dries and sends up other myriads of particles; cows are fed hay while being milked, and this act sends other multitudes of particles floating in the air.

Milk can be kept much cleaner than it generally is by observing some of the simplest rules of dust prevention. One of these is to see that the milking pail is scalded out before being used for milking purposes. Ordinarily, a pail gathers a great deal of invisible dust during the twelve hours when it is not being used. This is especially true in the summer time, when the ground outside is not covered with a blanket of snow, but when dust is being created by wind and sun from almost every object.

Every effort should be made to avoid the stirring up of dust in the stable at milking time. No hay should be fed before milking, but this should take place after the milking has been completed.

The sides of the cows should always be washed before milking, whether the cows seem to be dirty or not, and this washing should include the udder. The writer followed this practice for many years and reached a state of mind where he did not feel like touching the teats of a cow unless they had been recently washed. This is a good habit to form. The shaking of the udder in the act of milking is always shaking down dust particles unless they have been moistened by the wash water.

The cleanliness of the milk will be increased if a closed pail is used, or one that is mostly covered over the top. If four-fifths of the top is covered it will mean the keeping out of four-fifths of the dust that would otherwise get in.

Milk produced thus carefully will keep many hours longer than milk produced without such care.

Improvement in Cotton Ginning.

From Little Rock, Ark., on March 20th, it was reported that John A. Fordyce, of that city, son of Col. S. W. Fordyce, obtained a patent from the United States on a cotton gin which he invented. It is claimed to be the first successful departure from the gin invented by Eli Whitney in 1793.

This new gin pulls the fiber from the seed in such a manner that the natural length and strength of each fiber is preserved. This gives it a length of one-sixteenth to one-eighth of an inch over the old way. The speed of ginning exceeds the speed of the saw gin from 20 to 50 per cent., while the power required is less. It strips the fiber from the seed in a more thorough manner and increases the amount of lint obtained from the seed by about 4 per cent. of the saw gin.

At the cotton mill the cotton from the new gin has 18 per cent. less waste and the spinning value is so much increased and the yarn made from it is 5 per cent. stronger than cotton from the old style of gin.

Tests made by the Department of Agriculture at Washington support these claims.

SPOTSWOOD DAISY PEARL.

The New Premier Cow of the Guernsey Breed.

As a four-year-old dairy cow Spotswood Daisy Pearl was fifth in a list of 130 Advanced Register Guernsey cows, and as an aged cow she heads the list for a year's production of butter-fat, and is only second to Dolly Dimple in the matter of milk production.

The remarkable record of this wonderful cow is 18,602.80 pounds of milk in one year; butter-fat content, 5.15 per cent.; butter-fat production, 957.38 pounds. This record was made as a seven-year-old cow. From her four-year-old test to the seven-year-old test she gained in milk production from 11,750.71 pounds to 18,602.80 pounds. In butter-fat production she advanced from 572.67 pounds as a four-year-old to 957.38 pounds as a seven-year-old. Spotswood Daisy Pearl was bred by Edward F. Price, of Broad Axe, Pa., and is now owned by O. C. Barber, of Anna Dean Farms, Barberton, Ohio.

This cow averaged, with salt added, about three pounds of extra commercial butter a day, which, at 40 cents a pound, amounts to about $1.20 per day for the entire year. The ration fed, including an average of 16 pounds grain with 30 pounds ensilage and 10 to 20 pounds of hay, does not represent a cost at all alarming commensurate with the cash returns for the product. These champion cows are fed carefully all they can digest, and the victory in the end is largely due to the liberality of the ration.

Intensive Cultivation of Alfalfa.

Farmers who have irrigated lands can obtain some alfalfa data from an intensive cultivation basis by writing Prof. R. H. Forbes, Arizona Agricultural Experiment Station, Yuma, Arizona, for the little pamphlet entitled "Timely Hints For Farmers, No. 93." It is only eight pages, and small pages at that, but to the alfalfa grower by irrigation it is a little gold mine. There were 7⅓ acres, irrigated by water pumped by the United States Reclamation Service from the Colorado river. It was for several reasons a difficult place to handle, but in three years he managed to harvest from 6 to 9⅓ tons of alfalfa per acre, giving dates of seven cuttings. The cost of everything is stated carefully, number of irrigations, cost of water per acre, amount of water per ton of hay, etc. The battle with alkali spots, Bermuda grass, with such pests as gophers and the alfalfa butterfly, are all carefully considered in the result.

The pamphlet sets forth every possible detail that we recommend any and all of our readers to write for it if it interests them. Professer Forbes is inclined to believe that the largest returns per acre can be obtained from small tracts under the thorough care of the individual owner rather than by wholesale operations on the large tracts of the syndicates.

YOUR CROPS

can get more nitrogen out of one single sack of

Nitrate of Soda

than out of a two-horse wagon load of manure. The Nitrogen in Chilean Nitrate of Soda is 100% available and is *immediately* so the day you apply it! It produces

More powerful growth and healthier, bigger plants. Easy to handle, clean, cheap, odorless, free from fillers.

Write to us for valuable free literature on the crops that mean a living to you. A post card will bring it to you.

A New Gatekeeper.

Charles M. Cross, of Indianapolis, thinks variety adds spice to life, so he went to a spiritualistic service.

It was a lively affair with sepulchral voices sounding through trumpets, tambourines playing mysteriously in midair, and cold, clammy hands of partially materialized men and women making free in the dusky room with those who were in the flesh. In the midst of it something dealt Mr. Cross a vicious whack on the nose and he called for lights in a tone not to be disobeyed. With the light the circle he disclosed was all natural and human again. The most human member of it was Mr. Cross, with a bloody nose, spoiling for a fight and all the "madder" because he did not know whom to fight.

"Who did that?" he demanded of the medium.

The medium said the gay spirit was that of St. Peter.

But even this explanation did not satisfy Mr. Cross.

"Well, all I ask of St. Peter," he said, "is to materialize for just one minute, and if I don't make a vacancy for a new gatekeeper I won't ask to get in."—Indianapolis News.

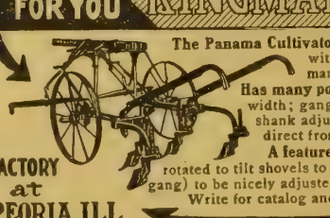
DISTEMPER IN HORSES.

Distemper, or strangles, is a disease principally affecting young horses. It is due to a germ belonging to the streptococcic group. The disease is accompanied by high fever, catarrhal inflammation of the mucus membranes, especially of the nasal passages, and as a result of this condition a discharge from the nose. There is a swelling of the lymph glands under the jaw, which later results in abscess formation. A horse with distemper can communicate it to a healthy one. The disease is more common in the spring months on account of the chill received as a result of the sudden changes at this season of the year. To avoid these and other contagious diseases, all horse-owners should have a supply of Frazier's Distemper Cure, which is a preventive as well as a positive cure. $1.00 bottle holds three 50-cent bottles. Send for free horse book. Sold by all druggists and harness dealers, or prepaid from Binkley Medical Company, Dept. H, Nappanee, Ind.

Hint For Mechanics.

If two nuts are run on a bolt so that the square sides face each other they will serve as a wrench in an emergency.

EASY FOR YOU — KINGMAN CULTIVATORS — EASY FOR YOUR HORSE



The Panama Cultivator is a machine of varied utility in the field, built with the same scrupulous care as to material and workmanship that characterizes all KINGMAN MACHINES.

Has many points of superiority over others. Frame adjustable in width; gangs adjustable to pull either to or away from the row; shovel shank adjustable in or out and inside ones up or down:—light draft direct from points of gang; dust proof hubs.

A feature of particular advantage to cotton growers is that gangs may be rotated to tilt shovels to fit the row, allowing cotton scrapers (when these are fitted to the gang) to be nicely adjusted to the ridges. All machines shipped as nearly set up as possible

FACTORY at PEORIA, ILL.

Corn Harvest is Easy

with the Johnston Corn Binder. The old, wasteful, drudging way is gone. In its place is the economical, easy, quick, modern method—the Johnston way. Johnston Farm Machines have represented implement quality for 60 years, do still and always will.

THE JOHNSTON CORN BINDER handles "down" corn, tall corn, short corn—all kinds of corn in all kinds of places. The big drive wheel; balance and distribution of weight; dust proof roller and brass-bush bearings; natural inclined elevation; automatic gates; perfect bundle tier; steel bundle carrier; special chain adjustment; right hand levers; strong, compact steel construction; light, straight draft; and perfect operation are a few of its winning points.

Handling Farm Butter.

At a meeting of car-load shippers of country products, held recently, one of the members reminded the convention that process butter-makers do not renovate butter, as is popularly supposed. They extract the butter oil from packing stock, and with this oil as a basis make new butter. Therefore, the quantity of oil as well as the quality is an important factor in determining the real value of the original packing stock.

The packing stock referred to is farm-made butter; the butter that sells at home for 16 cents a pound when good creamery butter is selling for 30 cents a pound. Packing stock is farm-made butter that, being sold at the country store, is dumped into a barrel with other butter that is worse and is really bought as oil and not as butter. All this packing-stock butter ought to be cut out from farming operations. The cream should be separated from the milk and shipped to the nearest creamery, and at the creamery where the cream is sold there the farmer should buy his butter.

Let no one suppose from this that good butter cannot be made on the farm; the fact is that a first-class dairy-farm butter often excels the best creamery butter, but 85 per cent. of the best dairy farmers have abandoned making butter simply because it is more profitable to deal with the creamery, which is the best-making selling agency for butter-fat. If it pays the better class of farmers to sell their cream rather than make butter, it certainly will pay the farmer to sell cream who has no better outlet than the packing-stock barrel at the country store. Many a farmer thinks he is selling butter who is only selling oil, and, if sold as butter-fat, it would realize twice as much money.

Difference in Butter Quality.

A buttermaker at a creamery, not being satisfied with his average quality and the usual price of his whole product in market, determined upon instituting a test inside of his own output. He selected the cream from some of his best shippers, made the butter and sent it forward in the usual way, and he also sent the remainder of his output that represented the butter made from the cream that he had not selected. There were seven tubs of butter from the selected cream and twenty-one tubs of the butter made from the cream from the balance of the patrons. The creamery buttermaker called upon his salesman in market to obtain expert report as to the quality of the different lots.

The report of the expert was as follows: "There were in this shipment seven tubs marked with X on cover. This butter showed up very well made. It was clean in flavor but showed a feedy flavor. Have scored it 37—25—15—10—5 equal 92 points. I examined some of the balance of the shipment, and it showed up with quite pronounced unclean, stale cream flavor, scoring 86 to 87 points. The marked difference in quality is a very good demonstration of what I think you could do in the way of improvement in the quality of your butter if you could get all your patrons to bring their cream in as good condition as the cream out of which the seven tubs were made. I hope you will make use of this by bringing it before your patrons in the proper way so that you may be able to secure their co-operation for improvement in the cream received, so that the quality of your butter may be improved."

It appears that in selling the butter the actual difference in result was only 1½ cents a pound, or say $19 on the twenty-one tubs. The butter was sold on a thirty-cent market. Had the butter been sold on a higher market, the "spread" being wider, the difference would probably have amounted to 2½ to 3 cents a pound, or $1.50 to $1.80 per tub.

The report of this circumstance, constituting a first-class educational item, was found in the New York Produce Review and American Creamery, the best paper in the butter and cheese trade.

New York Supplies of Milk.

Two hundred and ninety-five thousand cans of plain milk delivered in ten-gallon cans in one week looks like a big supply even for New York City. When last heard from, March 16th, the shippers in the 26-cent freight zone were being paid 3¾ cents net per quart, which makes the cost $1.81 per 40-quart can delivered in New York City to the distributing company.

DAIRY AND CREAMERY.

The best way to put a losing dairy on a profitable basis is to test the cows and turn out those that are unable to pay their way.

From Oconomowoc, Wis., on March 22d, it was reported that twelve hundred dollars was paid by Charles D. Ettinger, of Tinley Park, Ill., to H. H. Tichener, for Thelma Glenwood, a National Dairy Show champion, at the second sale of the West Moreland Guernsey farm, which was attended by 150 buyers from the North Central States. Thelma Glenwood has a record of 750 pounds of butter for one year.

Any farmer who fails to realize on his butter-fat is standing in the way of his own interest; butter-fat is the highest-priced product on the farm.

Highest-priced Cattle Feeders.

At Chicago, on Monday, March 18th, an Illinois cattle feeder took out 128 head of 1,040-pound feeding steers at a cost of $6.60 per 100 pounds, said to be the highest-priced feeding cattle ever bought there on the open market. Many other high-class feeders sold on the same day at $6.00 to $6.35 and some 1,055-pound at $6.50 per 100 pounds.

"Probably the poorest economy in the world is to buy things you don't want in order to make acquaintances you don't need."—Galveston News.

DE LAVAL CREAM SEPARATORS

No Excuse for any Cow Owner Being Without One

There is no reason why any cow owner who sells cream or makes butter should be without a cream separator and there is no excuse why he should not have the best separator.

Any creameryman or experienced dairyman will tell you that a good cream separator will give you a great deal more and a great deal better butter than you can make with any gravity setting system, and equally, of course, more and better cream, if you are selling cream.

The DE LAVAL is acknowledged by creamerymen and the best posted dairymen the world over to be the **"World's Standard"** and the one and only separator that always accomplishes the best results possible and always gives satisfaction.

You cannot make the excuse that you can't afford to buy a De Laval, because it will not only save its cost over any gravity setting in six months and any other separator in a year but is sold either for cash or on such liberal terms that it will actually pay for itself.

A little investigation will prove to you that the truth of the matter is that you really can't afford to make cream or butter **without** the use of a DE LAVAL cream separator.

The nearest De Laval local agent will be glad to demonstrate this to your own satisfaction, or you may write to us direct.

Raw Rock Phosphate.

If raw rock phosphate, ground or unground, was an available fertilizer or could be relied upon to become so changed when mixed with the soil as to become available as plant food in the second year or so, the works constructed for the purpose of rendering rock phosphate available as plant food by acid treatment would be abandoned and the complete commercial fertilizer would consist of usual sources and proportions of nitrogen, potash and of raw rock phosphate, instead of, as now, nitrogen, potash and acid-treated phosphate.

Since first raising the question as to the availability of raw rock phosphate as a fertilizer we have come to the conclusion that to buy it is to buy a "gold brick" that is not gold.

All who are students and experts in chemistry in soils, who very properly wish to find conditions under which raw rock can be converted into fertilizer by other than acid treatment, first fortify themselves by saying that raw rock phosphate is not soluble; that it is not available; that it is not a fertilizer; in other words, that it is absolutely no good for immediate results.

Then it is put up by the manufacturer to the farmer to buy this rock and turn his land into a fertilizer factory to treat the rock to bring the value up to the cost. To buy this rock and distribute it over ordinary soils appears to be worse than buying rich earth at so much a pound. There are rich alluvial soils that could be bought by the ton as a fertilizer and produce immediate growing results better than raw rock phosphate.

The fact of the matter is that raw rock phosphate is not sold upon its merits; the farmer is invited to buy it on a basis of what it contains, but he is not told that the contents are in the safe, and they do not deliver the key of the safe when they deliver the ground rock.

We believe what Professor Thorne, of Ohio, in a bulletin under his name, as late as December, 1911, said: "But the nitrogen of the Ohio peat beds and the phosphorus of the Tennessee rocks are locked up in insoluble combinations from which they must be set free by chemical treatment before they can be utilized by growing crops."

Foreign Crop Information.

A cablegram, dated March 23d, 1912, from the International Institute of Agriculture, Rome, Italy, has been received by the United States Department of Agriculture, giving the following information: "The area of winter wheat harvested in British India is 29,444,000 acres; in countries having 40 per cent. (94,000,000 acres) of the total winter wheat area last year, the area this year is 102.2 per cent. of last year. Winter cereal crops are in good condition. In British India a preliminary statement of the production of rice is 521,992,000 hundred-weight (58,463,104,000 pounds); and of cleaned cotton, 11,196,000 hundredweight (1,253,952,000 pounds)."

St. Louis Market For Cheese.

At St. Louis, April 1st, for cheese the demand was greater than the supply. On orders, per pound: Northern—Twins, 20c.; Singles, 20¼c.; Long Horns, 21c.; Daisies, 21c.; Young Americas, 21c.; Limburger, 18c. Swiss—No. 1, 23 to 24c.; No. 2, 20c.; broken, inferior or cracked, 6 to 7c.; brick, 21 to 22c.

A Convertible Wagon Box.

The Melrose Convertible Wagon Box furnishes a decided advance in facilities of farm work. The wagon —the ordinary wagon—is used more often than any other farm appliance, and it needed the Melrose Convertible Box to make it satisfactory for every use. On page 21 is the proposition as made by the American Wagon Company, Department 79, 112 West Adams street, Chicago, Ill. It is well worth considering from the clear-cut, honorable manner in which it is put up to the farmer.

A live man in your neighborhood can create a good business for himself by selling our fertilizers. They are rightly balanced and blended to improve both crops and soils.

They are adapted to all crops and soils; they are "making good," hence are well-known and popular, and sell readily to progressive farmers.

We have the largest and best equipped Fertilizer Factory in the State of Illinois.

Grafting Old Fruit Trees.

In practically every section of the country too many varieties of all kinds of fruit are grown, and the problem that confronts us is how to grow only those that are profitable. This may be done either by cutting out the less desirable or grafting them with those varieties that are in demand. With very large, old trees having but a few long, bare main branches the expense would be too great and very little good fruit would be produced if grafted, and the sooner they are taken out and cut into firewood the better. Those with a good supply of branches near the ground can be successfully grafted and in a few years produce good crops of the most profitable varieties. While grafting old trees is work that anyone with ordinary skill in the use of tools can accomplish, it requires good judgment to do the work so as to obtain the best results. In grafting old trees it should be the aim to produce as far as possible a full low head. This cannot in all cases be done in one year, therefore such branches as are in the right position and of the proper size are grafted the first year and perhaps some very large branches removed to force growth into smaller ones so that they may be grafted a year or more later.

The tools required for grafting are a saw with fine teeth for cutting off the stocks, a large sharp knife for paring the top smooth, a thin-bladed sharp knife for cutting the scion, a grafting chisel with which to split the stock and hold open the cleft for the insertion of the scion, and grafting wax for covering to keep out air and water from all cuts made. The time when grafts are more certain to grow is in the spring. About April 15th is a good time for cherries and plums, and about May 1st for apples and pears. Small branches from one to two inches in diameter are best for cleft grafting. These are cut off at an equal distance from the center of the tree at right angles to the axis of each branch. The end of the cut is then pared with the large knife and split with the grafting chisel, selecting a place where the wood will split straight. The chisel is then knocked out and the wedge driven in to hold open the cleft while the scion is being inserted. The scion, a shoot of one-year's growth taken from the outside of the tree, is cut wedge-shaped in two ways and is inserted into the cleft so that the inner bark of both stock and scion shall come in close contact. Two scions are used in each cleft to insure success. When the scions are in place the wedge is knocked out and the two are pressed closely together. Should the stock be small, growth will be more certain if it is tied together firmly with raffia or other soft strong string. All cut surfaces, the end of the stock, the split and the ends of each scion should be covered carefully with grafting wax to exclude air and moisture. Grafting wax may be purchased of dealers in horticultural supplies, or it may be made by melting five parts of rosin, two parts beeswax and one part of tallow or linseed oil, by weight. When thoroughly melted together, the mixture is poured into a pail of cold water and then drawn into sticks. Or it may be allowed to get nearly cold and then be cut out in cakes and pulled. It will be most convenient for use if made into sticks of about two ounces each and then carried to the orchard in water. In applying, a little soap or beef or mutton tallow will keep it from sticking to the hands.

The grafts should be examined several times during the first summer, and if the wax is running or curling it must be pressed back into place. All sprouts starting from the stock near the scions should be rubbed off unless the graft has failed, when they should be allowed to grow until the stock can be regrafted or the sprouts budded. Before growth begins the following spring such stocks as were not successfully grafted and others large enough should be grafted again, and any shoots budded the previous August should be cut back to within about one-half of an inch of the bud. When both grafts have grown, one is cut off, so that the wound will heal over and make a sound branch, which it would not do if both were allowed to grow. In young orchards, as soon as one finds that he has undesirable varieties, he should graft them and not lose valuable time.—William Hardy, Tunnel Hill, Johnson county, Illinois.

Taxpayers Save Money
Tonight's the Night to Write
Taxpayers, county officials, road builders, etc., can save money, time and labor by using American Ingot Iron Corrugated Culverts. They outlast all other metal culverts. First cost low—maintenance nothing. Spring freshets won't wash out, crack or break them, like bridges and other culverts.
Frost or Rust Won't Harm This Culvert
Concrete, stone, tile or brick culverts are smashed by Jack Frost. American Ingot Iron Culverts are unharmed. These culverts are not made of steel but American Ingot Iron—guaranteed 99.84% pure. Steel, on account of its impurities, rusts and corrodes quickly. American Ingot Iron, due to its purity, resists rust for many years. This is why American Ingot Iron Culverts outlast steel culverts many times over. Easy to install—never out of order.
AMERICAN INGOT IRON
Guaranteed CULVERTS 99.84% Pure Iron
Leading railroads of America are displacing concrete, stone, tile and brick culverts with this wonderful metal corrugated culvert. And this after they have tried all other makes. They know that American Ingot Iron Corrugated Culverts never buckle under heavy loads, or corrode, crack or rust. Look for the triangle trademark on every piece—it insures you getting the genuine American Ingot Iron. Only the manufacturers named below make American Ingot Iron Culverts. There's a lifetime's service in every section. Put the proof up to them. After the chores are done tonight—drop a line to the nearest manufacturer. He'll send you lots of money-saving culvert pointers.

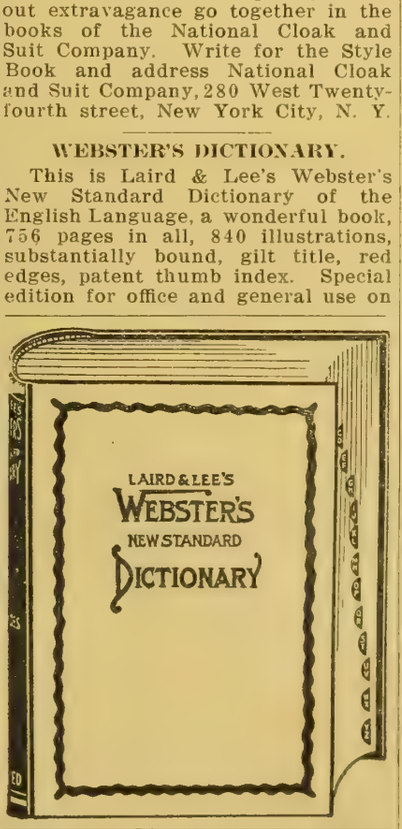
WEBSTER'S DICTIONARY.

This is Laird & Lee's Webster's New Standard Dictionary of the English Language, a wonderful book, 756 pages in all, 840 illustrations, substantially bound, gilt title, red edges, patent thumb index. Special edition for office and general use on



farms, estates, ranches, etc.; massive but handy; contains ten encyclopedic features, supplement of new words, dictionaries of biography, geography, musical terms, Biblical, classical, historical and mythological names, foreign phrases, English word-building, rules in orthography, current abbreviations, metric system with conversion tables; weighs twenty-eight ounces.

Our offer to you: Send us one dollar and we will send you The National Farmer and Stock Grower for two years and we will also send you, postage paid, safe delivery guaranteed, one copy of this great Webster's Dictionary. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

How About Your Straw Pile?

The threshing of small grain is a process which is very important to the farmer and the thresherman. The question "Is there grain in your straw pile?" is a very pertinent one asked by the Nichols & Shepard Co., of Battle Creek, Mich. They are builders of threshing machinery and have a card addressed to you on page 7 of this paper.

Vitrified Tile Silos.

The advertisement on page 8 of the Vitrified Tile Silo ought to be interesting to all farmers and especially to dairymen. It is claimed to be the only perfect material by men who have made a study of the subject. We commend it to our readers.

At St. Louis, April 1st, prime beeswax was selling at 29½ cents a pound.

"It takes twice as long to figure out to avoid doing a thing as it does to do it."—Exchange.

Edwards Roof Puts Cash in Your Pockets!

Edwards "REO" Steel Shingles "TIGHTCOTE" Galvanized

Will make money for you if you are the first man in your community to answer this proposition. You don't promise to do any selling work. Your neighbors see your Edwards Steel Roof and like it—and their orders **count for you.**

Edwards "REO" Steel Shingles Last Five Times as Long as Wood

and last three times as long as any other steel shingles because Edwards "Reo" Steel Shingles are "TIGHTCOTE" Galvanized.

Each and every Edwards shingle is dipped in molten zinc after the shingle is made. Each edge is galvanized as heavily as sides. **Rain-Proof, Rust-Proof, Rot-Proof, Acid-Proof. Last Longer Than the Building.** Any man who can drive nails can put them on.

$10,000 Ironclad Bond Lightning Insurance

We agree to refund the amount paid in every case where a roof covered with Edwards Interlocking "Reo" Steel Shingles is destroyed by lightning. This guaranty is backed by our $10,000 Ironclad Bond and stands forever. Ask for Big Free Roofing Catalog No. 457, with special low prices. Remember the special money-making proposition puts you under no obligation to us. Send dimensions of your buildings and we will quote you cost. Freight prepaid. Write today. (72)

Waste vs. Conservation.

The tillers of the soil in lowest Egypt, supplied as they are with the natural inundations of the Nile Valley, leaving a mud and manure rich in plant food every year, are the only farmers who can continually take away without returning to the soil something in the shape of plant food. Egypt's natural irrigation by overflow supplies manure and fertilizer along with and in addition to the moisture, and the husbandman is left nothing to do but plant his seed and reap the harvest. Conservation of soil resources in Egypt would scarcely interest the most astute politician.

The farmers of the United States, not having a perpetual supply of plant food, have not yet learned that it is cheaper to pay rent than it is to move, and yet they are face to face with the fact that new places are very few and moving costs money.

Acting under the advice of Horace Greely (peace to his ashes), they have very largely exhausted the plant food of the farm lands in the Eastern States and then rushed into the newer and richer fields of the Mississippi Valley to repeat the operation, and will soon be like Caesar—weeping because there are no longer new and fertile lands for them to despoil.

If this seems like a scathing arraignment of present methods of farming, well and good, for it is high time that we awake to the needs of our soil if we are to continue to hold supremacy as an agricultural nation and feed the 100,000,000 mouths of our own country and export a heavy surplus to foreign consumers. To exhaust the mineral elements of the fertile farms by continuous cropping means poverty, not wealth. Within fifty miles of Louisville, Kentucky, or Chicago, Illinois, you can find farm lands that are splendid examples of how **not** to do it; farms so poor in plant food that without commercial fertilizer you can't raise a disturbance, unless it be over a line fence.

Continually removing one or two of the basic elements of the soil has driven the farmer into newer countries, where he hopes to repeat his wasteful method, leaving his children and his children's children with nothing but acres of land, not soil suitable for growing crops, to return a profit on the seed and labor involved in the farm operations.

From New England, New York state and older sections of the East and South, farmers are coming into newer and therefore more fertile fields of the Central West, and once they have exhausted the nitrogen phosphate or potash here, where else is there a place for them to continue mining instead of farming? Subtraction is the second lesson taught in the country school mathematics to demonstrate that by continually taking away only a small number from a larger one the latter is finally exhausted unless something is added to it occasionally.

But nature is generous; she had a bountiful supply of plant food in the soil originally, and if it is added to occasionally and properly taken care of by crop rotation and careful cultivation our farms will grow richer instead of poorer.

By chemical analysis we determine that in a wheat crop of thirty bushels to an acre and a ton of straw we take out thirty-five pounds of nitrogen, twenty pounds of phosphoric acid and thirty-five pounds of potash. We must return these elements to the soil or they will ultimately become exhausted.

Clover adds nitrogen to the soil, but it takes out 46 per cent. phosphoric acid and 88 per cent. more potash than wheat, so the mineral elements are not conserved by growing this leguminous crop. Barnyard manure, green manure and phosphorus and potassium of commerce must be added sooner or later or the list of abandoned farms will grow apace. It is more economical to begin early to supply commercial fertilizers and keep the crops at maximum than to exhaust the soil by overcropping and then commence the slow process of rebuilding.

In the use of the term commercial fertilizer no thought is had of the many brands of the mixed articles which are to be found everywhere. They have served a very useful purpose and many of them are scientifically proportioned for the crops to which they are applied, but the acid phosphate (acidulated phosphate rock) and the potash and the blood and bone or nitrates can be had and blended at home in the exact proportion the crop demands. An average crop of wheat, as shown, takes out of the soil twenty-five pounds of nitrogen, twenty pounds of phosphoric acid and thirty-five pounds of potash, worth $8.35, while corn (sixty-five bushels and 3,000 pounds stalk) removes seventy-five pounds, twenty pounds and sixty pounds, respectively, valued at $22.75. Potatoes (150 bushels) remove forty pounds, twenty pounds and seventy-five pounds each; while a cabbage crop of thirty tons to the acre removes from the soil 200 pounds nitrogen, seventy pounds phosphoric acid and 270 pounds potash. It naturally follows that a mixture good for wheat would not be the proper mixture for any of the other crops. Each must have different treatment. Clover requires entirely different fertilizing; although it adds nitrogen to the soil it is a gross feeder on phosphoric acid and potash, a two-ton crop removing twenty-eight pounds of the former and sixty-six pounds of potash.

A bulletin issued by the Maryland Station says the best fertilizer for wheat at that station is 2 per cent nitrogen, 9 per cent. phosphoric acid and 7½ per cent. potash. If, however, previous crops have drawn heavily on the potash, like cabbage or potatoes, then the potash content of the fertilizer should be increased for present crops.

To get a large flow of milk you must feed the cow; to get the largest crop you must use in the soil a properly-balanced plant-food ration.—W. T. Davis.

GRASS HOOK No. K Price $0.50
Balance
in farming tools, means that they work *with* their user—that they work *easily* and smoothly. It means that the blades and the handles are just right in adjustment. They make the long workday easier, save strength and save effort. Keen Kutter farming tools mean balance and correct hang. They are really worth owning because they *stand up* under the everyday strain.

GOOD WIRE FENCING.

There are three things to keep in mind when selecting a good wire fence: The quality of the steel, the size of the wires and the grade as well as the thickness of the galvanizing.

If farmers would look into these very important features when buying their material, less complaint would be heard about rusty, no-account fences.

No doubt there are just as good wire fences made to-day as ever before; in fact, better; but care should be exercised in buying, and farmers should study the merits of all fences before placing their order.

One of our oldest advertisers, the Brown Fence and Wire Company, Cleveland, Ohio, Dept. 45, now issue a complete catalogue bearing upon this subject. We believe they make a very satisfactory and durable fence, otherwise we would have heard from some of our subscribers if their fence was faulty in any way. This catalogue is full of valuable fence information, and those interested would do well to send for it, which is free upon request.

Makes Forgery Impossible.

The forgery of all Bank of England notes is quickly detected, because of secret marks which are constantly being changed. They are visible only under the microscope.

Fertilizers That Pay

You Progressive farmers want to increase your profits. You know that good fertilizers insure increased profits, so its only a question of where to get good fertilizers.

You can easily prove to yourself what fertilizers are best by referring to the Indiana State Bulletin, No. 151, Vol. 15. Turn to page 72, which shows a comparative table covering nine years. You will find Darling's Fertilizers lead among the larger manufacturers who have had enough samples analyzed to give a fair comparison.

Let us send you our book "THE SOIL BUILDERS"

which tells all about Fertilizers and results obtained, also photos. It is free. Drop us a postal today.

We want good agents in territory where we are not represented.

Darling & Co., Dept. F, Union Stock Yards, Chicago

Where Many of the Well Dressed Women Come From

In almost every community in the United States, in almost every country on the globe, there are well dressed women who buy their clothes from Montgomery Ward & Co. They buy through our Women's Fashion Book, an authority for the latest, the best creations for women's wear. The fit, the fabric, the style, the wearing qualities of their clothes are of the same high grade that is found in the clothing of the most fashionably dressed women of the big cities. And yet, these Montgomery Ward & Co. customers are paying only two-thirds, and often only one-half of what other women who buy from retail stores are paying.

And, madam, you, too, can have the best quality of clothing that money and brains can manufacture if you will buy them through the pages of our WOMEN'S SPRING AND SUMMER FASHION BOOK. You need only put your name and address on the coupon below and the number 30, which is the number of this book, and it will be sent to you at once, free of charge. **Remember that we guarantee the fit, style, fabric, workmanship—everything—about each single garment, to please you perfectly.** If for any reason you are not entirely pleased, you may return your purchase at once and we will refund your money and any transportation charges you have paid.

Put the numbers of the other books you want on the coupon also.

Farm Information Bulletins.

Vital agricultural bulletins and circulars have just been issued by the Iowa Agricultural Experiment Station for general distribution. One on "Planning and Adorning the Farmstead," No. 126, by Prof. A. T. Erwin, gives some twenty pages of practical information on the arrangement of farm buildings, the planting and care of trees and shrubs, and the care of lawns and the building of walks and drives. Another, No. 127, "Spraying Practice For Orchard and Garden," is a complete compendium on that subject, written by Prof. S. A. Beach, Head of the Horticultural and Forestry Section of the Experiment Station. The bulletin describes all orchard diseases common to the Mississippi Valley and tells how to fight them as well as the various pests that cut down orchard yields. Circular No. 1 tells how to make home-made corn testers and is based on complete investigations and experiments by Prof. H. D. Hughes. Any one or all of the bulletins may be had by writing and asking for them. Write to the Director Iowa Agricultural Experiment Station, Ames, Iowa.

Prices Received For Apple Crop.

The State Board of Horticulture is now in possession of sufficient data to warrant the publication of a statement regarding the prices received for the past season's apple crop. The figures following are based upon reports received from several hundred correspondents who are fruit growers, each of whom reported for his own orchard. In order to maintain uniform conditions, the cost of package when furnished by the grower has been deducted.

Average price per bushel on trees, 42.5c.; average price per bushel delivered, 57.2c.; average price per bushel from storage (cost of storage included), 98.3c.

Average price per bushel by the bushel, 67c.; average price per bushel by the barrel, 58.5c.; average price per bushel by the cwt., 38.7c.

Sprayed, average price per bushel, 61.7c.; unsprayed, average price per bushel, 49.3c.

Graded, average price per bushel, 62.7c.; orchard run, average price per bushel, 43.4c.

Orchards reported sprayed, 37 per cent.; orchards reporting fruit unfit for market, due to disease and insects, 2.5 per cent.; orchards reporting no crop (no cause given), 12 per cent.; orchards reporting no sale, due to lack of buyers, 1 per cent.

Of the growers reporting as having sprayed, 50 per cent. sprayed twice, 25 per cent. sprayed three times; and of the others, some sprayed once, others three and four times, and one eight times.

Perhaps the two most important facts contained in the above figures are: First—The increase of 12.4c. per bushel received for sprayed over unsprayed fruit; and, second, the failure of 2.5 per cent. of the orchards to produce salable fruit due to ravages of disease and insects.

Now if to the above we add the fact, proven by experiment, that spraying increases the yield of merchantable fruit an average of two to three bushels per tree in orchards ten to twenty years old, also the extra cost of picking and sorting where the per cent. of good fruit runs low, it becomes apparent that spraying as an orchard practice is very profitable, indeed. — W. W. Chenoweth, Secretary.

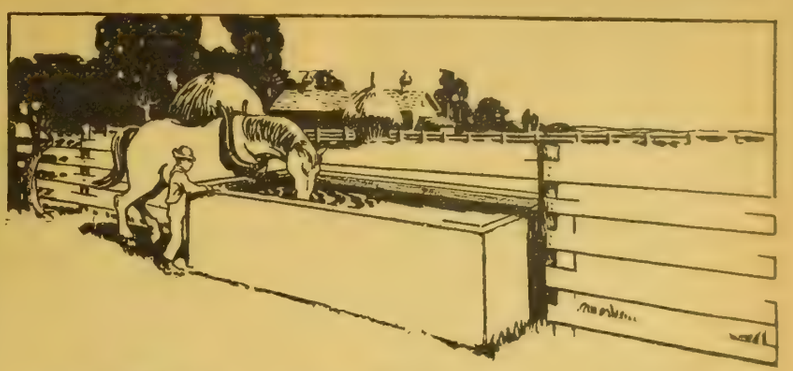
The Strawberry Culturist.

This is a handy little jewel of a book. It is by Andrew S. Fuller, one of the greatest horticulturists. It contains all the necessary information to enable everybody to raise their own strawberries. It is fully illustrated; bound in flexible cloth; is 5x7 inches. The strawberry crop is equal to all the other small fruit crops combined. This little book contains that which a beginner should have to start on and an expert needs to rely on. We will send a copy of the Strawberry Culturist post free by mail and The National Farmer and Stock Grower for one year for Sixty Cents. This is a splendid opportunity to get a good book for the cost of postage. An average crop of strawberries is 1,701 quarts to the acre. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

No Increase in Stock Cattle Rates.

On Monday, March 25th, the Interstate Commerce Commission rendered a decision that the proposed increase of 33⅓ per cent. in the transportation rate on "stock and feeder" cattle and sheep made by all of the Western railroads was not justified. The Commission expects all of the carriers to cancel the proposed advances by April 1st. If they should fail to cancel them voluntarily, the Commission will issue a peremptory order.

"Existing rates on feeder cattle" are approximately 75 per cent. of the rates on fat cattle. The railroads contended this low rate was a "gratuity" which they could withdraw at will.



ATLAS PORTLAND CEMENT

"THE STANDARD BY WHICH ALL OTHER MAKES ARE MEASURED"

There are many brands of Portland Cement. There is one that is always pure, always uniform, that can be had in all localities, always in the same grade, and that cement is Atlas.

"Atlas" means the best grade always, for the large user or the small user—for you who may want but one sack or one barrel, or for the Government which has purchased 4,500,000 barrels for the Panama Canal. Atlas is the standard by which all other makes are measured. Here is the trade-mark. To be sure of success in your concrete work about the farm, see that this mark appears upon the barrel or sack that you buy. Send for

"Concrete Construction About the Home and on the Farm"
A Free Book for the Farmer

It is complete, non-technical and well illustrated. It tells you everything you need to know, and particularly why Atlas should be the cement you use. Send for it.

If your dealer cannot supply you with Atlas, write to

THE ATLAS PORTLAND CEMENT COMPANY, DEPT. 165, 30 BROAD ST., NEW YORK

Largest productive capacity of any cement company in the world. Over 50,000 barrels per day

The Bloomington Horse Sale.

Our readers will remember the great horse sale by the Breeders' Sale Company at Bloomington, Ill., late in January. The total number of horses sold was 426, and the money realized $122,822.00. Sixteen Percheron mares sold at $590 to $720; Belgian mares sold at $500 to $550; Shire stallions sold at $575 to $820; a French draft stallion sold for $700. The Percheron stallions, fifteen head, sold from $505 to $1,575. The following were sold for $1,000 or better:

Rowe's Pride, 61,795, three years, to J. I. Moffatt, Paw Paw, Ill., for $1,530.

Rowe's Black Bird, 56,656, three years, to C. G. Summers, Snowville, Va., for $1,030.

Imp. Joyeux, 78,582, two years, to J. H. Brenning, Easton, Ill., for $1,575.

Imp. Juif, 78,581, two years, to Lawrence P. Funk, Bloomington, Ill., for $1,200.

The Monsees Sale of Jacks and Jennets, Held in March.

At Smithton, Mo., as advertised, on March 5th L. M. Monsees & Sons sold forty-four jacks for an average of $703.50 per head; twenty-six jennets for an average of $215.00, the total of seventy head averaging $522.10, and the total of the sale was $36,545.00. The top price was $2,500 paid for Barytone Mammoth, 2,466, black, foaled September 8, 1906, to J. T. Ernest, Fort Gibson, Okla. Other jacks bringing a thousand dollars or better included Col. Harger, 3,711, black, foaled September 30th, 1909, to H. Kohl, Vandalia, Mo., for $1,100; Baxter, 3,587, foaled June 7th, 1909, to F. A. Bowers, Watertown, Minn., at $1,075; Crown Prince, 2d, 3,740, black, foaled October 9th, 1906, to W. P. Hopper, Quinton, Okla.; Missouri King, 3,726, black, foaled 1906, to D. J. Hutchins, Sterling, Kas.; De Wolf Hopper, 3,720, black, yearling, foaled May, 1910, to W. F. Schade, Jackson, Mo., for $1,300, a record price for yearlings; Big Dan, black, foaled June 19th, 1908, to John Martin, Clinton, Mo., for $1,160; Gold Digger R., black, foaled June 5th, 1909, to S. C. Van Meter, Elkhart, Ill., for $1,000. A jack colt yearling sold for $800 to D. J. Hutchins. The highest-price jennet was $520, paid by T. E. Collins for Spot, a foal of 1906. The matured jacks averaged $805.50 and fifteen yearlings and weanlings averaged $452.65.

The Hambletonian Family.

"How completely the Hambletonian family of trotters now overshadows all others is strikingly illustrated by the statistics of harness racing for 1911. Of the 1,938 horses that entered the 2:30 list last year 1,712, or 88 per cent., are descendants of Hambletonian in the direct male line, while practically every performer carries the blood of the first great trotting sire on one side or the other. Of the 226 trotters and pacers that do not trace to Hambletonian in the direct male line 97, or about 5 per cent., so trace to Mambrino Chief; 63 to Gibson's Tom Hal, and 11 each to Justin Morgan, Pilot, Jr., and Tom Rolfe."—New York Herald.

Sale of Percherons in Kansas.

At a sale of Percheron horses held at Beloit, Kas., by Ralph G. McKinnie and G. H. McMilian & Sons, twenty-four mares sold for an average of $399.70, and seven stallions averaged $637.85. A yearling filly sired by Carnot sold to J. E. Squire, Scottsville, Kas., for $635, and Hardi, an imported stallion, sold to B. H. Bunny, of Bassano, Canada, for $1,595. A pair of mares weighing 4,200 pounds sold to C. J. Johnson, Solomon Rapids, Kas., for $1,620.

The Stock Farm, published at Lexington, Ky., is authority for the statement that the four greatest living trotting sires are Bingen, Peter the Great, Axworthy and Moko, all now quartered in Fayette county, Kentucky.

AMERICAN FENCE

ORIGINAL & GENUINE **STEEL POSTS & GATES**

American Steel Fence Post Cheaper than Wood and More Durable. Get Catalog.

THE Fence adds value to the farm. Keep fences in order and the house painted. It indicates prosperity. Here's an instance: Not long ago a little farm with shabby buildings and fences rotted down, sold for a song. The new owner had the right idea. Buildings were painted. Wire fences were erected to divide the farm into small fields in order to change pastures and rotate crops systematically. Then circumstances compelled him to sell out. The cost of painting and fencing was less than $200.00. The farm sold for four times its purchase price. Appearances *do* count.

AMERICAN FENCE is made of large, stiff wires, galvanized heavily, having the American hinged joint (patented), a fabric most flexible and wear-resisting. A square mesh fence of weight, strength and durability—three great needs in farm fences.

Dealers in Every Place

where farm supplies are sold. Shipped to them direct from mills in carload lots, thus saving freight charges and enabling dealers to sell at lowest prices, giving buyer the benefit.

Send for copy of "American Fence News," also book "How to Make the Farm Pay," profusely illustrated, devoted to the interests of farmers and showing how fence may be employed to enhance the earning power of a farm. Furnished free upon application

F. Baackes, Vice Pres. & Gen. Sales Agt., AMERICAN STEEL & WIRE COMPANY, Chicago, 72 W. Adams St.; New York, 30 Church St.; Denver; U. S. Steel Products Co., San Francisco, Los Angeles, Portland, Seattle.

Miller Brothers will ship a large consignment of polo ponies and saddle horses from their 101 Ranch, at Bliss, Okla., to Fiss, Doerr & Carroll, of New York City, for a special sale on April 24th. This is one of the annual sales of ponies from the Miller Ranch.

Mr. David M. Look, owner of Castleton Estate, near Lexington, Ky., has purchased of Mr. Wm. Bradley, of Ardmaer Farm, near Castleton, N. J., the famous trotting sire Bingen, 2:06¼, sire of Uhlan, 1:58¾, with a number of mares and colts, including Sweet Marie, 2:02; Consuelo S., 2:07¾; Blonde, the dam of Uhlan. Bingen is now nineteen years old and is returning to his native state.

At the St. Louis National Stock Yards, during the first three months of 1912, the receipts were 173,872 cattle, 782,035 hogs, 228,081 sheep, 59,790 horses and mules. The increase over the previous year thus far amounts to 56,343 hogs and 42,611 sheep, and the decrease consists of 8,018 cattle and 7,182 horses.

Bickmore's Gall Cure

The old-time remedy for keeping horses in condition. Don't lose the services of your high-priced horses. Bickmore's Gall Cure cures Galls and Sore Shoulders while the horse works. Hog Book Free.

Valuable hog book, great assistance to any one interested in hogs. On the care and management of hogs. It tells how to cure sick hogs, prevent disease and clear hogs of worms. It tells how to manage young pigs. It tells how to make hog raising and feeding a pleasure, and certain success. It tells how to make the hog business pay big. This book is mailed free to all who write Dr. D. C. Snoddy Co., of Nashville, Tenn. Dept. H.

Percherons in South Dakota.

At Wessington Springs, South Dakota, Mr. L. E. Ausman sold four Percheron stallions at $1,193.75 per head, and twenty-three mares at an average of $533.90. The top for grown mares was $725, paid twice by D. M. Brenneman, of Wessington Springs. E. E. Nesmith, also of South Dakota, paid $2,500 for a gray stallion, Raymond, weighing 2,220 pounds, and J. Christensen, of Platte, S. D., paid $1,020 for Leon, a black stallion foaled in July, 1909. W. S. Corsa, of Whitehall, Ill., bought a good, gray, seven-year-old, Lucille, at $710. It was a pretty good sale in a country where thirty years ago a dozen farmers had to club together to buy a farm wagon.

HORSEMAN'S ANNUAL.

GREAT PREMIUM OFFER.

We have made arrangements to use the **Horseman's Annual** as a subscription premium. Send us one dollar ($1.00) and we will send this paper, The National Farmer and Stock Grower, and we will send you the **Horseman's Annual,** postpaid, safe delivery in good order guaranteed. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A Very Successful Prescription.

The combination of remedies used in the manufacture of Bodi-Tone is proving a wonderfully successful prescription for old, chronic ailments. The makers of Bodi-Tone publish this prescription broadcast, so all may read and judge it for themselves. Bodi-Tone contains Iron Phosphate, Gentian, Lithia, Chinese Rhubarb, Peruvian Bark, Nux Vomica, Oregon Grape Root, Cascara, Capsicum, Sarsaparilla and Golden Seal. Read the trial offer on the last page. No one need pay a penny for Bodi-Tone until they have tried it.

General Beef Steer Market.

Even if the packers did not go to jail, they are not stealing many cattle. At Chicago, Monday, April 1st, the highest price for a load, nineteen head, 1,621 pounds, averaged at $8.70; twenty loads, 1,280 to 1,620 pounds, sold at $8.00 to $8.65 per 100 pounds; steer cattle at $7.00 to $7.95 averaged 1,000 to 1,400 pounds and represented the bulk of steer sales. A lot of little steers, 800 to 1,100 pounds, sold at $5.50 to $6.90. The high price for light cattle was $7.30 per 100 pounds for twenty steers averaging 950 pounds. The March average price for native steers was $7.20 per 100 pounds; fat cows and heifers averaged $5.00; canners and cutters, $3.00 per 100 pounds.

Western Range Horses.

We are again authorized to announce that Campbell & Reid and Western Sale Stables Company will hold their sales of Western range horses and mules as usual during the season of 1912. The first sale will be held in the middle of June, as usual. Ranchmen who will have stock for sale will find it to their advantage to consign to these sales, because they are the best conducted of all the sales of Western range horses. Eleven of these sales of Western range horses were conducted in the year 1911 by Messrs. Campbell & Reid and Western Sale Stables Company at the St. Louis National Stock Yards. The offerings ranged from 800 head to 2,500 head at each sale. These horses came in fresh from the ranges and were the best to be had. There were sold at auction singly, in pairs, in bunches, or in car-loads, and even larger lots, according to the sellers' judgment. The averages at sales ranged from $48.67 to $94.00 per head, and the grand average looked like about $70.00. That was for the mature horses. The loads of colts and yearlings ranged from $15.00 to $50.00. It is difficult to select bunches of representative sales by age, condition and quality from the list of 25,000 horses, mares, colts and yearlings without using a page to list them, because there was so great a variety. For instance: Twenty-three extra heavy mares and twelve colts averaged $160.00 per head for the lot; next there were twenty-three mares and colts, 900 pounds, averaging $58.00; seventy-eight broke horses at one sale averaged $94.13, with a top price of $185.00; again, 105 unbroke mares, weighing 1,100 to 1,300 pounds, sold at an average of $111.71. A good many range mules were sold at all prices, up to $165.00. One thing can be said about these sales, and that is, that there are neither delays nor disappointments; the horses are always there for buyers to see, and the buyers are there who are active bidders for horses. The horses come directly from the ranges where they are raised and are sold with the least possible expense to come out of the price of the horse. All sales are conducted on Thursdays two weeks apart. For full particulars concerning the sales address J. J. Searcy, Sale Manager, National Stock Yards, Ill.

Great Sale of Horses.

During the last week in March, Messrs. Holland, Nugent & Maxwell Bros. sold 1,380 horses at auction at the St. Louis National Stock Yards, for their customers, besides a number of car-loads of mules. All sold promptly at satisfactory prices.

Messrs. Holland, Nugent & Maxwell Bros. keep a red-hot auction going all the time. To horsemen who would like to experience strong competition and quick action on their car-loads, a trial of Monday or Tuesday at the St. Louis market may treat them to a new experience.

WESTERN RANGE HORSE SALES.

Horse raisers are advised that sales of the very best Range Horses in the country will be conducted by

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.,
As usual, during the season of 1912. The First Sale will probably be held

THURSDAY, JUNE 13,

And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is sure to be good, especially for well-bred Mares and Geldings in good condition.

Please address
J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

FARM AND RANCH LANDS.

ARKANSAS FARMS,—Nice level land. Fertile soil. Choice locations. $8 to $15 an acre. Write for Homeseekers' Guide and Large List of Bargains. **L. E. Moore,** Searcy, Arkansas.

CANADIAN HOMES. — Canadian lands can be had very cheap on the Canadian Pacific Railway in Alberta, Manitoba and Saskatchewan. Turn to page 31 and read the advertisement, then send in the coupon. It will get a line of reliable information.

FLORIDA SUBURBAN HOMES.
One of the most choice tracts of land in Florida sold direct to you by the owner. GEORGIAN HEIGHTS, FLORIDA, is not the ordinary kind of land. It is better and more conveniently situated. Only fourteen miles west of Jacksonville. The Florida Railway runs through the center of GEORGIAN HEIGHTS. Two other railroads, good, hard-surface wagon roads and automobile highway all run into Jacksonville, which is the largest and best city in Florida. All these conveniences, the high elevation of the land, good soil, together with the mild Florida climate all the year round, make GEORGIAN HEIGHTS one of the most desirable locations in the state. I will give you a valuable town lot free with each five-acre tract purchased. Price for tract, $300.00. Easy terms by the owner, **J. T. George,** Wainwright Bldg., St. Louis, Mo.

ILLINOIS.—Splendid farm property in Madison county, Ill., a short ride from St. Louis; 100 acres fine land; cannot be excelled. Two miles from station on Big Four Route; four-room house, summer kitchen; 1,200 fruit trees just in bearing. Rare opportunity to buy excellent farm property. Price reasonable. For further particulars address **Illinois Farmer,** care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

MINNESOTA.—Farms for sale. Send for my list of CHOICE FARMS for sale, the best in the United States, considering location, terms, etc. Ask for my FREE BOOKLET, telling about the country, crops, markets, etc. **Geo. W. Elder,** McGinn Block, Thief River Falls, Minnesota.

TEXAS.—Farms For Rent in Northern Texas, $1.00 per acre. **W. H. Bush,** 217 West Monroe street, Chicago, Ill.

To Buy, Sell or Exchange Property, address Northwestern Business Agency, Minneapolis, Minn.

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property FREE. **American Investment Association, 55 Palace Bldg., Minneapolis, Minn.**

I BRING BUYERS AND SELLERS TOGETHER. If you want to buy, sell or exchange a farm or business, write me. Established 1881. **FRANK P. CLEVELAND,** 7910 Adams Express Building, Chicago, Ill.

A PRACTICAL FARMER desires employment on farm for the next year. Good reference furnished. Address, **W. F. S.,** care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

Your Name Will Get $2 Eggs

For 50 Cents Per Sitting

The White and Brown Leghorns are the greatest layers in the World. I keep 2000 of the celebrated Chamberlain laying strains on my Experimental Farms, and to increase the sale of my Perfect Chick Feed, I will send to any one who will send me their name so I can send them my Perfect Chick Feed Catalogue, 2 sittings of Single Comb Brown or White Leghorn Eggs for $1 for the 2 sittings. Not less than 2 sittings sold. White or Barred Plymouth Rock or Rhode Island Reds or Silver or White Wyandotte or Rose Comb Brown Leghorn or Single Comb Black Minorca or W. Orpington Eggs, $2 per sitting. Leghorn eggs, 13 to a sitting; other varieties, 15 to a sitting. Leghorn eggs, $6 per 100; all other varieties $10 per 100. Large White Pekin Duck Eggs $2 for 10 Eggs. This is a rare chance to get a start of extra fine stock. Send Post Office order on St. Louis and have your orders booked early. Write for our prices on Old Trusty and Buckeye Incubators. Freight paid.

W. F. CHAMBERLAIN, (*The Perfect Chick Feed Man*)
KIRKWOOD, St. Louis County, MO.

Grades and Quality in Poultry.

Many people who are in the poultry business in a small way imagine that in the city market a turkey is a turkey and chickens are only sold in three classes, viz.: Fowls (hens), roosters and spring chickens. In New York, however, where business is business and they receive poultry that is put up properly, there are grades by weight, as will be seen by reference to the following quotations that were wired from New York City on March 23d, 1912. The quotations are for dressed poultry:

Frozen turkeys — Young Toms, Western fancy, per pound, 22c.; young hens, Western fancy, 22c.; old hens, Western, 21c.; old Toms, Western, 19 to 20c.; mixed hens and Toms, 18 to 20c. Tennessee and other fine Southern, 20 to 22c.

Frozen chickens—Broilers, milk-fed, fancy, 18 to 24 pounds to dozen, per pound, 28 to 29c.; do., 25 to 30 pounds to dozen, 24 to 25c.; medium chickens, 3 to 3½ pounds to pair, milk-fed, fancy, per pound, 19 to 20c.; do., average, 17 to 18c.; corn-fed, fancy, 17c.; do., average, 15 to 16c.

Roasting chickens, dry-picked, twelve birds to box—Milk-fed, fancy, 55 to 60 pounds to dozen, per pound, 21 to 22c.; do., 48 to 54 pounds to dozen, 20c.; do., second-grade, 17 to 18c.; corn-fed, fancy, 55 to 60 pounds to dozen, 19c.; do., fancy, 48 to 50 pounds to dozen, 18c.; do:, prime, 36 to 42 pounds to dozen, 16 to 17c.; do., second-grade, 15 to 16c.

Fowls, dry-picked, twelve birds to box—Dry-picked, fancy, 55 to 60 pounds to dozen, per pound, 17c.; do., 45 to 54 pounds to dozen, 16½c.; do., 39 to 44 pounds to dozen, 15 to 15½c.; do., 32 to 36 pounds to dozen, 14c.

Ducks—Fancy, 4 pounds up, 22c.; second grade, 16 to 18c. Geese—Western fancy, per pound, 16 to 17c.; do., second grade, 13 to 14c.

Scalded fowls—Fancy heavy, 45 to 60 pounds to dozen, per pound, 16½c.; do., heavy, 39 to 44 pounds to dozen, 15 to 15½c.; do., small, 32 to 36 pounds to dozen, 13½ to 14c. Roasters—Scalded, corn-fed, fancy, 5 pounds and over, 19c.; do., fancy, 4 pounds and over, 18c.; friers, 3 to 3½ pounds, 16 to 16½c.; do., broilers, 2 pounds and under, 22 to 24c.; do., broilers, 2 pounds and over, 20 to 22c. Barrel-packed selling 1c. to 2c. lower, as to quality, than box-packed poultry.

Growing Importance of Poultry Instruction.

The fact that the University of Illinois is to have a fine poultry plant is but one more index of the steady advance of the science of poultry raising. Hitherto the university has devoted itself to the larger items of agricultural production, but, like all the other great agricultural institutions in the country, has been looking forward to the time when poultry instruction could be included in its line of work.

A dozen of our big state colleges are now giving strong courses in poultry raising with important results. A better understanding of the industry is being disseminated among the people. More analysis is being put into practice and better methods are being secured.

Poultry raising has appealed to the universities as a small thing, because it is divided into such small parts. In the aggregate it is an enormous business, engaging the attention of the people in every zone where white men dwell.

The fresh egg is almost a circulating medium at any time of year anywhere. Poultry meat is a universal favorite with meat eaters, and it is a kind of meat that is as much desired for invalids as are medicines. The hotel and restaurant find it one of the staple things they must provide. The fresh egg has always been at a high price in winter, and up to this time the American market has never been able to sell fresh eggs at a low price in the winter months. The fresh egg during six months in the year can be changed into gold coin on sight, with a premium in favor of the egg. The demand is increasing with the increase of population. The market being assured, the problem remaining is one of production and of handling commercially. This the stations are attempting to do experimentally.

One reason why the poultry business is of immense importance to the farmer is, that it is a business that is seldom done on borrowed capital. It can be so easily undertaken that it can be begun with a few dollars. Moreover, it is a business that begins to pay a profit within a year from the time it is begun, and the capital invested in poultry for flock building is generally all paid back within twelve months.

Every little farm in the country is a place on which poultry can be raised to advantage. The big farms will not generally pay much attention to this branch of agriculture, leaving it to the men on the smaller farms. The fruit raiser is finding it more and more an ally, and the orchardist finds that he can with advantage use his orchard for a poultry yard.

Under these conditions of life it is not surprising that poultry instruction is more and more demanded of our educational institutions. It is one of the things that the school teacher finds it easiest to teach when he begins to introduce agricultural instruction into his school. One of the biggest High Schools in Chicago is giving instruction in poultry culture, and on certain days one may see quite an exhibit of poultry in certain of the class rooms. It is a branch of agricultural instruction that more and more appeals to the people not living on farms as well as those living on farms.

A Self-raising Gate.

Those fellows who live in a snow country and have to dig a ton or two of snow and ice away from their gates after every storm will be in a position to appreciate the utility of a new gate which is being sold by the Peerless Wire Fence Company, Adrian, Mich.

This gate is so constructed that it raises up and swings over snowbanks or anything else that it is necessary to get it over, and, best of all, it doesn't have to be lifted over; it springs up of its own accord the moment it is unlatched. It lifts itself, and, not having to be lugged around, it should be a boon to the women folks and the youngsters.

The Book That Met a Quick Universal Demand
That the highest grade saw and tool equipment is considered one of the live factors in modern farm efficiency is proven by the flood of requests for this book, "Disston Saws and Tools for the Farm," which has already necessitated a second large edition.
This free book tells about the great variety of
DISSTON
SAWS TOOLS FILES
They possess a world-wide reputation for efficiency and dependability and have a guarantee behind them of 72 years' standing.
These tools are made in the largest works of their kind in the world. This book offers many important suggestions on farm economies and improvements through efficient saw and tool equipment, and the keeping of same in proper working order.
Send for the "DISSTON FARM TOOL BOOK" today—a postal will bring it.
Sold by all Progressive Hardware Dealers

HENS MUST LAY
WHEN FED GUARANTEED
PRATTS POULTRY REGULATOR

The self-raising feature makes it handy in many ways, as it can be latched in the raised position to allow small stock to pass under, while still turning larger animals.

Another feature that should commend it to careful buying farmers is its galvanized finish. Every part, frame, filling, hinges and latch, is galvanized, making it rust-proof. Write them for their free catalogue. Address, The Peerless Wire Fence Company, 242 Michigan street, Adrian, Mich.

She Told the Congregation.

If brevity is the soul of wit, one of the wittiest specimens on record was made by a woman. Mrs. Briggs lived in the northern part of Indiana, a long distance from any village. Hearing that the Rev. Mr. Goodwin was to preach in a township some twenty miles distant, she resolved to be present, and, as no other way was afforded, she walked the twenty miles.

The pastor heard of this and was so pleased at the appreciation which it showed that at the close of the sermon he mentioned the fact to the congregation and called upon Mrs. Briggs to tell them how she came.

Rising slowly, she looked over the audience with great solemnity and said:

"I hoofed it."

Then she sat down again.—Indianapolis News.

Poultry and Farm Paper Club.

Two first-class papers can be had for the price of one. **The National Farmer and Stock Grower** is one, and the **American Poultry Journal** is the other. There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is the **American Poultry Journal**. We have made arrangements whereby we can send **The National Farmer and Stock Grower** and the **American Poultry Journal**, both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Father Fixed It.

Her Father—"My boy, I like you and I want you to marry my girl. But have you spoken to her mother about it?"

Suitor—"No, sir."

Her Father—"Then to make it a sure thing for you, I'll oppose the match."—Boston Transcript.

Indiscriminate Charity Wrong.

"One of the greatest injuries you can do an able-bodied idle man is to feed him twice without payment."—John Howland.

The Egg-laying Contest.

The National Egg-laying Contest conducted by the State Poultry Experiment Station is becoming interesting. Five months of the contest have expired, and only complete records for four months were made up before this paper was printed.

A Missouri pen of five hens leads 131 pens from twenty-five states and three pens from Canada. These five Missouri hens laid 110 eggs in January and 107 in February, and won the silver cup offered for each of these two months. It was a pen of Buff Orpingtons from Springfield, Missouri.

A S. C. Rhode Island Red from Marshfield, Mo., laid more eggs than any other hen among the 655 in the competition. This hen laid 96 eggs in November, December, January and February. A Silver Wyandotte hen from Kirkwood, Mo., has made the second best record with 89 eggs for these months. Considering the severe winter which they passed through, this is a good record. There are seventy-three pens entered from twenty-four other states and from Canada. Male birds are being used in all of these pens and eggs are being hatched from the highest producers.

POULTRY NOTES.

At the meeting of car-load shippers considerable was said in favor of the keeping qualities of infertile eggs. Infertile eggs are greatly superior and eliminate waste from decay.

At the Paris, France, Poultry Show of 1912 the largest representation of the French breeds was the Bresse, a breed that never stood in front before. A majority of them are black, an elegant form, fine bone, single comb with slate-colored legs. A good layer of white eggs and a bad sitter.

At the great Boston Poultry Show held recently there were 5,645 exhibits, consisting of 3,658 chickens, 1,825 pigeons and 162 of pet stock. This surpassed all former records.

The American Poultry Journal says: "Twenty pullets half fed will not pay as much as ten that are well fed."

At Paris, France, the most distinguished foreign chicken exhibit was of English Orpingtons, black, buffs and white. There were also two blue Orpingtons, the first ever shown in France.

Dr. P. T. Woods, in the American Poultry Journal, says: "Day-old chicks from any reliable incubator operator within two to three-days' express of your plant are usually a good, safe purchase. Of day-old White Rock chicks bought last spring we raised about 95 per cent. and had only a small percentage that failed to make good growth. Had 100 pullets out of 200 day-old chicks and not a really poor pullet in the lot."

The Morristown Produce and Ice Company of Tennessee has shown what a small station can do when surrounded by a splendid poultry-raising community. That company sold in one transaction 100,000 pounds of milk-fed broilers for $30,000. These broilers will be used to feed the passengers on the steamship lines crossing the Atlantic Ocean.

Why Horses Should Be Clipped.

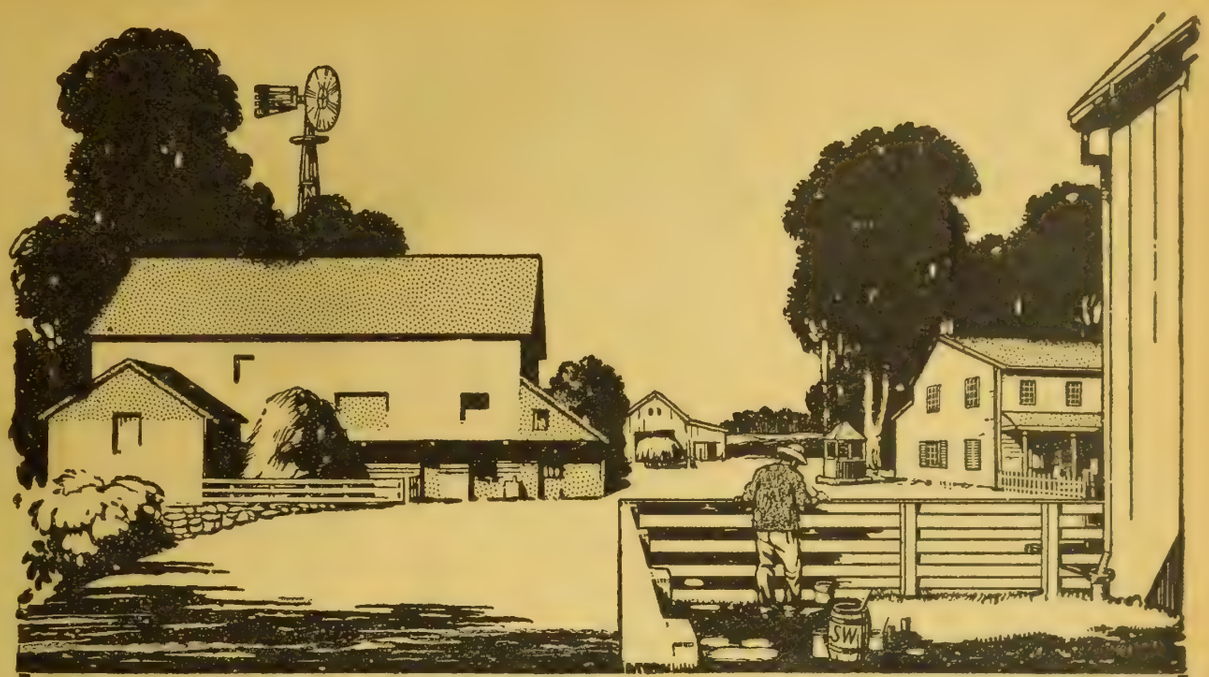
Horses represent a substantial investment and deserve good care. How to properly care for work horses is much better understood now than ever before, and those who have studied the horse most carefully and tried different remedies are agreed that a good clipping is very beneficial to work animals. The skin is a most important organ for the elimination of waste and it cannot properly perform its functions if it is not kept in a healthy condition with pores open, etc.

Animals performing work with a long coat suffer an unnecessary drain on the system. The sweat of the horse is not a simple mixture of water and salts, but of water, proteid and salts, and the observed loss of flesh which follows horses being worked unclipped, as was the practice a generation ago, is thus readily explained. The cost of a clipping machine is very small.

Unless the circumstances are exceptional, all horses should be clipped, and it will be found as a result that they feed, thrive and work better and are less subject to colds and coughs.

Many farmers claim, and we know they do so correctly, that it ensures a freedom from coughs and colds that they did not enjoy before its practice was commenced on their teams.

There is a book on horse clipping issued by the Chicago Flexible Shaft Company, 182 Ontario street, Chicago, Ill. Send for it.



There isn't any doubt about the quality of the paint you have bought AFTER you have bought it and used it

Then if you have gone wrong in your selection, it is too late; the mischief is done.

While there is a wide difference in paint—in its covering, its protecting and its enduring qualities, still there is no gamble in buying paint.

A little investigation will teach you that among paint manufacturers there is one that stands out as the pioneer in this country—one that has been making paints and varnishes of the highest quality for forty years, and has grown to be the largest paint and varnish concern in the world.

That concern is The Sherwin-Williams Co.—a name to remember when buying paint for every farm need. For whether you buy S W P for your house, Commonwealth Barn Red for your outbuildings, S-W Wagon and Implement Paint for your machinery and wagons, or S-W Brighten-Up Finishes for floors, woodwork and furniture, you get what the greatest paint organization in the world is willing to stake its reputation on as being the best.

Our Free Book tells just what paint to buy

for every surface on the farm and just how to apply it. This book is free. It should be in the hands of every farmer. Send for it today.

SHERWIN-WILLIAMS PAINTS & VARNISHES

Sold by dealers everywhere. Ask for color cards. Address all inquiries to
The Sherwin-Williams Co., 689 Canal Road, N. W., Cleveland, O. In Canada, to 639 Centre Street, Montreal

The Elimination and Waste.

At a meeting of car-lot poultry shippers, held recently at Kansas City, one of the speakers, Mr. H. J. Keith, of Boston, spoke of the relation of the bulk egg industry to the whole. "We would all vote," said he, "for an increased product. We want an ample supply of eggs the year round. We can't get it unless the industry is profitable to the producer, and this necessitates the elimination of waste. We must maintain a large consumption, and to do this must have a large supply of satisfactory quality and at moderate prices."

Mr. Keith was talking about the industry in general and more particularly of the branch of it which did not pay high prices for eggs. Bulk eggs go to the bakers and not to the dining table, but he hit the mark when he said a large supply was dependent upon the elimination of waste. Mr. Keith also included in his address a reference to the immense number of people (immigrants he referred to) who are all workers and have to be fed on moderate-priced foods. It would not be beneficial to deprive them of the cheaper forms of food and compel them to buy the more costly qualities, but we should help those who are striving to make a living and to progress toward better conditions by the most economical living; hence the further necessity for the elimination of the waste of time in collecting, in assembling, in concentrating, in transporting and disposing of the egg product and more particularly the eggs from a distance, which generally take anything but the top place in the market.

Mr. Keith gave us a new expression that could make a good resolution for the American people, and it is the "elimination of waste."

Art and Science.

"What a beautiful picture of an angel," said the lady who was visiting the art gallery.

"Yes," replied the aviation enthusiast, "but between you and me, those wings aren't practical."—Washington Star.

Wait a Long Time.

"Look here, how long am I going to have to wait for that half portion of duck I ordered?" asked the guest.

Waiter—"Till somebody orders the other half. We can't go out and kill half a duck."

"Many a boasted family tree is merely underbrush."—Exchange.

LIVE STOCK BREEDEDS' CARDS.

POLAND-CHINA HEADQUARTERS.

Write for circular of the Cloverdale Jacks, Percherons, Tamworth Hogs and Rhode Island Red Chickens. We pay express on all Jacks shipped West.

H. T. BROWN & CO., Lexington, Ky.

International Triumph For An American Product.

At the International Gasoline and Oil Engine Exposition held at Budapest, Austro-Hungary, last July, and again at the International Exposition at Turin, Italy, in September, the first prizes, highest awards for the best gasoline engine, were captured by an American-built machine, the Waterloo Boy, manufactured by the Waterloo Gasoline Engine Company, Waterloo, Iowa.

These sweeping victories were won by two regular four horse-power engines, taken from stock, in competition with the leading makes of all the countries of the globe.

These contests are of especial interest to all of us because they impress two exceedingly interesting and important facts: First, that America is rapidly forging to the front as a manufacturing country; and, second, that American farmers have the best agricultural implements in the world, and that the whole world's best farming machinery is now American-made.

The engine which scored this big triumph is not new to our readers, having been on the market for over twenty years and being one of the leading engines of the country for farm use. It is manufactured in one of the biggest factories of the kind in the world, with a capacity of nearly 40,000 complete engines per year—over 130 per day—and the manufacturers enjoy a wide reputation among farmers for reliability and fairness.

The Waterloo Boy is known everywhere as a low-priced engine of unusual high quality and the manufacturers claim that it has a number of distinctive features that make it superior to any other, regardless of price.

However that may be, an engine that can take two gold medals in succession in open competition with the world's leading makes must be a good one, and it will pay our readers to investigate it. Catalogues and full information will be sent on request by the manufacturers, the Waterloo Gasoline Engine Company, 228 West Third street, Waterloo, Iowa.

Competition in Harvesters.

The International Harvester Company agent has an abundance of competition for the buyer of harvesting machinery. There is the choice that every man has for his favorite machinery, be it Champion, Deering, McCormick, Milwaukee, Osborne or Plano. Each of the works are striving to turn out the best machine and each has a showing to make; a fierce but friendly rivalry of factory results against other factory results. Our patrons are reminded that the largest binder twine output is made by the I. H. C. Co.; made by free American citizens, and not defective twine by incompetent prison labor. Read the card on Page 9. There is much good in it.

SPLENDID CROPS
in Saskatchewan (Western Canada)

800 Bushels From 20 Acres

of wheat was the thresher's return from a Lloydminster farm in the season of 1910. Many fields in that as well as other districts yielded from 25 to 35 bushels of wheat to the acre. Other grains in proportion.

Large Profits

are thus derived from the **FREE HOMESTEAD LANDS** of Western Canada.

This excellent showing causes prices to advance. Land values should double in two years' time.

Grain growing, mixed farming, cattle raising and dairying are all profitable. Free Homesteads of 160 acres are to be had in the very best districts; 160-acre pre-emptions at $3.00 per acre within certain areas. Schools and churches in every settlement, climate unexcelled, soil the richest; wood, water and building material plentiful.

For low settlers' railway rates and illustrated pamphlet, "Last Best West," and other information, write to Sup't of immig., Ottawa, Can., or Can. Gov't Agt. (52)

Actual Cash Grain Sales.

At St. Louis, on March 30th, the following sales were made by sample for immediate delivery:

Wheat.—No. 2 red sold at $1.05½ to $1.04½; No. 3 red sold at $1.02 to $1.02½; No. 4 red sold at 98c. to $1.00, nominal; No. 2 hard sold at $1.03 to $1.04 (dark worth more); Turkey sold at $1.12½; No. 3 hard sold at $1.01 to $1.02, nominal; Turkey sold at $1.10 to $1.11½, nominal; No. 4 hard sold at 96 to 99c., nominal.

Corn.—No. 2 corn nominal; No. 3 corn, 74 to 74½c.; No. 4 corn, 72½c.; No. 2 yellow, 77½c.; No. 3 yellow, 74 to 74½c.; car 75c.; No. 4 yellow, 73c.; car 73½c.; No. 2 white, 76½c.; No. 3 white, 74 to 75c., mainly 74½c.; No. 4 white, 73 to 73½c.; cob corn, mixed, 73c.; destination; white, 74c., nominal.

Sample oats on track.—No. 2 white, 55¾ to 56¼c.; standard, 55½ to 56c.; No. 3 white, 55 to 55¼c.; No. 4 white, 54¼ to 55c.; No. 2 oats, 55c., nominal; No. 3 oats, 54c., nominal; No. 4 oats, 53c., nominal.

Rye.—No. 2, 95c., nominal.

Caught the Corn Thieves.

From Warrensburg, Mo., on March 29th, it was reported that Charles Goodnight, a farmer living north of Knobnoster, had devised a way of catching thieves who had been robbing his corn crib. After the crib had been visited several times he purchased several packages of dyes and boiled about a bushel of ears in the dye and distributed them over the crib. The next morning the colored corn was gone and Goodnight called the constable and searched the crib of a neighbor, where he found his colored corn. The thieves were taken before Justice Metts, of Knobnoster, where they pleaded guilty and were fined $30 each and ordered to pay Goodnight $30 for the stolen corn.

St. Louis Apple Market.

Basis of sales March 30th, 1912: Ben Davis at from $3.00 for fair to $3.50 and $3.65 for fancy cold storage; Gano at $3.25 to $3.75; Willowtwig and Roman Beauty at $3.00 to $4.25; Winesap at $3.50 to $5.50; Greenings at $3.50 to $3.75 for fancy—scalded at $2.25 to $3.25; Baldwins at $3.00 for No.2 to $4.00 for No. 1 and $4.25 to $4.35 for extra fancy; damaged, specked, slack-packed, etc., nominal. Sales: Twenty-five barrels Gano and fifty Ben Davis at $3.25, delivered; one car extra fancy Ben Davis (on shipping order, f. o. b.) at $3.80; eighty barrels Baldwin at $4.25, delivered; sixty barrels do. at $4.25 to $4.25 per barrel, delivered to buyer.

Roots For Sale.

The following were the wholesale root quotations at St. Louis, April 1st (quote by the pound): Golden Seal, $4.10; Lady Slipper, 15c.; Seneca, 34c.; Pink, 18c.; Black, 9c.; May Apple, 4c.; Snake, 25c.; Kansas Black Snake (Echinacea), 13c.; do. Oklahoma, 8c.; Missouri nominal; Angelica, 5c.; Wahoo—Bark of root, 20c.; bark of tree, 4c.; Blood, 5c.; Blueflag, 5c.; Sassafras—Bark of root, 5c.; Wild Ginger, 8½c.; Spikenard, 3c.; Skullcap, 8c.; Ginseng, $4.50 to $5.00 for wild and $4.00 to $4.50 for cultivated.

Baby Beef at St. Louis.

On April 1st, at the St. Louis National Stock Yards, C. H. Harrison, of Moniteau county, Missouri, marketed a drove of mixed steers and heifers that were of his own feeding. They averaged 724 pounds and were good enough to sell at $7.00 per 100 pounds. These heifers were fed on corn and clover hay for a period of five months, and were fed from the time they were calves; in fact, they were no more than calves in age when sold.

30 Days Free Trial

Not One Penny Down — *No Contract* — **Freight Prepaid**

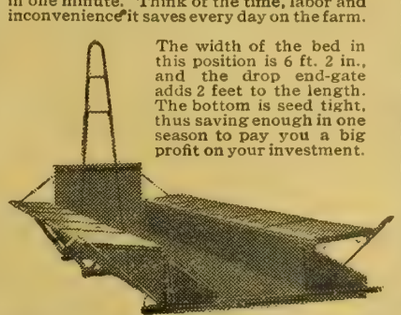
This illustration shows the ***Melrose*** as a grain tight box bed. The depth is 29 inches; width either 38 or 42 inches, outside measurements; length, 9½, 12, 14 or 16 ft., as you may prefer.

Instead of using extra sideboards as you do with an ordinary box, use the ***Melrose*** in this position. It will haul 65 bushels of ear corn; 115 bushels of shelled corn.

Not a nail in it. Bolts are used instead. All metal is cold rolled steel—the strongest metal known. Absolutely unbreakable. Not one ounce of cast iron used. Braces on sides and ends full galvanized to prevent rusting.

There are no ratchets, springs, cogs or complications of any kind or character. You need no wrench, key or tools—only your hands. It is simplicity itself, and can be operated by anyone, anywhere, any time.

For truck farming, fruit hauling—all purposes—the ***Melrose*** is indispensable. You can make the changes anywhere, any time, in one minute. Think of the time, labor and inconvenience it saves every day on the farm.



The width of the bed in this position is 6 ft. 2 in., and the drop end-gate adds 2 feet to the length. The bottom is seed tight, thus saving enough in one season to pay you a big profit on your investment.

No conditions, no agreement, no catch, no bait, no strings, no deposit, no concealment, no risk, no expense, no joker, no red tape, no obligations—nothing left out for you to find out later. You know all there is to this offer—and you know it ***NOW.*** It is a ***FREE TRIAL*** offer on our part to prove the actual value of this invention to you—***and we hereby openly take all the risk.*** We want to send this box to your farm and let it sell itself to you, which it is bound to do just as soon as you can realize and learn from actual service what a wonderful, new, practical time-saver, money-saver, labor-saver it really is.

The Melrose Convertible Box

Fifteen wagon boxes, racks and beds in one. No changing of boxes—no lifting, tugging, straining or suffering injury. In one minute the ***Melrose*** can be changed for any of a hundred different purposes required of a farm wagon—***the implement you use more than any other piece of machinery you own.*** Make it modern—and save money, time, inconvenience, labor, and your own peace of mind.

I am not asking you to take ***my*** word for it—nor the Company's word—but ***take your own word for it.*** You ought to be willing to do that. We agree to ship the box to you by ***prepaid freight,*** so you will have nothing to pay when you get it. We agree to let you use it for 30 days (one whole month) in order to give it a thorough test and trial right on the gears of your own wagon in your every day work. Then if you are not perfectly satisfied, just take the box to the station and tell the agent to ship it back to us, ***freight to be paid by our Company.***

You are not asked to pay one penny down—you are not asked to pay one penny of freight charges, or any other expense. This is an offer of a ***FREE TRIAL*** and it means just exactly what those two words say.

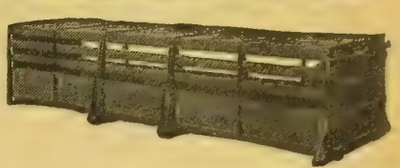
Guaranteed For Five Years

An absolute, open and above board guarantee—just the same as this Free Trial Offer. It will last three, four or five times that long—and its first cost is but very little more than the cost of a good, standard make, single purpose box, that must be lifted on or off every time you want to haul hay, or stock, or chickens, or fertilizer, etc.

Risk One Cent Send just a postal card, giving your name and address today, and receive by return mail our big book of complete information, full detail illustrations drawn from actual, daily use on farms, together with copy of iron-clad signed guarantee, and our great, fair, man-to-man ***FREE TRIAL OFFER*** that will place this modern invention on your farm for one full month's test, without paying anything down or depositing any money in the bank, or anywhere, or without signing any agreement of any kind. This is a ***FREE TEST*** offer and we take all the risk, excepting the price of the postal card you are to send before you turn this page. Send that card today. ***INVESTIGATE.*** We will give one ***Melrose*** Box a free ride on the train to your station, if you will give it a free ride around your farm and plenty of exercise for a month—***we furnish return ticket if you get tired of your visitor.*** ***Send that card today.***

Remember The ***Melrose*** costs but little more than a standard make of old-fashioned, single-purpose wagon box. It weighs less than an ordinary, cumbersome, single-purpose hay rack, regardless of the fact that it is steel bound, silled, braced and bolted throughout—absolutely indestructible. It is guaranteed—it has been tried, tested and proved. It is recommended by farmers and by the U. S. Government Agricultural Experiment Stations. Melrose Wagon beds are on exhibition at both the Chicago and Kansas City Stockyards.

PONY MELROSE
Inventor of the Melrose Convertible Wagon Box



Have one box for all purposes—not a lot of heavy, back-breaking, space-taking makeshifts that cost you more for the expense of sheltering and handling each year than their actual money value. You can prove the ***Melrose*** at our expense.

The ***Melrose*** is built of selected, long leaf, hard pine, double kiln dried. Steel sills: steel bracket and telescope braces throughout. It positively cannot bulge, warp or spring.

Built for any and every purpose on the farm. It is guaranteed for five years—a straightforward, above board, honest guarantee that means just what you want a guarantee to mean. Take it on your farm and prove it before you buy.

Two full size cows or bulls can be hauled, taking only one minute to make the change to the stock bed. A mere boy can go to town with a load of straw, cordwood or pigs, and return with screenings, fertilizer or sawdust.

Here the strength is absolutely proved—4800 pounds of baled hay. Yet with all this strength the ***Melrose*** weighs even less than an old-fashioned hayrack. The entire bed is practically indestructible and will last a lifetime.

The American Wagon Co. Dept. 79 **112 W. Adams St., Chicago, Ill.**

$15.95 AND UPWARD

AMERICAN SEPARATOR

SENT ON TRIAL, FULLY GUARANTEED. A new, well made, easy running separator for $15.95. Skims hot or cold milk; heavy or light cream. Different from this picture, which illustrates our large capacity machines. The bowl is a sanitary marvel, easily cleaned. Whether dairy is large or small, obtain our handsome free catalog. Address,

AMERICAN SEPARATOR CO. Box 1102 BAINBRIDGE, N. Y.

Laws to Get the Money.

About thirty-five years ago, in a growing Texas city, two cowboys were fined twenty-five dollars each and costs for a little wild riding through the town, and when they objected to the total bill as being extortionate, they were curtly informed that the ordinance under which they were tried, convicted and fined was passed for the purpose of "getting the money;" in fact, the little municipality was dependent for support upon the laws that were enacted to be broken as the best means of getting the money to pay corporation expenses, The cowboys answered good-humoredly: "These things come high, but we must have them."

However expedient it may be to pass unsatisfactory laws of that character, the want of principle connected with the transaction brings the law into contempt. There are many laws enacted which seem fair upon their face that were really passed as revenue measures in order to provide fat jobs at public expense in reward for party fidelity or infidelity; in other words, "to get the money."

If the law-making bodies were reduced by one-half their members, and the other half would be called in session after the first body had adjourned, and if the duty of the second body was to "recall" unjust, obsolete and vicious laws, there would be plenty for them to do. The cry to recall the judge who insists upon doing his duty, regardless of the popular clamor, is not by any means as reasonable as would be the agitation for a Legislature for the sole and only purpose of repealing unjust and burdensome laws, many of which, as previously stated, were passed merely to get the money either for the state or for the individual.

A Few Things About Fertilizers.

All fertilizers are profitable if intelligently used. The intelligent use of a fertilizer means applying it where it is needed and not where it is not needed, and in proper quantities. Thus, it is possible to apply such large quantities of a certain kind of fertilizer to certain plants that great growth would be made at the expense of fruit or seed production. The writer remembers one big apple tree that grew near a barnyard. It has twice the size of any other tree in the orchard, but could never be induced to bear more than a few scattering apples. It spread out like a shade tree in every direction, but produced nothing but shade, though it was, at the time the writer last saw it, at least thirty years old.

A man must study the fertilizer question to be able to use fertilizers intelligently. This is a thing that many will not do. The result is that they waste large quantities of fertilizers, and this means the loss of much money. To illustrate: A traveling salesman for the fertilizer department of a Chicago packing concern was traveling through the South, visiting the cotton growers. One man to whom he annually sold a certain brand of "complete" fertilizer was visited. The agent found that this man's land was deficient in only one element and that in buying a complete fertilizer the man was putting on certain elements that were of no value to his land. He carefully explained this to the plantation owner and advised him to buy a single fertilizer, by which means he could buy double the amount of needed fertilizer with the same money he had been in the habit of spending. But the planter declared he would stick to the old brand of a complete fertilizer. He was afraid to steer out of the beaten track. So he continued to follow a practice that meant an annual waste of hundreds of dollars.

This is similar to the waste that takes place in the buying of low-grade fertilizers when these brands of fertilizers are purchased. The low-grade fertilizers are manufactured to meet the demand for low-priced fertilizer. It is no economy, for the plant food in a ton of low-grade fertilizer costs more than in a ton of high-grade fertilizer, taking the plant food pound for pound. In a general way the highest-priced fertilizer may be said to be the cheapest. There is also a saving in the cost of transportation, as the low-grade fertilizer carries a large amount of "filler," which has no real fertilizing value, but which will often show up quite well under analysis.

There never was a time, and never will be a time, when a man without brains can advantageously buy and use fertilizers. The man who farms automatically will still continue to waste money on kinds of fertilizers he does not need. The brainy man will study both the fertilizer and the soil on which it is to be applied.

The Grain Dealer Surprised.

Farmer—Isn't No. 2 Corn worth more than 35c?
Grain Dealer—That is really the market price today, but I will make it 35½c. (Load weighs 2720 lbs.)
Farmer, opening Calculator—Amounts to $17.24; had on 48 bushels and 57 hundredths. (Page 13.)
G. D.—Well, I declare! Whose lightning Calculator is that?
F.—Why, Ropp's of course—the **New** improved edition. It comes handy indeed, couldn't get along without it.

Ropp's Commercial Calculator.

This is a standard book, and a revised, enlarged and improved edition. There are millions in use. **Ropp's Commercial Calculator** is especially valuable to farmers. By its regular use many hard problems become easy. It will prevent mistakes, relieve the mind, save labor, time and money, and do your figuring in the twinkling of an eye. As handy as a watch, always ready and reliable. Anyone who will send 50 cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of **Ropp's Commercial Calculator** as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Let Me Prove That Spraying Merry War Powdered Lye Kills Insects and Pests

E. Myers, President, E. Myers Lye Company

Most Effective Spray Mixture Known For Orchard, Garden or Poultry House — Will Not Injure Vegetation.

This claim which I make for *Merry War Powdered Lye* as a spray may be a new thought to you, but I know whereof I speak, because I speak from a lifetime of experience, making test after test.

I want to say to you Mr. Farmer, that if you want to get the most out of your orchard and garden you owe it to yourself to at once carefully investigate and prove to your own complete satisfaction that *Merry War Powdered Lye will exterminate bugs, insects, scale or pests* which take the profits from your pocket and that, unlike Paris Green and other spray mixtures, *will not sear the foliage or poison or dwarf the yield.* Moreover, the drippings act as a fertilizer, enriching the soil—increasing the yield.

You can have absolute proof of this. First, read about the experience of another in the letter printed below—then go to your local dealer and purchase a few cans of *Merry War Powdered Lye* and give it a common-sense trial. ***Accept no substitute,*** if you want results.

Read This Convincing Letter!

Vale Summit, Md.

Dear Sirs:-
I have given Merry War Powdered Lye a thorough test in removing San Jose Scale and have the most beneficial results. My orchard is now in fine, healthy condition as is my rose garden also. **James Barber.**

Follow Directions Carefully

Cut Them Out and Save For Reference

Every farmer knows that it is one constant battle to keep the pests down—and the trouble with most spray mixtures is that they cannot be used strong enough or often enough to keep down the pests without injury to the vegetation.

If you would have the largest possible yield, give as much time as possible to intelligent spraying of orchard and garden with *Merry War Powdered Lye.*

A potato patch sprayed weekly with *Merry War Powdered Lye* will yield an immense crop. Try it.

You can use *Merry War Powdered Lye* spray mixture as often as is necessary to keep the pests down without fear of injury to vegetation—in fact the more drippings of this spray mixture there are around the roots, the richer the soil, the larger the yields will be.

One can of *Merry War Powdered Lye* to 15 gallons of water makes a most effective mixture for most spraying purposes in orchard or garden.

Used frequently during the Winter and early Spring months, this solution will prevent or destroy San Jose Scale.

To exterminate Borers, make a solution of one can Merry War Powdered Lye to 10 gallons of water. Apply plentifully with a brush around the mouths of the burrows so that it will trickle down into the burrows.

Unequaled In Poultry House

The most effective wash or spray for nests, roosts and houses is made from three teaspoonsful of *Merry War Powdered Lye* to one gallon of Water—it's death to lice, mites and vermin.

You can use a solution of *one* teaspoonful of *Merry War Powdered Lye* in one gallon of water on bodies of lice infested fowls without injury to skin or plumage.

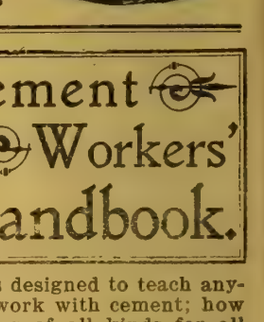
IMPORTANT WARNING If you want the very best results do not make the mistake of thinking that any ordinary commercial lye will produce the results claimed for *Merry War Powdered Lye.* Insist on your dealer supplying the genuine—and *accept no substitute.*

At All Leading Dealers *Merry War Powdered Lye* comes in 10c cans, full case of 4 dozen cans for $4.80, at Grocers, Druggists or Feed Dealers Everywhere. If yours can't supply you, write us, giving your dealers' names and we will see that you are supplied, and will also send you free, a valuable booklet *How Merry War Powdered Lye Adds To The Farmer's Profits.*

Crops Sprayed with Merry War Powdered Lye

E. Myers Lye Co.
Dept. 22
St. Louis, Mo.

Which Kind Of a Crop Do You Want?



Without

One On Bill Nye.

Whenever a member of Congress has a story to tell about that famous humorist, "Bill" Nye, he hunts up Representative Frank M. Nye, of Minnesota, his brother. Representative Gould, of Maine, cornered Nye in the lobby of the Capitol the other day and said that while most of the stories that are told could have been jokes which "Bill" Nye turned on the other fellow, yet he remembered an incident where the joke was on the humorist.

"Your brother was living in New York at the time," said Gould, "and a neighbor from Shirley, Maine, where you were born, dropped in to see him.

"'You know the old house is about all that is left of the town,' remarked the visitor.

"'Yes, I suppose that's so,' said Nye.

"'They think a great deal of you there. The old house stands on the corner and they have put a tablet in front of it.'

"'Bill' was all attention. He leaned forward and inquired:

"'What was on the tablet?'

"Eight miles to Readville,' said the visitor."—Philadelphia Record.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

In the state of Vera Cruz, Mexico, many peanuts are produced, and the average price is $1.00 per bushel.

8 Hardy Rose Plants Free.

The **Universal Magazine** is a splendid monthly publication; nice, bright, cheerful, illustrated; 32 pages, three columns to page. Devoted to stories, the homestead, good literature, poetry, patterns, embroidery, etc. We have a very liberal offer to make in connection with a subscription to the **Universal Magazine.** Anyone who will send us fifty cents to pay for two-years' subscription to the **Universal Magazine** can select as a Free Premium **Eight Hardy, Ever-blooming Roses,** one-year plants. They are splendid varieties, as follows: **Etoile de France, Yellow Kaiserin, Helen Gould, Clothilde Soupert, President Taft, White Killarney, Marigold** and **Ever-blooming Rambler.** No such collection was ever offered before as a subscription premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

THE GREATEST BOOK OF LIVE STOCK CHAMPIONS.

Ready For Delivery During the Month of April—The Most Valuable Book For Stockmen of Modern Times.

During the month of April the new edition of The Book of Live Stock Champions will be ready for delivery. The book will contain at least 320 pages, probably 336 pages. The size of the page is 6x9¼ inches, and the book is to be elegantly bound in silk cloth with gilt title. It will be a good, stout, handsome book, a fit ornament for any home, combining elegance with utility, and will weigh about twenty-eight ounces. It is as large as we dare make it.

This is UNCLE PIPER, subscription editor of The National Farmer and Stock Grower, rejoicing because he has once more in sight a volume of THE BOOK OF LIVE STOCK CHAMPIONS to dispose of as a subscription premium. UNCLE PIPER says THE BOOK OF LIVE STOCK CHAMPIONS is a seven-time winner.

A Five-thousand-dollar Book.

In The Book of Live Stock Champions there will be about seven hundred indexed illustrations, containing one, two or several champions to the page. A few are full pages, most of the cuts are half pages, and quite a number of the champions are taken in pairs. The book will practically contain one thousand champions in live stock. Every picture is from a half-tone engraving from photographs taken from life, and they are the very best pictures that money can buy. The book is printed on enameled paper, and the ink used in the printing cost a dollar a pound. Counting the cost of the photographs, the work of editing, the engravings, paper, ink, composition, presswork and binding, without the slighest exaggeration the first cost of the first thousand copies was not less than five thousand dollars, which is five dollars a volume and about a fair valuation of each copy of the book.

A champion in the show ring, as appearing in the book, is the winner of the highest award, especially sweepstakes, junior or senior champion, champion or grand champion, but sometimes a first prize is the highest awarded. In speed a champion is a maker of a new record; a dairy champion may make a new record as a producer of milk or butter. There are champions as sires, as matrons, champions in the markets, champions by courtesy. The book contains beef and dairy cattle; draft, trotting, pacing, coach, saddle and thoroughbred horses; mules, jacks and jennets; breeding hogs, market hogs; breeding sheep, market sheep, and Angora goats. Every animal is entitled by record to appear in the book, which contains no scrubs, either in records or appearance. Every animal has name, history, winnings and generally owner and breeder.

The Book of Live Stock Champions is not an advertising medium, neither was a charge made to anyone for publishing any of the pictures; the most that any breeder has done towards the publication was to furnish a suitable photograph, and that has been a great help. We have taken some subscriptions in advance for the book, but not many.

Our Good Intention.

The Book of Live Stock Champions is edited, published and issued as a souvenir supplementary edition of the Monthly National Farmer and Stock Grower, and, excepting some volumes that go to Agricultural Colleges, all the copies will be sold as such. Every one of our subscribers ought to have a copy, and can obtain one by sending in one dollar on subscription account. That will give them the paper for two years; the book is therefore practically a free premium.

A Personal Appeal.

The editor makes a personal appeal to each of our readers to send in one dollar on subscription account and to receive a copy of this book. Directly the books are properly bound, dried and ready for delivery every order to date will be mailed in one day. Anyone who is not perfectly and amply satisfied on receipt of the book will have the money refunded, and we will pay return postage also. To obtain one of these books upon the terms proposed is a privilege more than a purchase.

HERE IS A SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will also send me as a Souvenir Supplement, post free, one copy of **The Book of Live Stock Champions,** cloth-bound edition of 1912, immediately after publication, safe delivery in good order guaranteed.

Address. . . . . .

State. . . . . .

Dairymaid of Pinehurst.

Dairymaid of Pinehurst, a Guernsey cow, had a remarkable record as a three-year-old when in a year's test she made a record as a dairy cow that placed her at the head of the list of all dairy cows of that age. Her year's record as a three-year-old was 14,562.40 pounds of milk, containing 860.26 pounds of butter-fat. Dairymaid of Pinehurst was also winner of the Iowa State Dairy Cow Contest.

Dairymaid of Pinehurst has recently completed another remarkable record, this one as a 4½-year-old, with the following results: Year's milk, 17,285.30 pounds; average butter-fat, 5.27 per cent.; total butter-fat, 910.67 pounds.

Dairymaid of Pinehurst was bred by Mrs. E. W. Strowbridge, of Moorestown, N. J., and owned by W. W. Marsh, of Waterloo, Iowa. Her three-year record under test is worth considering as showing possibilities of the dairy cow development. First year—Milk, 7,930.50 pounds; second, 14,562.40 pounds; third, 17,285.30 pounds. Butter-fat—First year, 405.51 pounds; second, 860.26 pounds; third, 910.67 pounds. Average three years, 13,-253.73 pounds milk and 725.48 pounds butter-fat.

$27.65

THE ECONOMY CHIEF
The Closest Skimming Cream Separator Ever Made

Actually Buys the Highest Grade, Closest Skimming

Cream Separator

Ever Manufactured

Think of it! Only $27.65, full and complete purchase price for ***the big Economy Chief Cream Separator,*** absolutely proven by expert tests and thousands of testimonials to be the ***closest skimming*** and ***most durable*** cream separator ever put on the market. This is our wonderful brand new 1912 model, equipped with our marvelous patented ***purifying and aerating bowl*** and the celebrated ***double opposed disc system.*** A regular $70.00 ***big business*** cream separator for only $27.65, and with a capacity of ***300 pounds per hour,*** and ***absolutely guaranteed for twenty years.***

You Buy Direct From the Factory

That's the secret of our amazingly low prices. No big agents' commissions for you to pay; no extra dealers' profits; no so called factory distributers' profits. You pay only the ***rock bottom price.*** We actually save you from $40.00 to $50.00 on any capacity machine you want. For instance, a 400 pounds per hour capacity separator for only $34.90; a 600 pounds per hour capacity machine for only $42.35. We fill your order ***direct*** from the largest and most completely equipped cream separator factory in the world.

You Can Buy on Sixty Days' Trial

We will positively ship you THE ECONOMY CHIEF CREAM SEPARATOR on SIXTY DAYS' TRIAL. We want you to give this separator sixty days' good hard test on your farm before you decide to keep it. Compare it with any and all of the overpriced machines you can find around. Try it on warm milk, cold milk, new, mixed or old milk; it makes no difference. Then, after two whole months' trial, if you are not ABSOLUTELY CONVINCED that THE ECONOMY CHIEF is the greatest cream separator you ever saw at any price, simply return it to us and it won't cost you a penny. We will even pay the freight charges both ways.

Old Separators Taken in Exchange

If you have an old cream separator ***of any make*** that is out of repair, hard to run or will not run at all, we will take it off your hands as part payment for a brand new 1912 model Economy Chief. Furthermore, we will make you a ***good liberal*** and ***fair proposition.***

To Buy Groceries Right.

Our readers are well acquainted with the great merchandise firm of Montgomery Ward & Co., and will be glad to know that they have issued a new pure-food grocery catalogue. This firm is well and favorably known as a strictly reliable house, and hundreds of thousands of farmers will testify to this from having bought of them for many years. To get this catalogue, all you have to do is to write a postal card, saying: "Please send us your grocery catalogue as advertised in The National Farmer and Stock Grower." Address, Montgomery Ward & Co., Chicago Avenue Bridge, Chicago, Ill., or to Montgomery Ward & Co., Nineteenth and Campbell streets, Kansas City, Mo. The service is equally as good from either establishment.

Effect of a Good Fertilizer.

"I purchased of Culberhouse & Salmons by the solicitation of their salesman, Mr. R. R. Houston, 1½ tons of the Empire Cotton and Corn Grower Fertilizer. I left six rows through the middle of the patch unfertilized. They averaged twenty pounds to the row, while the six rows on the east and west side that were fertilized averaged sixty pounds to the row. That is what the fertilizer did for me."—W. J. Brown, Jonesboro, Ark. See advertisement of Empire Carbon Works on page 12.

Golden Arrow Seed Corn.

We commend to our readers the Golden Arrow Seed Corn sold by the A. W. Schisler Grain Company, 708 North Fourth street, St. Louis, Mo. This is a true bred Reid's Yellow Dent, and has been improved from original stock until it has some characteristics of its own. It is a very bright yellow corn, symmetrical, with small proportion of cob to grain, and is a large yielder. Mr. Schisler is selling it at $2.50 per bushel, and it is all butted and tipped, so that every kernel can be sown with confidence. Higher-priced seed corn can be found on the market, but none better at any price. Time is short. Send in your money for the amount of seed you need. It is a safe investment.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many otther things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Paper-bag Cookery.

A few years ago everyone was astonished over the claims of the fireless cooker, which in its simplest form was only a hay box. To-day cooking in paper bags is demanding the attention of the best people in culinary prominence. The system was perfected by M. Soyer, a French chef, who has been working for fifteen years to perfect it, and who now claims for it a great variety of work, though an omelet and a cup of tea are still baffling him.

A great advantage is that any ordinary stove may be used, the specially-prepared paper bags and a broiler being the only requisites. Food cooked in the bags must never be placed on a solid shelf, but upon a wire-rack shelf or broiler, to insure uniform cooking and a minimum danger of the bag's bursting during the process and scattering its contents.

Food cooked in the paper bags loses nothing of its flavor in the process, and it is also prevented from shrinking, a most important matter when the high cost of living renders the strictest economy an essential at every point. The odor of victuals does not permeate the entire house and vicinity, proclaiming with the accuracy of the most truthful gossip just what is to be served for dinner. The saving of dishwashing is material, removing not only a bit of drudgery but obviating the hard work of lifting pots and kettles, for the paper bag is used for kindling after a single service and a new one substituted. The microbe has little chance to exist here, for the bag, clean when the food is put in, is folded several times across the top and then fastened tightly with clips.

The bags are especially prepared for this purpose and come in assorted sizes. Each must be thoroughly greased inside before the food is placed in it. If a chicken or beef roast is desired, both meat and gravy are placed in the bag. If it is found later that the bag leaks you have simply to transfer the roast in the bag into a bag which is entire.

M. Soyer has a book on the subject in which he explains in detail the simplicity and advantages of the paper-bag cookery. There are some important details to be considered, notable among which is the distance the bag should be from the oven floor or solid shelf in using a gas stove. Of course this and other things must be regulated largely by the experience of each individual. The roast requires almost no watching during the process of cooking. It is evident that there are still possibilities not yet developed. The subject is interesting, and the woman who can obtain the paper bags with directions will find both pleasure and profit in making the practical test.—Bessie L. Putnam.

St. Louis Hog Market.

On Monday, April 1st, with about 10,000 hogs on sale, the top price paid was $8.15 per 100 pounds for a load weighing 241 pounds, and the bulk of the good-weight hogs sold at $7.85 to $8.00. Included in the sales were several loads, 250 to 295 pounds, at $8.07½. The top of the light hog market was $7.95 for a load weighing 196 pounds.

Our idea of a fair price for wheat is two cents a pound or $1.20 a bushel on the farm.

Campaign Offer!

The great Daily and Sunday KANSAS CITY JOURNAL

SIX MONTHS $1

This startling half-price subscription offer is made by THE JOURNAL strictly as a trial and on a cash-with-the-order basis.

ECZEMA

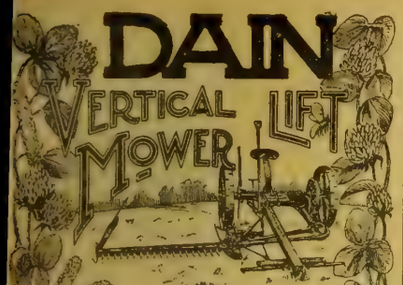
(Also called Tetter, Salt Rheum, Pruritus, Milk-Crust, Weeping Skin, Etc.)

ECZEMA CAN BE CURED TO STAY, and when I say cured, I mean just what I say—C-U-R-E-D, and not merely patched up for awhile, to return worse than before. Remember I make this broad statement after puting ten years of my time on this one disease and handling in the meantime a quarter of a million cases of this dreadful disease. Now, I do not care what all you have used, nor how many doctors have told you that you could not be cured—all I ask is just a chance to show you that I know what I am talking about. If you will write me TO-DAY, I will send you a **FREE TRIAL** of my mild, soothing, guaranteed cure that will convince you more in a day than I or anyone else could in a month's time. If you are disgusted and discouraged, I dare you to give me a chance to prove my claims. By writing me to-day you will enjoy more real comfort than you had ever thought this world holds for you. Just try it and you will see I am telling you the truth.

DR. J. E. CANNADAY, 352 Park Square, Sedalia, Mo.

References: Third National Bank, Sedalia, Mo. Could you do a better act than to send this notice to some poor sufferer of Eczema?

It is a lucky candidate who is more talked about than talking.



Is a Clean Cutter

Its compensating-gears and cutter bar realigning device are successful examples of the wonderful inventive genius of Mr. Joseph Dain. The gears are so mounted in relation to each other that perfect balance and true mesh are permanently insured and the crank shaft is relieved of all end thrust, preventing lost motion, reducing draft and multiplying cutting power. That is why the Dain Mower runs lightly and cuts where others fail.

It is the only mower you can realign, yourself, right in the field with your wrench. This practical adjustment for maintaining the cutter bar in line with the pitman, means added efficiency and years of extra service.

A Real Vertical Lift

Notice the spade handle on the lever. Easy to grasp, no twisting. One movement of one lever raises the bar, knife throws in and out of gear automatically as bar is raised and lowered. The large-coil, flexible spring floats the cutter bar, does practically all the work in lifting with the foot at corners and helps in raising the bar vertically.

Consult the nearest John Deere dealer; learn all about this greatest of all Mowers, and about the entire line of Dain Hay Tools, Loaders, Side Delivery Rakes, Stackers, Sweep Rakes, Presses; every one the best of its kind.

Dain makes the best hay tools. They have been specializing on them for over a quarter of a century.

Send for full particulars and a free copy of "Better Farm Implements and How to Use Them," the most complete and practical book ever written. Write today.
Ask for package No. R 7.

"Save seed only from the most profitable individuals with the same care you use in propagating your animals."—C. P. Hartley.

Children's Washable Dresses.

When making children's dresses there are many little ways in which it pays to leave a chance for enlarging, such as making the armholes large and the waist, sleeves and skirt several inches longer than necessary.

All wash goods should be shrunk in the piece before making up, and the best way to do this is to pour boiling salt water over the goods and let it stand until cold, and when cold the goods must be taken out of its salt bath and pinned on the line without wringing, and so carefully as not to wrinkle it, then it will be quite easy to press smooth. The salt is used to set the color and the hot water shrinks the goods.

Run a tuck underneath the trimming on the sleeves and in the hem of the skirt on the under side and set the skirt up on the waist, then you can easily make the dress larger when needed.

A little dress that is entirely outgrown can often be made plenty large enough, and sometimes they are prettier than when new.

A nice little white dress was ripped apart and a band of insertion set in the skirt and a yoke, belt and cuffs were made of the insertion, and the new dress did not have the appearance at all of being pieced out and made over.

If any fruit stains or any kind of stains are found upon their last year's wash dresses, soak the stained portions in coal oil, as this will nearly always remove old stains as well as fresh ones.

It is a good plan to look over their last summer dresses to see what can be done with them before buying new goods, as many of them can be made to do duty for another season. A little percale dress that was still good but faded was first pieced out to make it plenty long enough, then it was boiled in strong suds to remove the remaining colors and then colored a dark navy blue with Diamond dye for cotton, and it was as nice and serviceable as a new dress. Faded muslins can be colored pretty shades of blue or pink or any color wanted and will only need a little new trimming to make them as good and pretty as new garments, and it is well worth the trouble if one must economize closely. Every time these garments are washed, put a little dye of the same shade in the rinse water, and they will keep a good color as long as they last and always dry them in the shade with the wrong side out, as the hot sun will fade and spoil even the best colors of new fabrics. —Aline.

The Two Concrete Books.

We sell a cement book that is well worth buying, as will be seen on page 22; but there is another book which is on the same subject, and it is sent absolutely free. It is entitled "Concrete Construction About the Home and on the Farm." It is not a catalogue; it is an illustrated, instructive book whereby you first learn to do little things with concrete and then greater and still greater as you get better posted. Write to Atlas Portland Cement Co., Dept. 165, 30 Broad street, New York, and ask for the free Cement Book. You will get it and you will find it very satisfactory.

Have You a Chronic Illness?

If you have you will surely be interested in the Bodi-Tone trial offer which is printed on the last page of this paper. Bodi-Tone, which is now three years old, has made a great record in such cases. The manufacturers believe in it, for they will send you a box to try, no matter how old, hard or obstinate your case may be. If it does not help you, you need not pay for it.

Don't Pay for This Sheep Shearing Machine Until You See and Examine it

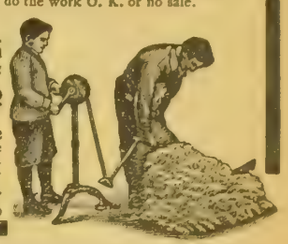
Most dealers have it. If yours hasn't, ask him to get one for you, and when it comes have it set up and try it. If you are convinced that it is what you want, buy it and try it on your sheep with the distinct understanding that it must do the work O. K. or no sale.

This STEWART BALL BEARING MACHINE No. 9
is just the easiest of all shearing machines to turn. A boy can run it all day without tiring. It is ball bearing throughout, including a ball bearing shearing head, shears quick and evenly all over. The price including four sets of knives is only **$11.50** It is really a wonderful machine and you will be agreeably surprised at the work it does.

Get your dealer to send now, or if you prefer send $2 and we will ship C. O. D. for balance and you may try the machine and if not satisfied we will refund all you paid out.

Send for copy of new 1912 catalague and Expert Instructions on shearing sheep.

CHICAGO FLEXIBLE SHAFT COMPANY
182 Ontario St., CHICAGO



Missouri Clipped Lambs.

At the St. Louis National Stock Yards, April 1st, T. L. Buford, a prominent stockman of Schuyler county, Missouri, was represented on the market with 145 head of 73-pound clipped lambs that brought $7.00 per 100 pounds. This was the first time in several months that clipped lambs reached that figure.

Colorado Sheep and Lambs.

A good number of sheep and lambs have arrived at the St. Louis market from Colorado. On April 1st the offerings embraced a nice string of 80-pound lambs that topped the market at $8.00. They were from Prowers county. Another good shipment from the same county included lambs at $7.50 to $7.75; while a San Luis Valley shipment sold at $7.65 to $7.85. Among the representative Colorado sales were sheep of rather plain quality at $5.50 and ewes at $5.00. In each case the price quoted is per 100 pounds.

Potatoes Selling High.

The opening of the April market at St. Louis found potatoes selling high. Fancy Red River Ohio seed potatoes were held at $1.65 to $1.67 per bushel; and "Dusty Rurals" sold at $1.50 per bushel. Fancy Burbanks were held at $1.55, and some fair quality sold at $1.45 per bushel.

A GARDEN OF ROSES—FINE, STURDY PLANTS.

The Most Delightful Subscription Premium Offered By Any Farm Paper.

The National Farmer and Stock Grower has again decided to send out a collection of eight choice ever-blooming Rose Plants to our patrons who will send in a special subscription. They are one-year plants and will give good satisfaction. We guarantee the plants to reach you in good growing condition and with each package we send complete directions for planting, care and culture.

The collection, briefly stated, is: **Etoile de France,** the acme of perfection of hardy red roses; **President Taft,** an ever-blooming pink rose of superior merit; **Yellow Kaiserin,** rich canary yellow, that will thrive under most unfavorable conditions; **White Killarney,** the wonderful new "Irish Beauty," of surpassing elegance; **Helen Gould,** vigorous, growing velvety red; **Marigold,** a most valuable variety for outdoor planting, producing deep, full, saffron-yellow flowers, which always appear charmingly fresh and sweet; **Ever-blooming Crimson Rambler** is the eighth of the collection, making a total of the grandest collection ever grown.

OUR SPECIAL OFFER.

Send us **sixty (60) cents,** by money order preferred. We will send you **The National Farmer and Stock Grower** for one year We will send you direct by mail, postpaid, the full set of **Eight Hardy, Ever-blooming Roses.** We will also send you a 16x20-inch picture entitled **"The American Beauty Rose."** The picture is most beautiful. There is a great bunch of roses resting on the white linen cloth of a table. It is glorious, magnificent. Send us **sixty (60) cents.** The paper can go to one address, the picture to another and the roses to another, or all three to one address. The roses are sent out directly it is safe to dig them in the spring.

HERE IS A SUBSCRIPTION BLANK.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:—Gentlemen: Herewith please find sixty (60) cents. Please send me **The National Farmer and Stock Grower** for one year, the **American Beauty Rose Picture** at once, and the full set of **Eight Hardy, Ever-blooming Roses,** one-year plants, when it is safe to dig and mail them in the spring.

Build Up the Home School.

If there is one thing that every agricultural community needs to-day it is a good school. The farmers of each locality can better afford to help build the local school than they can afford to send their children to city schools. When they send their children away from home they do three things: Subject them to social dangers; loss from their help at home; and incur heavy expenses for board and tuition.

The farmer that has children growing up around him and who is ambitious to have his children receive a good education, should begin at once to affect the school situation in his township. It is on the basis of the township that the agitation for better schools must be carried on in rural communities. The chopping up of townships into little school districts does not make the way easy to obtain good schools. Yet in many of our states the way is open for the people to combine their districts, if they wish to do so.

The greatest obstacle in each locality is the lack of public sentiment in favor of radical changes in the school system. Approach a neighbor and broach the subject and the commonest reply will be that the district school is all right and that no new conditions are desired. So the first thing to do is to begin the agitation for better things, with the expectation that it will take a year or two to awake the people to a realization of the insufficiency of the little district school to do the work required by modern conditions of life.

The community itself must be educated in the matter of the kind of a school it should have and the kind of a school it has. This work of educating must be done by self-sacrificing people who have the good of the community at heart. In this preliminary work it would be well to hold house meetings occasionally to discuss this very subject. Happy is the locality that possesses a leader of broad views, who will energetically keep things moving in the direction of better schools.

The community must be led to see that things must be done on a bigger scale than can be done in the little country school. There must be a stronger concentration and a wider co-operation than is possible with a few score families. We must get away from the idea of doing things on a little scale and take up the problem of how to do them on a bigger scale. The inevitable answer to this problem is the school in which are concentrated the pupils of several districts, under permanent teachers, who are receiving enough salaries to make them feel that they are fixtures in the work of teaching in that particular school.

Then will dawn a new era and new community life. The centralized school will draw together the pupils of the whole township and enlarge the circle of acquaintance of all. This centralized school will become a center of social effort as well as of educational effort, as it is fast doing in the large cities.

Flat Foot.

People often complain of rheumatism of the leg or foot when there is no rheumatic trouble at all. One young lady suffered for several years with acute pains in her feet and finally went to a doctor to ask for a remedy for her rheumatism. Upon examination the physician told her that she had no rheumatism, but was suffering from flat foot. Flat foot is nothing more nor less than a broken-down arch of the foot, caused by a straining of the muscles and tendons. It is brought about by standing on the feet a great deal, much walking in ill-fitting or high-heeled shoes, which throw the foot far out of the natural position, and similar causes. Nurses, restaurant waiters, salesmen and people in other vocations which require much standing are common victims of the discomfort. Housekeepers, too, often suffer with it, but a woman who stands on her feet nearly all day expects to be tired, and if she has acute pains in her feet and lower limbs she is apt to attribute it to too much standing, overweariness or rheumatism. A housekeeper is perhaps more apt to neglect this trouble than are persons in occupations that take them out of the home.

Though flat foot is rarely cured, yet it can be so relieved as to make it much less bothersome. The best thing is first to have the foot examined by a physician to make sure that flat foot is the trouble. Daily, vigorous massage is a help. Wearing low-heeled, well-fitting shoes that allow the foot to retain its natural position go a long way toward relieving the discomfort. Surgical manufacturers make a metal arch, designed especially to restore the natural curvature to the foot, and this support, provided it fits the foot, is the greatest help in correcting the deformity. A good physician can recommend a reliable arch or a firm who will make one fitted to the foot in question.—Janet Thomas Van Osdel.

The American Woman's Cook Book.

This is a splendidly-bound book that weighs nearly two pounds. There are three hundred and eighty-four pages of approved household recipes, including many excellent dishes never before presented in a Cook Book.

The American Woman's Cook Book is by Ella M. Blackstone, who is famous for clearing the road for the student of domestic science by giving the reasons for everything. It is easy to learn from her when everything having a bearing on the subject is explained so clearly.

The book includes chapters devoted to food for each month; time required to digest different articles of food; menus for all occasions; table etiquette; kitchen dont's; kitchen equipment, and useful hints and recipes for the home in general; specially-drawn articles upon various subjects, such as soups, fish, poultry, beef, veal, mutton, pork, salads, vegetables, and all classes of dishes, besides beverages, candies, pickles and preserves, ice creams and ices; also ruled pages for new recipes to be preserved.

The thorough alphabetical index is a wonderful help to all subjects. A good book is known by its index, which in this case is eighteen pages, three columns to the page.

The publisher's price for single copies of the American Woman's Cook Book is $1.50 per copy and 15 cents postage, but we have contracted for such a large number we have obtained the benefit of a reduced rate. Therefore we will send one copy of the American Woman's Cook Book, postage paid, for One Dollar, and include one-year's subscription to The National Farmer and Stock Grower. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

SisterWoman!

READ MY FREE OFFER

My Mission is to make sick women well, and I want to send **you, your daughter, your sister, your mother, or any ailing friend, a full** 50-cent box of Balm of Figs Compound **absolutely free. It is a remedy for the treatment of woman's ailments, and I want to tell you all about it**—just how to use it yourself—**right at home** without any inconvenience—and the best of it is that it will not in the least interfere with your work or pleasure. Balm of Figs Compound is a remedy that has made sick women well and weak women strong, and I can prove it—**let me prove it to you,** and I will gladly do it, for I have never heard of anything that has, according to the abundance of testimonials at hand, so **quickly** and **surely** cured women's ailments. No internal dosing necessary—it is a local treatment, yet it has to its credit some of the most extraordinary cures on record. Therefore I want to place it in the hands of every woman suffering with **any form of female weakness or diseases so common to women.**

This 50c box of Balm of Figs Compound will not cost you one cent

I will send it to you **absolutely free,** to prove to you its splendid qualities, and then if you wish to continue further, it will cost you only a few cents a week. I do not believe there is another remedy equal to Balm of Figs Compound, and I am willing to **prove** my faith by sending out these **50-cent boxes** free. So, dear reader, irrespective of your past experience, write to me **at once — today** — and I will send you **the treatment entirely free** by return mail, and if you so desire, I can readily refer you to many, who can personally testify to the great and lasting cures that have resulted from the use of this remedy. But after all, the **very best test** of anything is a **personal trial** of it, and I know a 50-cent box of Balm of Figs Comcound will **convince you** of its merits. Nothing is **so convincing** as the **actual test** of the article itself. Will **you** give Balm of Figs Compound this test? Write to me today, and remember I will gladly send you a **50-cent box of this remedy absolutely free.** Address,

MRS. HARRIET M. RICHARDS, Box E 18, JOLIET, ILLINOIS

"Three-In-One" Cake.

The skillful housewife recognizes it as a part of her duty to adapt her material to her work, and the recipe which will not admit of a bit of flexibility is never a favorite with her. And with each variation comes a suggestion for another until the original may be very much changed. This is especially true in cake making, and the following will be but suggestions for other forms as economical and pleasing as the triplet suggested:

White Cake.—Two cups granulated sugar, a scant half cup of butter. Use the butter without melting, creaming it with a silver knife, and when it is worked smooth add the sugar, beating the two together with the fork. One cup sweet milk, three cups flour, three teaspoonfuls baking powder, and when all are well beaten add the whites of six eggs (five will do), beaten to a stiff froth. Bake in two layers in a moderate oven.

Frosting.—Pour a little hot water over a teacupful of granulated sugar and boil until it "hairs;" pour the boiling mixture over the white of one egg beaten stiff. Add a few drops of vanilla or other flavoring, beat thoroughly while adding the syrup and until cool enough to spread nicely upon the cake.

Raisin Cake.—When commencing to make the cake pour a little water over a cupful of seeded raisins, cut into small pieces and let them stew until soft and then dry down so that they will add no moisture to the frosting. Make the latter as above and stir in the raisins.

When eggs are scarce, make the cake in two different parts, dividing the mixture into halves. In the one use the whites of three eggs, and in the other the yolks; or use brown sugar in the dark part and flavor with chocolate and spices. Make the frosting dark with chocolate, shaving it fine and dissolving in water.—Bessie L. Putnam.

TOBACCO HABIT
CONQUERED IN 3 DAYS

I offer a genuine, guaranteed remedy for tobacco or snuff habit, in 72 hours. It is mild, pleasant; strengthening. Overcomes that peculiar **nervousness** and craving for **cigarettes, cigars, pipe, chewing tobacco** or **snuff.** One man in 10 can use tobacco without apparent injury; to the other 9 it is **poisonous** and seriously **injures the health** in several ways, causing such disorders as nervous dyspepsia, **sleeplessness,** gas, belching, **gnawing,** or other uncomfortable sensation in stomach, **constipation, headache, weak eyes, loss of vigor, red spots on skin, throat irritation, asthma, bronchitis, heart failure, lung trouble, catarrh, melancholy,** neurasthenia, impotency, loss of memory and will power, impure (poisoned) blood, rheumatism, lumbago, sciatica, neuritis, **heartburn, torpid liver, loss of appetite,** bad teeth, **foul breath,** cunervation, lassitude, **lack of ambition,** weakening and falling out of hair and many other disorders. **It is unsafe and torturing** to attempt to cure yourself of tobacco or snuff habit by suddenly stopping—don't do it. The correct method is to **eliminate the nicotine poison** from the system, strengthen the weakened, irritated membranes and nerves and genuinely overcome the craving. You can quit tobacco and enjoy yourself a thousand times better while feeling always in robust health. My FREE book tells all about the **wonderful 3 days Method.** Inexpensive, reliable. Also **Secret Method** for conquering habit in another **without his knowledge.** Full particulars including my **book on Tobacco and Snuff Habit** mailed in plain wrapper, **free.** Don't delay. Keep this and pass it on. This adv. may not appear again. Mention if you smoke or chew.

The Increased Cost of Living.

A good many people have written on the increased cost of living. Many of these writers have tried to find some one or two reasons for the increased cost, but have generally stopped at two or three at the most. To the writer of this article it seems that the increased cost is due to many things and not to one or two merely.

Each one of us can take his own experience for a guide, to a large extent. The increased cost is largely but not entirely a matter that we can control.

First, there are the agencies that we cannot control. One of these is the combination of manufacturers in various lines. Another is the combinations of merchants and dealers. A third agency is the tendency of local tradesmen to make high prices on some things an excuse for raising the prices on other things. These are things beyond the control of the ordinary consumer.

But there are other groups of causes wholly within the control of the people that are groaning most loudly under the increased burdens put upon them.

The people generally are paying more for the same things than they did formerly, largely because they want them in different and more expensive forms. Take the breakfast foods, for instance. We buy patented oatmeal at five cents a pound because it is put up in a handy package, and we pass by the oatmeal in bulk that sells at two cents per pound. In that case we pay a 150 per cent. premium for the luxury of having the oatmeal in the better form.

We do not buy our apples by the barrel, as of yore, but we pay 50 cents a peck for our apples, buying them in small quantities. The barrel of apples that would cost us $3.00 if bought by the barrel cost us $6.00 when bought by the peck. This is to a large extent due to the coming of the flat, which has no cellar, and also is due to the placing of furnaces in the cellars of houses. These furnaces have destroyed the value of cellars for keeping apples and other fruit and vegetables.

The increasing multitudes now buy their potatoes by the peck for the above reasons. This means a very great increase in the cost of living in the cities and villages. It does not so greatly affect the country.

The telephone is another means of increasing our living expenses, not by reason of the tolls we pay, but by reason of the ordering done over the phone. It is so easy to step to the phone and order a lot of things that are not needed and which would not be purchased if the one who orders them had to go in person for them or even write a letter.

Increasing luxury is one of the things that add to the cost of living. It is a luxury to have a furnace in the basement, but it means a 50 per cent. increase in the cost of coal for heating. By means of the furnace all the house is heated, including the basement. When stoves were in use the basement was not heated, and that amount of coal expense was saved. And some of the sleeping rooms were not heated, and that still further saved the coal bill. This applies to both cities and country.

This list can be extended indefinitely. There is no reason why we should not indulge in these luxuries if we can pay for them; but they make up part of the increased cost of living of which we complain.

Some Hints in Dress.

While the present sleeve is still in vogue, the set-in sleeve is equally popular, and it is safe to say that the simple form which has been a distinctive feature for the past year will soon be a thing of the past. But it is undeniable that while it is easily made, neat and simple, it is a pattern which cannot be remodeled easily, neither does it adapt itself to being cut out from a dress of another style.

High waist lines are seen, yet the normal line is also in evidence, and it is only reasonable to predict that this will soon be the only line recognized. None of the tailored skirts are more than two and one-half yards wide at the bottom, and two yards is a more frequent width.

Large revers are still shown on the coats, a fact which will be welcome, since these can be easily added to the old coat, and the latter thus made to look almost like new.

For service the Peter Thompson dress is a favorite with misses. In blue serge with red and white trimmings it is a substantial and dressy form which is well adapted to all ordinary occasions. If the weather is warm, the sailor collar attached to the dress is sufficient about the neck, much more comfortable than the high collar which serves to make the dress warm in winter. A good serge will stand hard usage. It is fadeless and easily kept in order. While it may cost more at first, it is really economical in the end.

You can make your own fancy buttons by getting wooden molds with a center hole through which to radiate the fancy stitches. Cover with goods of the same, and then ornament with some geometric design. These are quickly made and form a most effective and inexpensive trimming.

Some of the old fashions in dress trimming are now being used to good advantage. Among them we notice the narrow plaiting with pinked edges, each double box pleat being caught together in the middle, from both top and bottom, and a very full effect thus gained.

Some of our leading authorities make a specialty of remodeling, and the ability to do this skillfully counts now to advantage rather than being a thing of which to feel ashamed. There are dyes which render the faded garments like new. White soap or gasoline will cleanse, and with neat pressing the cloth has a new lease of life. Some old silk or ribbon may be combined with it. And in washing the silk it is wise if possible to dry it by stretching out smooth on some glazed surface, as a window pane, and allowing to dry there without ironing. The touch of the iron is usually told by the shiny surface and the impaired silken lustre. Black silk is readily cleaned by sponging with cold coffee.

Fortunate is the girl who has the milliner's touch. Hats are expensive, but a wire frame may be picked up in the ten-cent store and covered with material in the house by one handy with the needle. Braid may be bought by the yard, and there are often plumes and ribbons which will serve another season. The softer braids now have the preference, and taffeta in plain or changeable effects is another favorite covering. What is becoming to the individual must always be the prime guide in selection. Once the majority blindly followed the leader, without regard to whether a style was becoming or not; but it is no longer so, and a woman of refinement will sacrifice all else to gain something adapted to her own face and figure.

Large feet are no longer a reflection. It has been an open secret among shoemen for some time that woman's foot is growing larger, and the No. 6 shoe is now the average size. So do not sacrifice comfort if your foot is spreading. And do not be tempted to any of the freak forms which mean only discomfort. A light-colored shoe makes the foot look larger than a black one.—Bessie L. Putnam.

A Useful Publication.

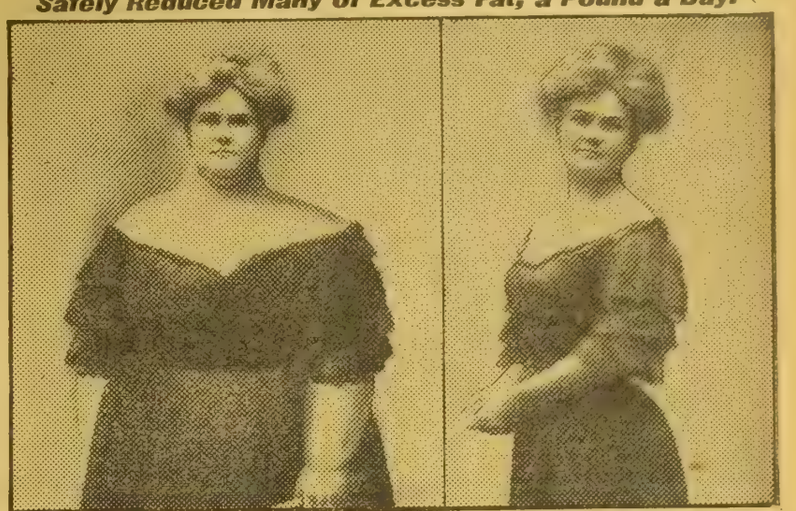
The National Farmer and Stock Grower is designed to assist a farmer in the conduct of his business, to guide him in his dealings with other people, and to keep him informed of the general drift of trade in farm products. A publication that costs only fifty cents a year cannot be expected to cover the entire field of farm operations, but all who read the paper will find that it is a help to them, inasmuch as it fits in with their thoughts and requirements; in other words, it is a publication that has the faculty of touching the right spot.

Be sure to read about the new edition of The Book of Live Stock Champions advertised on page 23.

FAT is Dangerous

It is Unsightly, Uncomfortable, Spoils the Figure, Causing Wrinkles, Flabbiness and Loss of Vigor.

Let me send you my Proof Treatment absolutely Free; I Have Safely Reduced Many of Excess Fat, a Pound a Day.



Note what my treatment has done for others; let me reduce your weight.

Lost 51 Pounds. Mrs. W. D. Smith, Box 34, Abbott, Me., writes: **"I have lost 51 pounds** by your treatment. I used to have heart trouble and shortness of breath; now I am well and can walk and work with ease."

Puzzles and Answers.

It is 439 miles from Pittsburg to New York. How many pretty girls, all in a straight line, would it take to cover that distance?

Four hundred and thirty-nine, because a miss is as good as a mile.

What does the evening wear?

The close of the day.

What is the difference between a kiss and a sewing machine?

One seems so nice and the other sews seams nice.

When is it proper to eat vinegar with a fork?

When it is a little tart.

What is the best material for an aeroplane?

Fly-paper.

How do locomotives hear?

Through their engineers.

What makes a pair of shoes?

Two shoes.

What does a stone become in the water?

Wet.

What is that which has a mouth but never speaks, and a bed but never lies in it?

A river.

Which is the longest five-lettered word in the English language?

Smile—because it extends a mile after the first letter.

Why isn't your nose twelve inches long?

Because if it was it would then be a foot.

BEAUTIFUL APRON PREMIUM.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial; and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H • • Notre Dame, Ind., U. S. A.

OVER-FATNESS KILLS

Shortens Life, Spoils Beauty, Brings Discomfort and Worry.

Usually an over-stout person dies from ten to thirty years earlier than one whose weight is retained at normal. Excessive fat cause the victim to become enfeebled and ailing and to die prematurely. The morbid fat gathers within the ribs and hardens, causing fatty degeneration of the heart—danger of sudden death after climbing stairs, shock, running for a train, etc. The double chin which people are apt to regard as merely an annoying defect in beauty, is a sign of weak throat and voice, and is frequently the forerunner of catarrh, asthma or bronchitis. A big stomach denotes gastric and intestinal troubles. Large hips indicate ailments or weakness of kidneys, liver or other vital organs.

The victim of obesity becomes a sad, ailing, weak, ill-tempered person. The safe, reliable, guaranteed home treatment of Dr. Bradford will speedily effect a cure which will last the entire lifetime, bringing added years, attractive appearance, freedom from pains and discomforts, and real contentment. You can obtain a proof treatment absolutely free by merely writing to Dr. H. C. Bradford, 287-G Bradford Bldg., New York, N. Y. With this the doctor will mail free a convincing array of testimonials and his book of advice.

It is advised that readers of The National Farmer and Stock Grower who are over-fat, or who have relatives or friends needing a reliable, perfectly safe treatment, take advantage of this unusual opportunity.

Regain Your Health.

You ought not to wait another day before trying Bodi-Tone, which many of your neighbors have used to the great and lasting improvement of their health. You ought to test it, because you can get it on trial and need not pay a penny unless it greatly benefits you. Read the liberal Bodi-Tone trial offer on the last page of this paper and send for a box.

Life-fitting Education.

Down on a small farm in the Ozarks there lives an intelligent couple who have a nine-year-old boy above the average in brightness. The little fellow goes to an ungraded school, and so readily does he master the subjects given to the children of his grade that he has left them far beyond. He is naturally a somewhat nervous child, so his parents have decided that he needs less indoor studying and more outdoor life. With this in view they keep him from school about one-third of the year, thus evenly dividing his time in and out of school. By this arrangement he can easily keep up with his classes, but even though he shouldn't, the parents care not a whit, for the reason that they are bringing up a child, not a machine. What one child can stand and do is no criterion of what another can do. A farmer well knows that some fields are better for one kind of growth, while other fields require something wholly different to make a good yield. Is it then unreasonable to conclude that our children are at least as different in their requirements as are these various plots of ground?

Incidentally, the child referred to "plays" with a typewriter at home. On this machine he already does fairly creditable work. He also manipulates a set of telegraphy instruments which his father, as ex-railroad man, owns. And then there is reading, real reading out of well-beloved books, with an intelligent father or mother to help him over hard places. All of this is really play to him now, but by the time he is eighteen years old he will have a practical trade at his fingers' ends, besides understanding farming, for he has regular duties about the place which he is required to perform. I cannot help but feel that the little lad will find his place in the world with less difficulty than some of his more faithful schoolmates who never miss a day's session at school.

Yet not for a moment would I decry regular attendance at school, provided it is what is best for the child and that he is developing along the lines in which he should develop. The discipline it gives children in faithfulness and punctuality alone is worth much, but it does appear that there is too much insistence placed upon every child reaching a certain standard of excellence in every study. And no two children being alike, it is quite impossible to form them according to the same mold. The teacher in an ungraded school, faithful and wise though he may be, has not the time nor the energy to study the peculiarities and the potentialities of each child under his supervision. This privilege is given to the parents, who should understand their own offspring, as no one else possibly can. It is their business to investigate why Johnny falls so much below the standard in some subjects and whether Susie's high marks mean a really intelligent grasp of what she has recited or whether she has a parrot-like habit of repeating mere words that mean nothing to her. A report card showing E or 100 for each study may not mean so much in the way of real development as some card with some P or 60 grades, provided the high marks come because the child readily memorizes a few printed words that mean little to him, while the low marks may mean that a child who learns more slowly has worked hard and conquered only a few of his problems, but there has also been a great mastery of self in the work. It is a fact that many of the boys and girls who have grown up to do things which have made the world admire and wonder were oftentimes ashamed to show their poor report cards to their parents. A little cramming system which fills a child's mind with a multitude of barren, unattached facts will profit him little in the game of life. Make him a thinker, draw him out along the lines for which he shows a peculiar aptitude and he will become really educated.—Janet Thomas Van Osdel.

AN ECONOMICAL FRUIT TREE SPRAY.

So much depends upon intelligent and systematic spraying, if the greatest possibilities of an orchard are to be realized, that orchardists are giving more and more attention to this important subject every year.

It is now claimed by many who have been conducting experiments along these lines that it is just as important to spray fruit trees occasionally throughout the fall and winter, beginning just after the fruit is picked and again after the dead leaves fall, as during the blooming and budding period.

In the opinion of many fruit growers the best and cheapest spray mixture is made by making a solution of Merry War Powdered Lye in the proportion of one can of the Lye to about fifteen gallons of water. This solution has sufficient strength to kill all pernicious insect life without the slightest injury to foliage or buds. When used during the winter months it is unusually effective in preventing and destroying San Jose Scale, which, as every fruit grower knows, occurs on any portion of a fruit tree, foming a crusty, ash-colored coating.

This Merry War Powdered Lye solution is equally as good for killing bugs and insects that infest the foliage of all plant life—shrubbery, vines, etc. It is an effective remedy, which, however, in the strength of solution here named, cannot do injury to the plant. Nearly every dealer carries Merry War Powdered Lye in stock for 10c. per can. If not, write to E. Myers Lye Company, Dept. 22, St. Louis, Mo., and ask for particulars.

Women Who Fill Attics and Closets With Old Trash.

In the April Woman's Home Companion appears the following:

"Most women dread housecleaning; and it is little wonder, if one could see into their attics and closets. They have the 'saving mania,' and have indulged it all their lives; and many a one, especially she who has stayed in the old home, has not only her own, but the accumulations of generations of women before her.

"How can any sensible woman be so selfish, and so self-abusive at the same time, as to keep what benefits her in no possible way, and yet makes her so much extra work every year? Why not dispose of things to the best possible advantage as they become useless, and save half the work of the spring overhauling as well as do a great deal of good?"

Flies! Flies! Flies!

Get rid of them and help make your home and premises sanitary by the liberal use of ***Tanglefoot Fly Paper.*** There is fully one-third more compound per sheet on ***Tanglefoot*** than on any other fly paper; hence it lasts longest, catches the most flies and is the **best** and **cheapest** fly paper. If you ask for "fly paper" or "sticky fly paper" you may get a cheap imitation that will soon dry up or glaze over. **Ask for Tanglefoot.**

Sold by Grocers and Druggists.

TREE TANGLEFOOT, **put up in 1, 3, 10 and 20 lb. cans, Will protect your trees from all climbing insects.**

A Good Example to Follow.

Subscribers on Missouri Point of the West Alton and Machens Telephone Company have adopted a special call to summon help if there is distress in any of the homes of the subscribers. Most of the subscribers are on one line. The signal is one short and one long ring. Every patron of the line, on hearing the signal, is to take down the receiver and wait for the message.

What to Do When a Child Has a Convulsion.

In an article on the care of children in the April Woman's Home Companion, Dr. R. H. Dennett, a great New York specialist on the diseases of children, tells as follows what to do when a child has a convulsion:

"When a child is suddenly seized with a convulsion, proceed as follows: First—Loosen the clothing, but take off only the shoes and stockings. Second—Place the child upon a bed or table, with his legs hanging over the edge from the knees down. Third—Put his feet and lower legs in a pail of hot water, to which has been added one tablespoonful of powdered mustard. If you have no mustard, use hot water alone; be very careful it is not hot enough to burn. Fourth—Put an ice-cap to the head; lacking an ice-cap, use plenty of cracked ice done up in a towel. Fifth—Give an enema of warm soap-suds. Repeat it if it is not retained. Sixth—As soon as the child is able to swallow, give a large dose of castor oil."

A Clever Ruse.

Mr. A.—"Norah seems quite gone on the postman."

Mrs. A.—"Gone! Do you know what that girl does? She mails herself a postcard every evening, so as to make sure he'll call the next morning."—Boston Transcript.

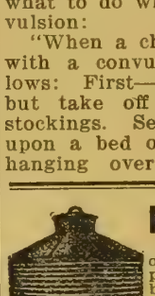
The Moment's Need.

"What do you think about Shakespeare and Bacon?"

"I don't. Eggs and bacon take up all my time and thinking."—Houston Post.

Land of Flowering Plants.

New South Wales is said to contain more kinds of flowering plants than all Europe.



BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

Play the Piano In One Hour

Without Lessons or Knowledge of Music You Can Play the Piano or Organ in One Hour.

Wonderful New System That Even A Child Can Use.

FREE TRIAL

She Doesn't Know One Note From Another, But Plays Like a Music Master.

Impossible, you say? Let us prove it at our expense. We will teach you to play the piano or organ and will not ask one cent until you can play.

A musical genius from Chicago has just invented a wonderful system whereby anyone can learn to play the Piano or Organ in one hour. With this new method you don't have to know one note from another, yet in an hour of practice you can be playing the popular music with all the fingers of both hands and playing it well.

The invention is so simple that even a child can now master music without costly instruction. Anyone can have this new method on a free trial merely by asking. Simply write, saying, "Send me the Easy Form Music Method as announced in The National Farmer and Stock Grower. The complete system together with 100 pieces of music will then be sent to you Free, all charges prepaid and absolutely not one cent to pay. You keep it seven days to thoroughly prove it is all that is claimed for it, then if you are satisfied, send us $1.50 and one dollar a month until $6.50 in all is paid. If you are not delighted with it, send it back in seven days and you will have risked nothing and will be under no obligations to us.

Be sure to state number of white keys on your piano or organ, also post office and express office. Address Easy Method Music Company, 2831 Clarkson Building, Chicago, Ill.

THE MONDAY MORNING DANCE.

Would you see some pretty capers,
Would you see some waltzing fine?
Watch the Monday morning dancing
Of the stockings on the line.

All the ages and conditions
Join the frolic mad and gay,
Stockings dainty, long and filmy,
Stocky socks of sober gray.

Stockings full of holes and ragged
Prance around with merry hop;
Baby's socks, absurdly little,
Execute an aimless flop.

Grandma's sturdy knitted woolen—
Who would think it?—dances high
While the socks of rainbow colors
In gyrations giddy vie.

To the music of the zephyrs
In a happy, free design,
Watch the Monday morning capers
Of the stockings on the line.
—McLanburgh Wilson, in N. Y. Sun.

JIM PARKS'S STORE.

You know Jim Parks? He used to farm
Out Hopkins Corner way.
Well, he got tired of planting corn,
And cutting oats and hay.
It was too hard and dull a life—
He said he could make more
To move to town and open up
A little grocery store.

The opening up was easy done,
And things just 'peared to swim.
You work a farm, but keep a store—
It seemed like fun to Jim.

His trade? Well, he had more or less—
'Twas hardly ever more—
But times would better in the fall,
And—he liked keeping store.

One day last week I called around,
And found him dreadful blue;
He's kept the store all right, but kept
The things inside it, too.
"The business suits me lots of ways,
But tell me how," said Jim,
"A man can keep on keeping store
When it will not keep him?"
—Woman's Home Companion.

ACCORDING TO PRECEDENT.

The hen that cackles loudest may not lay
the largest eggs;
The mule that kicks the hardest may not
have the toughest legs;
The tree that is the tallest may not bear
the sweetest fruit,
And the girl who is the fairest may not
wear the smallest boot.

The man whose brow is highest may not
always know the most;
The hero who is bravest may not make the
loudest boast;
The arm that is the strongest may not have
the farthest reach,
And the man who talks the longest may
not have the finest speech.

The rose that is the reddest may not have
the sweetest scent;
The man whose trust is proudest may not
be most prominent;
The woman who has jewels that she
measures by the peck
May not have the slimmest fingers or the
most delightful neck.

The man who works the hardest may not
draw the highest pay;
The man with deepest knowledge may not
have the most to say;
But the man who is the most modest gets
the last seat in the rear,
And the man who blows his bugle is the
one whom people hear.
—Chicago Record-Herald.

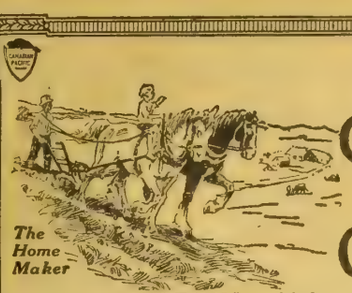
REAPERS OF LIFE'S HARVEST.

Ho! reapers of life's harvest,
Why stand with rusted blade,
Until the night drags round thee,
And day begins to fade?
Why stand ye idle, waiting,
For reapers more to come?
The golden morn is passing,
Why sit ye idle, dumb?

Thrust in your sharpened sickle,
And gather in the grain.
The night is fast approaching,
And soon will come again.
The Master calls for reapers,
And shall He call in vain?
Shall sheaves lie there ungathered,
And waste upon the plain?

Come down from hill and mountain
In morning's ruddy glow,
Nor wait until the dial
Points to the noon below;
And come with stronger sinew;
Nor faint in heat or cold,
And pause not till the evening
Draws round its wealth of gold.

Mount up the heights of wisdom,
And crush each error low;
Keep back no words of knowledge
That human hearts should know;
Be faithful to thy mission,
In service of thy Lord,
And then a golden chaplet
Shall be thy just reward.
—I. B. Woodbury.



Get Your Canadian Home from the Canadian Pacific

WHY FARM on high-priced, worn-out lands when the richest virgin soil is waiting for you in *Manitoba*, *Saskatchewan* and *Alberta*, the great Prairie Provinces of Western Canada? In many parts of the United States you have to spend as much money to fertilize an acre of your farm, as a fresh, rich, virgin acre will cost you in Western Canada. The first prize of $1000 for the best wheat in the world was awarded to a Western Canada farmer at the New York Land Show—farmers on our low-priced lands won first, second and third prizes for wheat in competition with the world.

Go where you too can prosper, where you will find perfect health, where you can earn a farm and a home in a few years' time at most—many farmers have paid for their farms with one crop—where it does not take a lifetime of drudgery to make a competence and where energetic efforts bring riches quickly.

Land from $10 to $30 an Acre Ten Years in Which to Pay

The Canadian Pacific Railway Company offers you the finest irrigated and non-irrigated land along its lines at low figures, and on long terms of payment—lands adapted to grain growing, to poultry raising, dairying, mixed farming, and to cattle, hog, sheep and horse raising—in the Prairie Provinces of Manitoba, Saskatchewan and Alberta. Select your own land. Decide what kind of farming you want to follow, and let the Canadian Pacific Railway put you on the road to fortune. Magnificent soil, good climate, good markets, excellent schools, good government, all are awaiting you in Western Canada; and a great Railway Company whose interest it is to help you to succeed, is offering you the pick of the best. *The best land is being taken first.* Don't wait. Ask for our handsome illustrated books and maps, with full information, free. Write and investigate this great proposition today. Address

Summer Bedding.

In the old days everyone had a supply of bed quilts for summer, but there are not many housekeepers now who have the time to piece quilts, and for this reason the summer blankets and light-weight comforts are coming into general use. There is nothing nicer for cool nights in the summer than light, soft comforts, and these can be quickly and easily made at home and cost very little, and the nicest materials for them are the cotton challies and pretty colored cheesecloth, and for summer bedding a pound or a pound and a half at most of pure white cotton is sufficient for each one, and if they are hung on the line in a strong breeze occasionally and beaten with limber switches they will not readily lose their freshness.

Cream-colored cheesecloth tied with blue or pink makes a pretty cover, while old gold tied with cardinal red is the most serviceable, as they do not show soil so quickly.

A very good comfort can be made without any expense. Sew together pieces of old, soft muslin and calico and make this the size you want the cover to be, then take pieces of outing cloth, scraps and pieces of old, soft underwear and baste these firmly on the muslin sheet and aim to have it the same thickness all over. Then use this as a filling for the outer covering. This covering can be made from the best breadth of summer dresses and the comfort tied with tidy cotton, and you can make the comfort as heavy or light as you want it to be; but for summer a very light filling will make it heavy enough.

The cotton blankets are almost as easily washed as a sheet and they are cleaned with very little rubbing by putting them to soak in warm suds in which some borax is dissolved, and the quantity of borax used must depend entirely upon the quality of the water, as hard water will require more than soft. The best way is to put a little of the borax powder in the water at a time and when the water feels soft to the touch no more of the powder is needed. The suds in which borax is dissolved are excellent for washing the white counterpanes and light-weight comforts. After washing the comforts and blankets, rinse them, drain a little and hang them dripping over the line, and when partly dry turn them crosswise on the line, pulling into shape, and they will be light, puffy and almost like new when well dried.—M. H.

Orders From Hindquarters.

Murphy was a new cavalry recruit and was given one of the worst horses in the troop. "Remember," said the Sergeant, "no one is allowed to dismount without orders."

Murphy was no sooner in the saddle than the horse kicked and Murphy went over his head.

"Murphy!" yelled the Sergeant when he discovered him lying breathless on the ground, "you dismounted!"

"I did."

"Did you have orders?"

"I did."

"From headquarters?"

"No, sir; from hindquarters."—Ladies' Home Journal.

It is the real joy of friendship that one may think out loud to a friend.

Hammond's Handy Atlas of the World.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For fifty (50) cents paid in advance we will send one copy of **Hammond's Handy Atlas** post free by mail and credit one-year's subscription to The National Farmer and Stock Grower. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Hold Out Your Hand

It is Yours

No matter where you are, whether you are a man or woman, twenty years old or seventy, whether you live in the town or country, whether you are rich or poor, all you need do is *hold out your hand for it.* Give us the signal that you want it, say the word, and it will be sent right out to you, without a penny from you. If you need it, if you want to try it and see what it will do, if you are ill, poorly, weak or suffering, hold out your hand and get it, as thousands have done during the past three years. You don't need to write a long letter, don't need to fill out any tiresome blanks, don't need to send references, money or stamps. It is yours to try at our risk, *yours for the asking*, no matter who or where you are, if you will hold out your hand for it, so we will know you want it. We place it right in your hand, and are *glad to do it when you ask for it.*

Clip the coupon, fill in your name and address, and we will send you a dollar box of Bodi-Tone without a penny from you.

This is how a quarter-million people have already tested Bodi-Tone, including hundreds of readers of this very paper, and *this is how we want you to try it.* We know Bodi-Tone, we know how quickly it acts in the body, how it makes its great power felt soon after you begin to use it, how it sends the glow of returning health into every nook and corner, and we want to prove it to you, absolutely at our own risk. If you are entirely satisfied when you see what the trial box of Bodi-Tone does for you, pay a dollar for it. Otherwise, that ends it. *We leave it all to you.*

Bodi-Tone

does just what its name means—*cures disease by toning all the body*, and we want you to try a box at our risk and see what it will do for *your* body. Bodi-Tone is a small, round tablet, that is taken three times every day. Each box contains seventy-five of these tablets, enough for twenty-five days' use, and we send you the full box without a penny in advance, so that you can try this great remedy and learn what it is, so you can learn how it works in the body, how it *cures stubborn diseases* by helping nature to tone every organ of the body. Tone is a little word, but it means a great deal, everything in health. When all the organs are doing their part, when each is acting in a perfectly natural way, when all the functions are healthy and performed with natural vigor, when the energy, strength and power of resistance to disease are all at a natural point, then the body is in proper tone. When disease has attacked any part, when lack of vitality is found and felt, the tone of the entire physical body should be raised to the highest possible point, to make all the body help to cure and restore. This is the power which underlies all of Bodi-Tone's great work for the sick, this is the power it offers you to help you get new health and strength, vigor and vitality.

WHAT IT IS

Bodi-Tone is not a patent medicine, for its ingredients are not a secret. It contains Iron Phosphate, Gentian, Lithia, Chinese Rhubarb, Peruvian Bark, Nux Vomica, Oregon Grape Root, Cascara, Capsicum, Sarsaparilla and Golden Seal. Such ingredients guarantee its merit.

When you use Bodi-Tone you know just what you are using, know it is good and safe and know you are taking the kind of medicine to provide real help for the body. It is a pure remedy that satisfies the most exacting. It contains no narcotics or habit-forming drugs, nothing that your own family doctor will not endorse and say is a good thing. It does not depend on killing pain with cocaine, opium, morphine, or other dangerous drugs. It does not excite the body with alcohol, but it tones the body, and corrects disorders with remedies Nature intended to tone and cure the body when that power was gone from them. Thus, Iron gives life and energy to the Blood, Sarsaparilla drives out its impurities, Phosphate and Nux Vomica create new nerve energy and force, Lithia aids in the Kidneys, Gentian does invaluable work for the Stomach and Digestive forces, Chinese Rhubarb and Oregon Grape Root promote vigorous Liver activity, Peruvian Bark raises the tone of the entire system, Golden Seal soothes the inflamed membranes and checks Catarrhal discharges, Cascara gives the Bowels new life in a natural way, and Capsicum makes all more valuable by bettering their quick absorption into the blood. *A remarkable combination that does wonderful work for health.* Each of these ingredients serves to assist, to help, to build upon the others work. Each adds a needed element from nature to the body. Each has work to do and does it well. They are used because of this ability. We claim no credit for discovering the ingredients in Bodi-Tone, each of which has its own well-deserved place in the medical books of most of the civilized world. We simply claim the credit for the successful formula which we invented, for the way in which these valuable ingredients are combined, for the proportions used, for the curative force which thousands have found in Bodi-Tone, for the cures which make it different from other remedies. Most of these ingredients are as old as civilization itself, for the curative forces which Bodi-Tone ably uses are the forces which have always existed in nature for the restoration of the body's health. Many are regularly prescribed in some form by the medical profession for various diseases and irregular conditions, being used either separately or in combinations with such drugs as each doctor may favor, for there are wide differences of opinion among the doctors of various schools. The *exact combination used in Bodi-Tone* is what gives it the far-reaching and thorough curative and restorative power that makes possible its remarkable cures.

Try it And See

If you are tired of ceaseless doctor bills and wearied of continual dosing without results, *you need Bodi-Tone right now.* If your local doctor has done you no real good, if you have given him a chance to do what he can and the ordinary medicinal combinations he used have failed, give this modern, scientific combination of special remedies a chance to show and prove what it can do for you. Its greatest triumphs have been among men and women with chronic ailments who had tried physicians and specialists at home and elsewhere without lasting benefit, and for this reason all chronic sufferers are invited to *try it at our risk.*

Bodi-Tone offers you its services if you are sick, if you need medicinal help, if your bodily organs are not acting as they should, if your body is not in right and natural tone. That is what Bodi-Tone is for—to restore health, vigor, vitality and strength by restoring tone to the body.

If there is anything wrong with your Kidneys, Bodi-Tone helps to restore tone to the Kidneys, helps to set them right. If there is anything wrong with your Stomach, Bodi-Tone helps to tone the Stomach, helps to set the wrong right. If there is anything wrong with your Nerves, your Blood, your Liver, your Bowels or your General System, the health-making ingredients in Bodi-Tone go right to work and keep on working day after day, exerting always a definite action that produces curative results of the kind sufferers appreciate. If you have Rheumatism, Bodi-Tone helps to eliminate the Uric Acid from the system while it restores tone to the Kidneys, Stomach and Blood, thereby preventing a continuance of Rheumatic poison and putting new activity into muscles, nerves and joints. Bodi-Tone should be used by all women suffering from any Female Ailment, for its toning properties have been found especially valuable in such ailments.

EASY TO GET

Why delay another day, when a trial of this proven medicine is yours for the asking. Why keep on suffering, when by filling in your name and address on the trial coupon and mailing it to us, you can get a full twenty-five days trial treatment of this great remedy which has already restored thousands to health. It just costs a two-cent stamp, and you don't need to pay a single penny unless Bodi-Tone benefits you.

Thousands of cures of Rheumatism, Stomach Trouble, Kidney, Liver and Bladder Ailments, Uric Acid Diseases, Female Troubles, Bowel, Blood and Skin Affections, Dropsy, Piles, Catarrh, Anaemia, Sleeplessness, LaGrippe, Pains, General Weakness and Nervous Breakdown, have fully proven the power and great remedial value of Bodi-Tone in such disorders.

Its history of success has proven beyond a shadow of doubt how the Bodi-Tone plan of *toning all the body* is a right plan that helps to *cure* these and other disorders, that it is *a real aid to nature.* Many who had for years been in poor health and had tried good doctors and most all of the prominent medicines, have found that *one single box of Bodi-Tone* did more good than *all* other treatments combined. Read the reports, showing how Bodi-Tone cures, send for a box on trial at our risk and see if it will not prove the *right thing* for you.

Cured a Year Ago and in Fine Health Since.

Comanche, Okla.—I have suffered almost all my life with Rheumatism, which bothered me since girlhood.

As it became settled in later years it affected my heart, and I would have spells in which I thought I would surely die. I have taken all kinds of medicine and bathed and rubbed with liniments, but nothing that I ever did seemed to do me any good. I saw Bodi-Tone advertised over a year ago and was attracted by the formula printed in the advertisement, which looked to me like a good medicine, and I sent for a trial box. It worked like magic from the start, and showed me that I had gotten the right medicine at last. I am in fine health now, and feel better than at any time within my recollection. I feel that I owe my life to Bodi-Tone's wonderful formula, for I was in a serious condition when I began to use it. I am forty-six years old, MRS. J. E. BOBO.

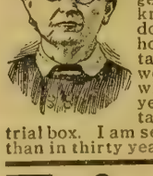
Missouri Preacher Found New Vital Vigor.

Macomb, Mo.—I want to give a word of testimony for Bodi-Tone. At the age of twenty-three I suffered a sun-stroke, and my health has been bad ever since. My Stomach, Liver and Bowels never seemed right. I was

treated by doctors at various times and have also taken my share of patent medicines, and by the time I learned of Bodi-Tone I was practically resigned to my physical infirmities and had learned to bear with them. I am a preacher, fifty years old, and if my experience will be of value to other sufferers, I would be glad to have you publish same. I have received more permanent good and renewed vital vigor from Bodi-Tone than I could have thought possible before I began its use. It has been of such benefit to me that words fail me in expressing the good I have derived. I find it has taken hold of the entire body, to the betterment of every vital part, and life has become a greater blessing to me. My aged mother, who has been helpless at 81 years, has also been using it and is experiencing great good from it. C. N. FINDLAY.

Was a Wreck With Pain.

Conroe, Tex.—I cannot speak too highly of Bodi-Tone. When I sent for the trial box I was a wreck with pains



from my head to my feet. I had pains of all descriptions, sharp and shooting and dull aching pains, in my back and in my hip. I was so weak, and had no strength to do anything. I could hardly get out and in at the door with my knees. It was a burden to me to try to do anything. I had to hire all of my housework done. Now, since I have taken Bodi-Tone, I can do all my housework and wash and iron, something which I have not been able to do in years. Bodi-Tone did it all, for I have taken nothing else since I sent for the trial box. I am seventy-three years old, and feel better than in thirty years. MRS. E. MC ILPINE.

Trial Coupon

Clipped from National Farmer and Stock Grower

Bodi-Tone Company,
Hoyne and North Aves, Chicago.

I have read your offer of a dollar box of Bodi-Tone on 25 days' trial and ask you to send me a box by return mail, postpaid. I will give it a fair trial and will send you $1.00 promptly when I am sure it has benefited me. If it does not help me I will not pay one penny and will owe you nothing. Neither I nor any member of my family have ever used it.

SCOTTISH LASSIE, 305,352—HEREFORD HEIFER, AS A TWO-YEAR-OLD. She was calved Septemebr 3, 1908; bred by Dr. J. E. Logan; sire, Young Bean Brummel; dam, The Last Rose. SCOTTISH LASSIE was exhibited at the Chicago International Live Stock Exposition of 1910 as a senior yearling; was first in class, junior and grand champion of the breed. SCOTTISH LASSIE was again exhibited by Mr. J. P. Cudahy, of Kansas City, in class for two-year-old heifers and under three, and was first in class, senior and grand champion cow at the Chicago International Live Stock Exposition of 1911. The picture of SCOTTISH LASSIE is from a photograph by Hildebrand, of the Union Stock Yards, Chicago, Ill., and from the same photograph an illustration of this famous female heifer appears in our Book of Live Stock Champions, and is one of 720 similar pictures in said book. All readers of this publication are earnestly requested to read the advertisement on page 23.

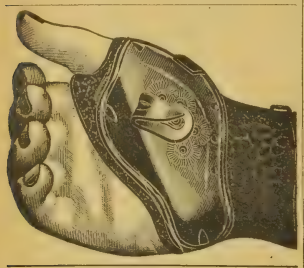
5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husks and prevent clogging. As this is the most approved husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The



strap passes through the leather tongue and the first ring and over the hand to the opposite ring and back through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch-lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle; the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Effect of Light on Plant Growth.

We all know that light is necessary to the growth of most plants, but most of us do not appreciate the very great importance of direct sunlight. Diffused light cannot take the place of direct sunlight.

The failure to appreciate this often leads to the allowing of trees to develop to a point where they shadow the vegetable garden and the flower garden. Sometimes the strawberry patch and the grapery are ruined by the cutting off of the direct rays of the sun.

Most of our farm plants need direct sunlight to do well. Even the shadow of the house or barn for a part of the day makes a great difference. High hedges are detrimental to plant growth. We see here and there a big hedge of osage orange separating the garden or field from the highway. The thick shadow thrown reduces the cultural value of a long strip of land next the hedge.

Plants fight to get to the light. The house plants all turn their leaves and stems toward the windows where the direct sunlight is. The potato sprouts in the cellar grow to great length in their search for light.

Go into the forest and note how many small trees there are that are dead or dying because their light has been shut off by the other trees. See the dead branches on the lower trunks of the spruces and note the richness of the color of the top branches which are bathed in sunshine. On the outskirts of the forest see the trees composing the outermost line, especially on the southeast, south and southwest. The branches stretching outward are big and strong; those on the inside are weak and dwindling.

Grass is a tenacious plant, able to endure under hard conditions, but note what the shade of that big maple tree does to it. Under the tree it is thin and sparse, while in the sunlight it is heavy and dense. Yet under the tree it gets diffused sunlight and some direct sunlight when the sun is low in the heavens.

Yonder is a splendid hard maple tree that has been standing in its present position since the land was cleared. It has made a magnificent growth during the past twenty-five years, and now has a spread of seventy feet. Its top rises grandly with thick foliage. It has had the sunshine in abundance with nothing to shade it. That is the only condition under which a tree can attain its full development.

Long rows of trees along the side of the road may be a pleasant feature of the landscape, but they cause a great deal of loss to the farmer whose fields they adjoin. If they chance to be on the south side of his field and running east and west, the ground will be reduced in its capacity to produce crops, though this is not a loss that can be estimated. It is one of the many cases where art conflicts with productiveness.

The matter of light is one which every farmer must watch, for the shadows of growing trees steal upon him so slowly and imperceptibly that he does not easily recognize the fact of his loss nor the cause for it.

THERE'S MONEY IN HAY.

Hay is Second Only to Corn as a Money Crop—A Plea For More and Better Grass.

"Although we see a good deal about clover and other legumes as a means to gather nitrogen into the soil," said Mr. P. E. Goodrich, President of the National Hay Association, "everybody seems to have overlooked the fact that there is more money in hay than there is in any other one crop except corn. In other words, clover and alfalfa are not only means to an end, but no mean end themselves.

"Taking the United States as a whole, it does not produce per acre over half as much as it should, and it only has about half as many acres as the demand requires.

"Grass crops are less trouble than any other crop, and our association is very much interested in bringing up the hay production, not only in quantity, but eventually in quality.

"The price of hay is all out of reason, and inasmuch as the prosperity of other kinds of crops depends so much upon hay crops, our association is ready to join with the Crop Improvement Association of the Grain Exchanges in preaching a sensible rotation."—National Crop Improvement Service.

Free Bulletins For Farmers.

Bulletin No. 98, "The San Jose Scale in Missouri," tells the story of one of Missouri's worst orchard enemies. It gives a complete history of the San Jose Scale and how it spreads, together with detailed information concerning remedies and methods of control. The bulletin comprises fifty-seven pages and fifteen illustrations. Every farmer who owns an orchard should have it. For free copy address Agricultural Experiment Station, Columbia, Mo.

Bulletin No. 99, "Inspection of Commercial Fertilizers," tells what the College of Agriculture has done during the year 1911 to prevent farmers from being defrauded by worthless fertilizers. It gives the analysis of every brand of fertilizer sold in Missouri and tells exactly what every brand is worth in dollars and cents. No farmer should spend any money on commercial fertilizers without first reading this bulletin. It is free. Write to the Agricultural Experiment Station, Columbia, Mo., for a copy.

Circular 51 tells how to prolong the life of fence posts by the use of creosote. Complete details are given for applying the treatment, its cost and its effectiveness. The information contained in this little four-page circular is worth a good many dollars to every farmer who uses wood posts for fencing. Write to the Agricultural Experiment Station, Columbia, Mo., for a free copy. Ask for Circular 51.

"Growing a Woodlot From Seed" is the title of an eight-page circular which should be in the hands of every farmer who maintains a woodlot to furnish fuel, fence posts and other wood material for which there is a constant demand on the farm. The circular tells how to keep the old woodlot well stocked and how to start a new one, what trees to select, how to grow them from seed and how to plant the seedlings. Write to the Agricultural Experiment Station, Columbia, Mo., and ask for a free copy of Circular No. 52.

What Certain Motors Can Do.

Below are given some data which have been compiled from actual tests, and are taken from recent publications of the General Electric Company:

Six horse power will drive a grain separator and thresh 2,500 bushels of oats in ten hours.

Three horse power furnishes all power needed to make 6,000 pounds of milk into cheese in one day.

Six horse power will run a feed mill grinding twenty bushels of corn an hour.

Five horse power grinds twenty-five to forty bushels of feed, or ten to twelve bushels of ear corn an hour.

Seven horse power drives an eighteen-inch separator, burr mill and corn cob crusher and corn sheller, grinding from twelve to fifteen bushels of good, fine meal.

Six horse power runs a heavy apple grater, grinding and pressing two hundred to two hundred and fifty bushels of apples an hour.

Five horse power will drive a thirty-inch circular saw, sawing from fifty to seventy-five cords of stove wood and from hard oak in ten hours.

Six horse power saws all the wood four men can pile in cords.

Twelve horse power will drive a fifty-inch circular saw, sawing 4,000 feet of oak or 5,000 feet of poplar in a day.

Ten horse power will run a sixteen-inch cutter and blower, and elevate the ensilage thirty feet high at the rate of seven tons per hour.

One horse power will pump water from a well of ordinary depth in sufficient quantity to supply an ordinary farm house and all the buildings with water for all the ordinary uses.

The Largest Grape-producing States.

According to the census, over 83 per cent. of all vines of bearing age in the United States is in three states—California, New York and Michigan. California had, in 1910, a total of 144,098,000 vines, an increase over 1900 of 53,412,000 vines. The production in 1909 amounted to 1,979,687,000 pounds, valued at $10,847,000. In 1899 there were produced 721,433,000 pounds.

In New York there were, at the present census, 31,802,000 vines of bearing age. The production reported for 1909 was 253,006,000 pounds, as against 247,698,000 pounds in 1899. The value of the crop in 1909 was $3,962,000.

Michigan had 11,014,000 vines of bearing age in 1910. The product in 1909 amounted to 120,696,000 pounds, valued at $1,531,000. In 1899 a production of 11,530,000 pounds was reported.

DAIN
SIDE DELIVERY RAKE
This Machine Makes Hay
WORTH MORE
To Feed—To Sell
Let hay lie in the swath and the sun scorches it robbing it of its color and much of its nourishment. In the ordinary close-packed windrow, the air is shut out. But throw it up in a loose fluffy windrow with the
DAIN
Steel Frame
Side Delivery Rake
And the hay is evenly dried by the warm air. All the rich juices and natural color are preserved. If you sell hay, get the highest price. If you feed hay, get the benefit of the increased feeding value by your stock.
Handles the Hay Gently
The rake bars have a slow, steady motion. The spring fingers lift the hay softly. The tender, foliage parts, high in feeding value, are not shattered or wasted.
Cures the Hay Quickly
Hay cures slowly in the swath thatch. Tedded hay falls back on the damp ground. The Dain Side Rake makes loose open windrows and exposes the damp stubble so that it dries out and warms up. This reflected heat helps cure the hay more quickly. In "catchy" weather, quick curing is of greatest importance.
Special Features
Teeth may be raised or lowered.
Teeth turn with gentle motion.
Handles to tender products.
Rakes clean, leaves trash and dirt.
All gears absorbed by rubber springs.
Easy regulation of bevel gears.
Easily adjusted to handle light or heavy hay.
All Dain Hay Tools Are Money Makers
They're made by hay tool specialists, 20 years of experience back of every machine. They're the most simple, the most sure and work saving, the most durable and dependable. Ask your John Deere dealer to show you the Dain line of mowers, rakes, stackers, loaders, presses, etc. Write us for new booklet of the tools on which you are interested. We'll also send you free "Better Farm Implements and How to Use Them," the most practical and valuable book published for farmers.

SOME RULES FOR SHADE TREE PLANTNG.

By Prof. W. W. Robbins, Department of Botany and Forestry, Colorado Agricultural College, Fort Collins.

It is better to use stock that has been grown under climatic conditions similar to those where the tree is to be planted.

Trees two inches in diameter are large enough.

Root system should be compact and trunk straight.

Watch for shipment. Do not allow trees to dry out on depot platform.

Plant the trees as soon as possible after they come from the nursery. However, if the grower is not ready to plant, the trees must be properly cared for. Unpack large bundles of stock, dig a trench in a shady place and heel the trees in until ready to plant. In any event, do not expose roots to air any longer than absolutely necessary.

Trim the lower branches to a height of six or seven feet from the ground. Remove about one-half of the previous year's growth in order to maintain the balance between root and stem systems.

Trim off all torn or broken roots before planting.

Plant with as large root system as possible.

The hole should be larger than the root system.

Do not put fresh manure in the hole; it will burn the roots.

Set trees an inch or two deeper than they stood in the nursery.

Arrange the roots to spread naturally.

See to it that the soil is firm about the roots.

Do not leave a depression about the stem in which water will stand; standing water at the base of young trees causes sun-scald.

Water young trees freely. Two good soakings a week are better than a small amount of water each day.

Cultivate about the trees. Do not allow sod or weeds to grow about young trees.

Place a guard about the tree.

Support the young tree so that its growth will be erect, not leaning in the direction of the prevailing wind. Do not allow any part of the tree to rub against supporting stake or guard.

Avoid Low-grade Nitrate.

The following letter has been received from the Nitrate of Soda Propaganda of the United States and Colonies, 71 Nassau street, New York:

Dear Sir:—Several cases of low-grade nitrate have in the past appeared on the market, and I am writing you to suggest that you advise correspondents to purchase nitrate from trustworthy dealers only. One adulterant is common salt, and sometimes salt cake has been used. Both are worthless as fertilizers and contain no plant food. It is preferable to purchase nitrate in original bags, which contain about two hundred pounds.

So far as the Chilian producers of nitrate are concerned, however, the greatest care is taken, and samples drawn by inspectors from all cargoes before they leave the ports of Chili, and heavy fines would be imposed upon any producers who attempted to export low-grade nitrate. Salt cake residue made as a by-product in the manufacture of nitric acid has also been used to adulterate nitrate, and in certain cases has been sold as niter-cake. This name tends to give it a false value. It is also worthless as plant food. On our part, we have done all that is possible to maintain a high standard, and that our policy will be the same in the future you may be fully assured, and I hope that you will be able to co-operate with us in helping to prevent sales of low-grade nitrate, which we would greatly deplore. Very Truly Yours, (Signed) William S. Myers, Director.

Effect of a Good Fertilizer.

"I purchased of Culberhouse & Salmons by the solicitation of their salesman, Mr. R. R. Houston, 1½ tons of the Empire Cotton and Corn Grower Fertilizer. I left six rows through the middle of the patch unfertilized. They averaged twenty pounds to the row, while the six rows on the east and west side that were fertilized averaged sixty pounds to the row. That is what the fertilizer did for me."—W. J. Brown, Jonesboro, Ark. See advertisement of Empire Carbon Works on page 14.

Mississippi Steers at St. Louis.

At St. Louis, on April 29th, twelve head of Mississippi steers, 1,148 pounds average, sold at $8.50 per 100 pounds; eleven head steers, 1,125 pounds average at $8.00; twelve head, 1,148 pounds, at $7.75; and twelve head, 1,148 pounds, at $7.55. The $8.50 cattle brought the highest price for native Mississippi cattle at any time at any market. These cattle were fed at the Agricultural College near Starkville, Miss., under the direction of Prof. E. R. Lloyd, who is in charge of the experimental work at the college. In later issues of this paper, when a bulletin is issued, giving the particulars of the cost of cattle, cost of feed, gain per day, etc., we will refer to this shipment again.

Be sure to look up page 23 and read about the magnificent Book of Live Stock Champions, which is just issued from the bindery.

The Wheat Harvest Is Everybody's Business

MORE than a hundred million people await the report from the wheat fields. Everybody is interested. A good harvest means prosperity to all. It means more than prosperity to the man whose work lies in the city or town; to him it means existence. Two-thirds of our people depend absolutely upon the other third for the very bread they eat. Truly, the wheat harvest is everybody's business, a matter of the deepest concern to us all.

Fortunately the farmer's reward for his work in the wheat fields is reasonably sure. Scientific preparation of the soil and seed bed, rotation of crops, selection of seed, and the use of high grade farm machines, have made a good crop almost an assured fact. For work of such importance the best machines that can be made are absolutely necessary. The harvest time is short; every minute is important; delay is intolerable and expensive. The choice of machines to harvest your growing crop is your most important duty. Make your investigation thorough and complete and you will decide that the harvesting machine for you is one of the world-famous I H C line:

Champion
Deering

McCormick
Milwaukee

Osborne
Plano

One of these will meet your harvest conditions better than any other machine made, because they have been developed in just such fields as yours. Improvements have been added year by year until I H C machines are practically perfected. They cut equally well, short, tall, standing, down, or tangled grain. They have been simplified until anyone can handle them safely and efficiently.

Because the harvest time is short and delay expensive, and because accidents to farm machines can never be foreseen, we have been careful to provide a stock of interchangeable repair parts where you can lay your hands on them at once if they should ever be needed. In choosing your harvesting machine do not overlook this most important feature. A day's delay on account of a broken part may cost you more than the price of a new binder. When you buy an I H C machine you buy it with the assurance that any needed part is no further away than your dealer's place of business.

This service does away with all unnecessary delay in the field and assures you a full harvest garnered in good season. This fact in itself is a strong reason for the purchase of an I H C harvesting or haying machine or tool.

The experience of many farmers for many years points to one of these machines as the one best buy for a man whose profit lies in the successful harvesting of a small grain or hay crop. I H C machines have been tested thoroughly under every harvest field condition, and have made good in every test. You are not asked to make any experiments, the experimenting has all been done. You take no risk, I H C experience has provided against all risks. With an I H C machine you are safeguarded against all harvesting chances except those of the weather, and very largely against them.

Of next importance to the choice of a machine is the buying of binder twine that will work without waste or trouble in that machine. Here again we have arranged to supply your needs with the best twine that can be made. Take your choice of seven brands—Champion, Deering, McCormick, Milwaukee, Osborne, Plano, or International, all made in four grades—Sisal, Standard, Manila, and Pure Manila.

See the I H C local dealer and discuss with him the machine and twine you should buy. It is his business to help you decide right. You can rely on what he tells you about I H C machines. If for any reason you prefer to have us do so we will send you catalogues. A post card will bring them.

Corn Market Situation.

There have been some remarks about corn selling high, which is not bad news for the farmer who has corn to sell. But there are lots of people who can pay almost any price for luxuries and do it with a smile who will "kick like a bay steer" at a fair price for bread. Corn is really not high at a dollar a bushel, which is less than two cents a pound.

Let us not disguise the fact, between ourselves, that 80-cent corn sounds good to the farmer. On April 30th, at St. Louis, Mo., in car lots sold by sample, the corn delivered and cash received, and under the circumstances, No. 2 corn sold from 81½ to 82 cents a bushel.

In the trading at Chicago, on April 30th, the May corn option closed with sellers asking 80¼ cents; the July option closed at 78⅞ cents, and the September option closed at 76⅜ cents, each of these quotations showing advances of three to six cents a bushel over the quotations of the closing day of the previous month. A year ago No. 2 corn was selling at 52¼ cents, and two years ago at 58¼ cents a bushel, or thereabouts.

We have often stated that there is nothing in the line of news or information that is of more value to the general farmer than these future quotations studied from the actual basis of trade, the end of one month to the end of another. They are not idle figures; they are subject to change; but every figure represents the buying and selling which are done by parties who are posted to the minute with every item of information having a bearing on crop growing, grain markets and actual values.

The Oats Market Situation.

In the closing transactions in cash oats at the St. Louis market, April 30th, 1911, the price for No. 2 oats was 32½ cents a bushel. On April 30th of this year, 1912, in the trading on the St. Louis market, the price of No. 2 oats varied from 56 to 57 cents a bushel.

At Chicago, the headquarters for large grain trading, the May oats option advanced from 54⅞ cents a bushel on March 30th to 56⅞ cents on April 30th. For the present that is a strong feature. The July option also advanced from 50¾ cents on March 30th to 54⅜ cents on April 30th, indicating that until another crop is in the traders expect no decline.

But a decline is expected from 54 and 56 cents when the new crop of oats comes to be harvested, for the September option quoted at 43⅜ cents on March 30th advanced to 45 cents, but that is 9⅜ cents a bushel less than the corresponding quotation for July. The expectation is that the new crop will be sufficient to reduce prices by its own weight. We do not anticipate such a large crop of oats, but we have considerable respect for the figures that are arrived at by buying and selling the goods.

Fertilizers For Corn.

There is an increasing interest in Missouri regarding the use of fertilizers for corn, and a large number of inquiries are being received at the Experiment Station as to the best methods.

In general, it is better practice to keep up the soil by a careful system of rotation, clover and cowpea growing and manuring, than to depend upon commercial fertilizers; but properly-used fertilizers may be a great help.

Briefly, the recommendations of the Experiment Station, according to the results secured on the various outlying soil experiment fields are as follows: On the average upland which is medium to low in fertility the application in the hill or drill with a fertilizer planter of 75 to 90 pounds of a fertilizer containing 2 to 3 per cent. potash will usually be accompanied by the highest net return per acre, per dollar invested in fertilizer, if the corn crop alone is considered. The same application of steamed bonemeal is also good.

On very thin lands the use of the same fertilizers at the rate of 200 to 250 pounds per acre ahead of the corn planter with a fertilizer grain drill is usually better. The same is true on lands medium to poor in fertility, if the crops following are considered, since some return will also be secured from the fertilizer on these crops. Care should always be taken not to apply too much fertilizer, particularly in the hill or drill, as there is danger of the corn firing on a dry season. On seasons of abundant rainfall double the amounts recommended for hill fertilization will often pay better; but taking the seasons as they run, 100 pounds is about the maximum that should be used.

It must be remembered that the use of fertilizers for corn does not keep up the land. It is merely a temporary expedient of getting a crop and should be used only in connection with the best system of rotation, legume growing and manuring that a farmer can practice. Used year after year on the same land, the effect on the soil is the same as if corn had been grown without fertilizer. Where proper systems of keeping up the land through rotation and manuring are practiced, particularly where occasional clover or cowpea crops are plowed in with a cheap phosphate like raw rock phosphate, the use of fertilizer at the time of planting is rarely remunerative.—M. F. Miller, University of Missouri, Columbia.

Two More Farm Publications.

Circular No. 55, entitled "Forage Crops For Swine," is a four-page circular which summarizes in concise form the more important results obtained in the feeding trials with hogs reported in Bulletin No. 95. Ten thousand copies of the latter were printed, but the demand for it was so great that the supply was soon exhausted. The new circular discusses the value of alfalfa, clover, rape and blue grass as forage crops for hogs. Farmers who have not received Bulletin No. 95 should write now for Circular No. 55, addressing the Agricultural Experiment Station, Columbia, Mo.

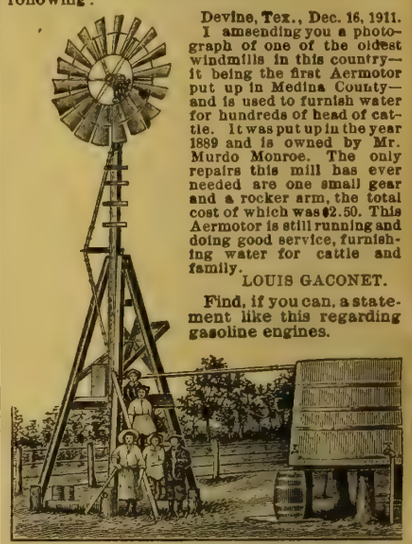
Bulletin No. 101 is the official report of the Director of the Missouri Agricultural Experiment Station for the last fiscal year. The report shows that during the year twelve publications were issued, nineteen new men were added to the Station staff, over 50,000 letters were received and answered, nearly 400 public addresses were made to over 143,000 people, and fifty distinct lines of investigation were carried on for the benefit of Missouri farmers. The report tells of the extensive co-operative experiments on several hundred farms in this state, and gives the interesting results obtained on the outlying experiment fields. Every farmer who wants the official statement of what the Experiment Station is doing for the state should write to the Agricultural Experiment Station, Columbia, Mo., and ask for the report of the Director, Bulletin No. 101. It is free.

The Aermotor with the automatic regulator stops when the tank is full and starts when the water is lowered 4 inches. You oil it once a week. A gasoline engine has to be started and stopped and oiled and attended almost constantly, and you have large expense for gasoline and oil. The wind is free.

We make gasoline engines (exceedingly good ones) but, for the average water supply for the home and 150 head of stock, an 8-foot Aermotor with a storage tank,—which is a necessity with any kind of water supply—is all that is needed and is by far the more economical. The supply of wind for the Aermotor is more to be relied upon than the supply of gasoline, batteries and repairs for the gasoline engine.

The cost of gasoline, oil, batteries and repairs in pumping for 150 head of stock with a gasoline engine, will buy an 8-foot Aermotor every year, and you are still to the bad the amount of time you spend over the gasoline engine.

But the gasoline engine has its place on the farm notwithstanding the fact that 100 people are maimed or killed with gasoline where one is injured by a windmill, and that 100 farm buildings are burned with gasoline where none is injured by a windmill. For the water supply, the windmill is the thing. Thousands of farmers who have done their first power pumping by a gasoline engine have become tired of it and are buying windmills. That is one reason why our windmill business increases from year to year. We can furnish you much testimony like the following:



Devine, Tex., Dec. 16, 1911.
I amsending you a photograph of one of the oldest windmills in this country—it being the first Aermotor put up in Medina County—and is used to furnish water for hundreds of head of cattle. It was put up in the year 1889 and is owned by Mr. Murdo Monroe. The only repairs this mill has ever needed are one small gear and a rocker arm, the total cost of which was $2.50. This Aermotor is still running and doing good service, furnishing water for cattle and family.
LOUIS GACONET.

Find, if you can, a statement like this regarding gasoline engines.

Of course, there are places where a windmill cannot be used. There you will have to use a gasoline engine, with all of its disadvantages. We will furnish for that place a small engine which costs but $37.50 complete, so it can be set to pumping in 30 minutes. Or we will furnish you a pump jack—the best made—for $6.00, to do pumping with a larger gasoline engine.

Send for catalogue giving full information about water supply. Aermotor Co., Chicago. Branch Houses: Oakland, Cal.; Kansas City, Mo.; Minneapolis, Minn.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the Cement Workers' Handbook. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

The Paint Instruction Book.

The Sherwin-Williams Company, of Cleveland, Ohio, will send an instruction book for painters that is very valuable. To paint the barn, the house, the fence, the vehicles and the implements does not require much skill, but you need practical guidance, showing paints, oils, dryers, varnishes for each particular class of work. Messrs. Sherwin-Williams will surprise you with the amount of assistance they can render if you will write for their free paint book and address the post card or letter to Sherwin-Williams, 689 Canal Road, N. W., Cleveland, Ohio.

Cash Wheat Sales at St. Louis.

On April 30th, on the St. Louis market, the following were the cash prices for grain sold in car-loads by sample:

Wheat.—No. 2 red wheat, $1.19 to $1.20½; No. 3 red, $1.18; No. 4 red, $1.10 to $1.15; No. 2 hard, $1.13 to $1.19, nominal; No. 3 hard, $1.11 to $1.16, nominal; No. 4 hard, $1.05 to $1.12.

Corn.—No. 2 corn, 81½ to 82c.; No. 3 corn, 78 to 79c.; No. 4 corn, 77 to 77½c.; no grade, 70 to 74c.; No. 2 yellow, 82 to 82½c.; No. 3 yellow, 79½ to 80c.; No. 4 yellow, 77½c.; No. 2 white, 83 to 84½c.; No. 3 white, 82 to 82¼c.; No. 4 white, 77½c.

Oats.—No. 2 oats, 56 to 57c.; No. 3 oats, 56c.; No. 4 oats, 55c., nominal; No. 2 white, 58 to 58¼c.; standard, 57¾ to 58c.; No. 3 white, 57 to 57¾c.; No. 4 white, 56 to 56½c., nominal; No. 2 rye, 94c., nominal.

Something New in Gates.

It's a far cry from the cradle to the self-binder; from ox team to auto; from the old-fashioned "bars" in the "gap" of the back pasture to the modern steel and wire gate; but alive and alert men are constantly improving and bettering our already almost perfect machinery in all lines.

The Peerless Wire Fence Company are just putting on the market an improvement on steel and wire gates which looks like a money saver for farmers. They have discovered a method by which every part of a steel gate can be galvanized, making it rust-proof.

This galvanizing is applied by the electro process, in much the same way silverware is plated. We all know that galvanized wire is better than painted wire for fence purposes, and the manufacturers claim their galvanized gate will give the same additional service, which looks entirely reasonable, as it is possible to do a better job of galvanizing by the electro process than by the old hot process, the method by which fence wire is galvanized. They will be glad to send their new catalogue free. Write them for it. Address, Peerless Wire Fence Company, 242 Michigan street, Adrian, Mich.

The Hay Market at St. Louis.

On May 2d the following sales were made in St. Louis, sales on St. Louis Side: One car no-grade at $20; part car wild grass and timothy at $20 and $25; one car clover-mixed at $27.50; three cars light do. at $27.50; two cars part clover-mixed at $25; part car No. 1 timothy at $27, delivered. Timothy—Two cars No. 3 at $21; part car at $25; one car scant No. 2 at $25.50; part car at $26; two cars No. 2 at $26, delivered; one car do. at $26.50, delivered; three cars No. 1 at $28, two cars delivered; three cars do. at $28.50; five cars do. at $29, two cars delivered; three cars high No. 1 at $29.50, one car delivered. Prairie—One car common Nebraska at $14; one car No. 2 do. at $22; one car do. at $22.50; one car do. at $23; four cars No. 1 at $24; two cars do. at $24.50; one choice at $25. Alfalfa—One car No. 2 at $23.50; three cars No. 1 at $24.50; one car do. at $25. On East Side: Timothy—One car No. 1 at $28; two cars do. at $29; one car high No. 1 at $29.50.

Vegetable Market Report.

The following were conditions during the first week in May at the wholesale vegetable market of St. Louis:

Cabbage.—Market weak and dull, depressed by large offerings of heated and damaged stock—couple cars Texas in bad order refused. Car Mobile sold at $2.25 per crate, delivered. Florida crates offered at $2.25, delivered, and only $2.10 bid. Choice green Texas bulk cabbage at $40 per ton—heated and ripe less. One car heating sold at $15 per ton on track and three loads trimmed at $20, delivered.

Old Potatoes.—Market weak and demand dull; receipts lighter, but some stock on tracks which receivers are endeavoring to move. Sales load sacked foreign dark white at 90c., delivered; couple loads sprouted Northern Rural at 95c., delivered; one car Wisconsin Rural at $1.00, track; one-half car do. at $1.00, delivered; one car dusty do. at $1.05, delivered.

New Potatoes.—About steady; freer offerings and demand fair. Car Texas sacked Triumphs sold at $2.90 per bushel; Louisiana hampers Triumphs at $2.00, delivered, and barrels red and white at $6.00 to $6.50, delivered; Florida hampers Triumphs at $1.50 to $1.60 for No. 2 to $1.75 to $2.00 for No. 1, and white at $1.35 to $1.50 for No. 2 to $1.65 to $1.75 for No. 1.

New Onions.—Lower, slow and weak; offerings large and in excess of the demand. Texas Cummer crates yellow at $1.30 to $1.40 for fancy; $1.00 for No 2; Crystal Wax at $1.25 to $1.60, delivered. Sales: One car delivered, including 394 crates fancy yellow onions at $1.40; 18-bushel baskets Triumph onions at $2.25; 32½-bushel baskets do. at 75c., and 22-Cummer crates do. at $1.75; one car yellow onions (damp and out of condition) at $1.00, delivered.

String Beans.—Florida round green (refrigerating car receipts) at $1.40 per hamper, delivered; and express receipts round green ranged at $1.00 to $1.40, and wax beans at $1.00 to $1.25 per hamper; New Orleans round green at $1.25 and flat at $1.00; lower coast round green at $1.65; pale do. at $1.50 and flat at $1.00 per hamper; Kenner wax at $1.00; Texas hampers (fancy round green) at $1.00—couple lots stale at 75c. and 90c.; Alabama hampers round green at $1.65, and Mississippi at $1.75.

Sweet Potatoes.—Home-grown eating Queen and Bermuda from farmers' wagons at $1.00; yellow and red Nansemond at $1.10 per bushel loose. Lot of fifty hampers Louisville yellow seed sold at 75 to 90c.

Tomatoes.—Weaker; three cars on sale and not all cleaned up; demand fair for sound ripe. Florida in jobbing way delivered at $2.50 to $2.75 per six-basket crate for choice and $3.00 to $3.25 for fancy. One car sold at $2.60 to $2.75 for choice and $3.00 to $3.25 for fancy.

Southern Agriculture.

The Southern Field for April contains a concise, general writeup of each of the Southeastern States, those commonwealths which are so prominently before the public eye to-day for their tremendous increase along every line of agriculture and industry. Anyone can get a copy of the Southern Field by writing to Mr. M. V. Richards, Land and Industrial Agent, Room 71, Washington, D. C. He has helped to find many superior locations for farmers who wish to live and work in the South.

Recent sales of wheat straw on the St. Louis market were at $10 per ton.

YOUR CROPS

can get more nitrogen out of one single sack of

Nitrate of Soda

than out of a two-horse wagon load of manure. The Nitrogen in Chilean Nitrate of Soda is 100% available and is *immediately* so the day you apply it! It produces

More powerful growth and healthier, bigger plants. Easy to handle, clean, cheap, odorless, free from fillers.

Write to us for valuable free literature on the crops that mean a living to you. A post card will bring it to you.

Dr. William S. Myers Director of Chilean Propaganda **17 Madison Ave., New York**

CURE FOR WORMS

A horse that is infested with worms can never do well. Worms cause a derangement of the whole system.

FRAZIER'S DISTEMPER CURE

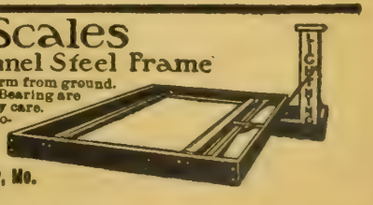
Is an excellent remedy for worms. We offer it on an absolute guaranty that it will give satisfaction to all who use it, or your money back. $1.00 bottle holds three 50-cent bottles. Free horse booklet on request. Sold by druggists or prepaid from

BINKLEY MEDICAL CO., Dept. H, NAPPANEE, IND.

Lightning Pitless Scales

New Pattern. Solid Channel Steel Frame

Channels are seven inches which is the height of platform from ground. Levers are octagon in shape giving greater strength. Bearing are Toolsteel. This scale will last a life time with ordinary care. Equipped with compound Beam Free. Furnished absolutely complete except platform planks. Guaranteed accurate and tested to more than its capacity. Write for our prices and description before buying.



KANSAS CITY HAY PRESS CO., 425 Mill St., Kansas City, Mo.

GRAND SUBSCRIPTION OFFER.

A Splendid Magazine One Year —The Ladies' World—National Farmer and Stock Grower One Year—Eight Standard Grapevines —All For One Dollar.

This is a startling subscription offer, especially valuable to farmers' wives and families and to anyone who owns a home. "The Ladies' World" is a monthly magazine,

forty-eight pages, four columns to the page, highly illustrated, cover in colors, beautiful, delightful, splendidly edited, lovely stories, instructive articles, lessons in housekeeping, domestic science, dressmaking, music, amusements, etc. No better, cleaner or more useful paper can possibly enter the farm home.

The National Farmer and Stock Grower is a monthly paper; contains practical information, clean-cut, instructive, up-to-date news of markets and instructive matter concerning general farming, stock raising, dairy, poultry keeping and all the especial features that keep a farmer posted on his own interests in dealing with the world of business.

The subscription offer includes a magnificent collection of **Eight Two-year Standard Grapevines.** These

grapevines are ready for planting. They are two-year-old vines from the best Chautauqua vineyards. The collection consists of **Moore's Early,** a black grape; **Catawba,** dark red when fully ripe; **Diamond,** a large white; **Concord,** black early; **Agawam,** red or maroon; **Niagara,** large and handsome white; **Delaware,** compact red; and **Worden,** a large black grape. We offered this premium last year with great success. The vines are taken up in the fall and held in storage for spring planting. A booklet giving complete directions for planting, pruning, etc., is sent with each set of grapevines.

We will send **The Ladies' World** one year; **The National Farmer and Stock Grower** one year; and the **Collection of Grapevines,** nicely packed, postage paid—all for one dollar.

SUBSCRIPTION COUPON.

Please Cut Out and Mail to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar ($1.00), for which send me **The Ladies' World** one year; **The National Farmer and Stock Grower** one year; and the **Eight Two-year-old Standard Grapevines** as advertised.

A Kingly Vegetable Grower.

In the Flaneur letters concerning European affairs, the fact, which is not generally known, was stated that King George of England is extremely fond of gardening, though now, of course, he has not so much time to devote to it as was the case when he was Duke of Cornwall and York. In those days the present ruler of Great Britain and his consort passed the greater part of their year at York cottage, Sandringham, and he cultivated a small garden entirely by himself, resolutely refusing any assistance, save that of his wife, who occasionally would help him to prune the rose trees and other light tasks of that description.

Vegetable growing strongly appealed to His Majesty, and he was always highly delighted when he could send a couple of cabbages or a basket of peas to his mother, Queen Alexandra, for her special use, saying that he had planted and grown them himself.

The love of gardening has been King George's hobby since he was quite a boy, when he and the late Duke of Clarence and Avondale, his brother, each were assigned a plot of land in the kitchen garden at Sandringham for their especial use. This garden they are expected to keep trim and in proper order throughout the year. But the tastes of the two young princes varied in a striking manner.

The late Duke of Clarence grew flowers to the exclusion of everything else. Roses, in particular, were his passion, and during the summer months, wherever Queen Alexandra may have been staying, there always was a vase upon her writing table filled with a handful of blooms grown by her elder son.

King George, in those youthful days, shaped his garden in a more practical way, devoting his attention to the growing of useful things, such as potatoes, turnips and carrots. He used to say with naive frankness: "Roses are all very well, but you can not eat them when you are hungry." The fact is, that the King of England to this day is a first-class agriculturist.

Anything connected with farming, from the raising of prize cattle to the experimenting with a new variety of seed potatoes, appeals to him strongly. Often he will sit up way into the night reading some new treatise upon farming.

The king also encourages his sons to take an interest in farming. Each one has his own plot ot York cottage. This is carried on to such length that Prince Henry, the third son of the royal pair, just a little shaver and a pupil, has a small garden at his school. Imagine the surprise and gratification of Queen Mary when finding upon her breakfast table on the morning of her coronation last June a bunch of sweet peas which the little son had grown for his mother.

King George is fully persuaded that gardening is the most invigorating pastime in the world, and that if more men would devote an hour or two each day in their gardens there would be fewer complaints of liver trouble and less need of physical culture of an artificial nature. (The most sensible thing he or any other king ever has been known to utter.) And what is more to the point, he lives up to his teachings. For within the past year he has been known to take a spade and dig vigorously for some time.

A Change in Wool Freight Rates.

For many years it has been well known that railroad tariffs were distinctly to the disadvantage of the sheep and wool-growing interest, so much so that between the cheap ocean freights and the transatlantic railway discriminations it was cheaper to ship wool from Sidney, Australia, to Boston than from Montana, Wyoming, New Mexico or Texas to Boston or any other Eastern market.

We are now informed that in a far-reaching decision rendered by the Interstate Commerce Commission the freight-rate situation has been changed for all Western wool growers, and large reductions have been ordered by the Commission on wool, hides and pelts from all points west of the Mississippi river to every point east, and the decision operates to upset the present wool rate system, which has been maintained by the railroads for many years. The Commission has ordered "blanket" rates supplanted by graded rates. It prescribed lower rates on baled wool than on wool in sacks and advised Western growers to bale their wool; establishes car-load rates on wool at a cheaper classification than is now maintained and gives to intermediate cities the privilege of cleaning and treating wool in transit, and yet under restrictions gives the railroads permission to charge lower through rates on wool from the Pacific coast to the East than from the intermountain districts.

The suit resulting in the far-reaching decision was brought by the National Wool Growers' Association and the Railroad Commission of Oregon. The railroad managers were given until May 1st to submit new tariffs in line with the decision.

In the wholesale market at St. Louis, Mo., Western pecan nuts are quoted at 10 and 10½ cents a pound, and Texans at 10½ to 11 cents. Peanuts, farmers' stock, at 3 to 3½ cents a pound. Black walnuts at 25 cents a bushel.

Take notice of the splendid rose premium offered on page 25.

The Culvert That Lasts

Culverts that crack, break and wear out quickly are useless. You want culverts that will endure under every condition—that once installed will last a lifetime. You can get such a staunch, serviceable culvert at a lower cost than any other make, by asking for the American Ingot Iron Culvert—the choice of the biggest railroads.

Why They Outlast Others

These wonderful metal corrugated culverts are **not** made of galvanized steel, but of galvanized **American Ingot Iron—guaranteed 99.84% pure.** Steel, on account of its impurities, rusts and corrodes quickly. This means a short life and unsatisfactory service. American Ingot Iron, due to its purity, resists rust for many years, and culverts made from this iron outlast steel culverts many times over. They will not crack, break, or wash out in freshet time as other culverts do. Easy to handle and install—no maintenance cost.

AMERICAN INGOT IRON CULVERTS

Guaranteed 99.84% Pure Iron

Leading railroads are displacing concrete, brick, tile and stone culverts with these durable and economical culverts. They **know** by experience the superiority of American Ingot Iron Culverts over all other makes. Look for the triangle trademark on every section—it insures you getting **genuine** American Ingot Iron.

Tell Us Your Road Troubles and Plans

Any manufacturer named below will gladly send you expert money, time and labor saving advice. Road builders, county officials, taxpayers, etc., can profit by this free service. **Only** the manufacturers named here make and sell American Ingot Iron Corrugated Culverts.

AMERICAN ARMCO INGOT IRON

American Ingot Iron May Be Had in Sheets, Plates, Roofing and Fence Wire

[Please mention National Farmer and Stock Grower.]

Amatite ROOFING

Mineral Surface Needs No Painting

IF you intend to build, use Amatite. You will do away not only with all roofing troubles, but with all unnecessary roofing expense, because Amatite *needs no painting or attention after it is laid.*

It has a wear-resisting *mineral surface* on top instead of paint. Amatite is easy to lay, fire retardant, attractive and absolutely waterproof.

Send for sample and make roofing comparisons, and know roofing before you buy. The man who knows, buys Amatite — always.

Live Stock and Agricultural Prosperity.

The richest agricultural countries in the world are those in which live stock is a considerable factor. Live stock raising develops where land areas are large and farm workers few.

The greatest single item of profit in the raising of live stock is the saving of labor. The steer harvests his own supply of grass or hay. Even in the winter time, in the shadows of the Rockies, he feeds on the grass that cured on the stem and become hay without the help of man. He gets his own water and provides his own shelter in the lee of a rock or a bush. If he is a tame steer, on an Eastern farm, he pastures in the spring, summer and fall, and asks no labor on the part of his owner. In the winter time he lives on the coarsest of fodder, hay and straw. The amount of labor put on him at any time is small. And during his whole life he is changing the food he eats into valuable meat or into fertilizer only a little less valuable than the food he eats.

The sheep takes care of itself in much the same way, and so does the horse. The hog does it to a lesser degree, but is a good grazer, when given the opportunity. The hog changes cheap products of the farm into the highest-priced meats. The value of the meat of the hog is always on the up-grade, taking one ten-year period with another, because bacon, hams and lard can be kept indefinitely and can be carried to the remotest corners of the world without spoiling. The navies of the world use great quantities of hog products, and these are largely purchased from the United States of America.

Bacon, ham and lard are now the staples of the merchant ship supplies, and ten thousand ships on all the seas carry these articles of food because of their great keeping quality and their nutritive value. These have helped to make agricultural prosperity, and yet the meat of the hog, being so largely fat, is made largely of the carbon of the air and the water so abundant everywhere.

The dairy cow comes in for her share of the credit for this prosperity, for her butter also is made from carbon and water, elements which do not impoverish the farm.

Through the medium of animals the cheapest vegetable growths of the farms are changed into high-priced products for which the world is waiting.

On every farm where live stock can be raised some stock should be kept to consume the roughage of the farm and to assist in keeping up its fertility. It is usually a poverty-stricken farm that never has anything that is capable of walking to the shipping point.

The parts of the United States where live stock is being least raised are feeling least the effects of agricultural prosperity. For this reason efforts are being made to introduce animal husbandry into the Southern States, where the land has been impoverished by long years of tillage under a system of agriculture that has not included a large element of stock raising.

International Exposition Notes.

At the recent Directors' meeting of the Chicago International Live Stock Exposition Association, the classification for the 1912 Show was made the principal subject for discussion, and it was decided to adopt, with some minor changes and additions, that used in connection with the 1911 Exposition.

In compliance with numerous requests made by Eastern breeders and feeders, the Board decided to divide the territory known as the "Eastern District" in the car-lot classification, and accordingly that section of the country comprising the states of New York, Pennsylvania, Virginia, West Virginia, New Jersey, Delaware and the New England States will hereafter be known as the "Atlantic Coast District," while the remainder of the territory will hereafter be known as the "Corn Belt District."

The Romney-Marsh sheep were given an opportunity to participate in shows of the future and will be given a classification in connection with the 1912 Exposition.

Mr. R. H. Keene, Westfield, Medmenham, Marlow, England, was selected as "foreign" judge and will pass on the grade steer and grand champion classes.

In the Book of Live Stock Champions advertised on page 23 of this paper there are pictures of fully four hundred of the animals that one year with another have won championship honors at the Chicago International Live Stock Exposition.

How to Renovate an Orchard.

Four important steps must be taken in the improvement of the general-farm orchard. These steps are practically the same as those which would be employed in the average orchard under normal conditions. With but little modification, the methods to be outlined may be continued after renovation. These are: (1) Pruning, (2) fertilization, (3) cultivation, and (4) spraying.

A general outline of work or a plan of campaign may be briefly summarized as follows, details being given later on:

1. If the orchard is and has been in sod for a number of years, plow in the fall about four inches deep. If not, plow either in late fall or early spring.

2. During the winter put on from twelve to fifteen loads of barnyard manure per acre, or one load to from three to five trees. Another plan is to apply in the spring 100 to 200 pounds of nitrate of soda, 300 to 500 pounds of acid phosphate, and 150 to 300 pounds of sulphate or muriate of potash.

3. In the winter or early spring, before growth starts, cut out all dead and diseased wood from the tree, head back the highest limbs, and thin the branches to admit sunlight.

4. Apply 1,500 to 2,000 pounds of lime per acre and work it and the manure or fertilizer into the soil thoroughly with a disk harrow or spring-tooth harrow. Keep up this cultivation until midsummer.

5. After cultivation ceases for the season, sow a cover or green-manure crop to plow under the following spring. Clover is one of the best leguminous crops in the North, while cowpeas are widely used in middle latitudes and in the South. For a non-leguminous crop rye is the most extensively used, though buckwheat is commonly used in some sections of the North.

6. Spray the trees in accordance with the directions given in government and state publications on this subject.

The foregoing six items are from Farmers' Bulletin No. 441, issued by the United States Department of Agriculture, Washington, D. C. The bulletin is a pamphlet of twenty-two pages and it is entitled "The Profitable Management of the Small Apple Orchard on the General Farm."

Advertising the Reo Motor Cars.

Farmers and stockmen who wish to understand something concerning motor cars will find it to their advantage to read the advertisement on page 32 with the utmost care. The statements are written in the clearest of language and by an expert who has created more cars than any other designer in the business. When a man has led the procession of automobile designers for twenty-five years and has finally reached the car that satisfies him, then the buyer can safely study that car and the price tag upon it. Farmers are not slow in appreciating clean-cut statements with good reasons to support them, therefore we commend this advertising to their notice.

Hire The Red River Special

CAN you afford to put the amount of your thresh bill into your straw pile? That is what too many ordinary and indifferent threshers do.

The **RED RIVER SPECIAL** is the only machine which beats the grain out just as you would do by hand with a pitchfork.

The Big Cylinder throws the intermingled straw, chaff and grain against the Man Behind the Gun. Over 90 per cent of the grain is **beaten out** right there.

The uplifting shakers keep tossing the straw up as long as it is in the machine, **beating out all the grain.**

Hire a **RED RIVER SPECIAL** this year and

Save Your Thresh Bill

Put that money into your pocket instead of wasting it. If you buy, buy a **RED RIVER SPECIAL.** If you hire, tell your threshermen to bring a **RED RIVER SPECIAL** to do your job.—It will Save Your Thresh Bill.

Write us for the proof.

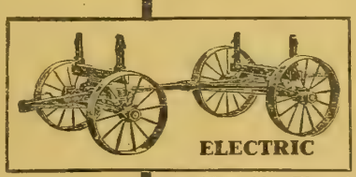
NICHOLS & SHEPARD CO.
Battle Creek, Mich.

Sole Builders of **The Red River Special Line,**—The Red River Special Thresher, Steam Traction Engines, OIL-GAS Tractors, Self Feeders, Straw Stackers etc.

The Wholesale Meat Market.

At Brooklyn, N. Y., on April 29th, the wholesale price of beef advanced a cent a pound to a higher record than any year since 1881. A carcass of native corn-fed beef was quoted at Wallabout Market at a top figure of 13 cents, which old-timers agreed was the highest price in more than thirty years. The retail butchers were equal to the emergency and were selling soup meat at 15 cents, two cents over the carcass price, also 25 to 26 cents a pound for porterhouse, and 24 cents for sirloin steak, 20 to 22 cents for rib roast, and other cuts in proportion.

Have You Written to the Electric Wheel Company Yet?



Do it now. Get one of the Electric Low Down Handy Wagons with broad tire Steel Wheels for your Summer and Fall work and save yourself and your horses. Wagons in stock, ready to ship. Also Electric Steel Wheels to fit old running gears and make old wagons new. We send *free*, on request, with full directions for using, rule and calipers for measuring old spindles, so that new steel wheels will fit perfectly.

ELECTRIC Steel Wheel Handy Wagons

Wagons in Stock Ready to Ship

Act promptly. Your wagon is waiting for you. Don't think of beginning the long busy season's hauling with your old-style high-wheeled wagon. We save you thousands of high lifts. It is the useless high lift that kills. Think of the hay, grain, fence material, lumber, stone, manure and other hauling that is before you—this year and every other year. *Cut out the high lifts. Stop cutting meadows and fields.* The Electric Handy Wagon lasts a lifetime. Send for book giving all information. Use the coupon or write us a letter or postal today.

ELECTRIC WHEEL COMPANY
BOX 40, QUINCY, ILL.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly by
THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.
E. T. R. Murfey, 1123 Masonic Temple, Chicago, Ill., Western Representative.

Entered at Postoffice at St. Louis, Mo., as second-class mail matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar.
Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.

The National Farmer and Stock Grower ought to be read at a desk with a bundle of postal cards at hand. We usually mention a number of valuable booklets which are well worth having, although free for the asking, and a postal card is very handy to ask for anything that is desired.

Several thousand of Myers' Sewing Awls, advertised on page 19, have been sent out from this office as subscription premiums and we have had but one complaint. The fact is, the awl is perfect for the purposes intended. Those who receive the awl get it direct from the factory and are able to send for new needles, thread, etc., at any time it becomes necessary to do so and to receive them without delay.

The Webster's Dictionary, which is advertised in The National Farmer Stock Grower on page 21, is certainly one of the best books we have ever sent out, and we do send out some specially serviceable books as subscription premiums. We guarantee it to be better than it is represented; in fact, it is equal to any purpose in school, college, farm, office or country house.

Every farmer who will read this publication through and through will most likely come to the conclusion that there is something in it that is useful in the conduct of his business.

Between floods, cyclones, railroad wrecks, ocean disasters and many varieties of ills and hardships, the month of April was full of trouble—a very sad month for very many homeless and distressed families. Let us hope that during the month of May the lives of the distressed will be brightened, and let us lend a helping hand to contribute to that end.

The National Farmer and Stock Grower was one of the first of the publications to use rose premiums in our subscription department, and we have a million rose plants growing in the gardens of our subscribers. May is the last month in which we advertise to send out roses. See page 25.

May is the last month in which we can furnish the grapevines which are advertised on page 6 in connection with the subscription to The National Farmer and Stock Grower and the Ladies' World. This is probably the last time we will be able to advertise such a bargain. The Ladies' World alone is worth the money.

The astonishing record of the cow Banostine Belle de Kol is worth reading. The record is on page 10 and the picture is on page 1. The picture of this cow with 730 pictures of equal size will be found in the Book of Live Stock Champions advertised on page 23.

Our Book of Live Stock Champions.

We specially request all our readers to study the advertisement of the Book of Live Stock Champions which appears on page 23. This is our own favorite publication. It contains a magnificent array of illustrations such as was never before brought together. There are 352 pages in all, 750 different illustrations, and there is a complete index. The book contains one to five champions to the page, and the record of each is given with name and address of owner in nearly every instance. There is no advertising in the book. This book would sell in limited numbers at $5.00 a copy, but our purpose is to place one on every stock farm in the United States, therefore we issue the Book of Live Stock Champions at practically a nominal price of $1.00 a copy to our own subscribers. Read the advertisement; it is well worth reading, and the book is certainly a credit to any farming establishment in the United States.

Our Industrial Policy.

The National Farmer and Stock Grower is in favor of the United States collecting a reasonable range of customs duties upon all foreign farm products and all foreign manufactured goods admitted into the United States from foreign countries, said duties to be applied to the support of the national government. Import duties on various products as now collected amount to over three hundreds of millions of dollars a year, and if not collected that way would have to be collected by direct taxes upon our own productions.

Every farmer in the United States is taxed by his county and by the state, and he pays indirect taxation for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal service the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. By collecting these customs duties the United States government receives the income that is necessary and must be collected for the public service and the farmer has a very moderate degree of what is called protection. In times of scarcity caused by drouth or other unavoidable influences the foreign farm productions can come in on a fair basis, and in times of abundance the country thrives better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmers' products the manufacturer would have to shut his doors. Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. It will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out.

Raw Rock Phosphate.

We regret very much that since forming the opinion that raw rock phosphate is no good as plant food we have been unable to change it. We advise farmers not to buy it until the United States Department of Agriculture gives them a demonstration that will justify them to do so.

We have just received a pamphlet entitled "Fertilizers For Corn," from the Missouri Agricultural Experiment Station and looked eagerly for some endorsement of raw rock phosphate, but we did not find it.

We are aware that raw rock phosphate has its advocates; but we have not looked for advocates recently, but for impartial judgment. We have failed to understand why the nitrate men and the potash men are not advocating raw rock phosphate to make up the complete fertilizers. It is clearly to their interest to do so, providing the raw rock is an available fertilizer, but their silence is more eloquent than words. They do not dare to advocate raw rock phosphate for the reason that they know it is absolutely no good.

Several hundred thousand tons of ground rock phosphate have been paid for and distributed in the soils of Illinois and the answer from that investment should come in the crop reports and the market reports and not from half-acre tract results that may just as well be attributed to lime, to improved tillage, to barnyard manure, to rotations, to other fertilizers.

Raw rock phosphate has been dumped on Illinois soils long enough to have produced crop results large enough to be seen as a monument. Where is that monument?

Germany produces thirteen bushels more wheat to the acre than Illinois, but the record of Germany is not made up with raw rock phosphate; neither do they turn under clovers and other legumes until they sell the hay. And here raw rock phosphate is bought on the faith that in one well-certified instance it caused a gain of 34½ bushels to the acre, and it is no good unless you turn under with it the most valuable crops in the market to-day.

We have been told that raw rock phosphate is not sold as a fertilizer, but every salesman is backed up by the endorsement of the experiments which discountenance every form of fertilization except raw rock phosphate. It is certainly bought as a fertilizer, and many of the farmers are looking in vain for results from the first-year's treatment.

If a farmer entered a restaurant and called for a beefsteak and the restaurant keeper showed him a calf in the pasture and told him he would get his beefsteak when that calf weighed 1,500 pounds, the farmer would be nearer to his beefsteak than he would be to a loaf of bread made from wheat grown by the influence of raw rock phosphate.

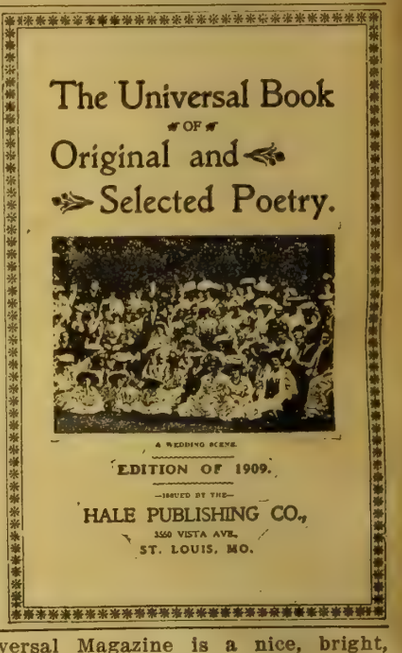
The owners of phosphate rock sell the high-grade material to be treated with acid to make it available plant food, and the lower grades which cannot be sold for that purpose are ground to be sold to farmers, and the only reason farmers buy it is because it is supposed to be cheap. They do not know that they would get more actual value in plant food if they bought a ton of earth from a neighbor, and there are some alluvial lands in the South that are worth, ton for ton, ten times as much in available plant food than ground raw rock phosphate.

The Market For Apples.

At St. Louis, on May 1st, 1912, the following were prices of apples sold at wholesale: Ben Davis, common storage, $2.00 to $2.25; sound cold-storage Ben Davis, $2.50 to $3.00; Gano, $2.75 to $3.00; Willowtwig and Roman Beauty, $3.00 to $4.00; Winesap, $3.25 to $5.50; Baldwins, $3.00 for No. 2 to $4.00 for fancy; No. 1 Russets, $3.50 to $3.75 and No. 2 do $2.50 to $3.00; damaged, special, slack-packed, etc., nominal.

UNIVERSAL POETRY BOOK.

This book consists of One Hundred Pages, containing three hundred and ninety beautiful, interesting, pathetic, descriptive, humorous and delightful poems. These poems have been selected from the very best of the ancient and modern authors and the occasional pieces which have attracted favorable attention. It is a book to be kept by the bedside to compose one to sleep, a book to carry in the satchel or to read on the train and street car. It is a book for all people at all times. We issued the Universal Poetry Book for the purpose of using it as a subscription premium in connection with our own new successful paper, the Universal Magazine. The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions—a splendid publication. Anyone who will send 10 cents to pay for four-months' trial subscription to the Universal Magazine can select one copy of the Universal Poetry Book as a free premium and we will send it by mail, prepaid, safe delivery in good order guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

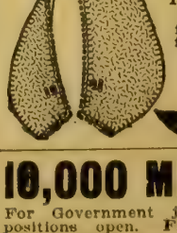


TRADE MARK
Ventiplex PADS
The Collar Pad without a fault
because it is made right.

This is the pad which is made of ventilated fabric that keeps a constant circulation of fresh air under the collar and prevents sore shoulders, galls and sore necks.

Your horses are always ready and willing to work when they have **Ventiplex** Pads in their collars.

If you have a horse with a sore neck, buy one of these pads and see how quickly it heals.



Your dealer should have them, but if not, send us his name and we will ship a sample promptly.

Better than other kinds, but cost no more

Increased Use of the Silo.

Our readers should not fail to read about the A. P. Grout Vitrified Tile Silo on page 11. It is proof against fire, wind, weather and decay. At a recent experiment at the Agricultural College of Illinois it was found that silage made a grand showing in feeding beef cattle and of as much value to a cattle feeder as to a dairyman. Write for the booklet entitled "Silo Facts" and address St. Louis Clay Products Company, Room 1601, Third National Bank Building, St. Louis, Mo.

Feeding High-priced Cattle.

Mr. Thomas Laking, of Grant Park, Ill., marketed two loads of first-class cattle at Chicago and explained to the Drovers' Journal how he fed them, as follows:

"The two loads of 1,369-pound steers I marketed at Chicago which sold at $8.75 were Angus and Shorthorns. They were bought in Kansas last October and were two and three years old when put on feed. During the summer and fall they were fed on grass. The cattle were all dehorned. I think dehorning cattle makes them more quiet and they will feed better. These cattle were range-bred. They were bred at Russell, Kas.

"I began feeding them a little shock corn on grass for about two weeks. Then ear corn in feed lot, increasing rations as cattle cleaned up feeds. Corn and cob meal was fed. Shredded corn fodder in racks was fed from the first and a little hay for the last two weeks. I should say each steer received about twenty ears, or a bundle a day. No other grain than corn was fed at any time while in the feed lot. Cotton-seed meal was fed as an additional ration. The cotton-seed meal acted as a great appetizer. At first two pounds was fed and later three pounds a day to each steer. I think feeding the cotton-seed meal paid well in the end. The feed-yard was four rods square. Plenty of straw was put in the feed-lot, which is about the best way to keep it from getting muddy. Good sheds sheltered the cattle while in the feed-lot. Sixty-five hogs followed the cattle through the feeding period and made a gain of one and one-half pounds a day. Just one feed-lot was used in the work. When I feed again the same process will be followed, as it seems good to me.

We think by feeding part corn-meal the latter part of the time that the cattle fatten a trifle quicker, but we have observed by so doing that we have often foundered steers by trying to fatten them too fast, hence our decision to feed cobmeal, as we have been more successful, having never lost a steer or had one foundered by feeding rations as described above. One word of advice: Keep the feed boxes clean and sweet, for cattle as well as people lose appetite when untasty dishes are put before them."

Missouri Apples and Peaches.

The Secretary of the State Board of Horticulture has received reports from correspondents throughout the state relative to the outlook for the apple and peach crop.

Indications on May 1st are that the apple crop will be unusually large if proper attention be given to spraying. Reports show that there will be a very heavy bloom, only a few reporting the bloom below the average, while many place it above the average.

The peach bloom is practically confined to a very limited area in the southwestern part of the state, and even there the prospects for a crop are far below the average. Practically all report very severe winter injury to trees.

Considerably more spraying than usual is being done. This gives a hopeful aspect to fruit growing in Missouri. Well-sprayed orchards are, as a rule, good paying orchards. (Signed) W. W. Chenoweth, Secretary.

Write to Nearest Manufacturer of Iron Corrugated Culverts.

The letters in answer to the advertisement of the American Ingot Iron Corrugated Culverts should be sent to the nearest manufacturer, as shown by the advertisement on page 6. This is very important advertising and it gives the buyer the opportunity to save considerably in freight bills and in time, besides insuring that they are the true American Ingot Iron Culverts.

Attention is invited to page 20, which contains a statement by Mr. McCormick in regard to the suit brought against the International Harvester Company. Notwithstanding the sensational news items concerning it, the suit is part of a friendly plan to shape Harvester affairs in strict accordance with the law. The suit will settle disputed and contested points; that is all; the business of manufacturing and selling harvesters will not be disturbed.

Ways to Get the Greatest Value Out of the Manure Pile.

Manure fertilizing is the cheapest kind of crop insurance. The farmer who has an eye to profits will not let a pound be wasted, but will adopt methods to get the manure back in the soil as soon as possible. Where manure accumulates rapidly it should be spread at very short intervals, and beyond question the intelligent way is to use a manure spreader. The general recognition of this fact has led to the manufacture of all kinds of spreaders, some of which are little more than spreaders in name.

Obviously, the first in importance is that a spreader should spread, and this, it should be remembered, is a different thing from dumping the manure on the ground—a big quantity here, none there, and so on all over the field. A machine that does not spread evenly ought not to be given serious consideration by the farmer who knows the value of manure to the soil.

Another essential is large capacity. Time required to drive back and forth for another load is time actually lost, and if the field is some distance from the stable the time can be considerable.

There are other points that enable one to make an intelligent choice of what has been termed the most valuable implement on the farm. It is the manufacturers of the New Idea Manure Spreaders, we believe, who claim at least twenty points of difference in their machine over others. This is the spreader that won the great Hartman contest a year or so ago, completely outclassing a large competitive field. Farmers who have not yet bought spreaders should write to the New Idea Spreader Company, 126 Sycamore street, Coldwater, Ohio, for one of their free books. It is an eye-opener on spreader facts and how to get the most out of a spreader.

The Best Hay Tools.

With hay selling higher than ever before it is well to study the subject with a view to obtaining hay tools that add a dollar or two to the market value of the hay. We have advertised the Dain hay tools for many years and have reason to believe that they have been kept up to the highest standard of excellence. Write to the John Deere Plow Company, Moline, Ill., for Package No. T 7 and you will get full particulars concerning Dain hay tools.

There's Nothing Cheap About Waterloo Boy Except the Price

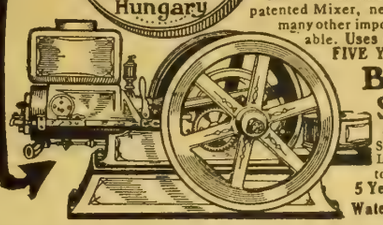
The best thought of mechanical experts, best materials, best skilled labor, and the biggest factory, all combine to make the Waterloo Boy the best GASOLINE ENGINE in all the world—a fact which is proven by the recent winning of gold medal in World's Competition.

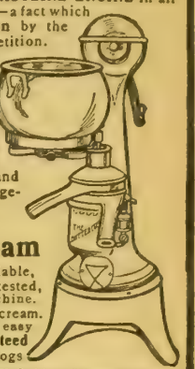
Gold Medal Awarded by International Gasoline Engine Show at Budapest Hungary

This great engine gives the most power at the smallest cost—the best service with the least attention—and the longest life for the lowest price.

It is the simplest engine made—has fewest parts, starts easy in coldest weather, its speed lever works like the throttle of a locomotive, patented Mixer, new, simple, positive Igniter and many other important features. Parts interchangeable. Uses either Gasoline or Kerosene.

FIVE YEAR GUARANTEE.





Buttercup Cream Separator is an old reliable, thoroughly tested, close skimming, standard machine. Skims down to 1-100 of 1% of the cream. Low, convenient, light-running, easy to clean, heavy base, etc. Guaranteed 5 Years. Write today for FREE catalogs

Waterloo Gasoline Engine Co., 228 W. 3rd Ave. Waterloo, Iowa

Saws, Tools and Files.

There is no excuse for using inferior tools when the best makers are selling their famous reliable brands of tools for the same money that inferior tools are sold for. Neither is there any excuse for not getting the right tools by asking for them. Henry Disston & Sons' tools advertised on page 18 are sold by all progressive hardware dealers, and the Keystone brand upon them is a guarantee of their quality. The subject of saws and tools for the farm is interestingly treated in a book that can be had by asking for it. Just write to Henry Disston & Sons, P. O. Box 1537 M, Philadelphia, Pa., and ask for the Disston Farm Tool Book.

Steel Wheel Handy Wagons.

The Electric Wheel Company of Quincy, Illl, have a coupon for our readers to sign on page 7. The low-down wagon wheels are very handy. They fit old running gears and make old wagons new. These wheels are very reasonable in the matter of cost and save their value every year. They are known all over the world and are the only wheels which are used to cross the sands of the Nubian desert. Send to Electric Wheel Company, Box 40, Quincy, Ill., and ask for Electric Wheel Book.

To Farmers Interested in Hay.

All farmers who are interested in hay presses and balers should send and get Whitman's Big New Catalogue. It shows all that is best in hay presses and balers. These new improved presses are great labor, time and money savers. This catalogue will be sent free to anyone mentioning our paper. Write for one to-day. Their address is Whitman Agricultural Company, 6901 Broadway, St. Louis, Mo.

Recent quotations for hops at St. Louis: Western at 42 to 44c. per pound; New York at 56 to 58c.; foreign, $1.00 to $1.10.

One car of high No. 1 timothy hay sold at St. Louis, May 2d, at $29.50 per ton.

Prevent Hog Cholera.

Don't wait until your hogs are sick and die. Prevent disease—give them sure protection. Use Snoddy's Hog Cholera Powder on them, made at Nashville, Tenn. It is fatal to the hog cholera germ and harmless to the hog. It will pay any hog man to use this hog medicine, as it is sure protection against disease. Snoddy's Hog Cholera Powder destroys all disease germs immediately and restores the herd to thrift. It means health to the hogs and wealth to the farmer. Write for book on how to prevent disease. Agents wanted in every county in the United States. Address Dr. D. C. Snoddy Company, Dept. H, Nashville, Tenn. When writing, send all mail and orders to Nashville, Tenn.

The Twice-a-Week GLOBE-DEMOCRAT

Is a magnificent newspaper, containing all the latest home, foreign and political news. It is unquestionably the best semi-weekly Republican newspaper in the United States, and is published at St. Louis, Mo.

The National Farmer and Stock Grower

The best monthly Farm Paper in the United States. Useful on any farm, in any state. Good for grain farmers, horse, cattle, hog and sheep raisers, also dairymen and vegetable growers.

Illinois Butter Scoring.

The monthly scoring exhibitions instituted for the instruction of Illinois buttermakers have now been in progress for one year; during that time 303 entries were made with an average score of 90.91.

Of the 303 tubs exhibited for scoring during the year, 19 per cent. were classed by the judges as extras (score 93 or above); 50.49 per cent. were placed in the extra first-class (score 90-93); 19.8 per cent. were classed as firsts (score 88-90); 7.59 per cent. came in the class of seconds (score 86-88); 2.6 per cent. received a score of less than 86 per cent.

The average water content of this butter was 13.47; average fat, 83.46; average salt, 2.15; and average curd, 0.94.

During the year, December, 1910, to January, 1912, eight buttermakers completed their year by totaling twelve exhibits and received their diplomas.

The highest average score of those completing their year was received by Forest Glen Creamery, Round Lake, Ill., a plant operating practically on the whole-milk basis; average score, 93.68. K. B. Carpenter, Mt. Carroll, Ill., ranked second, with an average score for the year of 92.83. Sam. Grimm, Crete, Ill., received third place, with an average score for the year of 92.65.

Brought First Cream Separator.

About the middle of last March Jeppe Slifsgard, aged 85 years, died at his home in Cedar Falls, Iowa. Mr. Slifsgard had the distinction of importing the first cream separator into America from Denmark in the early sixties. He was on a visit to his native country and found the separator in operation.

He hired an operator, bought a machine and had it set up at his country home, ten miles west of Cedar Falls. Then he sent for all of his neighbors and friends for miles around to come and see his newly-imported machine in operation, as he believed it to be a most useful invention for the use of his farmer friends. There are several farmers living in that locality who can recall having seen the separator soon after it was brought to Cedar Falls by Mr. Slifsgard.—New York Produce Review and American Creamery.

NEW DAIRY QUEEN.

The Wonderful Record of a Holstein-Friesian Cow.

Banostine Belle De Kol is a five-year-old pure-bred Holstein-Friesian cow owned by Dan Dimmick & Bro., of Maplecrest Farms, East Claridon, Ohio, and her fame is being carried to the ends of the earth as the new "Queen of the Dairy World." Her official records are as follows:

Length on record; Days.	Milk; Lbs.	Butter-fat; Per cent.	Butter. fat; Lbs.
7.. ...	672.5	3.67	27.697
30.. ...	2,828.0	3.50	98.987
60.	5,505.0	3.53	194.053
90.	7,856.8	3.61	283.543
7.. ..	492.1	4.31	21.195
365.. ...27,404.4		3.86	1,058.34

The second seven-day record was extraordinary by reason of it being made eight months after freshening.

The 365-day record was finished in April, 1912. The milk record was 27,404.4 pounds, and, roughly figuring, as milkmen do, at twelve gallons to the 100 pounds, the cow gave an average of nine gallons of milk every day in the year. The butter-fat content was 3.86 per cent. fat, which is a total production in one year of 1,058.34 pounds of butter-fat.

Banostine Belle De Kol was bred, reared and developed by Dan Dimmick & Bro. at the Maplecrest Farm. She is a strong, vigorous cow of wonderful capacity and will weigh in the neighborhood of 1,600 pounds. She is the daughter of Banostine Belle, who was a grand-daughter of Euphrasia A., one of the greatest foundation cows the breed has ever produced.

The sire of Banostine Belle De Kol is Friend Hengerveld De Kol Butter Boy, all of whose A. R. O. daughters have records of twenty pounds or more. Friend Hengerveld De Kol Butter Boy is a son Kol, 2d's, Butter Boy, 3d, and is showing himself to be the greatest son of that great sire.

During the time that Banostine Belle De Kol was in test she received nearly, if not all the time, more or less ensilage and alfalfa. When available, she received roots and a mixed grain ration, the foundation of which was bran and oats. The heavier feeds were varied frequently according to the condition of the cow, and that which seemed best at one time did not seem best at other times. She was also fed some dried beet pulp, especially when fresh roots were not available. Her grain ration from the first was gradually increased to twenty-five pounds, or a little more, but later reduced to as low as nine pounds per day. As near as can be estimated, the average amount of grain fed was twelve or fourteen pounds daily. She also received, when it was available, green corn with the stalks, and also green clover and any other green feed that might be available, including feed from the pasture. Banostine Belle De Kol has given birth to three calves, this record having been made after the birth of the third calf. All of her calves to date have been heifer calves.

Holstein-Friesian Records.

The high-class Holstein-Friesian cows that are tested for admission to the Advanced Register will show what large numbers of good cows will do. Seven-day tests were made of 246 animals. These 246 animals, of which much over one-half were heifers with first or second calves, produced in seven consecutive days 98,111 pounds of milk, containing 3,540 pounds of butter-fat, thus showing an average of 3.61 per cent. fat. The average production for each animal was, in round figures, 399 pounds, containing 14⅛ pounds of butter-fat, equivalent to 57 pounds or 27 quarts of milk per day, and 16¾ pounds of commercial butter per week.

The Cost of Building a Creamery.

During the past few years a large number of creameries have been built in the United States. Many of them have been successful from the start, while others have failed after a few-months' operation, and some were never even started.

An investigation of the creamery business in several states by Secretary Wilson, of the United States Department of Agriculture, has shown that the cause of many of the failures was due to lack of a sufficient number of cows, which should not be less than 400, and that others failed because of improper organization, in the case of co-operative creameries, and excessive cost of building and equipment. Many creameries have cost about twice their actual worth, and were not of the type suited to the locality in which they were built.

The cost of a creamery building about 28 by 48 feet will vary from $1,000 to $1,800, dependent upon the locality, the construction and the cost of material and labor. Such a building usually consists of a main work room, engine and boiler room (including space for refrigerating machine), coal room, refrigerator, store room and office.

Machinery for a gathered-cream plant, consisting of a fifteen-horse-power boiler, ten-horse-power engine, combination churn with a capacity of 600 pounds of butter, and other necessary apparatus, will cost approximately $1,200. Machinery for a whole-milk plant will cost about $1,850. This equipment will handle from 1,000 to 1,200 pounds of butter per day. If a refrigerating machine is included, the cost will be from $600 to $1,000 more.

The total cost of a creamery would therefore vary from $2,200 for a small gathered-cream plant without artificial refrigeration, where labor and material are cheap, to $4,650 for a whole-milk plant, including artificial refrigeration and a higher cost of labor and material.

The Department of Agriculture is prepared to furnish information for the proper organization of creameries and cheese factories, and upon request will supply plan of organization, list of machinery and plan of creamery. Correspondence should be addressed to the Bureau of Animal Industry, Washington, D. C.

Difference in Quality of Butter.

An average score of 92.33 was placed upon the seventy-seven exhibits of butter shown in the April scoring recently held at the College of Agriculture of the University of Wisconsin at Madison. Prof. C. E. Lee, in charge of the scoring exhibitions, states that many buttermakers have not been delivering as good butter to the markets as they send in for the scoring. In many cases, a special churning is made for the scoring exhibition, and often the man who makes the highest score at the college delivers comparatively poor butter in the markets.

On the Fort Worth, Texas, market quite recently a load of 353-pound calves, shipped by Welder Bros., Victoria, Texas, sold at $4.75 per 100 pounds, netting the shipper $15.62 per head for the calves.

DAIRY AND CREAMERY.

It is reported that Swift & Company have decided to build a large creamery at Seattle, Washington, that will have a capacity of 10,000 pounds of butter a day. It will be conducted in connection with the trade in meats and poultry.

The Congressional Committee on Agriculture has postponed consideration of the oleomargarine legislation until December 4th, 1912.

Creamelle Vale, a Holstein-Friesian cow owned by Fred F. Field, of Montello, Mass., has given 13,008 pounds of milk in four months and sixteen days, thereby breaking all records for the period. The test will be continued for a year.

SHERWIN-WILLIAMS PAINTS & VARNISHES FOR THE FARM

For painting and varnishing at one operation vehicles of all kinds—buggies, carriages, automobiles, sleighs, carts, etc., use Sherwin-Williams Buggy Paint. A durable, gloss finish—may be washed and cleaned without injury. Eight colors and black and clear.

Bacteria in Milk.

Bacteria in Milk, by L. A. Rogers, of the Dairy Division, Bureau of Animal Industry, is the title of Farmers' Bulletin No. 490, issued by the United States Department of Agriculture, Washington, D. C. All our readers know, or ought to know, this bulletin can be had by writing for it, therefore we have no intention of reproducing the twenty-three pages of this bulletin in full, first because we have no room for it, and secondly because the bulletins are in handy form for reference, and every dairyman should have his own copy.

The chapters include: Milk; its ocmposition and characteristics; —bacteria; their nature;—relation of temperature to growth of bacteria;—sources of bacteria in milk; —flavors in milk;—souring of milk; —sweet curdling and digestion;— bitter milk;—ropy or stringy milk; —disease-producing bacteria in milk;—the handling aud care of milk, etc. We have therefore informed our readers where they can obtain a splendid line of information at the cost price of a one cent postal card.

In this connection we desire to say that our new edition of the Book of Live Stock Champions includes the pictures of about 175 of the leading bulls and cows of the dairy breeds. The Book of Live Stock Champions is advertised on page 23.

The Pasteurization of Milk.

Pasteurization as applied to milk is the process of heating for a short or long period, as the different methods demand, at temperatures usually between 140 and 185 degrees. The process to be complete and effective must be followed by rapid cooling. The term originated from the experiments of Pasteur in France on the "diseases" of wine, in which he found that heating for a few moments at a temperature of 122 to 140 degrees was sufficient to prevent abnormal fermentations and souring in the wine. A little later Pasteur found that by a similar heating beer could also be preserved from souring. The application of the process gave rise to the term pasteurization. In this connection it may as well be understood that all first-class breweries pasteurize all their bottled beers; and all first-class city milk distributing companies pasteurize their milk after receiving it and before it is sold to consumers.

It is claimed for pasteurization that all the injurious germs in milk are destroyed by the process, or at least are rendered harmless, and it increases the length of time milk can be kept from souring. Pasteurizing is not advanced as a means of sweetening dirty milk, but as a means of prolonging the commercial life of sweet, clean milk.

All milk producers and sellers should be interested in Circular No. 184, issued by the Bureau of Animal Industry, Department of Agriculture, Washington, D. C., which sets forth and illustrates methods of pasteurization and machinery for the purpose of pasteurizing, with full instructions for all purposes. A letter to Dr. A. D. Melvin, Chief Bureau of Animal Industry, Washington, D. C., will surely get a copy.

The National Dairy Show.

At the recent annual meeting of the National Dairy Show Association, the Directors and officers whose terms had expired were all re-elected. The Board of Directors was increased by the addition of Messrs. F. L. Ames, of Massachusetts; J. R. Valenine, of Pennsylvania; C. D. Ettinger, of Illinois; John L. Smith, of Washington; Robert Scoville, of Connecticut; and Arthur G. Leonard, of Chicago. The date for the Dairy Show was fixed for the period of October 24th to November 2d for this year's show and as a permanent period for all future Expositions, and the International Amphitheater at the Chicago Union Stock Yards was leased for the show of 1912.

The success of the National Dairy Show and the assurance of increased interest and enlargement of all branches of the dairy business has induced the Board of Directors to arrange for a permanent manager of superior ability. The association is primarily undertaking to aid in meeting changed live stock conditions on this continent, with a full knowledge that decreased production of all farm commodities, with a rapidly-increasing population, may, if permitted to continue, jeopardize the standing of our nation as a world's food supply country to that of a food dependency. Therefore the slogan is: "More and better cattle; live stock on the farm, for the double purpose of money makers directly and as soil fertility increasers." This campaign will be waged on clean educational lines from one end of the country to the other in the firm belief that low prices will not again affect the results of farm activities.

To accomplish the purposes of the association to the fullest degree the Board of Directors have obtained the servies of Mr. W. E. Skinner as Active Manager. He is a pastmaster of the art of creating live stock expositions. He is also President of the International Live Stock Exposition. Mr. Skinner has an acquaintance with the live stock industry of this country which extends from coast to coast, having established the Stock Show at Fort Worth and placed the Western Stock Show at Denver on big national lines. He is essentially a show man, winning the confidence of exhibitors and public alike by adhering to the strictest lines of integrity in the intelligence and conduct of his work, and he will bring to the National Dairy Show his great executive ability, which will not fail to produce tremendous results.

The Directors of the National Dairy Show are now fully representative of every breed of dairy cattle. They are leaders in the improvement of dairy farming, and the general farmer, the breeder who is beginning and the breeder who is established can look to them for help and guidance, with the assurance that the National Dairy Show is the Clearing House for perfection in dairy cattle, the same as the International Live Stock Exposition is the Clearing House and Final Court of Resort for beef catle breeds and the various breeds of horses.

In this connection we also desire to say that ten of the Directors of the National Dairy Show are breeders and owners of animals that have made records and won premiums entitling them to appear in their places in the Book of Live Stock Champions advertised on page 23.

Be sure to look up page 23 and read about the magnificent Book of Live Stock Champions, which is just issued from the bindery.

On April 29th, at St. Louis, Mo., the best bid for Kaffir corn was $1.38 per 100 pounds. This is for car-load lots.

At St. Louis, Mo., on April 29th, three head of fat native cows, 1,335 pounds average, sold at $7.25 per 100 pounds.

TRADE
in your old separator
on account of a new
DE LAVAL
CREAM SEPARATOR

38,796 Users did so Last Year 26,569 in the U. S. Alone

It's come to be an accepted fact that the DE LAVAL cream separators are as much superior to other separators as other separators are to gravity setting systems, and that an up-to-date DE LAVAL machine will on an average save its cost every year over any other separator.

Aside from the actual saving in more and better cream and butter and in time of separation and cleaning, easier running, greater durability and less repairs; there's the pride, comfort and satisfaction which none but the owner and user of a DE LAVAL machine can feel in his separator.

In consequence thousands of users of inferior and worn-out separators of various makes take advantage every year of the educational allowances which the DE LAVAL Company continues to make and trade in their old separators.

APPLIES TO OLD DE LAVAL USERS ALSO

While all this applies particularly to the users of inferior separators it applies likewise to the many thousands of DE LAVAL machines 10 to 25 years old. They are not worn out and are still superior to other new machines of to-day, but there are so many improvements embodied in the modern DE LAVAL machines that these old DE LAVAL users can well afford to make an exchange and soon save the cost of doing so.

SEE THE NEAREST DE LAVAL AGENT

He will tell you how much he can allow on your old machine, whether a DE LAVAL or some other make, toward the purchase of a new DE LAVAL. If you don't know a DE LAVAL agent, write to the nearest DE LAVAL office giving make, number and size of your present machine, and full information will be sent you.

How Fertility is Maintained.

To the inquiry, to what is this fertility of European soil due, after so many years of cultivation, we answer:

First, it is due to the general system of a rotation of crops, which includes leguminous crops to gather nitrogen from the air, and thereby enrich the soil. The crops are never turned under but are fed and the manure saved.

Second, it is due to a general use of a system of grain and live stock farming in which all the manure, both solid and liquid, is carefully saved and returned to the soil. We do not mean to say that live stock is practiced exclusively, but the great bulk of the farm land is devoted to grain and live stock, either for meat or dairy products. Where other kinds of farming are practiced, we find the same principles in use, namely, rotation of crops, use of manure and of fertilizers.

Third, it is due to the purchase of imported feeding stuffs from America and other countries, whereby plant food is secured, and saved in the manure for the purposes of soil fertility.

Fourth, it is due to the extensive use of commercial fertilizers.

Fifth, it is due to the use of lime where needed.

Sixth, it is due to the prevention of loss of plant food from the farm. Thus, many landlords do not allow hay or straw to be sold, unless there is an equivalent purchase of plant food in the form of other feeding stuffs, or of manure. Hay, it is recognized, carries a large amount of plant food in proportion to its selling price.

In other words, the fertility of European soils is maintained by maintaining the supply of active plant food, and of organic matter. A part of the nitrogen is secured from the air, a part from the purchased feeding stuffs, and some from nitrogenous fertilizers. The losses of potash and phosphoric acid in the crop are counterbalanced by purchases in feeds and fertilizers. Every care is taken to prevent the loss of plant food. Leaves, stalks, etc., are either saved and fed, or are used as bedding.—From observations upon European agriculture by G. S. Traps, Chemist of the Texas Agricultural Experiment Station.

How to Make Hay.

Grass should be mown at a time when it is in the condition best fitted for the purpose to which it is to be put. In my experience I find that when grass of any kind is in bloom it is not best to cut it, but either just before or immediately after it comes in bloom. Should the grass be cut during the period of blooming, the countless pollen grains prevent the best curing of grass and cause a musty and dusty hay. The dried hay then should be secured with as little waste as possible.

Should the hay be intended for sale it should then be made with care in such a manner that it will present a fine appearance. Among a number of qualities that salable hay should possess is a bright green color. A good way to maintain a greenish tint throughout the hay is to dry the grass gradually; that is, expsose to direct sunlight only as much as may be practicable. If newly-mown grass were left to lie too long in hot sunlight, without turning a part of it, it would become brown and withered while the rest would remain green. It is bad practice to scorch hay or to leave it too long unturned in the hot sun. The change of color by the action of sunlight is a mere matter of fading, just as colored cloth will fade when exposed to sunlight. And nothing fades clothes more rapidly than alternate rain and sun. It is important therefore to avoid dew and rain as well as too much sunlight when green-colored hay is desired.

Rains and dew on newly-mown grass also promote evaporation and therefore the hay aroma so agreeable to live stock and to the salesman is lost in form of volatile gases by drying of the grass that has been rained upon. Not only the flavor of the hay is lost, but also its nutritive value is reduced thereby.

In order to cure hay thoroughly the grass when cut should be allowed to sweat freely. This may be done by piling the mown grass in small heaps. The leaves continue to transpire water very much, as they would do if the grass were standing uncut. The idea is this: As long as the grass remains alive water will continue to be exhaled from the pores upon the surface of the leaves and in this way the water will be pumped out constantly from the stalks in a natural way, much in the same fashion as though the grass were still standing. On the other hand, if newly-cut grass were spread in very hot sunshine the leaves are generally scorched to such an extent that circulation of moisture in them ceases and transpiration of moisture from the pores becomes impossible. It will readily be seen that the moisture in the stalks can only escape by simple evaporation, and this process is very slow. In this manner much moisture in the hay is brought to the barn, although the leaves of the hay may seem tolerably dry and crisp.

It is not good practice to spread and turn hay in the fields any more than is absolutely necessary. Should the hay lie in hay cocks or in windrows, the custom is to let it remain there untouched as long as the weather holds out, foul or uncertain, in spite of the imminent danger of its molding in the heaps in case the weather should happen to turn warm and muggy.

Fresh-cut grass, like fress-cut meat, keeps fairly well in cool weather, though considerable soluble matter may be washed out in rainy weather. When it rains on grass that has dried but little the cells within it are better able to resist attacks of the fungi, an excrescence which causes decay. But when rain comes on dead grass, bacterial organisms develop with great vigor and rapidity and cause decay. The present method in practically all localities is to make hay as rapidly as possible by turning or tedding with a hay machine the wilted grass which exposes it to the sun and air much more effectively than could be done formerly by hand labor. Tedded hay may then be raked into windrows and can be loaded directly onto wagons.

The ideal way of making hay would be to spread the mown grass out and let it wilt, not too much, and then put it into windrows or small haycocks, so that the leaves might continue to draw moisture from the stems. I believe that hay cured in this manner and by being allowed to stand in haycocks two or three days keeps better than that made by spreading the grass. Of course, if the bunches of half-dried hay are left too long unopened they will ferment; i. e., chemical changes will result from the action of microorganisms and heat will be developed. It would seem plausible that roughness and coarseness of the grass might be diminished by small touches of fermentation and the hay thereby made more palatable to the stock. There is really no need of actual fermentation. But in general it may be said that the sweating process is a valuable resource for dealing with the succulent hay or any kind of hay when the weather will not permit it to be made in the ordinary manner.—William Hardy, Rural Route No. 2, Tunnel Hill, Johnson county, Ill.

BLOODED STOCK NOTES.

An extraordinary sale of pure-bred Shorthorns held at Chicago by Thos. Stanton, of Wheaton, Ill., and George J. Sayer, of Chicago, was held at the Union Stock Yards, Chicago, Ill., April 4th and 5th. The fourteen bulls averaged $306, with a top of $1,700, paid by W. C. Thompson, President of the Independent Harvester Company, Plano, Ill., for Selection, grand champion of the Chicago International Live Stock Exposition of 1909. The female average was $230 for 124 head, with a top of $1,385, paid by H. L. Emmert, of East Selkirk, Man., Canada, for Countess Selma, with bull calf at foot by Selection.

The sale of Shorthorn cattle by F. W. Harding, of Waukesha, Wis., on April 3d, resulted in thirty-four females selling at an average of $344, and eight bulls averaged $620, making the general average $400 for forty-two head. Two bulls sold above the thousand-dollar mark and one female. Robert Miller, of Stouffville, Canada, paid $1,650 for Gloster Fashion, a bull calved in November, 1910; H. O. Weaver, of Wapello, Iowa, paid $1,305 for Sultan's Last, a yearling son of Whitehall Sultan; and R. W. Caswell, a Canadian breeder, paid $1,305 for Clipper Sultana, a show heifer.

Mr. J. P. Vissering, Box 1, Alton, Ill., writes that in his opinion we will have high markets for cattle for years to come, and that no one can do better than start a herd of blocky Angus beef. His card is to be found with the live stock breeders, as usual, and he has had thirty-years' experience as a breeder of the right kind.

Mr. N. V. Cusick, of Isabel, Edgar county, Ill., is advertising Hampshire hogs for sale. He is located on the Vandalia Line, with express facilities for shipping all over the United States. The Hampshire hog was formerly known as Thin-rind Hogs, and they make a pretty good showing as breeders and fat hogs in market.

The American Royal Live Stock Show will be held this year at the Kansas City Stock Yards, as usual, and the opening day is Monday, October 7th, and the closing day Saturday, October 12th. There has been considerable negotiation tending to remove the show, but it will probably stay at the Kansas City Stock Yards indefinitely.

One of the best lot of heavy beeves seen at the St. Joseph Stock Yards was on sale April 24th. It comprised a shipment of eighteen head of Hereford steers, fed by Mr. J. P. Martin, of Tarkio, Mo., which averaged 1,565 pounds and sold at $8.40 per 100 pounds, the top for the week, and equaling the highest-priced load of steers sold on the market this year, says the St. Joseph Stock Yards Journal.

At Menardville, Texas, a sale of range-raised Hereford cattle was held at auction on April 6th by V. B. Latham, of Eden, Concho county, in which thirty-four bulls sold for an average of $107.35. Ten females averaged $92. The forty-four lots averaged $1,033.36. With the exception of two or three bulls these cattle were strictly grassers.

At Kingsley, Iowa, April 12th, at an auction sale of pure-bred Herefords by Edmunds, Shade & Co., the average of fifty-two head of Herefords was $150. The twenty-six females sold at $151.50 per head, and the twenty-five bulls sold for $150.40 per head. L. A. Clifford, of Oshawa, Ontario, Canada, bought Beau Albany, a calf dropped August, 1910, for $500; and Len Lessenick, of Sioux City, Iowa, paid $275 for the full aged cow, Jersey Lady.

George Allen, of Lexington, Neb., sold forty-nine pure-bred Shorthorn cattle at auction at Omaha, Neb., on April 23d, for an average of $220. Ten bulls averaged $182.50, and thirty-nine females averaged $229.70. The top price for a bull was $325, paid for Barmpton Sultan, a calf of 1907, by A. N. Sutton, of Colon, Neb.; and Albert Hultine, of Sharonville, Neb., paid $580 for Countess Duchess, a mature cow with a heifer calf at side.

At Whitehall, Ill., on April 22d, forty-seven head of pure-bred Shorthorn cattle were sold at auction at an average of $130 per head. There were six bulls at $120 and forty-seven heifers at $130. The best price for a bull was $200, paid by George Thomas, of Patterson, Ill., for a bull calf, White Hope; and the heifer Princess Isabella, calved November, 1910, topped the females at $275, being purchased by Frank Sisson, of Bowling Green, Mo.

On April 10th the second importation of Shire and Percheron stallions for 1912 arrived at Trumans' Pioneer Stud Farm, Bushnell, Ill. The firm has the largest and choicest collection of imported horses of these two breeds in America. Also a choice collection of Belgian and Hackney stallions on hand. Catalogue can be had by writing for it.

Passed Over the River.

During the month of April the death of Joseph G. Marriott was reported, at the age of 79 years. Mr. Marriott was known in St. Louis as a former mill owner and member of the House of Delegates. To us he was Farmer Marriott, who, twenty-five years ago, established a herd of pure-bred Holstein cattle near Sulphur Springs, Jefferson county, Mo. He died at Barnhart, Mo., and is survived by his widow and two daughters, Mrs. P. H. Morrison and Mrs. L. F. Linning, and two sons, Joseph B. and Ellis T. Marriott.

Mr. J. J. Hamilton, for the past forty years engaged in the live stock business and one of the first shippers to the Chicago market, died at his home in Lenox, Iowa, in April.

It was reported on April 23d from Muskogee, Okla., that Captain F. B. Severs had died at the age of 77 years. He was for fifty years a shipper to the St. Louis market, first as a buyer and shipper of pecans and later as a cattle raiser and shipper. For several years at a time he shipped the best grass cattle to the St. Louis market. Paralysis was the cause of his death. He was one of the four white men adopted into the Creek tribe of Indians.

Good News to Stomach Sufferers.

A Chicago chemist is giving away ten thousand bottles of a remarkable stomach remedy that is accomplishing wonderful results for all stomach, liver and intestinal ailments and gall stones. In many cases one dose has accomplished a cure. The discoverer of this remedy, George H. Mayr, 271 Mayr Building, 156 Whiting street, Chicago, Ill., has been so encouraged by the good this remedy has been doing that he is making this most liberal offer to those who are in need of a cure. Write him to-day and he will send you a full $1.00 bottle free.

Illinois Experiment Cattle.

On April 25th, at the Chicago market, the Illinois Agricultural Experiment Station sold seven lots of beef cattle, ten head to the lot, which had been fed 150 days to determine the value of different feeds.

In the test corn was valued at 50 cents a bushel on the farm; cotton-seed meal at $30.00 per ton; silage, $3.16 per ton; and alfalfa, $16.00 per ton.

Lot No. 1 was fed corn, cotton-seed meal and silage, and after deducting value of pork produced, cost $6.49 per 100 pounds and sold at $8.40 per 100 pounds. This lot was fed the most silage and the profit was $21.74 per steer.

Lot No. 2, fed more corn, more cotton-seed meal and less silage, after deducting value of pork produced, cost $6.59 per 100 pounds and sold at $8.40. This lot made a profit of $15.65 per steer.

Lot No. 3, fed corn, cotton-seed meal, silage and alfalfa, after deducting value of pork produced, cost $6.75 per 100 pounds and sold at $8.40. This lot made a profit of $13.99 per steer.

Lot No. 4 was fed corn, silage and alfalfa, and no cotton-seed meal, and after deducting value of pork produced, cost $6.41 per 100 pounds and sold at $8.35. This lot made a profit of $14.68 per steer.

Lot No. 5, fed corn, silage and alfalfa, after deducting value of pork produced, cost $6.48 per 100 pounds and sold at $8.35. This lot made a profit of $14.63 per steer.

Lot 6, fed the most corn, some sialge and a liberal ration of alfalfa, after deducting value of pork produced, cost $6.61 per 100 pounds and sold at $8.40. This lot made a profit of $18.45 per steer.

Lot No. 7 was fed corn and alfalfa, but no cotton-seed meal or silage, and, after deducting value of pork produced, cost $6.90 per 100 pounds and sold at $8.40. This lot made a profit of $11.25 per 100 pounds.

This memorandum is made up from partial information. Later on the Illinois Agricultural Experiment Station will issue a bulletin giving results in detail, when this particular experiment will again be referred to. At the Chicago market Professor H. P. Rusk, Assistant Instructor in Animal Husbandry at Illinois College, was in charge of the shipment. He said: "We found our test in feeding silage highly satisfactory. It proved a most valuable feed, although we have discovered that a moderate ration of silage (and a larger ration of corn) is better in the last stages of the feeding period than is a heavy silage finishing feed, since lot 6, which was fed one-third as much silage as lot 5, made the highest daily average gains and the second largest profit."

If, however, the final figures will stand as they are and silage-fed beef cattle be finished at 2½ cents less per cost of a pound of gain than when fed corn and alfalfa, then will silage feeding become as general in beef-cattle finishing as it is in handling dairy cattle. In the market the steers averaged 1,104 to 1,198 pounds.

A Pointer in Favor of Pruning.

Properly-pruned trees, trained from the start, will hold, without breaking a branch, four times as much fruit as the tree should bring to maturity. On such trees, even when in bearing for several years, all the fruit should be gathered without the aid of a stepladder. Neglect this shortening, in process with trees on strong land and the fruit (always on young wood) will soon be found beyond reach and at the extremities of long, tall branches where only a light weight is necessary to break the tree to pieces.—Connecticut Farmer.

Good Tools That Save Strength

Keen Kutter farming tools are light and strong; they are easy to use and *never* clumsy to handle, because they are made on *correct* principles. The hang and pliability of the handles, the elastic property of the steel; and the lasting qualities of all

KEEN KUTTER
Farming Tools

mark them as the best that can be bought. They save strength because they lighten work and they lighten work because they are made to *fit* the man and his work. The Keen Kutter guarantee means your money back for *any* Keen Kutter tool or piece of cutlery that fails to make good.

A Good Suggestion.

The next Country Life Commission ought to begin at the suburbs and then investigate the cities. A report on city life would be interesting.

Make Something: Save Something:

YOU CAN DO BOTH by taking the agency now for **"Empire" Fertilizers** which are good sellers because of their long established reputation for giving results that pay. Any farmer will take pride in selling these brands because he knows he is giving his friends a good bargain. Our years of experience insure every pound.

Send a postal card for our proposition; and our representative will call and talk it over with you.

Empire Carbon Works
421 Locust St., St. Louis, Mo.

Where the Well Dressed Women, Who Wish to Save Money, Come From

At your disposal madam, in this book, is the pick of the new spring clothing. These suits, dresses and waists are the same pleasing designs and fabrics shown in all the first class fashion magazines and displayed in the most exclusive stores. But here is the difference—our prices are 20 to 50 per cent below what others charge. This is because we sell direct to you without your having to pay unnecessary profits to agents and dealers.

Undergarments, hats, shoes, gloves, parasols, dry goods—a full line of new, attractive, serviceable dress accessories—are also shown in this book at worth while money saving prices. Your spring and summer outfit, if you buy it from this book, will be prettier, more complete, than ever. Besides, think of the money you'll save.

Put your name and address on these two lines. Cut this coupon and send it by the next mail if possible. We will send you your copy of this money saving buying guide at once.

THE EUROPEAN USE OF LIME.

From Observations on European Agriculture by G. S. Traps, Chemist, Texas Agricultural Experiment Station.

Lime is quite frequently used in Europe. It appears to be used more or less in every locality, except where the soil is naturally calcareous. We found it much used in Switzerland, for example; to some extent in Scotland; also in England, France and other countries. It is an old saying "Lime makes the father rich and the son poor." This is on account of the property of lime to make some plant food available, thereby increasing the loss from the soil and leaving less for future use. In connection with crop rotation and the use of manure and fertilizers, lime aids in maintaining the soil at a high degree of productiveness.

One use of lime is to correct acidity and bring the soil to a basic reaction, which is more favorable to most crops than an acid condition. But this is not the only action of lime. It flocculates clay soils and makes them more easily worked. It liberates potash so that plants can take it up more readily. It increases the action of bacteria so that they produce more available nitrogen. This action, at times, leads to loss of nitrogen by leaching. All these effects of lime may, indeed, lead to loss of plant food.

Lime and Acidity.

When the soil is fertilized with sulphate of ammonia, it takes out lime and in time the soil becomes acid. With nitrate of soda, this is not the case. In one case, when the nitrogen is removed, the residue is acid; in the other case, it is alkaline. Hence the difference in the effects. The effect of soil acidity is strikingly shown at the Woburn, England, Experiment Station. On the unlimed sulphate of ammonia plots, barley did not grow at all—the plot was bare—and wheat was growing little. Where the acidity was partly neutralized with lime, or, on other plots, neutralized by large applications of lime, the differences were easily perceptible.

At the Rothamsted Station, where sulphate of ammonia was used on the permanent grass land, the soil was beginning to become acid, and peat was beginning to form, but application of lime (on other plots) caused the peat to disappear and a change in the character of the vegetation. Similar results could be seen on the grass land at Woburn.

The new catalogue just issued by the University of Missouri shows that the enrollment of students in the College of Agriculture has increased from 211, four years ago, to 794 during the present session. This is an increase of 276 per cent. Few Colleges of Agriculture in the United States have had such a remarkable increase in their enrollment during the same period of time.

A Test of Lime.

Whether or not the use of lime on fields in Oneida county, Wisconsin, where alfalfa and clover are to be grown, is advisable, is being determined this year by tests inaugurated by E. L. Luther, County Representative of the College of Agriculture of the University of Wisconsin. About 100,000 pounds of lime have been secured from the Menomonie Sugar Beet Factory and will be distributed free to thirty of forty farmers in Oneida county, who will try it on their farms this year.

The first Farmers' Course ever held under the direction of a county representative was recently held by Mr. Luther, and it was during this course that the experimental work with lime was inaugurated. About 150 farmers, or 25 per cent. of the total number in the county, attended this first Farmers' Course.

The Leading Egg-laying Pullets.

It is not the part of wisdom to count chickens until they are hatched, neither is it advisable to name the winners in a twelve-month contest after but five months have passed. But there is a story about five Buff Orpington pullets that lay 402 eggs in five months that lead the procession so far that will not keep for twelve months.

It appears that the five leading Black Orpington pullets in the National Contest at Maryville, Mo., were entered by Miss S. C. Fellows, of Springfield, Mo., and were all bred from one hen. Miss Fellows had five varieties of poultry. Her family insisted that she must get rid of four varieties and stick to one. She had quite a number of each of the other varieties, but only had one Buff Orpington hen. She said to the family she would not part with this hen for all the rest of the flock. This hen had laid nearly twice as many eggs as any other. She had made such a remarkable record that Miss Fellows was willing to part with a whole flock instead of this one hen. She got rid of all others, kept this hen and bred from her, and this pen of five pullets which leads 131 pens from all parts of the United States and Canada is the result. Was the trouble which she went to in discovering and breeding from such a hen worth while? Was she not wise in turning down four varieties and the entire flock for this one hen? Select the variety of your choice, for no one variety can claim all the good points, and then strive to improve it in both beauty and productiveness.

The High-priced Mule Trade.

Mules never sold any higher than they are selling now, but that only applies to good mules. Three pairs of mules sold for $2,100 at the St. Louis National Stock Yards, which is $700 a pair, and as they left the yards the trade turned out to look them over because they were extra good matched mules. The National Live Stock Reporter quotes mules as follows: 14 hands, $75 to $135; 14½ hands, $85 to $135; 15 hands, $120 to $140; 15½ hands, $150 to $210; 16 hands, $125 to $250; 16½ hands, $190 to $290. On May 1st Holland, Nugent & Maxwell Bros. said: "The mule supply is light; not many mules on the commission alley. All good, big mules are selling on arrival at strong prices. Good miners are selling well; in fact, all mules with finish are selling all right."

HORSE AND MULE NOTES.

At auction sale in New York City, held recently, nine head of high-class Polo ponies sold for an average of $1,095 per head.

At the St. Louis National Stock Yards, in April, 1912, 14,751 horses and mules were received, this being 5,070 more than were received in April of 1911.

Horsemen will find a boon advertised on page 14 that will interest them. It is called "The Horseman's Annual," a new edition just off the press. It is interesting to all lovers of the horse, and that ought to include all stock farmers and ranchmen.

At La Plata, Mo., on March 14th, a sale of jacks and jennets was held, and nineteen jacks sold for an average of $607.10, and twenty-two jennets sold for an average of $190.90. The top price was $1,470, paid by G. W. Cantwell, of Sterling, Kas., who bought the four-year-old jack Clover Leaf King; and French Carter, of Rutledge, Mo., paid $1,000 for the two-year-old Clover Leaf Burleigh. The jennet, Lady Von, seven years old, with jack colt at foot, sold for $550, which was the top price. The sale was by G. C. Roan.

On March 27th, at Holstein, Iowa, Mr. P. McGuire sold fifteen head of Percherons, Clydes and standard-bred horses at an average of $344.10 per head. Extremely unfavorable weather caused a curtailment of the sale. There was much mud underlaid with ice, and some horses were held for private sale.

Grass Steers at $7.50 Per 100 Pounds.

On April 30th, at Fort Worth, Texas, a load of grass Texas steers which averaged 1,131 pounds and shipped to market by Ellis Perry, of La Pryor, Zavalla county, was sold at $7.50 per 100 pounds, and reported as the highest sale of grass steers at any time at any market. The load was in a train consignment, but outclassed all others in the train and outweighed them by 115 pounds.

The Retailers' Margin.

Whenever beef at wholesale is advanced a cent a pound, beef at retail goes up about three cents a pound. When beef is scarce the retailer must make a larger profit per side of beef, therefore the basis of three to one.

New Hereford Record Completed.

Volume 36 of the American Hereford Record has been received by the Secretary from the printers and is now ready for distribution. The volume contains 21,000 pedigrees, from No. 365,000 to No. 386,000, and includes all animals recorded from March 15, 1911, to December 31, 1911. The volume will be sent, postage prepaid, to association members at $1.25 each. Orders should be addressed to Secretary R. J. Kinzer, 1012 Baltimore avenue, Kansas City, Mo.

PERSONAL HARDWARE.

Many Tools Have Come Into Use in Recent Years.

Not so many years ago a pocket knife was about the only piece of personal hardware owned, and its uses were as many as woman's proverbial hairpin. Now, however, there is quite a formidable list. Of course, a knife is still indispensable to the sex that has clothes with pockets. There is practically no limit to knife styles, ranging from the old-style one-bladed barlow up to six or seven blades, while inventive ingenuity has added special "tools"—nails, files, scissors, punches and so on—until almost any knife fancy or taste can be satisfied. But in addition to these, men's hardware now includes razors with concave blades, or safety razors, nail files, manicure scissors, nail clippers, pocket scissors and perhaps others in less common use.

A poor knife is an ever-present vexation, while to get an old-style razor that will hold its edge against a stiff beard is almost like hunting for the philosopher's stone. There is only one safe plan for the buyer to follow; that is, buy a trademarked brand. All the "hardware" mentioned in this article can be had in the famous Keen Kutter goods. The meaning of this trademark is that if what you buy is not satisfactory, you can get a new one in its place or your money back. You are the judge and the dealer knows it, so there is never any question or quibbling or chance to feel that the dealer did not give you a square deal.

For the ladies there is a seemingly unlimited assortment of shears and scissors, buttonhole scissors, lace and embro[illegible] lamp-trimming shear[illegible] ught singly or in co[illegible]

On [illegible] town ask to see t[illegible]rs. If he does not ha[illegible]ll not have our custom[illegible], write to the Simmons [illegible]e Company, St. Louis or New York, for a copy. It is a book every farmer ought to keep at hand for ready reference, as it lists almost everything in the way of tools for household as well as individual use. Keen Kutter tools of every kind are famous for quality. They are made upon the principle that "the recollection of quality remains long after the price is forgotten."

Bone Spavin

No matter how old the blemish, how lame the horse, or how many doctors have tried and failed, use

Fleming's Spavin and Ringbone Paste

Use it under our guarantee—your money refunded if it doesn't make the horse go sound. Most cases cured by a single 15-minute application—occasionally two required. Cures Bone Spavin, Ringbone and Sidebone, new and old cases alike. Not used on splint, curb or soft bunches. Write for

Fleming's Vest-Pocket Veterinary Adviser

Best book on blemishes, and we send it free. Read it before you treat any kind of lameness in horses. 192 pages, 69 illustrations, durably bound in leatherette.

FLEMING BROS., Chemists, (2)
218 Union Stock Yards, Chicago, Ill.

Hog Book Free.

Valuable hog book, great assistance to any one interested in hogs. On the care and management of hogs. It tells how to cure sick hogs, prevent disease and clear hogs of worms. It tells how to manage young pigs. It tells how to make hog raising and feeding a pleasure, and certain success. It tells how to make the hog business pay big. This book is mailed free to all who write Dr. D. C. Snoddy Co., of Nashville, Tenn. Dept. H.

St. Louis Hog Market Prices.

The prices paid for hogs on the St. Louis market, April 30th, ranged in general from $7.50 to $8.00 per 100 pounds. The bulk of the hogs sold at $7.70 to $7.90, the weights averaging 175 to 237 pounds. The best hogs bringing $8.00 were butcher quality, even lots, 215, 229 and 232 pounds. Many pigs and lights sold at $5.00 to $6.85 per 100 pounds.

Range Polo Ponies in New York.

Towards the end of April, at New York City, the horse commission firm of Fiss, Doerr & Carroll sold for Miller Bros., of Bliss, Oklahoma, one hundred head of Polo ponies and other range horses at an average of $200 a head. The New York Herald says of them:

"There were bloodlike little Polo types, trained to play the game; plain-looking bronchos, with brands and barbed-wire marks to attest their origin on the range, and then a lot of larger horses without distinctive character, some of them standing sixteen hands and looking like trotting-bred nags. Prices ranged from $625 for Casey Jones, a fast, handy, racy little chestnut sorrel, down to $150 for some of the blemished ones."

Record Price For Heifers.

On April 30th, F. O. Link, of Callaway county, Missouri, a large and prosperous farmer and feeder, marketed a load of choice 802-pound Shorthorn and Hereford heifers, which sold to Armour & Co. for $8.60 per 100 pounds. This price equals the top of the market for the year. The cattle were of Mr. Link's own feeding and speak well of his ability of finishing cattle. He expressed himself as being well pleased and said that cattle in his section of the country were getting very scarce.

Native Cattle Quotations.

On April 30th, the following were native cattle quotations at the St. Louis National Stock Yards: Choice to prime steers, $8.00 to $8.75; good to choice steers, $7.25 to $8.00; medium to good steers, $6.50 to $7.50; common to medium steers, $5.25 to $6.00; choice to prime yearlings, $7.50 to $8.00; good to choice yearlings, $6.75 to $7.75; fair to good yearlings, $6.50 to $6.65; common steers, 850 to 1,000 pounds, $4.75 to $5.50—all quotations being at the price stated per 100 pounds.

Advice to Horse Shippers.

The circular issued by Messrs. Holland, Nugent & Maxwell Bros. at St. Louis on May 1st mentions the sale of some strictly good horses, weighing 1,300 to 1,500 pounds, that sold at $220 to $275 in the auction ring. The circular is specially addressed to car-load shippers and describes exactly the horses that will and exactly the horses that will not bring the money. Mr. T. H. Holland writes these letters for the benefit of his personal shippers, and he can help those who are buying horses to avoid costly mistakes. Messrs. Holland, Nugent & Maxwell Bros. hold auction Monday and Tuseday of each week, and they can sell a few more car-loads that come direct from country buyers. Address, T. H. Holland, National Stock Yards, Ill., and let him know what horses you ship regularly and he will advise you in regard to them.

Missouri Steers at $8.60.

On May 1st, at St. Louis, straight car lots of steers sold up to $8.60 per 100 pounds. This price was obtained by Warner Robertson, from Cooper county, Missouri. The drove included twenty-two head that averaged 1,357 pounds. They were Mr. Robertson's own feeding and had been on a ration of molasses feed, corn and hay for about six months.

To Keep Hogs Healthy.

Providing a farmer can keep his hogs healthy there is nothing to prevent him making a handsome living raising them. On the other hand, sick hogs can demoralize a farm and lose a small fortune in a short time. Write to E. Myers Lye Company, Dept. 22, St. Louis, Mo., for a free copy of te book "How to get large profits from hog raising." You will then receive something valuable and interesting about powdered lye and healthy hogs.

Record Price on Steers.

W. H. Bosworth, the well-known Chariton county, Missouri, feeder, broke all 1912 steer records when he shipped in a load of his own fed beeves that sold on the April 30th market at $8.80 per 100 pounds. The shipment included twenty-three head that averaged 1,320 pounds. They were sold to Armour & Co. "To-day's sale of my steers was certainly a pleasant surprise to me," remarked their feeder, "although I knew they were in good condition, I did not figure that they would sell quite as high as they did. I had them on full feed for six months, using a ration of corn, cotton-seed meal and some roughage. They made a very good gain and their sale pleased me in both weight and price. I was very glad to get the record for the year, and though I have topped the market on several occasions, I have never received such a price as this."

Native Steers at $8.75.

On April 30th, at the St. Louis National Stock Yards, a four-car shipment of heavy-weight beeves that averaged 1,460 pounds brought $8.75 per 100 pounds. The consignment was made by T. P. Harrison, one of Callaway county, Missouri's, most extensive and reliable feeders. They were an extra fine drove of heavy-weights and showed the very best of quality. Mr. Harrison was along with his consignment and expressed a good feeling for the St. Louis market. "The cattle were roughed on shocked corn for a length of time," said the owner. "They were full fed for five months and a half on a ration of corn and hay. Their gain was a remarkable one."

Western Range Horses.

Owing to the severe winter and late spring the Western range horses are not in as good condition as they were last year. The season is estimated to be two weeks late. The first auction sale for the year 1912 under the management of Messrs. Campbell & Reid and Western Sale Stables Company will be held at the St. Louis National Stock Yards on Thursday, June 27th. At this sale there will be 1,200 select horses and mares that will be in good condition, and there may be 2,000 or more, all to be sold without reserve. The horses are very nearly fit to be sold in the domestic horse auction, but need a little finishing and handling. Keep in touch with these sales by writing to J. J. Searcy, sale manager, National Stock Yards, Ill.

Have you a copy of the Book of Live Stock Champions? See page 23.

WESTERN RANGE HORSE SALES.

Horse raisers are advised that sales of the very best Range Horses in the country will be conducted by

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.,
As usual, during the season of 1912.
The First Sale will be held

THURSDAY, JUNE 27,

And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is sure to be good, especially for well-bred Mares and Geldings in good condition.

Please address
J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

The Thoroughbred.

James Russell Lowell said: "Some kind of force may be got out of the veriest jade by the near prospect of oats; but the thoroughbred has the spur in its blood."

FARM AND RANCH LANDS.

ARKANSAS FARMS.—Nice level land. Fertile soil. Choice locations. $8 to $15 an acre. Write for Homeseekers' Guide and Large List of Bargains. L. E. Moore, Searcy, Arkansas.

FLORIDA SUBURBAN HOMES.

One of the most choice tracts of land in Florida sold direct to you by the owner. GEORGIAN HEIGHTS, FLORIDA, is not the ordinary kind of land. It is better and more conveniently situated. Only fourteen miles west of Jacksonville. The Florida Railway runs through the center of GEORGIAN HEIGHTS. Two other railroads, good, hard-surface wagon roads and automobile highway all run into Jacksonville, which is the largest and best city in Florida. All these conveniences, the high elevation of the land, good soil, together with the mild Florida cimate all the year round, make GEORGIAN HEIGHTS one of the most desirable locations in the state. I will give you a valuable town lot free with each five-acre tract purchased. Price for tract, $300.00. Easy terms by the owner, J. T. George, Wainwright Bldg., St. Louis, Mo.

ILLINOIS.—Splendid farm property in Madison county, Ill., a short ride from St. Louis; 100 acres fine land; cannot be excelled. Two miles from station on Big Four Route; four-room house, summer kitchen; 1,200 fruit trees just in bearing. Rare opportunity to buy excellent farm property. Price reasonable. For further particulars address Illinois Farmer, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

MINNESOTA.—Farms for sale. Send for my list of CHOICE FARMS for sale, the best in the United States, considering location, terms, etc. Ask for my FREE BOOKLET, telling about the country, crops, markets, etc. Geo. W. Elder, McGinn Block, Thief River Falls, Minnesota.

TEXAS.—We have for sale 5,502 acres in the famous Pecos Valley, near Pecos City, Texas. Shallow water belt; inexhaustible supply of water. This land lies in three tracts, but close together; three sets of houses, barns, wells, windmills, tanks, gardens, fruit tres, etc. All fenced and cross fenced. Schools, telephone, auto road. Dark chocolate loam. As fine land as the sun shines on for alfalfa, fruits, grapes and general crops. Ideal for dividing into small farms. Will sell in a body or in sections of 640 acres cheap for one-half cash, balance easy terms. Don't delay, if interested, as this land must be sold at once and is a real bargain. For full particulars address Robt. H. Rinehart & Co., Box 98, El Paso, Texas.

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property FREE. American Investment Association, 55 Palace Bldg., Minneapolis, Minn.

I BRING BUYERS AND SELLERS TOGETHER. If you want to buy, sell or exchange a farm or business, write me. Established 1881. FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.

Your Name Will Get $2 Eggs

For 50 Cents Per Sitting

The White and Brown Leghorns are the greatest layers in the World. I keep 2000 of the celebrated Chamberlain laying strains on my Experimental Farms, and to increase the sale of my Perfect Chick Feed, I will send to any one who will send me their name so I can send them my Perfect Chick Feed Catalogue, 2 sittings of Single Comb Brown or White Leghorn Eggs for $1 for the 2 sittings. Not less than 2 sittings sold. White or Barred Plymouth Rock or Rhode Island Reds or Silver or White Wyandotte or Rose Comb Brown Leghorn or Single Comb Black Minorca or W. Orpington Eggs, $2 per sitting. Leghorn eggs, 13 to a sitting; other varieties, 15 to a sitting. Leghorn eggs, $6 per 100; all other varieties $10 per 100. Large White Pekin Duck Eggs $2 for 10 Eggs. This is a rare chance to get a start of extra fine stock. Send Post Office order on St. Louis and have your orders booked early. Write for our prices on Old Trusty and Buckeye Incubators. Freight paid.
W. F. CHAMBERLAIN, (*The Perfect Chick Feed Man*)
KIRKWOOD, St. Louis County, MO.

SHOEMAKER'S BOOK on **POULTRY**

and Almanac for 1912 has 224 pages with many colored plates of fowls true to life. It tells all about chickens, their prices, their care, diseases and remedies. All about Incubators, their prices and their operation. All about poultry houses and how to build them. It's an encyclopedia of chickendom. You need it. **Only 15c.**
C. C. SHOEMAKER, Box 945, Freeport, Ill.

Poultry and Farm Paper Club.

Two first-class papers can be had for the price of one. **The National Farmer and Stock Grower** is one, and the **American Poultry Journal** is the other. There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is the **American Poultry Journal.** We have made arrangements whereby we can send **The National Farmer and Stock Grower and the American Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Egg-laying Contest at Storrs, Connecticut.

For the past six weeks every pen in the contest at the Connecticut Agricultural College, Storrs, Conn., has been shelling out eggs in grand style, and making new records, which will be very hard for the birds in any other contest to beat.

The Stoneburn Broody Coop has been installed in all the houses, and at the first signs of broodiness on the part of any bird, in she goes to the broody coop. Usually forty-eight hours is enough to cure any broody bird, and they are released and go right to laying again, which speaks pretty well for this broody coop.

There are just 490 birds in the contest, and at the present they are averaging about 325 eggs per day. The writer has been asked a great many times how it is we get so many eggs in the cold weather. He will tell you that Prof. F. H. Stoneburn, the Supervisor, and he himself have always insisted that the birds should eat at least as much dry mash as they do whole grain, and to bring about this order of things, they close the Norwich grain feeders until late in the afternoon, but the dry mash is before them all the time. This is what produces the eggs, combined with the best of care. This mash contains ground oats, corn meal, bran, middlings, gluten, fish scraps, beef scraps and ground bone.

Some of the birds still continue to lay two eggs a day; just recently a White Wyandotte pullet, owned by the Woodside Poultry Farm, of Philadelphia, Pa., performed the feat. Her first egg was laid about 9 a. m., and the second was laid about 2:30 p. m., the hen being trap-nested both times, and both eggs being collected by the same man. Assistant J. H. Austin. The largest and heaviest egg laid was by Wood's Lane Poultry Farm, Leaman Place, Pa. This egg weighed 24-100 of a pound, or nearly four ounces. There are five birds to each pen.

The wire fencing for the yards is being put up by the American Steel Wire Company. This fencing is five feet high, with two single wires four inches apart on top. All the parts used are hollow steel, and are made to last.

The English pen of S. C. W. Leghorns still leads in total number of eggs laid to date. At the end of the fourteenth week, Pen No. 45, R. C. R. I. Reds, owned by E. S. Edgerton, West Willington, Conn.; Pen No. 43, S. C. R. I. Reds, owned by J. A. Fritchey, Harrisburg, Pa.; and Pen No. 93, Buff Orpintgons, owned by O. Wilson, Carlisle, W. Va., were all tied for first position, each pen laying 26 eggs. Pen No. 63, S. C. W. Leghorns, owned by F. G. Yost, Sayre, Pa., was second with 24 eggs, and Pen No. 35, S. C. R. I. Reds, owned by Brother Wilfred, Inst. Agricole, La Trappe, Que., Can., was third, laying 23 eggs.

The fifteenth week the pen winning had to keep busy nearly every day to carry off the honors, which went to Pen No. 43, S. C. R. I. Reds, owned by J. A. Fritchey, Harrisburg, Pa., having laid 29 eggs; Pen No. 93, Buff Orpingtons, owned by O. Wilson, Carlisle, W. Va., was second with 28 eggs; and the third pen for the week was No. 91, Buff Orpingtons, owned by Barr and Skattowe, Mt. Orchard Poultry Farm, Marvon, Pa., this pen laying 25 eggs.

The sixteenth week is the record so far, Pen No. 93, Buff Orpingtons, owned by O. Wilson, Carlisle, W. Va., having laid 31 eggs out of a possible 35. The second pen for the week was not far behind, being No. 15, White Plymouth Rocks, owned by Hans Lobert, Pittsburg, Pa., who is a ball player on the Philadelphia Nationals. This pen laid 29 eggs; Pen No. 37, S. C. R. I. Reds, owned by Arthur Evans, Colonial Farms, Temple, N. H., was third, laying 27 eggs.

The seventeenth week the average is about the same as the week previous. Pen No. 96, S. C. W. Orpingtons, owned by L. O. Keeton, Brookland, D. C., won first position, having laid 29 eggs; Pen No. 37, S. C. R. I. Reds, owned by Arthur Evans, Colonial Farms, Temple, N. H., was second, with 28 eggs, and Pen No. 35, S. C. R. I. Reds, owned by Brother Wilfred, Inst. Agricole, Que., Can., was third, laying 27 eggs.

The eighteenth week a dark horse shows up. Pen No. 39, S. C. R. I. Reds, owned by Arnold Francis, Oaks, Pa., won first honors, having laid 28 eggs; two pens were tied for second place, No. 24, White Wyandottes, owned by Woodside Poultry Farm, Philadelphia, Pa., and No. 91, Buff Orpingtons; each laid 27 eggs. Pens No. 10, Barred Rocks; No. 11, Barred Rocks; No. 14, White Rocks; No. 15, White Rocks; No. 17, White Rocks; No. 36, S. C. R. I. Reds; No. 74, S. C. W. Leghorns; No. 92, Buff Orpingtons; and No. 96, S. C. White Orpingtons, were all tied for third place, each having laid 26 eggs.

All the game men in the country should be interested in the result of the nineteenth week, as a pen of Dark Cornish Games, owned by John W. Ward, Pennington, N. J., was first, with 30 eggs; the second pen was S. C. R. I. Reds, owned by Arthur Evans, Colonial Farms, Temple, N. H., having laid 29 eggs; third pen, White Plymouth Rocks, owned by W. J. Tilley, Packersville, Conn., 28 eggs.

DISSTON Cross-Cut Saws Will

run easiest, cut fastest and last longest. Our free book explains *why* in detail and illustrates the cross-cut saws we make which are best for farm use. For felling trees a cross-cut saw saves labor, time and wood—it has practically replaced the axe for this purpose in all parts of the world.

DISSTON
SAWS TOOLS FILES

especially adapted for your use are fully described in this book, which also tells how to properly care for your tools. You should have it.

Just write on a postal "Send the Disston Farm Tool Book"

HENRY DISSTON & SONS, Incorporated

Keystone Saw, Tool Steel & File Works — P. O. Box 1537 M, PHILADELPHIA, PA.

SOLD BY ALL PROGRESSIVE HARDWARE DEALERS

[Please mention National Farmer and Stock Grower.]

A short time ago a S. C. R. I. Red, owned by Howard Steel, Philadelphia, Pa., died suddenly, and on examination it was found that she had two perfect oviducts, which in a way may account for a hen laying two eggs in one day. These items are from a report by A. M. Pollard to the Feather, published at Washington, D. C.

POULTRY NOTES.

White Leghorns first, White Leghorns second, White Leghorns third, White Leghorns fourth, Black Leghorns fifth, White Leghorns sixth, White Wyandottes seventh, Brown Leghorns eighth, White Leghorns ninth and White Leghorns tenth, account for the first ten pens in an egg-laying contest in South Africa, there being twenty-five pens in competition, and nineteen of them were Leghorns.

In the year 1912, that is to say, in the first three months thereof, three cities—Chicago, New York and Boston—received a total of 1,382,619 cases of eggs, and that number was actually 769,495 cases less than the number received at the same cities during the past three months of 1911. The long, severe winter was charged with the falling off in egg shipments.

Sample Distribution of Amatite Roofing.

The manufacturers of Amatite ask us to say that they are ready to distribute samples of their roofing to anyone who is interested in the new type of roofings. Anybody can obtain one of these samples by simply addressing a request for it to the nearest office of the Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburg, Cincinnati, Kansas City, Minneapolis, New Orleans, or Seattle. In writing, kindly mention The National Farmer and Stock Grower.

This sample serves to show the mineral surface of Amatite, which is its great unique feature. By this mineral surface Amatite eliminates the painting nuisance.

You lay Amatite on the roof, leave it alone and it will take care of itself year after year. It needs no painting or attention. Of course, this reduces the total roofing expenses considerably, for nobody who has had experience with the ordinary smooth-coated roofing is willing to consider that paint is cheap. It might be expected that Amatite would cost more than the smooth-coated roofings, but its price, in fact, is somewhat lower than roofs of the old type.

If you are interested in ready roofings, Amatite is worth remembering.

To Buy Groceries Right.

Our readers are well acquainted with the great merchandise firm of Montgomery Ward & Co., and will be glad to know that they have issued a new pure-food grocery catalogue. This firm is well and favorably known as a strictly reliable house, and hundreds of thousands of farmers will testify to this from having bought of them for many years. To get this catalogue, all you have to do is to write a postal card, saying: "Please send us your grocery catalogue as advertised in The National Farmer and Stock Grower. Address, Montgomery Ward & Co., Chicago Avenue Bridge, Chicago, Ill., or to Montgomery Ward & Co., Nineteenth and Campbell streets, Kansas City, Mo. The service is equally as good from either establishment.

Read about the "last chance for roses" on page 25. It refers to the best premium ever offered.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

"DONT'S" IN THE CARE OF LIVE STOCK.

By C. L. Barnes, Veterinarian, Colorado Agricultural College, Fort Collins.

"Don't" water a horse soon after feeding him grain.

"Don't" feed a large quantity of hay to a horse that is afflicted with heaves.

"Don't" change the grain ration abruptly.

"Don't" keep the idle horses on full feed of grain.

"Don't" turn horses to a straw stack and expect them to get a living, keep in condition and with certainty escape impaction of the bowels.

"Don't" fail to have your horses' teeth examined once a year.

"Don't" drive overheated horses through a stream of cold water, and by no means allow them to drink while in this condition.

"Don't" feed wheat or barley to horses when oats and corn are available.

"Don't" allow your mares or cows to deliver their young in a dirty barnyard.

"Don't" feed your horses when they are very tired, especially grain.

"Don't" wait until your mare is almost dead, at time of foaling, before calling a veterinarian.

"Don't" administer medicine to the horse, or any other animal, through the nose; nature never intended it that way.

"Don't" administer any drug to an animal until you are familiar with its action and the exact condition of your patient.

"Don't" administer medicine on the "gun shot" plan.

"Don't" be continually dosing your horse; keep him well by proper care.

"Don't" clip your horse and leave him unprotected while not in motion.

"Don't" leave the shoes on a horse longer than five or six weeks without resetting.

"Don't" allow the blacksmith to rasp the hoof wall and otherwise mutilate the foot in shoeing.

"Don't" shoe with calks unless absolutely necessary.

"Don't" leave the grain bin where the horse can get to it, should he become untied.

"Don't" allow the horse to stand in a draught.

"Don't" wash the horse's legs; curry them when dry.

"Don't" wait until the horse's shoulders are sore before properly fitting the collar.

"Don't" put chains behind the horses to keep them from backing out of the stall.

"Don't" allow the horse to drink too much water at one time.

"Don't" feed irregularly.

"Don't" water horses at public watering troughs.

"Don't" try to doctor a glandered horse.

"Don't" fence your farms with barb wire, if you can afford a better way.

"Don't" wait until the cow or bull has become ugly before dehorning; do it while they are young.

"Don't" feed the cows heavy just before calving time.

"Don't" leave poisoned meat for the rats in the daytime; Rover may get it.

"Don't" stand the horse on an inclined-plank floor.

"Don't" wait until your animals are beyond help before calling a veterinarian.

SHEEP AND LAMB NOTES.

There are generally sufficient "ups and downs" in the mutton and wool markets to permit anyone to get in or get out of the sheep business whenever he determines upon doing one thing or the other; but the farmer who keeps some sheep under any and all circumstances is the one who always cashes the surplus at a good price and obtains a good income.

At Johannesburg, in South Africa, there were 33,673 pigs marketed in the year 1911, and 689,851 sheep and lambs were sold in the same year. This shows why there is room for American pork products in South Africa.

J. R. Hamilton, of Terrell county, in Southeast Texas, recently distinguished himself by shipping 4,000 sheep in one consignment to the Fort Worth market. His next consignment, also large, consisted of 3,300 fall shorn wethers and ewes, 104 pounds average, sold at $6.00 per 100 pounds.

On April 26th, at Chicago, over 3,000 head of prime Colorado lambs arrived on the Chicago market. They averaged 85 to 90 pounds and sold at $9.75 per 100 pounds, the highest mark since April, 1910.

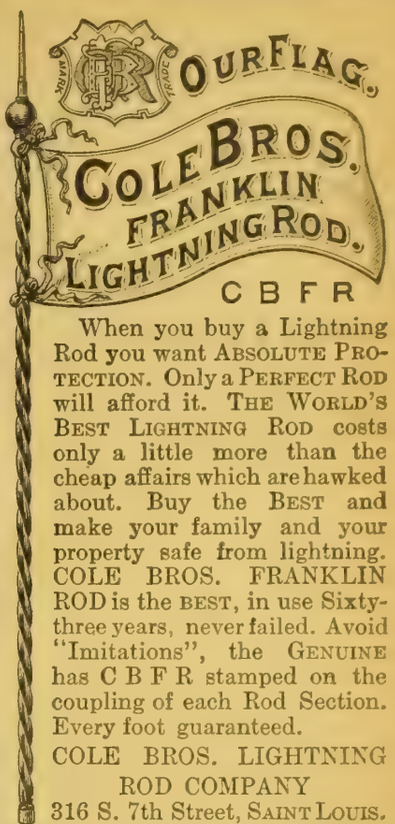
During the third week in April the house of Armour & Co., at Fort Worth, Texas, bought and slaughtered 400 sheep that were shipped dressed to their house at Omaha. This was the reverse of the usual practice, because Omaha, having a surplus of mutton, usually ships mutton to supply deficiencies at other markets.

Increased Use of Nitrate.

According to the reports of the United States Department of Commerce and Labor, the consumption of nitrate of soda for agricutural purposes during 1911 increased 108,000 tons. The United Kingdom consumed 10 per cent. more than in 1910, the United States 10 per cent., Holland 7 per cent., Belgium 7 per cent., France 4 per cent., and Italy 12 per cent., while Germany consumed about 4 per cent. less.

Golden Arrow Seed Corn.

We commend to our readers the Golden Arrow Seed Corn sold by the A. W. Schisler Grain Company, 708 North Fourth street, St. Louis Mo. This is a true bred Reid's Yellow Dent, and has been improved from original stock until it has some characteristics of its own. It is a very bright yellow corn, symmetrical, with small proportion of cob to grain, and is a large yielder. Mr. Schisler is selling it at $2.50 per bushel, and it is all butted and tipped, so that every kernel can be sown with confidence. Higher-priced seed corn can be found on the market, but none better at any price. Time is short. Send in your money for the amount of seed you need. It is a safe investment.



When you buy a Lightning Rod you want ABSOLUTE PROTECTION. Only a PERFECT ROD will afford it. THE WORLD'S BEST LIGHTNING ROD costs only a little more than the cheap affairs which are hawked about. Buy the BEST and make your family and your property safe from lightning. COLE BROS. FRANKLIN ROD is the BEST, in use Sixty-three years, never failed. Avoid "Imitations", the GENUINE has C B F R stamped on the coupling of each Rod Section. Every foot guaranteed.

COLE BROS. LIGHTNING ROD COMPANY
316 S. 7th Street, SAINT LOUIS.

THE BEST POULTRY PAPER.

We are often asked which is the best poultry paper published in the United States, and the answer is, The Reliable Poultry Journal. There are other good papers, but this is the best. The subscription price of The Reliable Poultry Journal is 50 cents a year, and the subscription price of the **Universal Magazine** is 25 cents a year. We have made arrangements whereby we can send the **Universal Magazine** and The Reliable Poultry Journal, both papers one year for 50 cents. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

At a recent California butter scoring contest the average was 91.97 and the top score 95.

BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

STEEL ROOFING Of All Kinds,
Stock and Storage Tanks,
Wagon Tanks, Etc.

Send for Free Catalogue.

O. K. HARRY STEEL WORKS, 2353 Papin Street, ST. LOUIS, MO.

Don't Pay for This Sheep Shearing Machine Until You See and Examine it

Most dealers have it. If yours hasn't, ask him to get one for you, and when it comes have it set up and try it. If you are convinced that it is what you want, buy it and try it on your sheep with the distinct understanding that it must do the work O. K. or no sale.

This STEWART BALL BEARING MACHINE No. 9

is just the easiest of all shearing machines to turn. A boy can run it all day without tiring. It is ball bearing throughout, including a ball bearing shearing head, shears quick and evenly all over.

The price including four sets of knives is only **$11.50**

It is really a wonderful machine and you will be agreeably surprised at the work it does.

Get your dealer to send now, or if you prefer send $2 and we will ship C. O. D. for balance and you may try the machine and if not satisfied we will refund all you paid out.

Send for copy of new 1912 catalogue and Expert Instructions on shearing sheep.

CHICAGO FLEXIBLE SHAFT COMPANY
182 Ontario St., CHICAGO

CASE OF THE INTERNATIONAL HARVESTER COMPANY.

It is very well known throughout the country that an action is pending in the courts by the government against the International Harvester Company which will probably be settled in the course of time. In the meantime, by request of the I. H. C. Company, we publish their side of the case, as set forth by Mr. Cyrus H. McCormick, President of the International Harvester Company, who says as follows:

"The International Harvester case differs radically in its facts from all the so-called "Trust" cases heretofore decided under the Sherman Law. The International Harvester Company was organized in 1902 for the purpose of securing economy in the manufacture and sale of harvesting machinery and of increasing the foreign trade. It had no water in its capitalization and it has earned only a reasonable return on its capital—less than seven per cent. per annum on the average. The prices of its machines are now substantially the same as in 1902, notwithstanding an increase of 15 per cent. in raw material prices and 30 per cent. in wages. The company has caused a large saving to American farmers in the cost of agricultural implements. It has increased the foreign trade in agricultural implements four-fold in nine years; its foreign sales in 1911 were over $42,000,000. It has not sold cheaper abroad than at home. Its treatment of its customers, its employes, its agents and its competitors has been in accord with the highest standard of ethics and honorable business methods. To the farmer it has given better service and better machines; to agents and dealers, a less hazardous and fluctuating business; and to its employes it has given higher wages, improved and sanitary working conditions, insurance against sickness, accident and old age, and a share in the profits.

"The charges of misconduct found in the bill have been met and disproved by the company in other cases; and they will again fail, because they are untrue. The Supreme Court of Missouri, in a suit in which these charges were fully gone into, said:

" 'On the whole, the evidence shows that the International Harvester Company has not used its power to oppress or injure the farmers who are its customers.' "

"And again: 'The price of harvesting machines has not increased in proportion to the increased cost of construction or the increased merit of the machines, and Respondent has brought other farm implements into trade.' "

" 'The evidence also shows that the machines manufactured by the International Harvester Company have been greatly improved in quality, and the item of repair material has been reduced in price and placed within closer reach of the farmer.' "

"The organizers of this company acted under the advice of able counsel and in the sincere belief that they were violating no law. If under later decisions it should be held that the law was violated, it could only be through the creation of a power to oppress, which has never been exercised."

"More than six years ago the company asked for its investigation by the United States government and opened all its books and records for inspection and furnished all information requested. No suggestion of any change in its business methods has been made to it by the government at any time. Recently a full and frank discussion of the whole situation has been had between the representatives of the government and the company, in an honest desire upon both sides to avoid litigation. Some plan may yet be found which will obviate the necessity of any protracted litigation by satisfying the claims made under the Sherman Act without seriously impairing the economic advantages and benefits secured by the organization of this company. No form of reorganization, however, was suggested by the government which seemed practically possible."

"The government has been careful to avoid embarrassment to the foreign business from the litigation; the bill makes no attack upon and seeks no change in the export business of the company. The filing of the bill will in no way interfere with the company's carrying on its business the same as heretofore."

I Am the Paint Man

O. L. Chase, The Paint Man
St. Louis Chicago

O. L. Chase Made-to-Order Paint, Sold Everywhere Has Established A New Standard of Paint Worth.

YOU should get "My Fresh Paint Book." It's new — it's original — it's unique. It tells you all about paint—how you can know good paint—how you can make yourself a judge of what serviceable, worth-while paint really is. It will help you to avoid buying cheap, shoddy paint often sold at high prices on extravagant claims.

You can get O. L. Chase Made-To-Order Paint either direct from me or through a responsible accredited dealer in your town.
I Pay The Freight

After reading my book you can depend on your own best ideas—you can buy paint that will give you eye pleasure,—and will last longer than the ordinary paint—which will serve the real purpose of paint, namely: For Protection, Appearance and Cleanliness.

Read What the U. S. Government Says About Paint.

The U. S. Department of Agriculture, in Bulletin No. 474, issued Nov. 29, 1911, says, in part:

"It would probably not be denied by any one that a better paint can be made in a well equipped factory than by an individual at home in a small shop. Many ready-mixed paints are of the very best quality, but many are of poor quality, made of cheap materials and at the same time are sold with extravagant claims and for high prices."

Read What O. L. Chase Says In "My Fresh Paint Book."

"Most people know little about Paint. Too many of them . . . . either go to a store and lay down their money for 'any old kind' of *stale*—ready-mixed Paint the dealer may have on hand or try to mix some themselves. . . . . Any good painter—and they all are with us—we'll tell you that O. L. Chase *Made-to-Order Paint* gives you longer life and is the only kind of paint to use—Any good painter knows. . . . . Just a little practical knowledge will enable YOU to avoid all that—and practical paint knowledge is what I am giving in this book. I know paint from the standpoint of the painter—I know paint from the standpoint of the manufacturing chemist—I know paint from the standpoint of the manufacturer—and ALL my knowledge is YOURS FREE."

Study what the Government Says—Study What O. L. Chase Says. Isn't My Made-To-Order Paint the Right Paint?

Over fifty thousand users all over the country have enthusiastically decided it is.

When you receive your Made-to-Order paint, if it's six gallons or more, use two gallons. Then if you're not satisfied, return the balance to me. The 2 gallons you use won't cost you a penny.

You can't know paint till you have read "My Fresh Paint Book." It's the only book that tells of the new standard of Paint Worth, O. L. Chase Made-to-Order Paint. It's free. Write to nearest address.

O. L. Chase, The Paint Man, Inc., Dept. 16 St. Louis, Mo. or Chicago, Ill.

When I say you can have this dinner set free, I mean that it will not cost you one single penny as **I pay all the freight charges.** I will deliver it in your town prepaid and **guarantee it against breakage.**

A Prize for Prompt People

I like prompt people and if you are prompt I will reward you with 6 lovely handkerchiefs. I insist on promptness so **don't delay a minute, write me today.** Remember you get these handkerchiefs in addition to the Dinner Set so get your pencil and write me at once.

A Most Beautiful Set

My Royal Delft Blue and Gold is the handsomest set of china you have ever seen and it is **a complete set too.** It is not a little breakfast or tea set, but **is a full sized Dinner Set of 42 pieces** with large platter and a big covered dish. Delft Blue and Gold are the most expensive as well as the most beautiful decoration for china and has become famous in aristocratic homes. No picture can do justic to the beauty of this dinner set, a flawless, pure white with rich blue at the edges shading to the most delicate tints and a dainty filigree design in pure gold overlapping, with a beautiful gold spray in the center of each piece. The colorings and decorations are underneath the glaze and will wear a lifetime.

You will be proud of this set as long as you live on account of its beauty and quality and because **it costs you absolutely nothing.**

My Offer:

I want every lady reader of this paper to grasp this opportunity **now** to own a set of my **Royal Delft Blue and Gold** dishes absolutely free. Just write me a letter and enclose 10 cents as evidence of good faith on your part. For your 10c I will mail you 15 of the most beautiful art post cards you ever saw. These cards are really worth 25c. Now I ask you to send me the 10c merely to keep out curiosity seekers and children. All that I ask of you is that you help me among your friends and neighbors on my great introductory offer. Something that you can do easily and quickly. Write me today enclosing 10c to convince me that you really want one of my 42 piece Dinner Sets and that you are not a mere curiosity seeker. I will immediately send you the 15 fine post cards and arrange to place my big 42 piece **Dinner Set in your home free and all charges prepaid.**

DON'T LET THIS WONDERFUL OFFER WAIT BUT WRITE ME NOW--TODAY.

L. R. FORD, Manager, 36 Friend Bldg., **KANSAS CITY, MISSOURI.**

The Wheat Market Situation.

There is no politics in the wheat trade, neither is there much "hot air." Business is done on a business basis, entitled: "Put up or shut up." The man who buys wheat has to put up earnest money; the man who sells wheat also has to put up earnest money. In the market the earnest money is called a "margin."

The May option is now in sight. On May 31st, unless previously settled, the man who bought the wheat must pay the balance of the money, and the man who sold the wheat must "deliver the goods" or pay the difference. It is this "paying the difference" which the legislators are asked to do away with, but there is no sense in doing away with what is really the Clearing House manner of doing the business. If legislators lost their pay every time they passed unjust and injurious laws the sessions would be shorter and there would be more thinking before legislating.

Coming to the wheat market, we find that on April 30th cash wheat sold at St. Louis from $1.05 to $1.12 per bushel for hard winter to $1.19 to $1.20½ for No. 2 red. The cash market for soft wheat at St. Louis for immediate delivery was nearly 10 cents higher than the speculative market of Chicago, where the goods are to be delivered at Chicago thirty days later. During the month of April, at St. Louis, cash wheat advanced about sixteen cents a bushel.

Returning to the subject of the May option, Chicago trading, we left it quoted at $1.02½ on March 30th, and we find it closing on April 30th at $1.14⅞, a good twelve cents a bushel gain and a fraction more in thirty days.

On March 30th we noticed that the July wheat option closed at 97⅝ cents, and by April 30th that option advanced to $1.11¼, which is a clean gain of nearly fourteen cents. The advance of the July option is of considerable value to farmers, whereas there is not much wheat in farmers' hands that can be marketed before the May option closes, hence the farmers' great interest in the July option.

Furthermore, the September option also advanced from 95⅞ cents on March 30th to a close of $1.08¾ on April 30th, and this also is a cheerful indication to farmers that the chances are good that the new crop of wheat will be worth in market twenty cents a bushel more than it was quoted at the time a year ago.

In concluding our review of the wheat situation (written after the close of the market on April 30th) we quote the telegram of a dealer in grain on that date. Bartlet-Frazier's wire to their representative said:

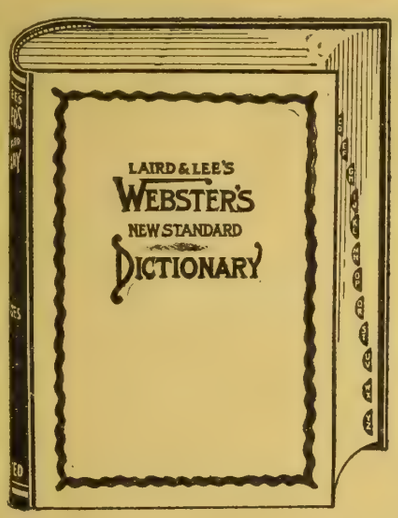
"The best advices show that on account of lack of opportunity to do fall plowing last year the acreage of spring wheat in North Dakota will be materially less than harvested in 1911. If we have a perfect spring wheat yield this year it will not be possible to make 600,000,000 total wheat crop, and this would not be enough for bread and seed. That part of this crop that comes from the Pacific coast cannot be used to supply the territory east of the Rocky Mountains unless we reach a price where we will be compelled to import wheat, in which case we would go to Canada. If the spring wheat crop falls down, it means there will not be enough wheat east of the Rocky Mountains this year for domestic consumption. It must be remembered that the carry over this year will be extremely small, there being little left on farms."

GREATEST VALUE EVER OFFERED FOR $1.00.

THE VERY BEST MONTHLY FARM PAPER FOR TWO YEARS AND A COPY OF LAIRD & LEE'S

Webster's New Standard Dictionary

Which is the Most Compact, Useful, Handy, Instructive Book Ever Issued by the American Press.



LAIRD & Lee's Webster's New Standard Dictionary of the English Language--a wonderful book, 756 pages in all, 840 illustrations, substantially bound, gilt title, red edges, patent thumb index. If You Are Becoming DEAF

or are troubled with

Ringing Noises in the Head

My Illustrated Free Book Contains

JOYFUL NEWS

I do not offer you makeshifts such as artificial ear drums or other apparatus; **I do not approve** of saturating your system with habit-forming drugs. I am not content to merely give you a brief period of relief from deafness but my aim is

TO CURE YOU PERMANENTLY

I am a practising physician of 32 years' active, extensive, experience. I know the only satisfactory method of conquering deafness and head noises is in getting at the seat of the trouble and curing it.

I have published a book; it is written in easy, plain language and is **illustrated.** It tells you facts you probably never imagined and you may see just why you probably never succeeded in getting a real, lasting cure before. It is the one treatise you have been seeking and it tells all about **the one Method** you should adopt and which is comparatively **inexpensive.**

DEAFNESS IS DANGEROUS

There always was some danger in being deaf but with the introduction of rapid speeding automobiles, no deaf or partly deaf person can feel safe. Accidents to those who could not hear well, are being recorded by thousands. **Moreover, deafness**

Always Others by Forcing Them to Shout at You
Prevents You from Enjoying Theatres, Concerts, etc.
Makes You Feel a Bore When in Company
Hinders Your Success in Business or Socially
Stops You from Hearing Sweet Sounds of Nature
Is usually Allied with Nervousness and Despondency

My book explains why it is very probably your own fault that you remain deaf and why you are becoming a little harder of hearing every year. Explains nervousness. Shows wherein the underlying causes of continued deafness or head noises are probably

SHORTENING YOUR LIFE

My book tells you how I have cured cases which have been given up as hopeless, it explains wherein you may gain **wonderful benefit** from the very outset. It is a book for **men and women of any age.** It fearlessly exposes the frauds that prey upon those who are deaf. It shows you how **Nature is patiently waiting** for you to give her a chance to help you. This book you may say, is WORTH ITS WEIGHT IN GOLD to you, yet **it will cost you nothing** but the expense of a postcard or stamp in writing for it. Don't pass this by and say "it is like the rest of them—I am disappointed and discouraged," but get the book now and be **surprised—joyous—at the prospect of a**

BOOK ABOUT PERFECT HEARING FREE

SPEEDY, LIFELONG, HOME CURE

Throw aside your prejudice over past failures, no matter what bad luck you may have had even with skilled specialists. My book shows you why they so often fail and gives you simple directions for testing whether your own case is hopeless or **probably curable.** There are many genuine pleasant surprises in my book. **You will feel better** for having read it. Let me send it to you, in plain wrapper, **absolutely free.** Keep this ad't. Address:

Ropp's Commercial Calculator.

This is a standard book, and a revised, enlarged and improved edition. There are millions in use. **Ropp's Commercial Calculator** is especilly valuable to farmers. By its regular use many hard problems become easy. It will prevent mistakes, relieve the mind, save labor, time and money, and do your figuring in the twinkling of an eye. As handy as a watch, always ready and reliable. Anyone who will send 50 cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of **Ropp's Commercial Calculator** as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

How to Cut Out Cutworms.

Tomatoes, cabbage, sweet potatoes and other vegetables and garden plants, and especially those which are started under glass and transplanted, are subject to serious injury by cutworms. They appear sometimes in great numbers in spring and early summer and frequently do severe injury before their ravages are noticed. The method of attack is to cut off the young plants at about the surface of the ground, and as these insects are of large size and voracious feeders, they are capable of destroying many plants in a single night, frequently more than they can devour. During the past two years these insects, working generally throughout the United States, destroyed hundreds of thousands of dollars' worth of crops. By the timely application of remedies, however, it was demonstrated by the Department of Agriculture, through field agents and others of the Bureau of Entomology engaged in the investigation of insects injurious to truck crops and sugar beets in some of the principal trucking regions, notably in tidewater Virginia; in Southern Texas; in the vicinity of Rocky Ford, Colo.; in Southern California; in the vicinity of Sacramento, Cal.; in Stark county, Indiana, and in some other regions, that these insects can be readily controlled, large areas being successfully treated. The usual method of control is by the use of poisoned baits.

Take a bushel of dry bran, add one pound of arsenic or Paris green, and mix it thoroughly into a mash with eight gallons of water, in which has been stirred half a gallon of sorghum or other cheap molasses. After the mash has stood several hours, scatter it in lumps of about the size of a marble over the fields where injury is beginning to appear and about the bases of the plants set out. Apply late in the day so as to place the poison about the plants over night, which is the time when the cutworms are active. Apply a second time, if necessary.

When cutworms occur in unusual abundance, which happens locally and sometimes generally, in some seasons, they exhaust their food supply and are driven to migrate to other fields. This they do literally in armies, assuming what is called the army-worm habit. At such time it is necessary to treat them as we do army worms. While the methods which have been advised are valuable in such cases, these remedies may be too slow to destroy all the cutworms and we, therefore, have to employ other methods. These include trenching, ditching, the plowing of deep furrows in advance of the traveling cutworms to trap them, and the dragging of logs or brush through the furrows. If the trenches can be filled with water, the addition of a small quantity of kerosene, so as to form a thin scum on the surface, will prove fatal. In extreme cases barriers of fence boards are erected and the tops smeared with tar or other sticky substances to stop the cutworms as they attempt to crawl over.

Clean cultural methods and rotation of crops are advisable, as also fall plowing and disking. Many cutworms can be destroyed where it is possible to overflow the fields. This is particularly applicable where irrigation is practiced.

NOTES CONCERNING SWINE.

No one need be afraid of there being an oversupply of hogs. There never will be again, and, what's equally important, there is no place on earth where hogs can be raised to match those which are produced in the corn belt.

The Fort Worth market is about 80,000 hogs behind in the receipts of hogs, as compared with last year. Texas has not yet reached the capacity of Missouri in raising hogs.

Turn Second Rate Hogs Into "Top Notchers" By Feeding Merry War Powdered Lye

E. Myers, President, E. Myers Lye Company

You owe it to yourself *not* to raise thin, scrawny, light weight, second rate hogs. They are only fit for the soap maker and never were profitable for any hog raiser—and never will be.

The hog raiser who expects to clear *big* profits *must* raise "top notch" pork and if your pork producers are thin, scrawny, "second raters" you *must* raise their standard of quality until they can rate as "top-notchers."

My experience of over 20 years of untold experiment and the experience of thousands of Hog Raisers has amply proven that feeding *Merry War Powdered Lye* to hogs, with their daily rations, is the greatest thing the world has ever known for improving the standard of quality of your porkers—turning every ounce of feed into a grade of pork on which you can realize big, quick profits.

Feed Merry War Powdered Lye Every Day

Don't delay another day—for the sooner you begin to feed *Merry War Powdered Lye* the sooner I will be able to convince you this is the easiest, cheapest way to improve the quality of your pork.

It keeps your hogs on their feed and on their feet every moment, from weaning to marketing, giving them hearty appetites, toning them up, making them fat and sleek, insuring that improvement in their standard, in the shortest possible time, that brings you top notch prices.

Follow These Directions Carefully

Mix one tablespoonful *Merry War Powdered Lye* with slop for ten hogs, or half a can with barrel of swill. Stir well and feed every day, night and morning. If your hogs are on a dry feed ration, mix half a can *Merry War Powdered Lye* to each barrel of drinking water.

These Letters Convincing Evidence

C. M. Cooper, Grocer, Dawson, Neb. "Cholera all through our district. Those who have used Merry War Powdered Lye have escaped it."

C. F. Newman, Lebo, Kans. "Have best results with my hogs and no sickness since I've used Merry War Powdered Lye while near neighbors have lost heavily."

Melvin Bolton, Independence, Kans. "Since I commenced feeding Merry War Powdered Lye according to directions I never saw hogs fatten faster."

Important Warning

Some commercial lye makers are trying to persuade dealers and hog raisers that any lye will do what *Merry War Powdered Lye* will for hogs—*but it will not, it can't*—because no other lye maker knows the combination in *Merry War Powdered Lye* that improves the quality of your pork producers.

Merry War Powdered Lye is the only Lye which is absolutely *safe* to feed hogs—the greatest hog remedy the world has ever known, and Hog Raisers who make the mistake of thinking any lye will do—fail to obtain results—pay the penalty in loss of hog profits. Don't allow yourself to be talked into a substitute.

For Hog Cholera, Worms, Etc.

Merry War Powdered Lye is also the best and cheapest protection against hog losses ever discovered—preventing Hog Cholera; killing worms; rendering hogs immune from infectious diseases.

You are not asked to accept my statement, alone, for this. My Hog Booklet, which is yours for the asking, carries testimonials from hog raisers everywhere, regarding wonders worked by *Merry War Powdered Lye.*

Kettle Powdered Lye for Soap Making

If you want the best lye, exclusively for soap-making, scouring, cleaning, disinfecting, etc., use my famous Kettle Powdered Lye—it makes the best soap you ever used—but DON'T feed it to your hogs. I SELL ONLY MERRY WAR POWDERED LYE TO YOUR HOGS.

At All Leading Dealers

Most grocers, druggists and feed stores handle *Merry War Powdered Lye,* 10c a can, 4 dozen cans to the case, $4.80. If your dealers can't supply you, write us, stating their names and we will see that you are supplied and will also send you free, a valuable booklet on "How To Get The Biggest Profits From Hog Raising."

E. MYERS LYE COMPANY, Dept. 22, St. Louis, Mo.

Which Kind Do You Want?

Increase in Number of Grapevines.

At the census of 1910, taken as of April 15th, there were reported 224,097,719 grapevines of bearing age, as against 182,227,655 vines in 1900 (census taken as of June 1st), an increase of 41,870,064 vines, or 23 per cent., in ten years. In 1910 there were 923,396 farmers in the United States who reported growing of grapevines, or 14.5 per cent. of the total number of farmers in the United States. No report was received in 1900 showing the number of such growers. The average number of vines per farm is given as 243, but this high average is due largely to the fact that in the Pacific Division, which reports considerably more than half of all grapevines in the country, the average per farm amounts to 5,855.

The teacher had been telling the class about the rhinoceros family. "Now, name some things," said she, "that are very dangerous to get near to, and that have horns." "Automobiles!" replied little Jennie Jones, promptly.—Unidentified.

Rubber Roofing

The Girl Graduate.

The season of high school commencements is at hand, and many are the mothers who are striving to make the penny do the work of two, and go without necessities, personal and in the home, that Mary may have the proper attire for the occasion.

Surely, it is one of the events of a life and deserves, as such, most careful consideration. But the public school system, which so encroaches upon the funds of its patrons at these special exercises, in some instances almost forfeits its right to the adjective "free." Usually, however, it is custom which has rendered the preparation for commencement a burden, and it is one which needs reform. The great object of free education is in danger of being forfeited when fashion steps in to dictate a costume which means painful economy in other parts of the home.

The simple graduating gown is the most appropriate for the young girl. Silks and expensive trimmings are not in keeping with "sweet sixteen," and very often not in keeping with her father's purse. Lawns and other sheer cotton goods may be made into many beautiful combinations with the addition of a little lace or embroidery. In some places we have noticed that the cost of the graduating dress has been officially fixed not to exceed five dollars. And the move is commendable, for with this amount one may combine a simplicity which is charming with all the richness suitable to extreme youth. One of the most admired graduating dresses was a plain sheer organdie, made over an embroidered waist.

There are always some in the class compelled to count expense very closely, and for this reason, if for no other, the simple dress is best. It is also most appropriate. There is nothing more suitable than the peasant sleeve effect, lawn trimmed with lace or embroidery being a popular material. By watching remnant counters for trimming or using a little skill in hand embroidery one may find the work of evolving a beautiful dress at small cost possible.

Gloves, shoes and other necessaries vary much with the neighborhood, but where the girls of a class can come to an amicable decision as to these details and thus secure uniformity the effect is more pleasing. Just now the rage for white footwear is at its height, and those who find the white buck too expensive may be glad to avail themselves of the less expensive white leather known to the trade as "Nubuck." Though its wearing qualities are less enduring than buck, it has several advantages over canvas, and is very popular in the high cuts with fourteen or sixteen pearl buttons, or in the low styles.

The simpler forms of hair dressing now so much in vogue are a pleasing feature in the dress. Whatever style you choose, adapt it to your own face, rather than becoming a mere copyist, regardless of whether the style chosen is becoming or not.

Not long ago we heard of a little girl who is going to take pills made from a most poisonous drug "to make her white," believing that in small quantities the deadly poison will not hurt her. This is a great mistake. Any drug taken in quantities to produce a change in the color of the skin cannot but be harmful, to say nothing of the possibility of fatal effect through overdose. If you must improve upon nature (?), get a reliable druggist to give you a safe powder. Better plaster this on a dozen thicknesses deep than be so foolish as to take any of the powerful drugs prescribed by quacks for the complexion.

A simple and becoming dress is in much better taste than senseless frills and gewgaws. Avoid extremes. Remember that what you have in your head amounts to more at commencement time than what you wear. It does not pay to go beyond what one can afford for the sake of display; neither is it in good taste for one member of the class to materially outstrip her mates, just because her father is rich. In the public school children meet on a supposably common basis, and the unity of the class is always a happy feature.—Bessie L. Putnam.

Cabbage growers ought to send to the Secretary of Agriculture, Washington, D. C., for Farmers' Bulletin No. 448. It is entitled "Diseases of Cabbage and Related Crops and Their Control."

Take notice of the splendid rose premium offered on page 25.

THE BOOK OF LIVE STOCK CHAMPIONS.

Edition of 1912.

Now Ready For Delivery.

True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

ONE THOUSAND CHAMPIONS,

Winners in Annual Live Stock Contests at State and National Fairs and Expositions.

THIS is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in The Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, famous sire, mother of champions, or winner in the prize ring.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special Inducements

To Paid-in-Advance Subscribers--To Old Friends and Patrons.

We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title.

This is An Extraordinary Offer.

Here is a Subscription Blank.

HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.:

My occupation is.....

Remedies For Children's Ills.

If more young mothers would prepare good home remedies and have them ready to use the moment they are needed, there would be a great saving of doctor's bills and also of suffering, and these remedies should be kept together by themselves, where they may be easily found when wanted.

Colic is the complaint from which children suffer much, and quick and ready relief should be given, and in case of sudden and severe pains in the bowels caused by an accumulation of gases in the stomach, a hot infusion of peppermint is a valuable remedy for the older children, and for the very small ones who are troubled with colic two or three drops of the essence in water will quickly give relief.

The essence of peppermint is good for summer complaint, and put five drops of paregoric in half a teacup of thin starch water and use this as an injection. For vomiting or sour stomach, a few drops of peppermint in a little warm water often gives immediate relief. For earache, that bane of childhood, we know of no remedy so effective as onion juice. Put the onion in the oven to roast, and when tender extract the juice by squeezing in a piece of cheese cloth, after which it may be bottled and kept for use as needed. When needed, warm a drop or two in a teaspoon and drop into the ear and cover with a bit of warm cotton to exclude the air.

Long, continued bleeding from the nose is very terrifying to mothers, and although rarely dangerous, should not be allowed to contiue too long. First bathe the face and neck with cold water, then roll a little piece of white paper in a tight roll and place it under the upper lip, where it press against the gum. If the bleeding continues, snuff up powdered alum.

In a family of children cuts and bruises are of common occurrence, and several thicknesses of clean cheese cloth or soft linen saturated with a boric solution and placed on open wound is a fine antiseptic and cleanser, and on small cuts and wounds this is all that is needed, and if you have a bottle of this boric solution you have a valuable home remedy. This solution is prepared by dissolving one-half ounce of the boric powder in one pint of boiled water; then this can be bottled ready for use. Every infant's mouth should be washed twice daily with a piece of clean, sterilized linen dipped in warm water to which a little of this solution is added and it will keep the breath sweet and the gums healthy and the dry powder mixed with corn starch makes an excellent powder for chafed skin.—A. M. H.

A Few Items in Egg Laying.

Unfortunately for us, when we go to press with the May issue of The National Farmer and Stock Grower the April record of the Missouri National Egg-laying Contest is not made up. We will therefore try to interest our readers with a few March items.

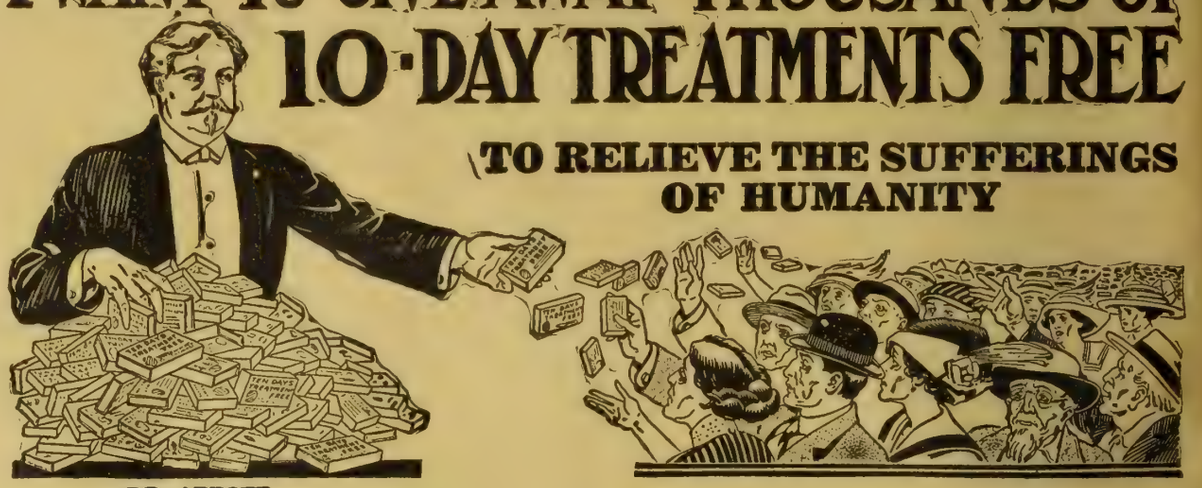
A total of 10,828 eggs was the record for March, or a grand total of 28,673 eggs for the five months. Twenty-seven pens of five hens laid more than 100 eggs each this month. Several pens laid 32 eggs in seven days out of a possible 35 eggs. The pen of R. C. R. I. Reds, owned by D. E. Hall, of California, Mo., won the Golden Egg Cup for March by laying 126 eggs. The Buff Orpingtons went to first place with 421 eggs to their credit for the five months, and the Silver Wyandottes retain second place for the month with 118 eggs and second place for the entire time with 416 eggs as their best record. A Barred Plymouth Rock pullet owned by Miss Lillian C. Adams, of Tipton, Mo., laid an egg every day for thirty consecutive days, and as she was still laying at the close of the month, she will probably continue for some time yet. A White Orpington pen of Bailey & Carson's, of Parsons, Kas., laid 55 eggs in twelve days, or 55 eggs out of a possible 60. A Barred Rock pullet from Canada has laid 39 eggs in 49 days, and laid twenty-two days without missing. Two Buff Cochin pullets owned by Byrd Bryan, of Mercer, Mo., laid 29 eggs each during this month, and one laid 40 eggs in forty-five consecutive days, which is considered a good record for a Cochin.

See the Rose Premiums. Page 25.

Breese, 21st, a pure-bred Hereford cow, owned by J. C. Dibrell, proprietor of the Echo Ranch, Coleman county, Texas, has 554 descendants recorded in the American Hereford Herd Book. She lived to be twenty-four years old and was bought in the year 1888 at a sale held at the Dallas Fair. At that time many imported Herefords died of fever, and in this purchase Breese, 21st, was the one survivior of three purchased.

I WANT TO GIVE AWAY THOUSANDS OF 10-DAY TREATMENTS FREE

TO RELIEVE THE SUFFERINGS OF HUMANITY



DR. ABBOTT

I want every man or woman reader of this paper who suffers to write me and get this wonderful TEN DAY TREATMENT of mine, FREE.

It is not an experimental distribution of medicine, such as have been made before, that I am offering you. It is not a sample of a medicine or a proof, but a bonafide ten-day treatment that has cured a great many people and should cure you. And it **is absolutely free to you.** There is no money to pay. I even pay postage and all charges. **I just want to relieve thousands of sufferers** in return for the success that my thirty-two years of labor in the medical profession have brought me.

If you have rheumatism, back-ache, kidney or bladder troubles, chronic catarrh, or any of the other Uric Acid complaints, such as often are female weakness and so-called male nervous debility, write to me, filling out the little coupon herewith attached and I will send you **at once a full Ten-Day Treatment,** as thousands of earnest testimonials I have in my possession will prove to you.

There is too much sickness in the world **and it is mostly due to neglect.** Long treatments, expensive courses of medicine, with their consequent expense, **are no longer necessary.** I can and do cure with these **Ten-Day Treatments** and I want to give thousands of sufferers a chance to profit by my discovery **at my expense. It costs you nothing, now nor at any time.**

Don't send me any Money

not even postage—I will pay all expenses. But if you value happiness, success, a healthy mind in a healthy body. Don't waste any time but fill out this coupon and mail it to me. Remember it is FREE. You will owe me nothing now nor later.

My Ten Day Treatment Positively Cures BACKACHE FREE

Are you racked with pain?

Do you suffer so that your daily work is a torture instead of being a pleasure?

Have you lost ambition, zest, enterprise, the desire to better yourself because of pains, aches, dullness?

Has rheumatism set its clutches on your muscles and palsied your limbs so that life is hardly worth living, your days a horror, and your nights a terror?

I can relieve your sufferings and I want to do it now. Write to me. Fill out the coupon and mail it to me. That is all you need to do. **I will do the rest and it will cost you absolutely nothing.**

Rheumatism, back-ache, kidney troubles, bladder troubles, chronic catarrh, female weakness and the so-called weakness of men are generally due to one cause—uric acid poisoning. My treatment, which is different from all others, will dispel your pains; it will make life worth living. Take it and you will get up in the morning after a sound night's sleep, refreshed and invigorated. Once more your muscles will respond to your will and do so readily without twinges of agony, without reluctance. Your backache will vanish and you will bless me and thank me as have done thousands of others.

This treatment is not an experiment. It does not contain drugs that injure you while giving temporary relief. We have vouched for it according to law.

I am not offering to send you a sample but a full ten days' course of treatment with full instructions as to how to use it and all of it is absolutely free to you.

I want to convince you that it is your duty to yourself and to those who love you and are dependent on you to try this free 10 day treatment of mine.

No man tortured with uric acid complaints is fit for the battle of life. He cannot bring his brain nor his hands to work properly when his body is racked with pain. No woman can care for her home, bring up her children right or work if she is cross, miserable, distracted by suffering. The struggle is too keen, competition too merciless, the fight for success too strenuous to be handicapped by physical ills. To the man or woman who suffers I want to bring relief, comfort, happiness, success. Fill out the coupon attached here and mail to me. **Don't wait until tomorrow,** tomorow never comes, **do it at once.** With my Ten-Day Treatment, I will also send my book on Uric Acid Diseases. It is a pamphlet full of the results of an experience of thirty-two years, during which I have specialized in uric acid complaints. It contains also a few of the tens of thousands of testimonial letters from preachers, lawyers, men and women of affairs the country over who have not hesitated to say just how much I have benefitted them.

DR. G. B. ABBOTT

P. S. Perhaps you have a friend who is a sufferer. Don't hesitate to have him or her fill out this coupon or write me a letter, or you do it for your friend. They will call you blessed.

ECZEMA

(Also called Tetter, Salt Rheum, Pruritus, Milk-Crust, Weeping Skin, Etc.)

ECZEMA CAN BE CURED TO STAY, and when I say cured, I mean just what I say—C-U-R-E-D, and not merely patched up for awhile, to return worse than before. Remember I make this broad statement after puting ten years of my time on this one disease and handling in the meantime a quarter of a million cases of this dreadful disease. Now, I do not care what all you have used, nor how many doctors have told you that you could not be cured—all I ask is just a chance to show you that I know what I am talking about. If you will write me TO-DAY, I will send you a **FREE TRIAL** of my mild, soothing, guaranteed cure that will convince you more in a day than I or anyone else could in a month's time. If you are disgusted and discouraged, I dare you to give me a chance to prove my claims. By writing me to-day you will enjoy more real comfort than you had ever thought this world holds for you. Just try it and you will see I am telling you the truth.

DR. J. E. CANNADAY, 352 Park Square, Sedalia, Mo.

References: Third National Bank, Sedalia, Mo. Could you do a better act than to send this notice to some poor sufferer of Eczema?

WOMAN'S HAPPINESS ON THE FARM.

By J. E. Buck, of the I. H. C. Service Bureau.

In the latter part of March there convened in Philadelphia one of the most noted assemblages ever brought together on the American continent. The gathering was made up of statesman, scholars, educators, clergymen, professors of agriculture, scientists and agriculturists. The conference was held under the auspices of the Pennsylvania Rural Progress Association, the oldest agricultural society in the United States, having been organized in 1785.

At this gathering were discussed the problems of the farmer's wife and the conditions under which she struggles, not only to bring up her family, but to help make the living and means to alleviate her from isolation and bring about conditions favorable to her well being.

Miss Martha Van Rensselaer, of New York, struck the keynote to the meeting when she declared that rural progress depends on the happiness and comfort of the woman on the farm more than upon well-tilled fields and well-built and well-stocked barns.

Importance of Contentment.

"If the woman is not satisfied," she said, "and if no effort is made for her comfort, the farmer might as well give up his aspirations to become successful, for the family cannot remain on the farm if the wife and mother rebels. On thousands of farms in this country there is every reason for rebellion, for absolutely nothing is done to give the woman the aid she needs in housekeeping, in the bringing up of her children and the performance of her share of the farm duties. How many men who have reapers and binders think of the washing machine and the ironing machine for their wives?

"In how many cases would the woman think this was a needless expense, simply because she has been trained to believe that her health and her happiness and conservation are inferior matters and do not measure up to the needs of the live stock and the farm? The farmer's wife should be taught how to conserve her time and energy; how to get the latest labor-saving devices; how to do her work scientifically and intelligently; and how to combine pleasure with duty. She should have some idea of art, so that her home may be beautiful, and she should not be given to believe that there is nothing in life beyond the dreary routine of daily toil.

Education For Farmers' Wives.

Mrs. Jean Kane Foulke, of West Chester, Pa., spoke along the same lines, emphasizing the field for educational work among farmers' wives, who, she said, do not know the value of good cooking, have no idea of the application of business methods to housekeeping, and are not even, in many parts of this state, good buttermakers, because they have not been taught to give scientific consideration to the task in hand of making farm life interesting and profitable. Mrs. Foulke declared that part of the trouble is caused by the division of interest on the farm; that the man thinks that the stock and the products are his lookout, and that his wife should do all the work of the house unaided.

"No matter how many improvements are inaugurated, how many reforms are brought about," she said, "you will never get the ideal condition on the farm until the man and the woman realize that their tasks are equally important and that their interests are one. The man must give up the old notion that his wife is his chattel and simply part of the machinery of the estate, and must allow her some time for individual development, some time to make herself a real companion for him."

Some Machines That Help.

Among the more noteworthy helps that have recently been placed within the reach of the farmer's wife is the gasoline engine. It pumps the water for cooking and other purposes and makes it possible for the country home to be lighted by electricity. The gasoline engine is also utilized to operate the cream separator, washing machine and churn, and this in a large measure removes drudgery from the woman's work on the farm. Where the farm is equipped with all these modern appliances the children can be a material help and learn to do many things that will be of service to them in after years.

A Delicious Beverage.

Coca-Cola as a refreshing, wholesome, thirst-quenching beverage, has withstood every test. It is sold at every soda fountain in the United States because it is exactly what it is claimed to be. See card on page 31.

A Coupon Worth a Fruit Jar.

Our lady patrons are invited to understand the advertisement of the Hazel-Atlas Glass Company, of Wheeling, W. Va. They manufacture the E-Z Fruit Jar and wish to introduce them into families where fruits and vegetables are canned. These jars are kept for sale by grocers, and if you can find the grocer handling their jars he will furnish you with a free sample that when canning time comes around you will buy their jars because you like them. It will do no harm to write the Hazel-Atlas Glass Company, Wheeling, W. Va., and ask for a free book on fruit jars.

Protection Against Lightning.

Cole Bros. Lightning Rod Company have a card on page 19. Their Franklin Rod has been tested and found to be reliable in many states. For many years lightning rods were considered to be of doubtful value, whereas to-day in building and construction the lightning conductor is considered of the first importance.

Read about the "last chance for roses" on page 25. It refers to the most delightful subscription premium ever offered by a farm paper.

The Army and Navy Needle Book.

Please address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Garden Notes.

When you clean out the hen house save the refuse for onions, cabbages, tomatoes, cucumbers or melons. Many are afraid to use this concentrated fertilizer, but there is no danger if it is well mixed with the soil. All of the above-named plants require an abundant fertilizing, and if done in the row or hill before planting, all of the plant food will go where it will be aprpopriated.

Strive when transplanting to avoid letting the plants get wilted. This gives a check for several days at least, and if they become badly wilted it is even longer before they fully regain their vigor. Drench the soil several hours before transplanting, or place the roots in a dish of water in the cellar for a few hours. Choose a cloudy day or do the work in the evening, in order that the plants may have in part recuperated before the hot sun comes up. If they show the least sign of wilting, stick a leafy twig into the ground beside each plant to shade it. By the time these have wilted the plants will be so well established as to need no further protection.

If your garden is small, sow early radish seed among the melon and squash vines. The radishes will be ready for use before the vines seriously encroach upon the space. Celery may be planted between the rows of early potatoes after the final cultivation is made. If you use the hilling-up system, this will provide the trench for the celery.

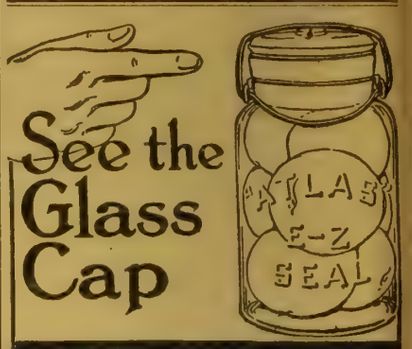
As the early onions are used, fill in with pepper plants. The large, mild-flavored varieties for stuffing will form a fine addition to your pickles next fall. One or two plants of the fiery sorts may prove sufficient; but of sweet peppers one can use quite a quantity.

Do not neglect to sow a row of salsify. Even if you do not care for it this season, when there is an abundance of other vegetables, next spring you will be glad to be able to dig something fresh out of the ground.—Bessie L. Putnam.

Wisdom From the Bench.

"A man hit me, and I hit him back," said a woman at the Marylebone Police Court. "Yes," said Mr. Plowden, 'you wouldn't be a woman if you didn't nowadays."—London Express.

Be sure to look up page 23 and read about the magnificent Book of Live Stock Champions, which is just issued from the bindery.



The very best jar from the cap—down!

It is no trouble to "jar" things these days. Even many vegetables that you never thought of "canning"—it is *easy* in these all-glass jars.

No spoiled vegetables or fruit—no sweltering over hot stoves for nothing! Just put up most fruit and "garden stuff" *whole* and get *best* results from the

E-Z SEAL JAR

This jar is *safe*. The glass cap fastens with a wire spring—it closes with a *touch* and opens with a *tilt*—no wrist-turning, no neck-twisting, no shattering or splattering!

Then — the heavy, green-tinted glass keeps out the light. Your fruit opens fresh and plump instead of faded and *wilted*. Try the E-Z Seal way.

Free Jar—Free Book

Cut out this coupon, take it to your grocer — he will give you one E-Z Seal Jar — FREE. Be sure and write us for FREE Book of Recipes—it tells many things you should know. Get the Jar from the *grocer*. Get the Book from *us*.

HAZEL-ATLAS GLASS COMPANY
Wheeling, W. Va.

1-Qt. E-Z Seal Jar CG FREE for the Coupon

Please note—In order to secure free jar this *coupon must* be presented to your dealer before Sept. 1st, 1912, with blank spaces properly filled out.

HAZEL-ATLAS GLASS CO.,
Wheeling, W. Va.

This is to certify, That I have this day received one "Atlas" E-Z Seal Jar Free of all cost and without any obligation on my part. This is the first coupon presented by any member of my family.

Send stamps or coin at once. Don't miss this great offer, because our supply will not last very long. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

To Guard Against Typhoid.

One of the most deadly scourges of modern times is typhoid fever. Some other diseases, such as smallpox, formerly were more destructive, but vaccination has made smallpox of little terror to our modern communities. Civilization has proved the stronger.

But civilization has not been able to stop the ravages of typhoid fever, which has become a greater menace with the increase of population. With the increase of density of population the volume of the sewage of cities has increased in a corresponding ratio. The sewage often carries the germs of typhoid fever, and it is harder and harder to prevent it getting into our drinking water.

Many of our cities and villages are supplied with drinking water from lakes and rivers, which in turn receive the sewage from numerous localities. The tendency of water to purify itself is about the only protection the people have against typhoid, and that protection is a very uncertain one.

The well in the thickly-settled community is no longer a protection, because fissures in the rocks and gravel strata in the soil permit water to move under ground in ways that the dwellers on the surface of the soil cannot know. We have on record many instances of drinking water being contaminated by movement of water through soil.

It is therefore the part of wisdom for people when traveling to be on guard against the disease germs lurking in the clear-looking water they may drink here and there. Every year the physicians of some of our large cities report an increased number of typhoid cases due to contamination while on vacation.

Many of the summer resorts are poorly supplied with pure water. They are thronged only during a few months in the year, and everything is of a temporary nature—wells, water closets, the milk supply, the vegetable supply, and so on. On the Fair Grounds the provision for the supplying of pure water is miserable. On one of the largest and most expensive Fair Grounds in the United States—that at Springfield, Illinois—one finds the drinking water supplied in open barrels, into which cakes of ice are dumped. Tin dippers hanging by chains are the means by which the people slake their thirst. Thousands of months contain germs of disease, which get into the drinking cups and into the barrels of ice water. Disease-laden dust can blow and does blow into the water. Moreover, there is no certainty that the ice is not from some pond that is receiving sewage from some source. Such water should not be used for drinking purposes, and a general protest should be raised wherever such a mode of supplying drinking water is practiced.

Every person, on the farm or elsewhere, should be on guard against typhoid, which comes through the food or liquids taken into the body. A mild heat kills the disease germs—typhoid—and when one is on a journey among suspicious surroundings it is better to eat food that has been cooked and drink water that has been heated to above 150 degrees. Many a farm home has been wrecked by typhoid carelessly brought in.

Value of Screens on the Farm.

Screen wire is very cheap, and a few dollars invested in it give a great deal of comfort from the time the first fly appears in the spring till the last mosquito has disappeared in the fall. It is astonishing that there are yet to be found homes and even small hotels where screens are not used. The writer has stopped at more than one hotel where he had to fight flies at least three times a day, at meal times.

Screens are protectors against disease. The house fly is a great spreader of diseases. In an epidemic in a big American city it was found that the house flies had been visiting closets and then the dining tables in the homes. This was proven by scattering flour in the closets. The flies that afterwards were seen crawling over the food on the tables were white with flour.

In the country, most closets and privies are not sufficiently protected from the invasion of flies. Screens should be on every such closet and the flies rigorously excluded. This is a precaution against the spread of disease, which is generally neglected. With the screening of closet windows and of doors should come the tightening of the other parts of the closets to make them fly-proof.

Some of our very progressive farmers have for years been screening their stables where dairy cows and horses are kept. Often the whole barn is screened. This is particularly desirable in the case of the dairy cows, as milk is one of the very important foods of every country family.

Too many farm houses are without screens. This is generally caused by neglect merely. The materials for the making of screens can be purchased and the screens made at a cost of less than 50 cents for an ordinary window. These screens will last indefinitely if painted after the first year's service. It is just as well, however, to paint them at first, as some of the wire purchased in the general market is so poorly coated that rust spots will appear on it the first season.

Screen to keep out every fly and every mosquito from the entire house. The cellar windows should be screened, so that there may be a free circulation of air during the periods when it is desired to air the basement of the house. The screens in the cellar windows will do the double duty of keeping out flies and of keeping out mice, which try so hard to get into the house in the fall of the year.

If there is a large porch, screen it in and it will become an additional room during all the warm months. It is the cheapest way to add another room to the house. The screening of the porch will still further decrease the number of flies that get into the house, as the flies will then have a double obstacle to pass before getting into the rooms where food is kept. Houseflies and mosquitoes are the two most disagreeable insects with which we are compelled to associate.

Trouble For the Cattle Tick.

The members of the Cotton Seed Crushers' Association of Georgia have begun a campaign of education in an effort to drive the cattle tick out of the state. If this pest is destroyed it means that Georgia will profit hundreds of thousands of dollars a year in cattle raising.

Live Stock in Argentine.

The Minister of Agriculture of Argentine estimates the live stock in that country as follows: 29,124,229 cattle; 1,404,281 hogs; 67,383,952 sheep, 3,946,750 goats, 7,537,675 horses, 465,054 mules, and 285,113 jacks and jennets.

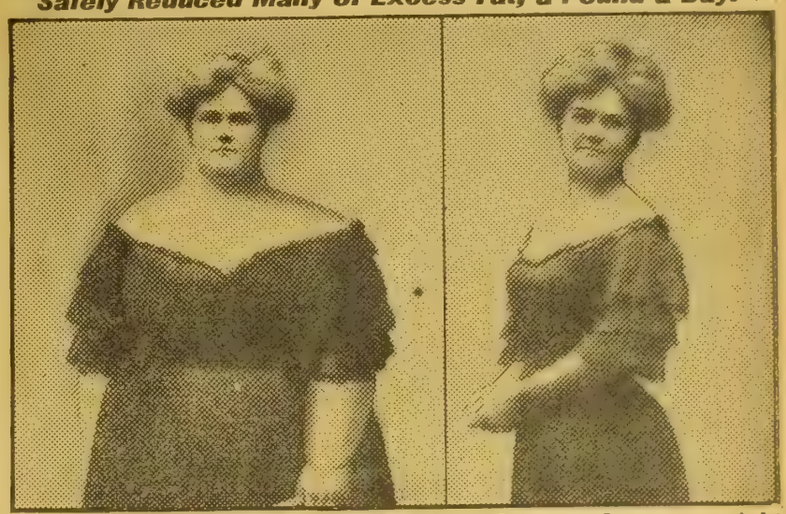
Roasting pigs, fifteen to thirty pounds weight, are selling at St. Louis, Mo., at $1.50 to $2.00 per head.

Take notce of the splendid rose premium offered on page 25.

FAT is Dangerous

It is Unsightly, Uncomfortable, Spoils the Figure, Causing Wrinkles, Flabbiness and Loss of Vigor.

Let me send you my Proof Treatment absolutely Free; I Have Safely Reduced Many of Excess Fat, a Pound a Day.



Note what my treatment has done for others; let me reduce your weight.

Lost 51 Pounds. Mrs. W. D. Smith, Box 34, Abbott, Me., writes: **"I have lost 51 pounds** by your treatment. I used to have heart trouble and shortness of breath; now I am well and can walk and work with ease."

Permanent. M. E. King, 5634 Spaulding Ave., Chicago, writes: "By the Dr. Bradford Method **I reduced 35 lbs.** eight years ago, haven't gained an ounce since. Rheumatism also cured."

Lost 112 Pounds. W. C. Newburn, Contact, Nev., writes: "I have lost 112 lbs., am **wonderfully benefited** in heart and general vigor. Can climb mountains easily now."

Lost 98 Pounds. Mrs. J. H. Wooldridge, Galena, Mo., writes: "My figure and appearance have been wonderfully improved; have lost 98 lbs. **Friends amazed."**

Many other testimonials from well known persons will be mailed with **FREE PROOF TREATMENT.**

I could fill every page of this journal with testimonials from grateful patients.

It is dangerous, unsightly, uncomfortable, and embarassing to be too fat. Excess fat weakens the heart. The liver, lungs, stomach and kidneys become diseased, the breathing becomes difficult and the end may come in **HEART FAILURE** and sudden death. You may save yourself from these **DANGERS.**

I want to prove to you that my treatment has positively reduced legions of persons to normal, no matter where the excess fat was located, stomach, bust, hips, cheeks, neck. Weight is quickly and safely reduced without tedious exercise or starving. Eat what you like. **Your figure will be beautified; wrinkles disappear.** Rheumatism, asthma, shortness of breath, kidney and heart troubles usually leave as the fat goes away. The American Woman's Cook Book.

This is a splendidly-bound book that weighs nearly two pounds. There are three hundred and eighty-four pages of approved household

recipes, including many excellent dishes never before presented in a Cook Book.

The American Woman's Cook Book is by Ella M. Blackstone, who is famous for clearing the road for the student of domestic science by giving the reasons for everything. It is easy to learn from her when everything having a bearing on the subject is explained so clearly.

The book includes chapters devoted to food for each month; time required to digest different articles of food; menus for all occasions; table etiquette; kitchen dont's; kitchen equipment, and useful hints and recipes for the home in general; specially-drawn articles upon various subjects, such as soups, fish, poultry, beef, veal, mutton, pork, salads, vegetables, and all classes of dishes, besides beverages, candies, pickles and preserves, ice creams and ices; also ruled pages for new recipes to be preserved.

The thorough alphabetical index is a wonderful help to all subjects. A good book is known by its index, which in this case is eighteen pages, three columns to the page.

The publisher's price for single copies of the American Woman's Cook Book is $1.50 per copy and 15 cents postage, but we have contracted for such a large number we have obtained the benefit of a reduced rate. Therefore we will send one copy of the American Woman's Cook Book, postage paid, for One Dollar, and include one-year's subscription to The National Farmer and Stock Grower. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Razorback Hog.

When the train stopped at the little Southern station, says The Housekeeper, the Northern tourist sauntered out on the platform. Under a scrub oak stood a lean animal with scraggy bristles. The tourist was interested. "What do you call that?" he inquired of a lanky native.

"Razorback hawg."

"Well, what is he doing rubbing against that tree?"

"He's stropping himself, mister; jest stropping himself."

How It Started.

It is a not unreasonable supposition that many, if not most, quarrels are like that described in the Washington Star. "So you and your husband are always quarreling?" asked the lawyer. "Yes," answered the young woman. "What do you quarrel about?" "I forget the subject of the first quarrel. But we have been quarreling ever since over who was to blame for it."

Had No Objection.

A Union officer appeared before the mistress of a Southern home, saluted and said: "Madame, a federal soldier has been killed on your place. Have we your permission to bury him here?" The old woman drew herself up proudly. "Sir," she replied, "you may bury the whole Union army here, if you wish!"

Difficult Mark.

A story that Lincoln used to enjoy telling is recalled by the Housekeeper. It is easy to imagine the maxims of homely philosophy that it could be used to illustrate. A certain old backwoodsman had very heavy, overhanging eyebrows, and wore big spectacles with brass rims. One day he came rushing into his cabin, and, seizing his rifle, aimed it carefully through a crack of the door at a great oak tree that stood near, and fired. "What is it?" whispered his wife. "A wildcat, Sairy," he said, excitedly, "an' I missed him!" He hastily loaded and fired again, and then again. "Now hold on, Joshua," said his good wife. "Let me look at you. Why, laws-a-daisy, it's nothin' but a little bug on one o' your eyebrows!"

When They Came to the Fold.

A Boston clergyman tells of a gentleman in that city who has a somewhat patronizing manner, due to the exaggerated notion he has of the amount of "bad blood" that runs in his veins. When not long ago this man was introduced to a Syrian of good birth and education, who lives in Worcester, the Hubbite blandly inquired, during the course of their conversation: "May I ask if you are of the Christian religion?" The Syrian smiled. "My family," replied he, "was converted to Christ's teachings at the time of John's second visit to Lebanon."

Retains Memory at 125.

In Prussia there lives a woman who has completed her one-hundredth-and-twenty-fifth birthday. Census officials have been interested in her case for the last fifty years, first on account of her marvelous memory, and more lately because of her longevity. She is now almost blind, and bent fairly in two with rheumatism. She has been transferred, within the last year, to a Catholic institution, where she will be cared for.—Harper's Weekly.

Much Rubber in Rhodesia.

The vast extent of Northern Rhodesia renders it impossible at present to estimate even approximately the extent of the rubber areas, but such evidence as is available points to the great prospective value of this asset.

$1 Worth of Mayr's Wonderful Stomach Treatment FREE

It is a positive remedy for all Stomach, Liver and Intestinal Trouble, Gastritis, Indigestion, Dyspepsia, Pressure of Gas around the Heart, Sour Stomach, Distress After Eating, Nervousness, Dizziness, Fainting Spells, Constipation, Congested and Torpid Liver, Yellow Jaundice, Sick Headache and Gall Stones.

The above ailments are mainly caused by the clogging of the intestinal tract with **mucoid and catarrhal accretions,** backing up poisonous fluids into the stomach, and otherwise deranging the digestive system. I want every sufferer of any of these diseases to test this wonderful treatment. **You are not asked to take this treatment for a week or two** before you will feel its great benefits—**only one dose is usually required.** I say emphatically it is a positive, permanent remedy and I will prove it to you if you will allow me to. I will send the complete $1.00 treatment to sufferers absolutely **Free** so you can try it in your own home at my expense.

The most eminent specialists declare that 75 per cent of the people who suffer from Stomach Trouble are suffering from **Gall Stones.** I firmly believe that this remedy is the only one in the world that will cure this disease. Sufferers of Stomach and Liver troubles and **Gall Stones** should not hesitate a moment, but send for this **Free** treatment at once. A Genuine Rupture Cure Sent On Trial To Prove It

Don't Wear a Truss Any Longer.

After Thirty Years' Experience I Have Produced An Appliance for Men, Women and Children That Actually Cures Rupture.

If you have tried most everything else, come to me. Where others fail is where I have my greatest success. Send attached coupon today and I will send you free my illustrated book on Rupture and its cure, showing my Appliance and giving you prices and names of many people who have tried it and were cured. It is instant relief when all others fail. Remember, I use no salves, no harness, no lies.

I send on trial to prove what I say is true. You are the judge and once having seen my illustrated book and read it you will be as enthusiastic as my hundreds of patients whose letters you can also read. Fill out free coupon below and mail today. It's well worth your time whether you try my Appliance or not.

The above is C. E. Brooks, inventor of the Appliance, who cured himself and who has been curing others for over 30 years. If ruptured, write him today.

Pennsylvania Man Thankful

Mr. C. E. Brooks,
Marshall, Mich.
Dear Sir:—

Perhaps it will interest you to know that I have been ruptured six years and have always had trouble with it till I got your Appliance. It is very easy to wear, fits neat and snug, and is not in the way at any time, day or night. In fact, at times I did not know I had it on; it just adapted itself to the shape of the body and seemed to be a part of the body, as it clung to the spot, no matter what position I was in.

It would be a veritable God-send to the unfortunate who suffer from rupture if all could procure the Brooks Rupture Appliance and wear it. They would certainly never regret it.

My rupture is now all healed up and nothing ever did it but your Appliance. Whenever the opportunity presents itself I will say a good word for your Appliance, and also the honorable way in which you deal with ruptured people. It is a pleasure to recommend a good thing among your friends or strangers. I am,

Yours very sincerely,
JAMES A. BRITTON.
80 Spring St., Bethlehem, Pa.

Recommend From Texas Farmer

C. E. Brooks,
Marshall, Mich.
Dear Sir:—

I feel it my duty to let you, and also all people afflicted as I was, know what your Appliance has done for me. I have been ruptured for many years and have worn many different trusses, but never got any relief until I got your Appliance. I put it on last November, but had very little faith in it, but must say I am now cured. I have laid it away—have had it off for two weeks and doing all kinds of farm work with ease. While I was wearing it, I had lagrippe and coughed a great deal but it held all right. Words cannot express my gratitude towards you and your Appliance. Will recommend it to all ruptured people.

Yours sincerely,
Bald Prairie, Texas. J. E. LONG.

Others Failed But the Appliance Cured

C. E. Brooks,
Marshall, Mich.
Dear Sir:—

Your Appliance did all you claim for the little boy and more, for it cured him sound and well. We let him wear it for about a year in all, although it cured him 3 months after he had begun to wear it. We had tried several other remedies and got no relief, and I shall certainly recommend it to friends, for we surely owe it to you. Yours respectfully,
WM. PATTERSON.
No. 717 S. Main St., Akron, O.

Cured At the Age of 76.

Mr. C. E. Brooks, Marshall, Mich.
Dear Sir:—

I began using your Appliance for the cure of rupture (I had a pretty bad case) I think in May, 1905. On November 20, 1905, I quit using it. Since that time I have not needed or used it. I am well of rupture and rank myself among those cured by the Brooks Discovery, which, considering my age, 76 years, I regard as remarkable.

Very sincerely yours,
High Point, N. C. SAM A. HOOVER.

Child Cured in 4 Months.

21 Jansen St., Dubuque, Iowa.
C. E. Brooks,
Dear Sir:—The baby's rupture is altogether cured, thanks to your appliance, and we are so thankful to you. If we could only have known of it sooner our little boy would not have had to suffer near as much as he did. He wore your brace a little over four months and has not worn it now for six weeks.

Yours very truly,
ANDREW EGGENBERGER.

Ten Reasons Why

You Should Send For Brooks Rupture Appliance.

1. It is absolutely the only Appliance of the kind on the market today, and in it are embodied the principles that inventors have sought after for years.
2. The Appliance for retaining the rupture cannot be thrown out of position.
3. Being an air cushion of soft rubber it clings closely to the body, yet never blisters or causes irritation.
4. Unlike the ordinary so-called pads, used in other trusses, it is not cumbersome or ungainly.
5. It is small, soft and pliable, and positively cannot be detected through the clothing.
6. The soft, pliable bands holding the Appliance do not give one the unpleasant sensation of wearing a harness.
7. There is nothing about it to get foul, and when it becomes soiled it can be washed without injuring it in the least.
8. There are no metal springs in the Appliance to torture one by cutting and bruising the flesh.
9. All of the material of which the Appliances are made is of the very best that money can buy, making it a durable and safe Appliance to wear.
10. My reputation for honesty and fair dealing is so thoroughly established by an experience of over thirty years of dealing with the public, and my prices are so reasonable, my terms so fair, that there certainly should be no hesitancy in sending free coupon today.

Remember

I send my Appliance on trial to prove what I say is true. You are to be the judge. Fill out free coupon below and mail today.

Free Information Coupon

MAY MANTON EMBROIDERY.

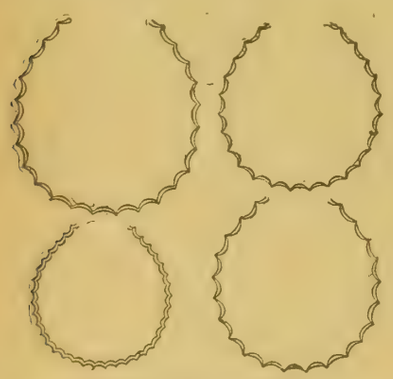
These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron when a perfect outline will result. Please order by embroidery number.

Attractive Twelve-inch Doylies.

No. 648.—Design for embroidering doylies twelve inches in diameter. Two transfers are given. The price of the pattern is 10 cents.

For a Stylish Wrist Bag.

No. 649.—Design for embroidering a wrist bag, including outline of bag. The price of the pattern is 10 cents.



Neat Designs in Scallops.

No. 647.—Designs for scalloping the necks of girls' and children's dresses. The price of the pattern is 10 cents.

A Nine-inch Doyley.

No. 646.—Design for embroidering a doyley nine inches in diameter. Four transfers are given. The price of the pattern is 10 cents.

A Neat Border.

No. 645.—Design for an embroidered border one and one-quarter inches in width. Four yards and four corners are given. The price of the pattern is 10 cents.

Please send all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Home Paper Hanging.

Paper that is fresh has not only the greatest renovating power in a room, but it will renew more surface more quickly and at less cost than any other method. Paint is good, but think of renovating a strip sixteen yards long and eighteen inches wide for from three to five cents! Paper is the only thing which will do this.

To employ a professional paperhanger will just about double the expense when a moderate-priced paper is selected. But those who have more time than spare change can do the work themselves, when once they have had a little practice. Even ceiling papering is not so laborious as many suppose, and after a bit of practice many prefer it to side walls, because it is all straight work, with no corners to cut and fit around.

Patterns are more than usually attractive this year, and one may find something beautiful as well as appropriate, whether in the cheaper or more expensive grades. The beginner in the work will wisely select a fairly good grade of paper, even though it costs a little more. The wet paste renders the cheapest grades so tender that they are easily torn, and while the experienced hand knows just how to manipulate it and get good results, the amateur is apt to get nervous, and only invites more rents, until the extra labor more than balances the small saving in original cost. Avoid plain papers also. You may gain in having no figure to match, but you will lose more because of troublesome wrinkles, the slightest of which shows on the plain surface. Pictures, however, show to best advantage on a plain wall.

There is a decided tendency toward a softening of colors. Instead of the intense reds for the library, they have a subdued tone. The greens have in them a touch of brown. Some of the flowered borders show elaborate cut-out patterns in festoons of flowers; but the extra work which this feature involves will scarcely insure for it a long life. Never before were granite papers for the kitchen so attractive, and the tile effects for the bath room are very artistic.

If a room is low, a striped effect will seemingly raise it, and nothing wider than a nine-inch border should be used. If it is dark, creams or yellows will brighten in. Avoid the bright pinks and blues, which usually fade easily. A touch of gilt or a silver or satin stripe adds to the rich appearance of the paper, providing it is not given in a flashy form.

Walls which have never been papered before should be gone over with a sizing of glue, made by soaking a pound of glue for twelve hours in cold water and adding twelve quarts of hot water and a tablespoonful of powdered alum. Apply with a whitewash or kalsomine brush. Or washing the walls with a weak solution of vinegar is sometimes done to counteract lime.

To make the paste, rub three pints of flour in two quarts of cold water until it is perfectly smooth. Then add enough boiling water to make it the right consistency, stirring constantly during the process. About two gallons will probably render it thin enough to be easily spread. It should be semi-transparent in color. If it is not, let it cook a little, but much boiling on the stove impairs its adhesive properties. Let it cool before using.

Cut the ceiling paper in strips long enough to come down on the side wall two or three inches. Match each strip as you go along and number them. Draw a chalk line along the ceiling sixteen inches from the side wall. This may be done by fastening the chalked line tight at each end of the room and then pulling it down in the middle and quickly letting it go, just as they mark lines on the old-fashioned patchwork quilt for quilting. It is very important to start the line straight, for if this is not done there will be trouble with every later strip hung.

Lay strip No. 1 on the table, face down. Commencing at the left-hand side of the table, apply paste to half the strip, a whitewash brush making a good pasting brush. Fold over the side that is pasted, bring the end to the middle of the strip, keeping the edges smooth. Paste the remaining half of the strip and fold over to the middle in the same way. Carefully trim, thus preparing the two thicknesses at once.

Next mount the platform extending across the room and preferably so that your head will come about two feet from the ceiling. Start at the right-hand corner of the room, and if the strip is so long as to give trouble after the one-half is partly unfolded, have an assistant hold it. Paste so that the line chalked will guide the outer edge, and this will give room for the paper to drop down on the side. Then when the border is applied, any inequality in the wall will still insure against leaving a bare spot. Work gradually from right to left, unfolding the last half as needed. Smooth with a whisk broom. If the first strip is applied straight, the rest will give little trouble. The main point is to remember that paper is quite strong unless it is twisted or jerked. A straight, even strain seldom does mischief.

After the ceiling is completed, cut the side wall, allowing it to come well up under the place to be covered with border. Commence at any door. Short pieces will usually fill in around doors and windows, but let the first strip hung be one of full length. See that it swings naturally into the proper place. If there is much fitting around doors and windows it is well to paste narrow waste strips at the edges of these before hanging the paper. Then, if there is a defect in carpenter work, the little gaps left will be covered with the same ground tint, and not leave a thread of glaring white to annoy as long as the paper lasts. After the paper is in place, crease with the back of the shears just where the line of the baseboard comes, loosen the paper a little and trim in the crease. Then return to its place and brush down tight to the wall. Small dots at the margin of the paper serve as guides to matching, so little trouble will be found in this. Some use a caster from a bedstead for rolling seams, but this should never be done for at least ten minutes, as it is apt to press out surplus paste and mar the paper. Beginners often make the mistake of using too much paste, causing the paper to tear easier. A little experimenting will show that just enough to cover the surface brings best results.

The border is more easily managed, commencing not in, but just a few inches beyond a corner, working from right to left. If the ceiling is uneven, mark with a chalk line around the lowest point and bring the edge of the border just even with this. The fact that the ceiling paper has been allowed to drop and the side walls raised will insure against any bare spot. Put on in sections of four or five yards at a time.

Be sure to allow liberally for paper. You may injure a strip so that you would be glad to throw it aside if the extra material to replace it was at hand. Cutting around windows and doors implies waste. Some of this can be used in filling up the various blanks. But, on the other hand, the waste in matching figures must be taken into consideration, especially if they are large ones. Paper is so cheap that it is better to have a little left than to run the risk of lacking a few feet or yards. Measure the dimensions accurately and then make an allowance for waste. What if you do have a little left! It will prove useful in renewing some portion where there is extra wear.—Bessie L. Putnam.

Take notice of the splendid rose premium offered on page 25.

Flies! Flies! Flies!

Get rid of them and help make your home and premises sanitary by the liberal use of ***Tanglefoot Fly Paper.*** There is fully one-third more compound per sheet on ***Tanglefoot*** than on any other fly paper; hence it lasts longest, catches the most flies and is the best and cheapest fly paper. If you ask for "fly paper" or "sticky fly paper" you may get a cheap imitation that will soon dry up or glaze over. Ask for Tanglefoot.

Sold by Grocers and Druggists.

TREE TANGLEFOOT, **put up in 1, 3, 10 and 20 lb. cans,**

Will protect your trees from all climbing

PROFITABLE DAIRYING.

A very elegant, illustrated, cloth-bound book of 200 pages is called **Profitable Dairying.** It is all good, satisfactory reading matter relating to the successful management of the dairy business under all circumstances, including the management of the cows and construction of the barn. We have discovered this book lately and we find that there is a better demand for it than for all other dairy books combined. For one dollar we will send

The National Farmer and Stock Grower for two years and we will send the book, Profitable Dairying, as a premium. Address,

LEANDER'S BRINDLE COW.

Leander Leghorn's brindle cow got breachy
one fine day,
And off she went on mischief bent, head
down, tail t'other way.
When Leghorn saw her cuttin' up he said a
thing or tew;
Around the house and barn they ran, a
perfect tandem team,
And every time Leander'd spurt the cow
put up more steam.
With both dead game and hoein' in, be-
twixt 'em who could choose?—
Leander said if he should win he thought
the cow would lose,
The neighbors, eager for the fun, came
rushin' down the street
To see Leander Leghorn run with bunions
on his feet;
As he tore on behind the cow, hot foot
upon her trail,
Some bet their wads that he would win,
while others said he'd fail.
They streaked like mad across the fields,
their hoofbeats rent the air;
A-thunderin' on towards the corn ran that
ungainly pair.
Old Brindle rushed into that corn, just
comin' out in silk,
She stumbled o'er a punkin vine, fell
down and strained her milk.
The Milk Trust heard she strained her
milk—they bought it on the spot,
And sold it to the Brookline swells at 13
cents per quart;
And while the Trust raked in the dust,
raked in the dust in glee,
Leander fussed and cussed the Trust for
paying him but three.
That critter's milk is rich in cream, though
once 'twas blue and thin,
Till Leghorn shingled her to keep the rain
from soakin' in.
No more does Leghorn's brindle cow get
gay and caper round—
Old Daffy Howes has got her now locked
in the Maiden Pound.
"Whit," in Boston Post.

THE SCARECROW.

I met an aged gentleman beside a field of
rye,
With form as thin as any rail, and dull,
lack-luster eye.
"Oh, tell me, ragged wanderer," I ques-
tioned then and there:
"Why do you seem so satisfied with what
you have to wear?"

He waved an armless sleeve and grinned,
and shook his simple head.
"I'm waiting for the grain to grow," was
all his queer lips said.
I puzzled o'er his silly words, and turned
again, to see
The hay blow from his padded form—but
still he smiled at me.

"Oh, tell me, childish simpleton, about
your foolish youth,
And keep your wit for duller minds and
only tell the truth."
"Alas!" he said, and smiled again. "A
sorry tale I know,
I've waited 'ere me whole life through for
this 'ere grain to grow.

"I love th' little dicky birds, an' all th'
wise old crows,
An' lawks! it's mostly all of 'em as comes
'ere, I suppose.
An' so I stays an' wisits 'em. They come
an' then they go,
An' all th' while I'm waitin', sir, for this
'ere grain to grow!"
—Stacy E. Baker, in Youth's Companion.

FARM YARD SONG.

O'er the hill the farm boy goes,
His shadow lengthens along the land,
A giant staff in a giant hand;
In the poplar tree, above the spring,
The katydid begins to sing;
The early dews are falling—
Into the stone heap darts the mink;
The swallows skim the river's brink;
And home to the woodland fly the crows,
When over the hill the farm boy goes,
Cheerily, calling—
"Co', boss! co', boss; co'! co'! co'!"
Farther, farther over the hill,
Faintly calling, calling, still:
"Co', boss; co', boss! co'! co'! co'!"

Into the yard the farmer goes,
With grateful heart at close of day;
Harness and chain are hung away;
In the wagon-shed stand yoke and plow;
The straw's in the stack, the hay in the
mow,
The cooling dews are falling—
The friendly sheep his welcome bleat,
The pigs come grunting to his feet;
The whinnying mare her master knows,
When into the yard the farmer goes,
His cattle calling—
"Co', boss! co', boss! co'! co'! co'!"
While still the cowboy, far away,
Goes seeking those that have gone astray—
"Co' boss! co', boss! co'! co'! co'!"

Now to her task the milkmaid goes,
The cattle come crowding through the gate,
Lowing, pushing, little and great;
About the trough, by the farm yard pump,
The frolicsome yearlings frisk and jump,
While the pleasant dews are falling—
The new milch heifer is quick and shy,
But the old cow waits with tranquil eye;
And the white stream into the bright pail
flows,
When to her task the milkmaid goes—
"So, boss! so, boss! so! so! so!"
The cheerful milkmaid takes her stool,
And sits and milks in the twilight cool,
Saying: "So, boss! so, boss! so! so! so!"

To supper at last the farmer goes,
The apples are pared, the paper read,
The stories ahe told, then all to bed.
Without the cricket's ceaseless song
Makes shrill the silence all night long;
The heavy dews are falling.
The housewife's hand has turned the lock;
Drowsily ticks the kitchen clock;
The household sinks to deep repose;
But still in sleep the farm boy goes
Singing, calling—
"Co', boss! co', boss! co'! co'! co'!"
And oft the milkmaid, in her dreams,
Drums in the pail with the flashing
streams,
Murmuring: "So, boss! so! so! so!"
—J. T. Trowbridge.

A COWBOY'S PRIZE.

Never was no gal like Mollie
In creation, I don't think!
Hotter'n a hot tomale
When her temper's out of kink;
Han'some ain't the word to fit 'er—
She's a beauty, head to heel—
Lightnin'-built, git-up-an'-gitter,
An' as true as polished steel.

Case o' love at first sight, reckon—
On my part, you understand—
An' I swore she'd soon be packin'
This same ol' cowpuncher's brand.
Went into the game an' won 'er,
From all rivals yanked the prize;
Cut 'er from the bunch an' run 'er
Off before their jealous eyes.

Now she's mine. There ain't a prouder
Rider on the ranges, see?
Mortal couldn't yawn no louder
Crackin' up her worth than me.
From the crupper to the snaffle
She's a thorrerbred, than that mare,
That I won at Johnson's raffle
At the T Ranch on the Bear.
—Denver Post.

REFORM.

If I could have the makin' of the country
laws, I'd do
Funny things, you'd better reckon, that I'm
sort of plain, too;
I'd make each dad burned bachelor adopt
some little girl,
Just an infant, wash an' dress it, too, an'
keep its hair in curl;
An' make each sour-visaged spinster 'dopt
some orphaned little chick
To bring up, an' see she kept it rosy-
cheeked an 'span an' spick,
And each crusty married couple, without
babies, I would see
Was provided with a fam'ly of small babies
—two or three;
An' each woman with a lap dog I would
make to choke the beast,
And, place of the nasty critter, take one
little babe, at least,
To look after, an'—an' that is all—the
babes 'ud do the rest,
Ever'one that holds a baby for a minute to
her breast,
Or his breast, would give their life up for
the little lass or lad,
An' the feelin' of protectin' 'em would keep
'em feelin' glad,
Till she'd loosen up an' notice trees an'
blooms an' skies above,
An' their days an' nights be loaded to the
muzzle just with love.
—J. M. Lewis, in Houston Post.

THE PESSIMIST.

Nothing to do but work;
Nothing to eat but food;
Nothing to wear but clothes,
To keep one from going nude.

Nothing to breathe but air;
Quick as a flash 'tis gone;
Nowhere to fall but off;
Nowhere to stand but on.

Nothing to comb but hair;
Nowhere to sleep but in bed;
Nothing to weep but tears;
Nothing to bury but dead.

Nothing to sing but songs.
Ah, well, alas! alack!
Nowhere to go but out;
Nowhere to come but back.

Nothing to see but sights;
Nothing to quench but thirst;
Nothing to have but what we've got;
Thus thro' life we are cursed.

Nothing to strike but a gait;
Everything moves that goes.
Nothing at all but common sense
Can ever withstand these woes.
—Ben King.

GONE!

Our little girl is gone, alas! She was so
young, so fair;
There is the lonely looking-glass at which
she combed her hair;
Here are the slippers that she wore; how
lonely they appear;
Her bath robe hangs behind the door, and
all is silent here.

Our little girl who yesterday could cheer us
with her song
Has left us sitting in dismay through mo-
ments that are long;
The curtains of her rooms are drawn and
all is silent there;
Our little girl, alas, is gone! She was so
young, so fair!

Her laughter gladdens us no more, fond
hopes we had have died;
Here are the slippers that she wore, where
they were kicked aside;
She's gone with one who cannot earn half
what they'll need, alack,
But they will doubtless soon return, and
we will take them back.

THE DYING SHOEMAKER.

"Dear wife, I'm waxing near my end,"
The dying cobbler said;
"Soon to an upper world my soul
Its lonely way must tread.

"I fear indeed I'm pegging out;
But then what boots it, love?
Here we've been a well-fited pair,
And so we'll be above.

"My ills I know no drugs may heal,
So it's well to prepare;
We can't run counter to our fate—
Just put a peg in there.

"The future need not give you care,
I've left my awl to you;
For deep within my inner sole
I know that you've been true.

"I've always given you your rights,
But now you must be left;
However, do not grieve too much
When of me you're bereft.

"A last farewell I now will take."
He smiled and raised his head.
"B-last the cruel malady
That lays you low," she said.

"I'll slipper away in peace," he sighed,
"The strife will soon be past."
His head fell back, he sweetly smiled,
And then he breathed his last.
—Unknown Author.

THE BRINDLE HEIFER.

Pa sold some cows; I didn't want
Our brindle heifer sold;
For she's so kind, and gives more milk
Than any five-year-old.

I knew the man would have his pick,
For Pa had told me so.
And I felt bad, I couldn't bear
To have our brindle go.

So I just took a rope and tied
Her foreleg to her head;
And when the man came to the field,
He spoke right up and said:

"I'll not take her; I wouldn't care
To buy that sort of cow."
And Pa cried out: "You rascal boy,
Why did you do that, now?"

The man he said: "You won't fool me
With no softsoap, you bet."
Now, I don't know just who was fooled;
But we've got Brindle yet.
—Cora A. M. Dolson.

8 Hardy Rose Plants Free.

The **Universal Magazine** is a splendid monthly publication; nice, bright, cheerful, illustrated; 32 pages, three columns to page. Devoted to stories, the homestead, good literature, poetry, patterns, embroidery, etc.

We have a very liberal offer to make in connection with a subscription to the **Universal Magazine.** Anyone who will send us fifty cents to pay for two-years' subscription to the **Universal Magazine** can select as a Free Premium **Eight Hardy, Ever-blooming Roses,** one-year plants. They are splendid varieties, as follows: **Etoile de France, Yellow Kaiserin, Helen Gould, Clothilde Soupert, President Taft, White Killarney, Marigold** and **Ever-blooming Rambler.** No such collection was ever offered before as a subscription premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

My Greatest Success

By R. E. Olds, Designer

Trainloads of Reo the Fifth

In the past 25 years, a dozen models of mine have become the season's sensation.

Again and again I have seen the factory swamped, and men paying a bonus to get my latest creation.

But Reo the Fifth has broken all records. I never saw a demand which compares with this.

Five cities at this writing have **trainload** orders with us—**orders for forty carloads each**—to go in a single shipment.

But the demand is just beginning. Very few men have yet discovered this car.

Soon there will be 10,000 cars in the hands of 10,000 owners. Ten thousand men will be telling others how Reo the Fifth performs.

Then will develop the real demand for this final car of mine.

Not a Passing Sensation

Other season sensations have come and gone. New cars and better came out to displace them.

Those days are over now. Reo the Fifth comes close to the limit in motor car engineering. It embodies the final results of my 25 years of experience. In every detail it marks the best I know.

There is no probability that we shall ever see a materially better car. The years can bring only minor changes.

It Deserves It

This car deserves popularity. That is my satisfaction.

The men who buy it get the utmost of which I am capable. There will be no regrets—none to say I misled him. And none will ever see a car which gives more for the money.

The steel in this car is all analyzed. Every vital part is put to radical test.

Parts are ground over and over, to get utter exactness. Inspection is carried to extremes.

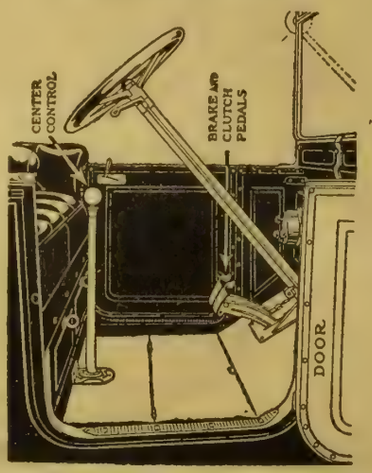
There are big margins of safety. The bearings are Timken and Hyatt—roller bearings, in place of the usual ball bearings.

The tonneau is roomy, the wheels are large, the car is overtired. The carburetor is doubly heated.

The body is finished in 17 coats. The upholstering is deep, the lamps are enameled. Even the engine is nickel trimmed.

Every part of the car shows the final touch—the avoidance of petty economies. I am proud of it. Not an iota has been omitted which could add to the worth of this car.

Center Control—No Side Levers



Then here, for the first time, we get rid of all side levers. All the gear shifting is done with this center cane handle—done by the right hand. It is done by moving this lever less than three inches in each of four directions.

Both brakes are operated by foot pedals, one of which also operates the clutch. So the entrance in front, on either side, is clear.

This arrangement permits of the left side drive. The driver sits, as he should sit, close to the passing cars—on the up side of the road. Heretofore this was possible in electric cars only.

Thus we have solved the last important problems in designing.

Price Still $1,055

The price of this car remains at $1,055, though subject to instant advance. This price is too low for a car like this. It leaves no adequate margin.

But we shall continue this price, in all probability, until materials on hand are exhausted.

1,000 Dealers

Reo the Fifth is shown by dealers in a thousand towns. We will direct you to the nearest when you send for our catalog. Please write for it now. It shows the various bodies. Address

10,000 Cars at $1,055

To Introduce Reo the Fifth

By R. E. Olds, Designer

To the Thousands Who are Buying

I am not writing this to sell more cars. The present demand taxes our utmost capacity. And the cars in use will sell our future output better than words of mine.

In all my experience of 25 years I have never seen a success like that of Reo the Fifth. I have never seen a car so popular.

What I have to say now is to you who are buying, largely through faith in me.

I want you to know that, despite this rush, there are hundreds of us watching every car. We are giving more than we promised.

And you who took my word—who are buying first—are getting an underprice.

Just the Start

Reo the Fifth is not built for a season. The present demand is just the beginning.

This car, remember, is the final result of 25 years spent in car building. It marks my limit—the very best I can do. And no car of the future can greatly improve on it.

The cars we sell now are sent out to sell others—to create reputation for My Farewell Car. And you may be sure that not a car goes out until we know it is utterly perfect.

Our Costly Care

We analyze the steel that goes into this car. Every part is inspected over and over. Every part with a flaw is rejected.

Every important part is put to radical test before it goes into the car.

The engines are tested for 48 hours. The finished cars are given more severe try-outs than in any other factory I know.

Parts are ground over and over to get utter exactness. Absolute silence in every part is demanded.

Each body is finished in 17 coats. The upholstering is perfect. To every part we give the final touch, regardless of time or cost.

For each of these cars is a salesman. Each will tell to hundreds of people the story of Reo the Fifth. And all our success in the future depends on the tale they tell.

The Underprice

There was never a car so underpriced as Reo the Fifth at $1,055. Every man knows this who makes any comparison.

This price is ridiculous. It is too low to endure. The coming advance in the cost of materials is bound to send it soaring.

But we are content to sell 10,000 cars without regard to profit. So the present price will doubtless continue during the spring demand.

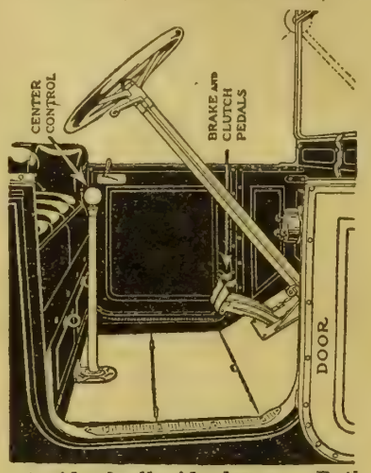
It goes to original buyers—to the men who first come to this car. And they will create our future market. Their cars will be our future advertisements.

You early buyers are getting an inside price, and I am glad to know it. But men who expect the present price to continue are bound to be disappointed.

The Center Control

This Year's Best Innovation

The success of Reo the Fifth is largely due to our new center control. Here, for the first time, we get rid of all side levers. Both doors in front are clear.



All the gear shifting is done by moving this center lever less than three inches, in each of four directions. It is done with the right hand.

Both brakes are operated by foot pedals, one of which also operates the clutch.

This arrangement permits of the left side drive, heretofore possible in electric cars only. The driver sits, as he should sit, close to the cars he passes and on the up side of the road.

The old side drive will appear very awkward when you once see this.

1,000 Dealers

Reo the Fifth is sold by dealers in a thousand towns, so everyone can easily see it.

Our catalog shows the various bodies and gives every detail. Ask us to mail it to you. Address

R. M. Owen & Co. General Sales Agents for Reo Motor Car Co., Lansing, Mich.

THE BRITISH MEAT TRADE.

Information Showing the Needs of the British Isles in the Matter of Meat Supply.

The Department of Commerce and Labor furnishes a nice line of information concerning the British meat trade, as follows:

The Port of London Authority is building a storehouse to hold 84,000 carcasses of cattle alongside its premises at Smithfield and is preparing to enlarge its storage supplies at the docks to meet the annual increase of the frozen-meat trade. The frozen-meat trade is increasing and the live cattle imports are decreasing.

Live Cattle Importations.

In the year 1911 there were 200,397 head of live cattle imported into the United Kingdom, against 219,561 head in 1910, of which 155,816 head came from the United States, 42,239 head from Channel Islands. The number of sheep and lambs imported was 47,673, of which 42,805 came from the United States and 4,868 from Canada.

Home Supply of Cattle and Sheep.

There was an increase in 1911 of 100,658 cattle in the United Kingdom, the total being 11,866,111, against 11,765,453 in 1910, but a decrease of 684,780 in the number of sheep, bringing the aggregate down to 30,479,807, against 31,164,587 at the close of 1910. With the reduction in the number of sheep and with an increasing number of cattle being utilized for dairying purposes it is manifest that in 1912 even to a greater extent than last year the supplies of meat for the United Kingdom must come from abroad. The drouth of last summer caused the slaughter of a large number of animals to save the abnormal expense of feeding them.

Frozen Beef Supply.

Of the total imports of frozen beef, amounting to 3,420,071 hundredweight, against 3,766,799 hundredweight in 1910, Argentina furnished 2,357,878 hundredweight, Australia, 708,388 hundredweight, New Zealand 257,806 hundredweight and Uruguay 65,486 hundredweight. Frozen beef from the United States amounted to but 4,906 hundredweight, against 7,703 hundredweight for 1910.

Changes in Chilled Beef Supply.

The decrease in the receipts of chilled beef from the United States continued during last year, and during November and December the imports almost stopped. In 1905 the imports of chilled beef from the United States aggregated 2,232,200 hundredweight, while in 1911 the receipts were only 169,444 hundredweight. During the same period the imports from the River Platte, South America, increased from 653,560 hundredweight to 3,753,140 hundredweight. The arrivals from Canada in 1911 were only 2,520 hundredweight, against 8,680 hundredweight in 1910 and 13,580 hundredweight in 1909. There was a trial shipment received from New Zealand last year, and the meat arrived in fairly good condition. Four shipments were received from Venezuela, totaling 858 quarters, against 200 quarters for the preceding year.

The Actual Supply of Beef.

The total supply of beef available from all sources for consumption in the United Kingdom during 1911 was placed at approximately 1,227,134 tons, and of mutton and lamb at 594,719 tons, or a little over sixty pounds of beef and twenty-nine pounds of mutton and lamb per head of the population. These totals were made up of home-grown meat to the extent of 61.6 per cent., frozen meats 23.7 per cent., chilled beef 10.8 per cent., and 3.9 per cent. of foreign live cattle and sheep and fresh-killed mutton.

Imports of Fresh Pork.

The receipts of fresh pork in 1911 amounted to 401,107 hundredweight, compared with 429,252 hundredweight for 1910. Of the total last year the Netherlands shipped 370,345 hundredweight and Belgium 14,537 hundredweight. Frozen pork imported amounted to 51,825 hundredweight, of which the United States furnished 4,099 hundredweight, compared with 1,044 hundredweight for 1910. Australia and New Zealand increased their shipments of pork in 1911 over the previous year.

Imports of Bacon.

Of the total imports of bacon amounting to 4,868,738 hundredweight last year against 3,863,380 hundredweight for 1910, Denmark furnished the greatest amount, being 2,122,087 hundredweight, followed by the United States with 1,817,835 (an increase of 510,914 hundredweight over 1910), and Canada 615,807 hundredweight. The imports of hams totaled 954,811 hundredweight against 719,126 hundredweight in 1910, of which the United States furnished 887,303 and 665,775 hundredweight, and Canada 62,295 and 37,621 hundredweight for the two years, respectively.

Fresh Mutton Supply.

The imports of fresh mutton amounted to 117,175 hundredweight, of which the Netherlands furnished 113,386 hundredweight. The total receipts of frozen mutton amounted to 5,220,276 hundredweight, against 5,261,623 hundredweight, of which 1,981,467 hundredweight came from New Zealand, 1,782,066 hundredweight from Argentina, and 1,291,696 from Australia.

Rabbits Cut a Figure.

The imports of frozen rabbits in 1911 aggregated 23,393 tons, or 6,795 tons less than in 1910.

The "Grind" of Farm Life.

We hear the complaint that the great objection to farm life is its eternal "grind." But the writer has observed that the farmers that fail are frequently men that avoid doing much of this kind of grinding.

It is doubtful if there be more grinding in the farmer's life than in the life of many of the city business men, who work seven days a week and from twelve to fifteen hours each day. Some of the successful business men have built up their fortunes by a slavery that is not surpassed by anything that occurs on the farms. In either case, it is the greatest sacrifice of such a life that gets results in the end and an old age of competence.

The grinding the farmer does is under the bright skies, with the pure air blowing around him. In the spring the zephyr fans his warm cheek and in the autumn the invigorating wind gives him new life. In the winter the germs are nailed down under the snow and the frigid air breathed by the farmer is pure. The city man works in a close office, often poorly ventilated, and during much of the daytime under artificial light. Multitudes of men work in city offices in which the gas or electric light is turned on at the time the men begin work in the morning, and is used till the last worker is gone at night. The rising or setting of the sun is never an event with them, for they never see it. Its rising and setting are hidden by lofty buildings that are always throwing a shadow on one side of them. The wind that sweeps through the building is always laden with dust and smoke. Several times a day the worker has to wash the dust from his hands. When the snow comes in the winter it does not protect him from the dust and germs of disease. Then the rooms are closer, and in those rooms the "grind" goes on. So much does this affect the health of the workers in the long run that it is a common saying that "were it not for the fresh blood being constantly supplied from the country, the cities would go to decay."

Then, too, the "grind" in country life is largely the fault of the farmer himself. A good many farmers are greedy of land and own and try to farm more land than they can comfortably handle. When a farmer settles down to the idea of farming only what land he needs he frequently finds that the necessity for grinding has dropped from him.

The "grind" of farm life is being lessened by intelligence. The Agricultural Colleges and Experiment Stations are constantly working in his interest and finding new ways of doing the things that need to be done.

In spite of the so-called "grind" of farm life we find that many farmers take time in the winter to go on long journeys for pleasure's sake.

The more a farmer thinks the less he is likely to grind, for the thinking saves his work. The putting in of the telephone has saved the farmer many needless journeys and by that much has reduced the "grind."

With the passing of the years and the increase of intelligence we may expect to see the "grind" of farm life greatly lessened.

No. K33498
Price $1.25
A KNIFE that is sharp today and dull tomorrow is likely to have more dull days than keen ones. The quality that goes into Keen Kutter pocket knife blades makes them hold their edges without frequent recourse to the sharpening stone. They are the kind of knives that it is a pleasure to own and use. Uniform quality, but many styles. Prices vary only according to handles and number of blades.
KEEN KUTTER
No. KI- Price $3.50
No. K3- Gold-Plated Price $5.00
Safety Razors are made with the characteristic Keen Kutter attention to correctness of design and quality of material and will prove a revelation to every shaver who uses them. All Keen Kutter cutlery carries the guarantee of satisfaction or money back.

Belated Acquaintance.

Pension Agent Joab N. Patterson at a banquet in Concord said of a disappointed place asker: "No doubt he feels badly. He feels—though with less reason—like the young wife to whom a friend said: 'When did you get acquainted with your husband?'

"'I got acquainted with him,' the young wife answered, with a bitter laugh, 'three days after the honeymoon, when I first asked him for a little money.'"—New York Press.

"Honesty pays best, but it is never a bonanza."—Globe-Democrat.

Hire The Red River Special

CAN you afford to put the amount of your thresh bill into your straw pile? That is what too many ordinary and indifferent threshers do.

The **RED RIVER SPECIAL** is the only machine which beats the grain out just as you would do by hand with a pitchfork.

The Big Cylinder throws the intermingled straw, chaff and grain against the Man Behind the Gun. Over 90 per cent of the grain is **beaten out** right there.

The uplifting shakers keep tossing the straw up as long as it is in the machine, **beating out all the grain.**

Hire a **RED RIVER SPECIAL** this year and

Save Your Thresh Bill

Put that money into your pocket instead of wasting it. If you buy, buy a **RED RIVER SPECIAL.** If you hire, tell your threshermen to bring a **RED RIVER SPECIAL** to do your job.—It will Save Your Thresh Bill.

Write us for the proof.

NICHOLS & SHEPARD CO.
Battle Creek, Mich.

Sole Builders of **The Red River Special Line,**—The Red River Special Thresher, Steam Traction Engines, OIL-GAS Tractors, Self Feeders, Straw Stackers etc.

AUTOMOBILES.

Buy The Mitchell, BECAUSE Every Ounce of horsepower in the **Mitchell** is available for the road, no matter what it may be; it makes little difference whether hills, ruts, sand, mud or clay, its all the same; it meets the demands of every condition of American roads. **Buy the Mitchell**—BECAUSE—Its simplicity brings it within the comprehension of the average man and woman, the average person can run it under any and every road condition. **Buy the Mitchell**—BECAUSE—Its motor is simple, its transmission is simple, its cooling system is simple, its pump is simple; simplicity reduces the cost of operation and upkeep. **Buy the Mitchell**—BECAUSE—In the **Mitchell** is found a standard of motor efficiency, correct transmission and drive; correct carburition, ignition and lubrication. **Buy the Mitchell**—BECAUSE—The **Mitchell** price is figured to give the buyers of motor cars the most that can be had for the money. **Buy it**—BECAUSE—Its the car known the world over, its the car you cannot wear out. **Buy it**—BECAUSE—The **Mitchell** "Make-Good" policy Protects you. Prospective buyers call on us and examine the **Mitchell** line at your leisure.

The Oats Market Situation.

Farmers who are raising oats ought to arrange to hold them either on the farm or in elevators until it suits their own good pleasure in selling the crop. Oats cost money to raise and should not be let go any year at any time under 50 cents a bushel, market basis.

At the time we are writing this article, May 31st, after the close of a dull market, the conditions affecting the market do not look any too rosy, but the fact remains that the statistical situation is strong, and were it not that there is considerable unrest in the business world that is making people fearful in conducting their business on normal lines, we would have a better market. The strikes which take place one after the other in one country after another are of sufficient magnitude to paralyze business.

The May oats option was closed out quietly. A year ago the Chicago May option for oats was closed out at 34½ cents a bushel, and this year it was closed out at 50½ cents, having declined from 56⅞ cents, which was the April 30th quotation for May delivery. The political battle is a most disturbing factor, and peace will not be declared very soon. Our trade with Mexico is at a standstill because of the revolutionary disturbance. We are in danger of intervention in Cuba and Mexico, but we hope not in either case.

A feature of the oats trade, so far as the Board of Trade is concerned, is the decline in the future estimate of values. A month ago the July oats option of 1912 was quoted at 54¾ cents, and on May 31st the same option was quoted at 49⅛ cents a bushel, and the September option declined in a month from 45 cents to 41⅞ cents a bushel.

Although we have profound respect for the figures arrived at by legitimate trading, we think they are mistaken whoever may believe that late in September they will be able to buy oats in Chicago at 41⅞ cents a bushel. There is no surplus of oats, there will be no surplus of oats and there is no occasion for farmers to sacrifice their oats. If farmers will just quietly go on with their business and not sell oats unless the market suits them, the prices will be satisfactory to those who raise them. Oats are worth 50 cents a bushel on the farm, and even at 60 cents a bushel those people in cities who buy oats and who feed on oats have no reason to complain of the high cost of living.

The Corn Market Situation.

The corn market situation does not please the people who have to buy corn, but it ought to look good to those who have corn to sell. On May 31st the May corn option at Chicago was closed out at 80 cents a bushel, which is 27⅝ cents higher than the close of the May option last year, and 24 cents a bushel higher than the May option closed out two years ago. If the market value of corn was decided by industrial conditions alone corn would be 25 cents a bushel cheaper than now, but corn is upheld by the cattle and hog feeding demand, and the corn that is required for usual city demands has to grade higher than the bulk of the corn in the country would grade in market, hence it takes good money to buy the corn which reaches the city market.

The May trading is over, the Board of Trade members traffic very little for June delivery, but the expectation is that corn for July 31st delivery is worth 75 cents a bushel; for September 30th delivery, 72¾ cents; and for December delivery, 62⅞ cents a bushel.

This review is written on May 31st, after the market closed. The immense crop of corn produced in 1910 is passing away; the good crop of corn raised in 1911 is also becoming a thing of the past, and, to say the least, the extent of the corn crop of 1912 is an unknown quantity and very likely will be small enough to keep prices up to a profitable basis, and it is very likely that the future estimates of prices will have to be revised upwards later on.

The Wheat Market Situation.

So far as the general trade is concerned as viewed from the Chicago Board of Trade, there was no scarcity of wheat when the May option went out, May 31st, 1912, at $1.10½ per bushel, which is 4⅜ cents a bushel less than was quoted thirty days previous.

The first time we began to notice the particular May option referred to was last July, when it was bought and sold for 98 cents a bushel, so that our readers can understand that there was 12½ cents' difference between the price of the first contracts entered into and the last. In other words, wheat for May, 1912, delivery was worth more on May 31st, 1912, than it was ten months ago.

On the basis of $1.10½ a bushel farmers would be getting about a dollar a bushel net on the farm. If wheat would always net $1.20 a bushel or 2 cents a pound on the farm, it would be a fair basis, and until farmers believe they are going to receive that much there will be no great extension of wheat acreage. We believe, however, that farmers who raise wheat now will receive a good price after harvest and after all harvests yet to come.

The Chicago Board of Trade quotation on May 31st for wheat deliverable July 31st was $1.10½, and for delivery next September 30th at $1.06, and for delivery next December 31st, $1.06¼. Allowing no more than usual fluctuations to take place according to conditions to arise, it appears that there is no expectation that wheat will sell lower than $1.06 per bushel on the Chicago market during the balance of the year.

So far as cash wheat is concerned at St. Louis, the trade seems to be on the basis of local supply and demand. On March 31st, when the Chicago option for No. 2 wheat was expiring at $1.10½, cash wheat, No. 2 soft, was selling by the car-load at $1.19 to $1.20½ per bushel at St. Louis.

Gas Engine Meeting.

The semi-annual convention of the National Gas Engine Association will be held at Milwaukee, Wis., June 17 to 22, in conjunction with the holding of the first Gas Engine Show at the Auditorium. The convention hall will be a commodious room in the Auditorium Building and convenient to the show. This meeting will bring together exhibits of nearly all the engines used on farms and will be very important to farmers for that reason.

Interstate Shipping of Live Stock.

A long article appears in this paper concerning shipment of stock and the requirements of each state for admission of live stock from other states. It is by Dr. C. D. Folse, of the Kansas City Veterinary College, and is based upon a published government bulletin, with recent regulations to bring it up to date. See page 20.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Universal Exposition.

On Wednesday, May 29th, at the club house of the Universal Exposition Company, a banquet was given to a large number of citizens of St. Louis who are interested in re-establishing the old St. Louis Fair under the name and title of the Universal Exposition of St. Louis. The officers of the Exposition Company are C. F. Blanke, President; Geo. W. Maxwell, Vice-President; Thos. W. Garland, Secretary and Treasurer; and Joseph A. Murphy, General Manager.

The grounds of the Exposition Company consist of 175 acres fronting upon the St. Charles Rock Road. These grounds are already enclosed; a large amount of work has been done to beautify them; there is a speedway under construction; stabling for live stock is being completed, so far as horses are concerned, with many other improvements under way.

The Directors of the enterprise are C. F. Blanke, of the Blanke Tea and Coffee Company; G. R. Collett, Vice-President St. Louis National Stock Yards; P. E. Conroy, President Conroy Piano Company; G. Lacy Crawford, Vice-President St. Louis Horse Show; J. T. Dodds, City Engineer; Thos. W. Garland, Merchant; J. H. Gundlach, President City Council; Julius Kessler, President State Bank of Wellston; S. P. Keyes, of Keyes & Marshall Livery Company; George W. Maxwell, of the Maxwell Mule and Horse Company; Joseph A. Murphy, Secretary of the St. Louis Fair; A. O. Rule, Vice-President Kilgen-Rule Real Estate Company.

Other stockholders and club members include Mr. B. F. Bush, President Missouri Pacific Railroad; Paul Brown, of the American Tobacco Company; Dr. C. W. Crowley, Horse Expert; D. R. Francis, President Louisiana Purchase Exposition; Philip H. Hale, Editor National Farmer and Stock Grower; Mr. Goodman King, President Jaccard & King Jewelry Company; Hon. F. H. Kreismann, Mayor of the city of St. Louis; Robert McCulloch, President United Railways; George and Joseph Nugent, Horse and Mule Dealers; Gerald B. and Jos. M. O'Reilly, Real Estate Agents; T. E. Price, Stock Broker; John C. Roberts, of Roberts, Johnson & Rand Shoe Company; I. H. Sawyer, Wholesale Merchant; A. T. Stickney, of Stickney Cigar Company; Julius S. Walsh, Capitalist; Rolla Wells, former President St. Louis Fair; and Walter B. Woodward, of Woodward & Tiernan Printing Company.

At the banquet much encouragement was tendered the promoters of the new Exposition Company. Besides a number of enthusiastic talks additional stock was subscribed to the promoting company, and assurances given that aid would be forthcoming from civic organizations.

The Presidents of nine civic and commercial organizations all have declared themselves as favoring the movement, as have Fred C. Lake, President of the Retailers' Association, and former Mayor Rolla Wells, President of the Business Men's League.

Mr. Rolla Wells, who was President of the old Exposition Company from 1891 to 1894, spoke on the old Fair and its traditions. He said it had been one of the greatest factors in the city's betterment.

Former Gov. D. R. Francis, President of the Louisiana Purchase Exposition Company, was the first speaker of the evening. His subject was "St. Louis as a Fair and Exposition Center."

M. L. Wilkinson, of the Scruggs-Vandervoort-Barney Dry Goods Company, spoke on "The Fair From the Merchant's Standpoint."

Mayor Kreismann talked on the "Benefits to the City at Large From a Fair." He said the State Legislature might act more favorably toward the big cities, and especially toward St. Louis, if there were more of interest to them in the city.

J. H. Gundlach, President of the City Council, followed the Mayor with "Why St. Louis and St. Louis County Have Common Interests."

G. A. Wurdeman, Circuit Judge of St. Louis county, spoke of St. Louis county and its advantages and the possibilities of its helping St. Louis.

J. Van S. Barret spoke on "Why the Present Generation Owes St. Louis a Fair." Barret's father was the first President of the old St. Louis Fair.

Two speakers dwelt expressly on the live stock features which the new enterprise would offer. Joseph A. Murphy, General Manager of the Universal Exposition Company, told that it was projected to make a Live Stock Exposition the initial attraction for the Fair. He told that at a recent meeting of the Southern Illinois Editorial Association aid was promised to make the Live Stock Exposition an extraordinary event. Col. John I. Martin declared the new enterprise would tend to revive clean horse racing in St. Louis, which, he asserted, would be of great benefit to the city.

Mr. Joseph A. Murphy, General Manager of the Universal Exposition Company, announced recently that M. A. Bright, a commission man at the National Stock Yards, East St. Louis, had been selected by the Exposition's Board of Directors as Managing Director of the live stock exhibit of the Exposition. Mr. Bright accepted and named the personnel of an Advisory Board at the request of the officers of the Exposition.

The Advisory Board, composed entirely of live stock commission men at the National Stock Yards, is as follows: W. S. McBride, W. H. Keys, W. W. Stewart, L. O. Draggon, John W. Sanders, C. M. Raffety, Capt. J. H. Campbell, W. H. Ray, George P. Coy, Perry C. Sparks, A. J. Milton and J. S. Harrison. Mr. Murphy said that the live stock exhibit would be held the week commencing September 23d, one week in advance of the Missouri State Fair and two weeks in advance of the Illinois State Fair. Since the meeting and banquet the contract has been let for the grand stand—a structure of concrete. The office of the Universal Exposition Company is at 1027 Chestnut street, St.Louis,Mo.

Effective Spraying Mixture.

Many orchardists and fruit growers waste a great deal of time and money each year experimenting with different spraying mixtures in the hope that they will finally hit upon just the one that can be used freely without injury to buds and foliage and at the same time contribute towards a heavy crop yield of sound, perfect fruit

With so many spraying mixtures on the market, it is rather a difficult matter for the average fruit grower to select the one which is best adapted for his particular needs. Many such mixtures, especially those which contain a considerable amount of Paris green, really do more harm than good, because while they unquestionably kill the insect pests, they also sear and blight the buds and leaves. No such injurious effects as these are possible when a spraying mixture made of one can of Merry War Powdered Lye to fifteen gallons of water is used. Many of the most successful and practical fruit growers declare this to be the ideal spraying mixture.

It means instantaneous death to every form of insect pest; cannot injure the buds or foliage, no matter how freely it may be used, and has the additional advantage in that the droppings around the roots of the trees enrich the soil. Used frequently during the winter and early spring months, this solution will prevent and destroy San Jose Scale. This mixture is equally effective for fruit trees or for garden vegetables, grapes, vines, etc. If the solution is made a little stronger, in the proportion of one can of Merry War Powdered Lye to about ten or twelve gallons of water, it makes a most effective exterminator of borers. For this purpose it should be applied plentifully around the mouths of the burrows with a brush, so that it will trickle down into the burrows.

Merry War Lye is manufactured by the E. Myers Lye Company of St. Louis, who have just issued a most interesting booklet telling of the many practical uses for Merry War Lye on the farm and in the home. A copy will be sent free to anyone on request. Write to E. Myers Lye Company, Dept. 22, St. Louis, Mo., and ask for spraying booklet.

A Difference.

George Ade, at a dinner in New York, urged a subtler use of words.

"Use words with delicate care," he said. "Observe all subtle distinctions. Never write 'vision,' for instance, when 'sight' is what you mean."

"There's no difference between 'sight' and 'vision,'" interrupted an editor.

"No?" said Mr. Ade, "and yet, Billy, when you and I passed each other on Broadway yesterday afternoon, the girl I was with was a vision, while the one with you was a sight."

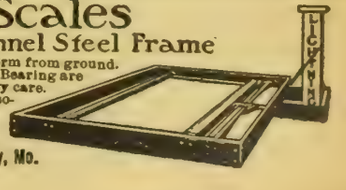
COUGHS
COLDS
INFLUENZA
PINK-EYE

Catarrhal Fever, and all Nose and Throat Diseases. One bottle a guaranteed cure, or your money back. Cures the sick and prevents other horses and colts from taking the disease. Best Kidney and Worm Remedy; safe for mares in foal and all others. $1 bottle holds three 50-cent bottles. Send postal card for free horse booklet. Sold by all druggists, or prepaid from
BINKLEY MEDICAL CO., Dept. H, NAPPANEE, IND.

Lightning Pitless Scales

New Pattern. Solid Channel Steel Frame

Channels are seven inches which is the height of platform from ground. Levers are octagon in shape giving greater strength. Bearing are Toolsteel. This scale will last a life time with ordinary care. Equipped with compound Beam Free. Furnished absolutely complete except platform planks. Guaranteed accurate and tested to more than its capacity. Write for our prices and description before buying.



KANSAS CITY HAY PRESS CO., 425 Mill St., Kansas City, Mo.

Winter Wheat Growing.

The office of the Middle West Soil Improvement Committee has just issued another of its helpful bulletins. In this publication the authors give some very helpful suggestions relative to winter wheat growing, which will be of interest and value to our farmer readers. The tables of prominent agricultural colleges corroborate the statements made. The main points of the bulletin, entitled "Winter Wheat Growing," are as follows:

The population of America is increasing at the rate of over 20 per cent. per decade, while wheat production is remaining practically stationary. America is content with a yield of 14.8 bushels per acre, while European land, which has been under cultivation for hundreds of years, doubles and almost trebles this yield per acre.

James J. Hill has wisely said that the production of greater yields depends upon the attention that is given to the following conditions:

First. The farmer must cultivate no more land than he can till thoroughly.

Second. There must be rotation of crops.

Third. There must be soil renovation for fertilizers.

For winter wheat, the ground should be carefully prepared. It should be mellow and well supplied with a correct balance of plant food. Special attention should be given to drainage and the supply of organic matter in the soil.

A very important factor is the quality of seed that is used. None but sound, well-filled seed will give best results. This seed should be drilled at the right depth. It has been found that as a rule drilled seed makes an evener and more uniform growth than broadcasted seed, and survives a severe winter much better than that which has had an uneven planting.

The addition of a small amount of suitable fertilizer at the time of sowing, which supplies readily available plant food for the tiny plant, has given very satisfactory results. Not only does it assist the young plant into a strong and vigorous growth, but the experiments of a number of Experiment Stations, among which the most notable are Rothamsted Experiment Station, England, Ohio and Indiana, show a marked increase in both yield and weight per bushel where this amendment was used. A suitable wheat fertilizer should supply a fair amount of nitrogen to give the plant rapid and vigorous growth; an abundant supply of available phosphoric acid to fill and ripen grain of superior quality, and potash to give strength to the growing stalk.

Where due attention is paid to drainage of soil rotation of crops and fertilization, there is nearly always a satisfactory yield of grain of superior quality.

The bulletin entitled "Winter Wheat Growing" may be had on application to the Middle West Soil Improvement Co., 916 Postal Telegraph Building, Chicago, Ill.

Water Requirements of Corn.

The Nebraska Experiment Station has just issued Bulletin No. 128, on "Studies in Water Requirements of Corn." A brief report is made on results secured in past years, which have heretofore been published.

Results indicate that the best growth is secured when the soil contains about 60 per cent. of the water it could hold if saturated. Soil that is too wet gives decreased yields. It was also found that the amount of water required from day to day by growing corn varies with weather conditions, and in very much the same way as evaporation from the surface of a tank; also the greater the leaf area the greater the water requirement.

In 1911, corn was grown in two greenhouses, in one of which the air was dry, just as the natural outside air. In the other the air was artificially kept humid. The plant required twice as much water to make a pound of dry weight in the dry greenhouse as it did in the humid greenhouse, indicating that in a dry climate like Nebraska the water requirement for growing crops is very high as compared with a humid climate. It was found that in the year 1911 it took 345 pounds of water to make one pound of dry weight in corn, while in 1910 it took only 250 pounds. This was due to the fact that air was much drier in 1911. So even with equal rainfall, in certain years the water requirement is very much higher than in others.

Soils of three degrees of fertility were used, and these same soils were each fertilized with sheep manure in a second series. It was found that the more fertile a soil the less water required to produce a pound of dry weight, and that the adding of manure decreases the water requirement except in the most fertile soils. This would indicate that manuring soils low in fertility will give a greater yield for a given quantity of water, but if the soils are sufficiently fertile the addition of manure will probably have little or no effect.

The Competition (Crowding) of Plants.

A new Farmers' Bulletin, issued by the Nebraska Experiment Station, discusses the competition which takes place between cereal plants when grown under field conditions. For example, for several years to every 100 seeds of wheat or oats sown under favorable conditions only about sixty-six were harvested, or only about two-thirds of the plants reached maturity. In other words, about one-third of the plants that come up, for some cause or other, die out before maturity. While there are various causes for this loss, it has been found that at least one cause seems to be the natural competition which takes place when the stronger plants crowd out the weaker ones. This seems to be nature's method of maintaining the stronger and more vigorous plants in field crops when sown under ordinary conditions.

Our ordinary rate of seeding places a great many more plants on the land than is necessary, and a certain percentage of the weak ones are very soon crowded out. The thicker the rate of planting the greater number crowded out. Hence we should expect that saving seed from very thick planting would give us stronger and more vigorous plants than those that had been grown under thin seeding and not subjected to the effects of competition. Practical results with corn have shown that seed grown under thick planting, namely, five plants per hill, has produced a higher yield than seed from one stalk per hill, the difference after six years' selection from the two rates of planting amounting to seven or eight bushels per acre.

Nature seems to have a way of eliminating the weaklings, especially when very thick planting is done (as is the custom when sowing small grain crops), but this probably accounts for the productiveness of these crops, although practically no selection is practiced with them.

This bulletin, No. 127, may be had free of cost upon application to the Agricultural Experiment Station, Lincoln, Neb. Address, E. A. Burnett, Director.

Missouri Fruit Prospects.

Reports from special correspondents from every county of the state to the Board of Horticulture show that throughout the state the prospects are good for large crops of apples, cherries, pears, plums and strawberries. Grapes and bush fruits were injured somewhat by the severe winter and do not promise as well. Peaches are an entire failure throughout the state, except in one or two small regions, and these show only a partial crop. At the time of receiving reports, fruits were either in bloom or setting the buds, so that much still depends upon how well the fruit sets. In detail, conditions average about as follows:

Northwest Missouri.—Apples vary from 50 per cent. to full bloom, with an average of 97 per cent. Cherries, pears and plums all promise well, with average for each of 95 per cent. Grapes, through winter injury, drop to 86 per cent. Blackberries, 38 per cent.; raspberries, 65 per cent.; while gooseberries and currants show 80 to 85 per cent.

Northeast Missouri.—Apples show a falling off in this section, being only 87 per cent. of a full bloom. Pears, plums and cherries promise a full crop. Grapes show much more winter injury, the estimate being 65 per cent. Blackberries are 50 per cent.; raspberries, 60 to 65 per cent., while gooseberries and currants range from 80 to 90 per cent.

Central Missouri.—Apples are reported at an average of 90 per cent.; cherries, pears and plums at 90, 95 and 98 per cent., respectively. Grapes are placed at 80 per cent. Blackberries and raspberries appear to have been more seriously injured here than in the more northern part of the state, blackberries being placed at 25 per cent., and raspberries at 40 per cent. Gooseberries average 75 per cent., while currants are 80 per cent.

Southwest Missouri.—This section shows well in tree fruits, apples being 100 per cent.; cherries, 90 per cent.; pears, 98 per cent.; and plums, 90 per cent. This is the only section from which correspondents report peach bloom of any consequence. In a very small area there will be a partial crop. Grapes are placed at 80 per cent. Blackberries and raspberries appear to have received the worst injury in this section, being 30 and 25 per cent., respectively. Gooseberries and currants average 80 to 85 per cent. each.

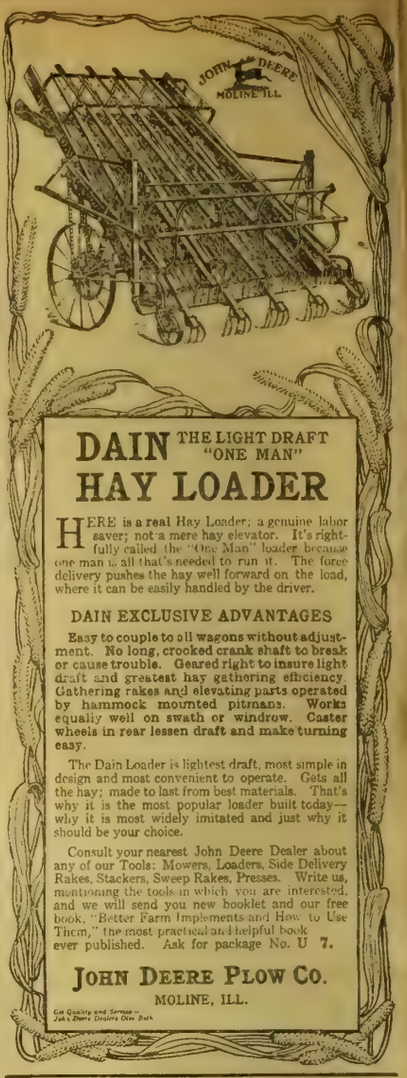
Southeast Missouri.—Apples show 95 per cent.; cherries, 80 per cent.; pears, 70 per cent.; plums, 82 per cent.; grapes, 90 per cent.; blackberries, 52 per cent.; raspberries, 50 per cent.; gooseberries, 84 per cent.; currants, 80 per cent. This report was dated May 14th and signed by W. W. Chenoweth, Secretary of the State Board of Horticulture.

Growing Willows For Basket Making.

In co-operation with the United States Forestry Service the Forestry Department of the Agricultural College has started an experiment to determine the species of basket willow best suited to the climate of Missouri. The state has a large area of land lying along its rivers which is subject to annual overflow and is, therefore, not suited for ordinary crops, but which would be admirably adapted to growing the basket willow.

An acre of suitable land will produce from 1,000 pounds to 1,300 pounds of willow whips each year. They have an average value of five to seven cents a pound. The demand for willow rods of high grade, for the manufacture of baskets and willow furniture, is constantly increasing. At present the United States imports over 1,000,000 pounds annually. It is believed that there is a large future for the industry in Missouri.

After determining the proper species for the state, the Agricultural College will endeavor to foster the industry by the distribution of cuttings. Later on this subject will be referred to again.



DAIN THE LIGHT DRAFT "ONE MAN"
HAY LOADER

HERE is a real Hay Loader; a genuine labor saver; not a mere hay elevator. It's rightfully called the "One Man" loader because one man is all that's needed to run it. The force delivery pushes the hay well forward on the load, where it can be easily handled by the driver.

DAIN EXCLUSIVE ADVANTAGES

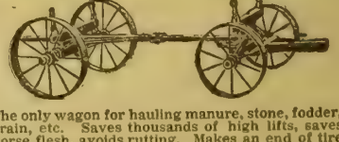
Easy to couple to all wagons without adjustment. No long, crooked crank shaft to break or cause trouble. Geared right to insure light draft and greatest hay gathering efficiency. Gathering rakes and elevating parts operated by hammock mounted pitmans. Works equally well on swath or windrow. Caster wheels in rear lessen draft and make turning easy.

The Dain Loader is lightest draft, most simple in design and most convenient to operate. Gets all the hay; made to last from best materials. That's why it is the most popular loader built today—why it is most widely imitated and just why it should be your choice.

Consult your nearest John Deere Dealer about any of our Tools: Mowers, Loaders, Side Delivery Rakes, Stackers, Sweep Rakes, Presses. Write us, mentioning the tools in which you are interested, and we will send you new booklet and our free book, "Better Farm Implements and How to Use Them," the most practical and helpful book ever published. Ask for package No. U 7.

JOHN DEERE PLOW CO.
MOLINE, ILL.

ELECTRIC
Low Down Handy Wagon



The only wagon for hauling manure, stone, fodder, grain, etc. Saves thousands of high lifts, saves horse flesh, avoids rutting. Makes an end of tire setting and repairs. This wagon will last a generation. Electric Steel Wheel Wagons don't break down. Write for book and see why.

Make Your Old Wagon Over

Use your old running gears, we'll supply Electric Steel Wheels to fit. All heights, all tire widths. Wagon better than ever by simply buying wheels. Let us prove it. Address ELECTRIC WHEEL CO., Box 40 Quincy, Ill.

Electric Steel Wheels

Notes on Apple and Pear Orcharding.

Often the new orchardist makes more money from his orchard than does the old orchardist. The reason frequently is that the new man is willing to try new methods, while the old orchardist drifts along in the old ways.

If you have a family orchard on clay soil and have coal ashes, try using the coal ashes as a mulch around the trees. On some soils this will prove a great help to the trees. The writer has in mind two pear trees. One of these he has mulched heavily with coal ashes during the last four years; the other has been left unmulched. The tree that has received the coal ashes treatment is remarkably healthy and has made a much greater growth than the other tree. Doubtless the soaking rains carry down some fertility from the ashes, which is an additional help; but the first great effect is that of protecting the ground around the tree from evaporation in dry weather.

In the case of pear trees, go over the orchard in the spring and make sure that there are no blighted trees that can supply bees and other insects with the germs of the blight. The process of spreading the blight is for bees and perhaps other insects to visit the trunks of trees from which oozes out a sort of gummy exudation from diseased trees. Then the insects visit the blossom twigs and infect the tender shoots. The blight develops from the tenderest parts and spreads down the twig and limb. To prevent the insects coming into contact with diseased material, inoculation is very desirable and will save much trouble during warm, moist days, when fungus spores develop rapidly.

Mulching and cultivation seem to have about the same value in many cases. We have known farmers with orchards to fail to cultivate or mulch and at the same time get rid of materials that might be used for mulching. This is particularly true of coal ashes, which are exceptionally valuable for mulching purposes. They have the advantage of straw and hay in that they cannot take fire and destroy the orchard, which is the great danger when straw is used in large quantities. The writer once visited an orchard which was mulched with straw to a depth of six inches all over the ground. The owner told the writer that the fear of fire was constant with him and was the only one great drawback in that kind of mulching. It is easy to imagine what a fire would do in such a circumstance.

Mulching and draining are necessary in most soils. The draining is desirable to keep the roots from being too wet during the wet times. The mulching keeps a certain amount of moisture around the roots when the roots would otherwise be too dry. Too dry roots and too wet roots render no service. It is only when soil air and soil water are supplied together that the roots are able to perform their functions.

Most orchards are maintained in a half-starved condition. The other crops of the farm are given fertilizer to increase their growth, but the trees in the orchard are looked upon as able to do well and bear large crops without the supplying of plant food. Manure and fertilizer will often be found as profitably applied to an orchard as to any other part of the farm.

A Very Successful Prescription.

The combination of remedies used in the manufacture of Bodi-Tone is proving a wonderfully successful prescription for old, chronic ailments. The makers of Bodi-Tone publish the prescription broadcast, so all may read and judge it for themselves. Bodi-Tone contains Iron Phosphate, Gentian, Lithia, Chinese Rhubarb, Peruvian Bark, Nux Vomica, Oregon Grape Root, Cascara, Capsicum, Sarsaparilla and Golden Seal. Read the trial offer on the last page. No one need pay a penny for Bodi-Tone until they have tried it.

Fertilizer Testimonial.

Empire Carbon Works, St. Louis, Mo. Gentlemen: — Regarding your fertilizers, I have been using it for the last four years, and find that it gives good results on any kind of land and for any crop—corn or wheat. Especially good for tomatoes. We find that it will increase the crop from one-third to one-half more when properly used. I can highly recommend Empire Fertilizers to give results when used in proper way. Yours truly, Northview Canneries, (Signed) A. L. Bumgarner, Northview, Mo., February 17, 1912.

Testimonial For Visio.

Dixon, Ill., April 15, 1912.
Visio Remedy Ass'n.

Please send me one bottle of your Eye Remedy. My brother used your remedy and cured a horse that was almost blind, with one bottle.

J. T. LAWRENCE, JR.

Beware of the Daughter.

A gentleman who was once stopped by an old man begging, replied: "Don't you know, my man, that fortune knocks once at every man's door?"

"Yes," said the old man, "he knocked at my door once, but I was out, and ever since then he has sent his daughter."

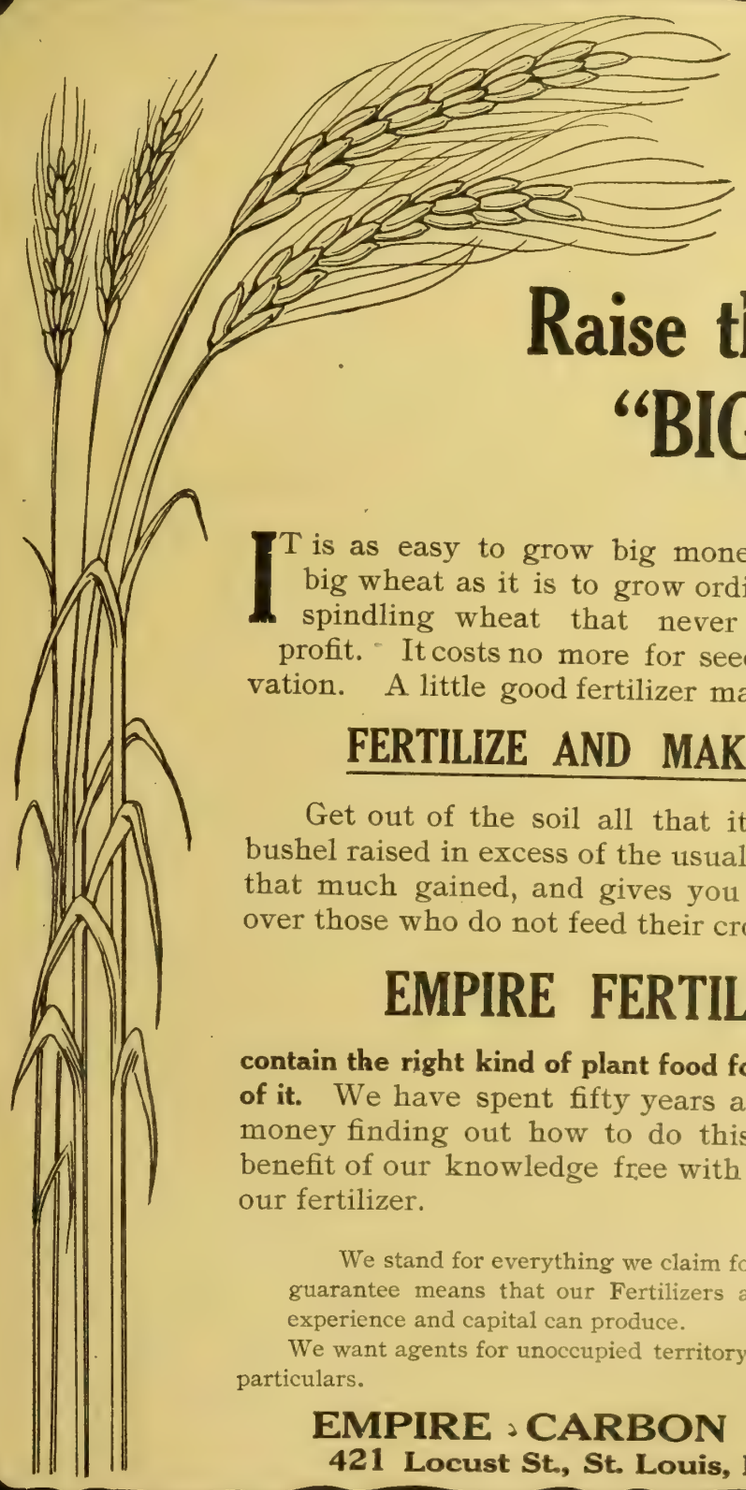
"His daughter?" replied the gentleman. "What do you mean?"

"Why, Miss Fortune."—Flashlight.

A Cross For a Bite.

Gabe—"What? Are you going back to that place for this summer? Why, last year it was all mosquitoes and no fishing."

Steve—"The owner tells me that he has crossed the mosquitoes with the fish, and guarantees a bite every second."—Cincinnati Enquirer.



Raise the "BIG" Wheat

IT is as easy to grow big money-making crops of big wheat as it is to grow ordinary crops of small spindling wheat that never pay anybody any profit. It costs no more for seed, planting or cultivation. A little good fertilizer makes the difference.

FERTILIZE AND MAKE MONEY

Get out of the soil all that it can bear. Every bushel raised in excess of the usual production means that much gained, and gives you a great advantage over those who do not feed their crops.

EMPIRE FERTILIZERS

contain the right kind of plant food for wheat, and plenty of it. We have spent fifty years and a great deal of money finding out how to do this, and you get the benefit of our knowledge free with every purchase of our fertilizer.

We stand for everything we claim for our Fertilizers. Our guarantee means that our Fertilizers are the best that skill, experience and capital can produce.

We want agents for unoccupied territory. Write us at once for particulars.

The Book of a Thousand Champions in Live Stock.

The Honorable Uncle Piper, subscription manager of The National Farmer and Stock Grower, is not often allowed to break into the reading columns of the paper, but he insists upon doing so this month. He was in the office the other day and remarked that the new Book of Live Stock Champions makes him laugh. A man who reads about the book on page 23 may not become excited over it and rush madly to the postoffice to send an order for the book, but Uncle Piper says that whenever a stockman who is a true stockman gets his hand on the book, when he sees the beautiful blue cover, the gilt title, the 352 pages, the 750 illustrations, the thousand champions, and when he has become interested, it is impossible to take it away—the stockman will rather pay one great, big, hard-earned or one easily-earned dollar, as the case may be, and hold onto the book. "Why," said Uncle Piper, "the book is as fat as a butcher hog and it looks like a picture show. Everybody's buying it and can't do without it." The draft-horse man thinks it is a draft-horse book; the dairy-cattle raiser knows it is a dairy book; the Hackney horse breeder has never seen so many Hackneys before; the hog raiser takes it as a hog book; the sheep raiser has an idea it was published for his special benefit. There are more pictures of Shorthorn champions than in the Shorthorn Herd Book; there are sections full of Herefords and all other cattle breeds, and a French horse breeder wires from Paris: "Send me twenty of the Percheron champion books." The first order after publication was for six copies for the Porto Rico University, followed by six copies for the State Agricultural School of Kansas. Dr. Wm. Rommel, Chief of the Animal Husbandry Department, Bureau of Animal Industry, Washington, D. C., said: "I think the book is improving with each succeeding edition." Mr. F. D. Coburn, author of the great book "Alfalfa" and the great authority on Swine Husbandry, writes: "I wish I could help you sell a million." Wherever one copy of the Book of Live Stock Champions is seen it is greatly admired. We have many letters from stockmen who ordered the book in advance of publication, saying: "We are recommending this book to our friends." It is the highest compliment that can be paid the book, and we are thankful for all such recommendations. See page 23.

Uncle Piper.

The people of the United States are very hard up, owing to the high cost of living, but they managed to buy European luxuries in one year to the amount of two hundred millions of dollars. Let us hope that the people will have enough money left to buy bread.

Scrub Cows and Scrub Separators.

A young man who has a dairy farm in Central Illinois remarked recently that he had reduced his herd of milking cows from forty-five to thirty-six. He said he had profited by a careful examination of each cow's performance on a good ration of feed. "Now," said a man standing by, "maybe you have a scrub separator." "No," said the dairyman, "the only way to be absolutely safe is to own a 'De Laval,' and I have one of the latest and it is absolute perfection." A chapter on scrub cream separators being as unprofitable as scrub cows will be found on page 11.

More Money in Beans.

One of the most remarkable conditions of agriculture in the United States is that the systematic growing of white beans, the navy beans of commerce, is confined to three states. During the census year California produced 3,323,608 bushels; Michigan produced 5,282,511 bushels, and New York state produced 1,681,506 bushels, and all the other states combined raise very few over a quarter of a million bushels.

This is the more remarkable since it is a very profitable crop, and no doubt in Ohio, Indiana, Illinois and Wisconsin, as well as in Michigan, beans can be raised profitably, and in New Jersey and Pennsylvania as well as in New York. States which have successfully started growing beans are Arizona, Florida, Maine, New Hampshire, New Mexico and Vermont.

The bean is coming so much into general use that it is becoming a bonanza crop. On June 1st, the St. Louis market quotes beans at $2.90 to $3.05 per bushel, wholesale, and it is estimated there are very nearly as many bushels in a crop of beans as in a crop of corn on the same farm. The beans are harvested differently, but the machinery is fully up-to-date. In fact, it is ahead of the crop.

The domestic crop of beans—in excess of 10,000,000 bushels annually—has been proved entirely insufficient for home consumption. Large quantities are imported every year.

Considering the nationally wide popularity of beans as an article of food—a popularity that is constantly growing, largely through the great advertising campaigns of the big canning industries—it is easy to see why farmers have made a mistake in not turning their attention more closely to bean culture long ago.

Authorities tell us that any soil that will grow wheat and corn is adapted to the profitable production of beans.

A common rotation for large bean growing sections is clover, beans, and wheat. Bean experts recommend plowing not less than six inches to prepare the soil for beans. As to the planting time, it is a wise rule to wait till the soil is thoroughly warmed. Cold ground is death to the success of a good many beans.

The planting time recommended by the most successful bean growers of New York and Michigan is between June 5th and June 20th. The time, of course, depends entirely upon geographical location and the condition of the ground.

The United States Department of Agriculture has contributed literature towards the industry. In the Year Book of 1911 there is an article showing how to handle horse labor and man labor on a New York potato and bean farm. In the article it says: "Both are crops that yield better than average returns."

There is also a Farmers' Bulletin, No. 121, entitled "Beans as Food." We advise our readers to consider if they have not a few acres to devote to a crop of beans and to write at once to the United States Department of Agriculture, Washington, D. C., for all literature on the subject of "Beans as Food."

Raw Rock Phosphate.

Raw rock phosphate is being ground and sold as a fertilizer, and farmers are buying it because it is supposed to be valuable and cheap. So far as we have been able to ascertain, raw rock phosphate has absolutely no value as a fertilizer until the fertilizer material is made available by a chemical process, and that is an expensive process.

We have seen claims advanced, and have the claims before us, that raw rock phosphate is worth $30.00 per ton to a farmer.

We have seen, and have before us, the assertion that rock phosphate is credited with causing a gain of 34½ bushels per acre of wheat on an Illinois farm. We have before us the advertisement stating that the "final measure of phosphate rock is the unit cost of 'available,'" and yet we still stick to the original opinion.

In our opinion, as first formed, the unit value of phosphate rock as fertilizing material is nominal; that it is not available as plant food; the farmer has no available means to turn it into plant food. The farmer can spend ten dollars an acre upon raw rock phosphate and apply it to his land with barn-yard manure and turned under with green crops which are worth more, pound for pound, than the rock phosphate, and all the farmer will receive in return within the next ten or fifteen years will be what the green crops and barn-yard manure and his better cultivation will do for him without the raw rock phosphate, be it ground or unground.

The sale of rock phosphate in its raw state has been going on long enough, and such immense quantities have been sold in Illinois that in the matter of corn, wheat, oats and barley there ought to be some visible gains to attribute to it. Some few individual acres may be brought in evidence, but our lookout is for something more tangible. Improvements in cultural methods, better implements, legumes in rotations, differences in seasons, will account for any showing claimed for raw rock phosphate as a fertilizer.

Illinois is not such an old agricultural state as to be thoroughly worn out. It has had the advantage of being a first-class dairy and stock-raising state. Under modern conditions of agriculture Illinois stacks up as one of the best farming states in the Union, and if raw rock phosphate had any influence on Illinois crops there is no year in which it ought to have shown better than last year.

The United States Department of Agriculture bunches Illinois, Ohio, Indiana, Michigan and Wisconsin as being in the same range. Last year Illinois averaged 33 bushels of corn; Ohio, 38.6; Indiana, 36; Michigan, 33; and Wisconsin, 36.3 bushels to the acre.

Last year Illinois averaged 16 bushels of wheat to the acre; Ohio, 16; Indiana, 14.7; Michigan, 18; and Wisconsin, 15. Last year was a bad year for wheat growers.

Last year Illinois raised 28.8 bushels of oats per acre; Ohio, 32.1; Indiana, 28.7; Michigan, 28.6; and Wisconsin, 29.8.

Last year Illinois produced an average of 28 bushels of barley to the acre; Ohio, 27.2; Indiana, 26.5; Michigan, 24; and Wisconsin, 25.5.

We have referred to the figures which appear in the Year Book of the Department of Agriculture and we see no light therein that indicates any proof that the immense quantity of raw rock phosphate that has been dumped on Illinois soil has done any good.

We wish it were otherwise; if the immense deposits of raw rock phosphate were available as plant food, it would be a great help to agriculture, because if no treatment other than grinding was necessary it ought to be very cheap; but the Creator of the world probably intended the raw rock phosphate of the present day to be the plant food of a century yet to come for the benefit of farmers yet unborn, and that is the reason very much fertilizer material in the soil which can be ascertained by analysis as being there is not as quickly available as we would like it to be. The fertilizer subject is a very difficult one to handle, and we find that soil experts do not always agree, although we would like them to do so. At the same time they agree without exception that raw rock phosphate, standing alone, is worthless as a fertilizer.

"The man who is his own worst enemy carries on the fight to the bitter end."—Puck.

WATERLOO BOY
POWER
The Waterloo Boy is built of the best material throughout. It is so simple a 10-year-old boy can run it. Starts easy in any weather; always dependable. Will develop more power for its rating, at less cost, than any other engine.
Has reliable fly-ball governor and fuel saving regulation; patent mixer does away with pump; patent igniter that never misses; lever to change speed while running. All parts interchangeable.
Write for Catalog.
WATERLOO GASOLINE ENGINE COMPANY.
228 W. 3rd Ave. Waterloo, Iowa.
Runs with either gasoline or kerosene.
5 YEAR GUARANTEE
FROST PROOF
LOW PRICE

SUBSCRIPTION PREMIUM — A POCKET COMPASS.

This is a true 1¾-inch Pocket Compass purchased from a reliable house. It is a fancy, nickel-plated, open-face, watch-shape Compass, with a silvered dial, and it weighs less than one ounce. Every farmer or ranchman should have one in his pocket. Send us One Dollar and we will send you The National Farmer and Stock Grower for one year, and we will also send you this Pocket Compass by mail postpaid. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

EVERLASTING WATERING TANKS.

How Stockmen Build Their Own Concrete Troughs.

Many farmers and stockmen want to know how to build their own concrete watering tanks and troughs. The method is easy and a tank is not expensive. To explain this, a horse and cattle tank is described below which holds thirty barrels of 31½ gallons each. If desired, smaller or larger troughs, round or square, may be built in exactly the same manner. Such tanks, well made, never crack, wear out or cause mndholes.

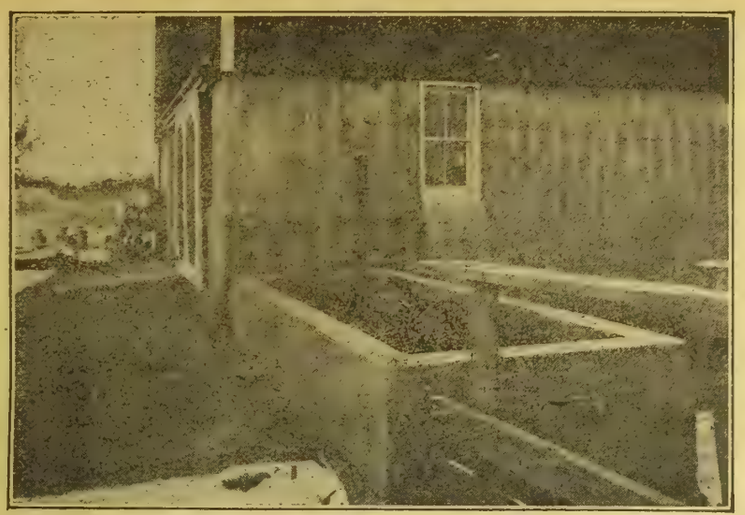
To build an oblong tank like the one shown in the picture, mark out the ground plan five by fourteen feet. Within these lines scrape away all trash and dig a foundation trench ten inches wide and two and one-half feet deep around the entire tank. Lay all inflow and overflow pipes (not less than one and one-half inches in diamter) so that the ends, fitted for connections, will be even with the finished bottom of the tank.

Before digging the foundation trench, build the forms and have all materials on hand. For forms use one-inch siding on two-by-four-inch uprights spaced two feet apart. The outside form is a bottomless box five feet wide by fourteen feet long, inside measurements. Make it three feet high to provide for a six-inch floor and a clear depth of two and one-half feet. The inside form must be narrower and shorter to make provision for walls five inches thick at the top and flaring to a thickness of eight inches at the bottom of the tank. When ice forms, this slope allows it to slip up the tank walls instead of pushing directly against them. The sides and ends of the forms may be made separate and put together in place; or, if there is sufficient help, each form may be entirely completed and set up as one piece. The forms are held in position by two-by-four-inch liners at top and bottom, and, if necessary, by sloping braces nailed to stakes driven in the ground. Cut strips of heavy woven wire fencing long enough to cover the bottom of the tank crosswise and to project up into the walls to within six inches of the top, and likewise a strip four feet longer than the inside length of the tanks.

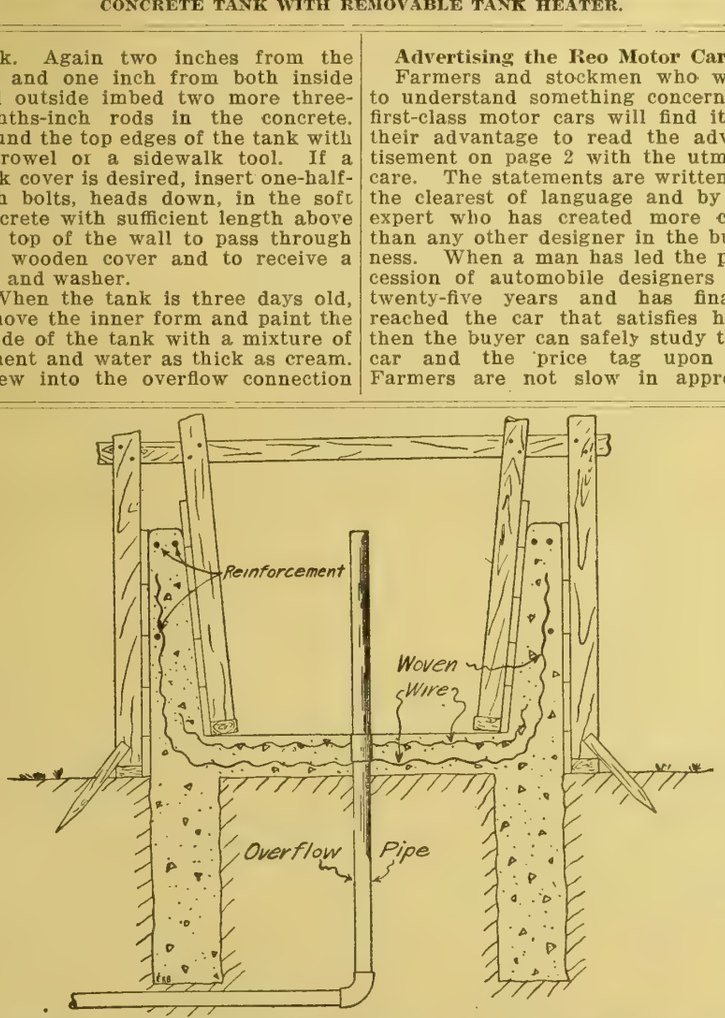
With the forms ready, mix the concrete one part Portland cement to two parts sand to four parts crushed rock. In measuring the materials, count one bag of cement equal to one cubic foot. If bank-run gravel is used, mix the concrete one part cement to four parts gravel. Fill the foundation trench with concrete. Set the outside form in place. See that it is level, so that the tank will be level and can be entirely filled with water. Lay the six-inch bottom reinforced one and one-half inches from the under side with the short lengths of woven wire crosswise and one and one-half inches from the upper side with the long strip of fencing. Bring up the extra length of wire so that the ends will project up into the future side-walls and can be fastened to the reinforcing rods. (This wire reinforcing in the bottom will prevent possible cracking due to heaving by frost.) Finish the surface of the bottom the same as for a sidewalk. Do not let concrete get into the inflow and overflow pipes.

With the bottom finished, immediately set the inside form in place and fill the wall space with concrete mushy wet. Half-way up the side, and one inch from the outside, lay a three-eighths-inch rod (or several hooked together) entirely around the tank. Again two inches from the top and one inch from both inside and outside imbed two more three-eighths-inch rods in the concrete. Round the top edges of the tank with a trowel or a sidewalk tool. If a tank cover is desired, insert one-half-inch bolts, heads down, in the soft concrete with sufficient length above the top of the wall to pass through the wooden cover and to receive a nut and washer.

When the tank is three days old, remove the inner form and paint the inside of the tank with a mixture of cement and water as thick as cream. Screw into the overflow connection the necessary length of overflow pipe. The tank may be used in ten days provided the outside form is left in place. If the outer form is removed at the same time as the inner, do not use the tank for two weeks.



CONCRETE TANK WITH REMOVABLE TANK HEATER.



CROSS-SECTION SHOWING FORMS AND TANK WITH REINFORCEMENT.

Bill of Materials.

Crushed rock, 6½ cubic yards at $1.10, $7.15; sand, 3¼ cubic yards, at $1.00, $3.25; Portland cement, 10½ barrels, at $2.50, $26.25; twelve rods, ⅜x10 inches, 45 pounds, at $0.02¼, $1.00; total, $37.65.

By getting prices from local dealers, the cost may be found to be less. Such a tank is by far the cheapest to be had, since it never needs repairs and never wears out.

Advertising the Reo Motor Car.

Farmers and stockmen who wish to understand something concerning first-class motor cars will find it to their advantage to read the advertisement on page 2 with the utmost care. The statements are written in the clearest of language and by an expert who has created more cars than any other designer in the business. When a man has led the procession of automobile designers for twenty-five years and has finally reached the car that satisfies him, then the buyer can safely study that car and the price tag upon it. Farmers are not slow in appreciating clean-cut statements with good reasons to support them, therefore we commend this advertising to their notice and recommend they mention The National Farmer and Stock Grower when writing for catalogue.

Large Sale of Mohair.

Late in April it was reported that C. D. Stokes, of Lampasas, had bought 250,000 pounds of spring mohair from the Wool Growers' Central Storage Company, of San Angelo. He paid from 28 cents to 34 cents per pound, a price better than the last fall prices. This is the first mohair to be sold in Texas, and represents almost the total spring clip of the San Angelo country. The clip was practically 90,000 pounds.

FARM AND RANCH LANDS.

FARM AND RANCH LANDS can be advertised effectively in The National Farmer and Stock Grower in small space at a reasonable price. The best land advertising in a general farm paper is classified and arranged by states. The National Farmer and Stock Grower will obtain for an advertiser more substantial inquiries in a ten-line advertisement than any other farm paper will give for five times the space or money. Send in your advertisement and let us quote you a price. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

ALABAMA.—2,240 acres fertile farm land. Thirty-three tenant houses. 900 acres fenced. Fine land for alfalfa, corn, cotton or cane. One-fourth mile from station. Buy from owner and save commissions. **D. Vaughan,** Catherine, Ala.

ARKANSAS FARMS.—We have for sale a large list of well-located farms, nice, level, land and fertile soil at $8.00 to $15.00 an acre. If interested, write us. **Ross & Moore,** Searcy, Ark.

FLORIDA.—Write for special summer price and terms. Don't wait until winter and high prices. One of the most choice tracts of land in Florida sold direct to you by the owner. GEORGIAN HEIGHTS, FLORIDA, is not the ordinary kind of land. It is better and more conveniently situated. Only fourteen miles west of Jacksonville. The Florida Railway runs through the center of GEORGIAN HEIGHTS. Two other railroads, good, hard-surface wagon roads and automobile highway all run into Jacksonville, which is the largest and best city in Florida. GEORGIAN HEIGHTS is one of the most desirable locations in the state. I will give you a valuable town lot free with each five-acre tract purchased. Easy terms by the owner, **J. T. George,** Wainwright Bldg., St. Louis, Mo.

MINNESOTA.—Farms for sale. Send for my list of CHOICE FARMS for sale, the best in the United States, considering location, terms, etc. Ask for my FREE BOOKLET, telling about the country, crops, markets, etc. **Geo. W. Elder,** McGinn Block, Thief River Falls, Minnesota.

MISSISSIPPI.—464 acres, Yazoo county, Mississippi. All rich, bottom land, on which a fine quality of long staple cotton is grown except 20 acres, which is upland. Entirely free from overflow and not dependent on levees. 320 acres in cultivation; one residence, plastered and ceiled; six tenant houses; good water and barn. $17.50 per acre.

MISSISSIPPI.—507 acres, Yazoo county, Mississippi; bottom and rolling upland; 275 acres in cultivation; 100 acres in pasture; eight tenant houses, all with wells and barns. $15 per acre.

MISSISSIPPI.—3,176 acres, Yazoo county, Mississippi; black soil, underlaid with clay; gently rolling upland. Handsome six-room residence, thirty tenant houses, four rooms each, ceiled and painted, and pasture, barn and well with each. Large three-stand gin plant, new machinery. 1,800 acres in cultivation; 150 acres meadow. Easily worth $20 per acre, but we are offering it for quick sale at $12 per acre.

The finest grade of blue ribbon sugar cane is grown on these places, yielding from 350 to 500 gallons of the finest molasses to the acre, and sells for 50 cents per gallon. Our farmers who make this syrup are unable to supply the demand. The cost of production is so small, it enables some to clear $100 to $200 per acre easily. A sample of this syrup will be mailed to interested parties upon request.

As the climate here is mild and the grazing season long, it is one of the finest stock-raising countries to be found.

All of these places are on the main line of the Illinois Central Railroad and close to good towns.

Write or call on **R. C. Jarnagin,** Goodman, Mississippi.

MISSISSIPPI.—800 acres of land, in one body, for sale, located 1½ miles from the I. C. Railroad, south of Corinth. Good soil—no rocks; plenty of timber. Price, $10.00 per acre. Fine place for settlement. Every ten acres would make a good truck and poultry farm. Address, **Owner,** care National Farmer and Stock Grower, St. Louis, Mo.

TEXAS.—We have for sale 5,502 acres in the famous Pecos Valley, near Pecos City, Texas. Shallow water belt; inexhaustible supply of water. This land lies in three tracts, but close together; three sets of houses, barns, wells, windmills, tanks, gardens, fruit trees, etc. All fenced and cross fenced. Schools, telephone, auto road. Dark chocolate loam. As fine land as the sun shines on for alfalfa, fruits, grapes and general crops. Ideal for dividing into small farms. Will sell in a body or in sections of 640 acres cheap for one-half cash, balance easy terms. Don't delay, if interested, as this land must be sold at once and is a real bargain. For full particulars address **Robt. H. Rinehart & Co.,** Box 98, El Paso, Texas.

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property FREE. **American Investment Association, 55 Palace Bldg., Minneapolis, Minn.**

I BRING BUYERS AND SELLERS TOGETHER. If you want to buy, sell or exchange a farm or business, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

The Laws of Breeding.

"There are two fundamental laws which underlie breeding. The first is, that like produces like; and the second, that variation is more or less spontaneous. The first law can only be said to apply to breeds whose members have been uniform in type for several generations; in other words, to animals of good pedigree. Every animal has a pedigree, but it only becomes a good pedigree when it can be shown that the animal's ancestors were possessed in a marked degree of the desired qualities of that particular breed, and his power to transmit his good qualities to his offspring will vary with the number of his ancestors who have had these qualities. It must also be borne in mind that bad qualities can be accumulated in a beast just as well as good ones."

The foregoing, which is taken from an unknown source, indicates what ought to be always kept in mind, which is, that those who are not breeding up are sure to be breeding down. There is no such thing as holding what there is in sight for long. You must go either forward or backward.

Holstein Milk and Butter Averages.

Holstein cows and heifers to the number of 268 head were tested seven consecutive days for the purpose of obtaining admission to the Advanced Register of the breed. Naturally. The reports were received in April of the present year.

This herd of 268 animals, of which over one-half were heifers with first or second calves, produced in seven consecutive days **110,220.9** pounds of milk containing **4,406.216** pounds of butter-fat, thus showing an average of 3.67 per cent. fat. The average production for each animal was **411.3** pounds of milk containing **15.098** pounds of butter-fat, equivalent to **58.76** pounds, or nearly **28** quarts of milk per day, and over **17.6** pounds of the best commercial butter per week. Seven gallons of milk a day, 3.67 per cent. fat, for 268 cows and heifers looks good against any feed bill that can be put up against it.

Myers' Sewing Awl.

Several thousand of Myers' Sewing Awls, advertised on page 14, have been sent out from this office as subscription premiums and we have had but one complaint. The fact is, the awl is perfect for the purposes intended. Those who receive the awl get it direct from the factory and are able to send for new needles, thread, etc., at any time it becomes necessary to do so and to receive them without delay.

"The talent of success is nothing more than doing what you can do well and doing well whatever you do without a thought of fame."—Longfellow.

PROFITABLE DAIRYING.

A very elegant, illustrated, cloth-bound book of 200 pages is called **Profitable Dairying.** It is all good, satisfactory reading matter relating to the successful management of the dairy business under all circumstances, including the management of the cows and construction of the barn. We have discovered this book lately and we find that there is a better demand for it than for all other dairy books combined. For one dollar we will send **The National Farmer and Stock Grower** for two years and we will send the book, **Profitable Dairying,** as a premium. Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

Growing Appreciation of Concrete.

The farm is unusual to-day which does not show at least one example of concrete construction among its buildings or equipment.

Those farmers whose profits are larger than those of others are practically sure to be users of concrete. In the past many have seemed to believe that this was because of their larger profits. Now most of us realize that the use of concrete is one of the reasons for these profits instead of a result of them.

The same principle lies behind permanent building, as behind crop rotation and other progressive ideas on the farm. The foresight which acknowledges the lessened value to the owner of a perishable building within a few years after erection also appreciates the final serious weakening of the soil by continuous single cropping.

The farmer who uses wood to-day for construction, because of a seeming lower cost, realizes that it is really only a makeshift at best and will end by costing more than concrete—much more.

It is certainly true that while this growing appreciation of the advantages of concrete construction about the home and on the farm is due in a large measure to the educational work done by the government, others should justly receive much credit.

The larger cement companies, aside from the purely business viewpoint, have done a great deal of thoughtful educational work by distributing text books explaining many practical uses of concrete on the farm.

For instance, the Atlas Company, which is the largest in the world, has sent out over one million, five hundred and sixty-seven thousand farm books. As they are books of over one hundred and fifty pages, not small pamphlets, one realizes their value to the farmer when really studied.

Of course, they have resulted in a largely-increased use of cement, but at the same time have clearly shown the user why and how such use actually benefited him quite as much or more than the producer.

Efforts like this to improve conditions, once understood, have the right to meet with sincere and hearty approval.

Be sure to read about the free book to farmers issued by the Atlas Portland Cement Company on page 15 of this issue.

Compresses For the Eye.

A specialist in the study of the eye recently made this statement to a patient who had an abscess on his eye and who remarked that it was impossible to get to the oculist sooner and in the meantime he had been bathing his eye with hot water.

"You could have done nothing better according to your knowledge of the case. If the water had been hotter and you had used it more frequently on your eye the abscess might not have formed. As it is, your treatment has probably saved the necessity of an operation. I can give you this generad advice to follow in case of any acute eye trouble: Whether it is a swelling, a soreness, an inflammation or a growth, alternating compresses of hot and cold water will tend to alleviate the trouble. Take an old, soft, white rag that is perfectly clean and which has not been laundered with strong soaps and chemicals, fold it several times, dip in hot water and hold it against the inflamed organ until the heat leaves the cloth. Repeat this at frequent intervals and occasionally try the same treatment with very cold water instead of the hot. Destroy each cloth used in each treatment, as there is always a possibility of infection. These applications will do no harm, and they may do a vast amount of good. But most emphatically do I say, never use any kind of medicine in the eye unless it has been prescribed for your particular case by a competent oculist.—Janet Thomas Van Osdel.

A Volcano That Became a Lake.

Unique among the natural wonders of America is the lake in Crater Lake National Park in Oregon, which is described in a publication entitled "Geological History of Crater Lake," just issued by the Department of the Interior. The traveler who, from the rocky rim of the lake, looks across its limpid waters to the cliffs beyond, stands where once the molten lava of Mount Mazama boiled and seethed in its efforts to find an outlet, for Crater Lake is all that remains of a great volcano that ages ago reared its lofty summit high above the crest of the Cascade Range.

Before the Cascade Range existed the region now included in the state of Oregon was a great lava plateau that extended from the Rocky Mountains to the present Coast Range. Gradually mountain-making forces became operative; the surface of the plateau was arched and there rose the great mountain system which is now known as the Cascade Range. With the hardening of the crust the centers of eruptions became fewer until they were confined to a few high mountains that were built up by the flows of molten lava. In this way were created Hood, Rainier and Mazama, from whose sides and lofty summits streams of lava poured across a desolate land. Hood and Rainier still lift their snowy caps to the clouds and fling a defiant challenge to the mountaineer to scale their steep, ice-covered slopes. Mazama alone is gone, engulfed in the earth from which it came. In what is left of its caldera lies Crater Lake.

Mount Mazama in its prime rose to a height of over 14,000 feet above the sea. Mount Scott, which towers above Crater Lake on the east, was only a minor cone on the slope of Mount Mazama. The portion of the mountain that has been destroyed was equal in size to Mount Washington, in New Hampshire, and had a volume of seventeen cubic miles.

From the crest of the rim surrounding the lake the traveler beholds twenty miles of unbroken cliffs, which range from 500 to nearly 2,000 feet in height. The clear waters of the lake reflect the vivid colors of the surrounding walls, and, whether in the soft glow of early morning, in the glare of the noonday sun or in the rosy hues of the dying day, the view is one of awe-inspiring grandeur and beauty.

This publication contains a detailed account of the formation of this wonderful work of nature. It is well illustrated by photographs and is written in non-technical language so that it may be readily understood by the reader who has not the advantage of scientific training.

WHITMAN'S Steel Queen Hay Press
40 Years the Standard

Finest in the World

Strongest, Most Durable, Most Economical and Simplest Hay Press made—best work—greatest capacity—saves time, labor, trouble—exclusive features not in others. Fully guaranteed. Hand, Horse, Belt and Gasoline Engine Presses—also largest line of Bailers—write for free catalog.

Guernsey Cattle Club.

The Annual Meeting of the American Guernsey Cattle Club was held recently in New York City, and the reports of the year's business showed that the interests of the Guernseys were in a most flourishing condition.

A year ago the work of this club showed a gain of 97½ per cent. in two years. The reports of the work this year showed that there had been a gain over this increase of 39½ per cent. There was a gain in the number of bulls registered of 507, of cows, 1,030, while there have been 1,423 more transfers recorded than a year ago. This shows practically a gain of over 20 per cent. in the year.

The number of Guernseys imported in the year, including those in quarantine at the present time, are 975, or 157 more than were imported a year ago.

The reports of the Treasurer show that the total receipts of the year have been $59,400.32; that there were received for fees alone $5,590, or 23 per cent. more than a year ago. The expenditures for the year amounted to $57,383.34, leaving a cash balance of $2,016.98. This, with the amount of invested funds, $1,624.63, together with the inventory, showed that the present resources of the club amount to $26,499.81.

During the year the rapid growth has forced the club to seek larger office accommodations and add somewhat to the force. The club have purchased and fitted up a building for their own use in Peterborough, N. H., where the club has been located for the past eighteen years. Thirty-five new members have joined the club during the year, and there were four deaths reported. This leaves an active membership of 359.

The Advanced Register has grown materially during the year. There are now 786 cows under test, representing 122 breeders. During the year 132 bulls and 1,673 cows, with 121 registrations, have been placed in this Register. During the year the cow, Spotswood's Daisy Pearl, 17,696, has gone to the head of the Advanced Register with an official record of 18,602.80 pounds milk and 957.38 pounds butter-fat. There were also many other very meritorious records made.

The following officers were elected at the Annual Meeting: President, Charles L. Hill. Rosendale, Wis.; Vice-Presidents, Ezra Michener, Michener, Pa.; Gov. W. D. Hoard, Fort Atkinson, Wis.; Secretary and Treasurer, William H. Caldwell, Peterboro, N. H. Members of the Executive Committee — Robert Scoville, Chapinville, Conn.; F. Lothrop Ames, North Easton, Mass.; M. T. Phillips, Pomeroy, Pa.; Howard B. Tuttle, Naugatuck, Conn.; James Logan Fisher, Philadelphia, Pa.; S. M. Shoemaker, Eccleston, Md.; W. W. Marsh, Waterloo, Iowa; E. T. Gill, Haddonfield, N. J.; F. G. Benham, Canandaigua, N. Y.

The rules and regulations of the Advanced Register were revised and the club voted to hold a fall meeting and Guernsey Breeders' Convention in Chicago at the time of the National Dairy Show.

A Good Case For Cheese as Food.

While so much is being said and written about the high cost of foodstuffs, it is well to remember that the housekeeper who has the most knowledge of the materials with which she works and the most skill in applying her knowledge is the one who can make the money at her disposal go the farthest.

The cheaper cuts of meat are as nutritious, and, when well cooked, are as palatable as the more expensive cuts. If she wishes to use something in place of meat, she has fish—fresh and cured—milk, eggs, beans, peas and similar legumes; nuts, if they are relished; and last, but very important from the standpoint of its food value, palatability, and the great number of ways in which it can be used—cheese.

The ways in which these substitutes for meat can be served are numerous and varied. Individual taste and food habits are to be considered, but, in general, it is true that the relish with which other dishes are accepted in place of meat depends upon the ingenuity and skill of the cook. It seems a foundation principle that as meat is a savory dish, any acceptable substitute for it must be savory, or must be made so by suitable seasoning and proper cooking.

Those who wish to make substitutions of these foods for meat often desire to know how much of each is necessary in order to replace a given amount of meat. If we consider only the protein of the meat, the following general statement may be made: 2½ quarts milk, 1½ pounds fresh lean fish, three-fourths pound dried fish, two-thirds pound ordinary cheese, somewhat less than a pound of mixed nut meats, nine eggs, one-half pound shelled peanuts, or two-thirds pint dry beans, peas, cowpeas, or lentils, is equal to a pound of beef of average composition.

It will be seen that two-thirds of a pound of cheese contains as large an amount of what laymen call "the muscle-forming" materials, as one pound of beef of average composition. According to abundant analyses, cheese compares even more favorably with meat if its fuel value instead of its percentage of protein is taken into consideration, for one-half of a pound of ordinary cheese yields as much energy as a pound of beef of average composition.

If the housekeeper wishes to know how to make several sorts of macaroni and cheese, Boston roast, baked eggs with cheese, and a large number of other cheese dishes which are palatable as well as nutritious, she can find out by sending to the Secretary of Agriculture, to a Representative in Congress, or to a Senator, for a copy of Farmers' Bulletin 487, "Cheese and Its Economical Use in the Diet," which has been called "Uncle Sam's Welsh Rabbit Book."

Taken as a whole, the bulletin makes out a good case for cheese. It should be helpful to those who for any reason wish to use cheese in greater quantities in their diet. Since it shows, on the basis of many experiments, that cheese is not to be regarded as a cause of physiological disturbance with the average healthy person, it should remove any prejudice which may have been entertained regarding the desirability of eating cheese in quantity.

Canadian Butter in New York.

The New York Produce Review and American Creamery of May 8th said: "New York was so short of butter early last week that one or two operators bought some fresh goods in Canada and hurried them in here by express. In all about 600 boxes arrived. Of these 400 boxes were purchased by G. W. Martin & Bro. for the Great Atlantic and Pacific Tea Co., and 200 boxes came to another party. It is understood that the butter was bought in Montreal at a cost of 26 cents. The duty is 6 cents a pound and express charges 1 cent, which made the cost delivered in New York 33 cents. Part of the stock arrived in time to show a little profit, and the balance got here too late for satisfactory sale. The feature of interest in connection with the deal is that we should have to go to Canada for supplies so late in the season."

Mean Milk Competition.

A correspondent of the New York Produce Review states that in Freiburg, Germany, the competition among the milk dealers is not only lively but mean in the highest degree. Lately the manager of the Milk Dealers' Association was caught adding rennet extract to the cans belonging to a co-operative milk shippers' association, while they were at the railroad depot.

DAIRY AND CREAMERY NOTES.

During the middle of May the New York milk shippers were netting 3¼ cents a quart, and it cost the dealers $1.61 for each ten-gallon can delivered in New York City.

On December 2d, 1910, Anthony P. Ahrens sold a creamery at Westphalia, Mich., and in consideration of the amount paid agreed to not engage in the dairy business there again; but he changed his mind and started an opposition, which, after trial, the law courts made him close up.

Eastern dealers were surprised this spring by the unusual fluctuations in the price of butter. Some of the changes were considered demoralizing. For instance, a five-cent decline in one week was a pretty strong change to take place, as it did, early in May. One day the finest grades sold at thirty-five cents a pound and three days later the highest price was thirty-one cents. May as a rule, is not a high time in butter, it being a month when supplies usually increase.

As a producer of butter made on the farm as distinct from butter made at creameries, the state of Texas comes first with 65,000,000 pounds, followed by Ohio with 63,569,000; then Pennsylvania, 61,158,000; Michigan, 50,405,000; Illinois, 46,610,000; Indiana, 43,182,000.

A new moisture test for butter is described in Bulletin No. 220 of the College of Agriculture of the University of Wisconsin, prepared by Prof. G. H. Benkendorf. The apparatus needed for the new test is very simple in construction, and only five minutes is required for heating the butter in making the test.

A Page to Look Up.

Be sure to look up page 23 and read about the magnificent Book of Live Stock Champions, which is just issued from the bindery.

"Scrub" Cream Separators as Unprofitable as "Scrub" Cows

This is the good advice one of the big and long experienced Western cream buying concerns gives to its farm separator patrons, being taken from a letter to one of them.

"We believe the DE LAVAL is the best separator made. We feel that anyone wishing to purchase a separator makes a great mistake unless he purchases the best machine on the market. No one can make a success of dairying by continuing to use scrub cows. Neither can he make a success of dairying by using scrub separators."

There couldn't well be a more simple, comprehensive and forceful statement of the whole cream separator proposition than this. It's just plain common sense.

LIVE STOCK BREEDING.

Address by W. J. Kennedy, Iowa State College, Before the Interstate Breeders' Association, Sioux City, Iowa, 1912.

This is a day and age of agricultural development. People, in all vocations of life, are manifesting an unusual interest in the farm and its products. This is as it should be. Every human being is more or less dependent upon the farm. We can never give too much attention to the study of agriculture. From a humane standpoint it is necessary. Before the middle of the twentieth century the farmers of this country will be called upon to feed at least one hundred and fifty millions of people. This problem can only be solved by a more intensified form of agriculture.

As an American people, we are a nation of meat eaters, not vegetarians. This being true, we must not neglect our live stock industry. It is up to us to produce the beef, pork and mutton products demanded by our people. In the past this has not been a difficult problem. In the future it is going to require business methods on the part of the producer. Both the land and feeding stuffs used are sure to be higher in price. The finished product cannot go much higher. This means either more pounds of edible meat from a given amount of food fed the animal, or a loss to the producer. This can only be secured through a more careful and intelligent system of breeding and selecting domestic animals. The "scrub" animal, whether pedigreed or not, must be obliterated.

There always has been and I believe there always will be in our agriculture a place for each and every class of live stock. We must have horses, beef cattle, dairy cattle, sheep and swine. To the man who breeds the right kind of animals of any one of the above-mentioned classes will always find his work both useful to the community and profitable from his own standpoint. We need them all in our farming operations. Some will succeed with one class of stock and make a failure with another, and vice versa. The real secret of success in any line of work depends a great deal upon the amount of individual attention given it. The amount of enthusiasm and interest which any particular individual will give to any line of work will always be governed very largely by his own likes or dislikes for the same. This being true, each man had best select and breed the class of stock which appeals to him most strongly. Where such a system is adopted success usually follows.

For over twenty years I have studied carefully the methods pursued by breeders of live stock, both the successful and the unsuccessful. The former are comparatively few in number compared with the latter. It has been my good fortune to have had the opportunity of observing the methods pursued on the best farms in the United States, Canada, and eleven different European countries. I am frank to say that in no other line of work is a well-defined purpose so necessary as in the successful feeding of live stock. Each and every one of our present-day breeds of live stock was brought up to its very highest degree of excellence by the sheer determination to carry out a well-defined purpose on the part of some two or three men. It is true that hundreds and thousands of men were breeding, but only two or three in each instance really succeeded. Why did the others fail? Simply because they were like the man walking slowly along the public highway, and, when stopped by a stranger who asked him: "Where are you going?" and his reply was: "I don't know, but I am on my way." It is just so with a great many breeders of stock; they don't know where they are going, but they are on the way, too often on the road to failure.

No man ever has succeeded and no man ever will succeed for any length of time in breeding live stock who does not have as his slogan that one word **Utility.** Almost a century ago, Amos Cruickshank, "the herdsman of Aberdeenshire," said that "the real test of value in beef cattle is their ability to turn straw, turnips and cake into pounds, shillings and pence at a profit." When ridiculed by his fellow-breeders because he overlooked fashionable pedigrees and color markings, he replied that the only question in his mind was: "What is best for our country, our agriculture and our people?" It would be a Godsend to our American live stock interests if we had to-day a thousand Amos Cruickshanks, so that we might put one in each of the thousand counties which constitute our corn belt states. The useful animal has always been a money-maker and will continue to be so in the future.

No man ever has succeeded and no man ever will succeed for any length of time in breeding live stock who attaches his kite to "faddism." We do not need to mention any one particular individual to demonstrate the folly of such work. There is hardly a country, in any live stock section of this country or any other country, which has not anywhere from one to twenty men who have clearly demonstrated that "faddism" is always a forerunner of failure. By "faddism" I refer to the tendency on the part of many men to disregard the really useful features on an animal and go to the extreme on certain blood lines, color markings, shape of ear, head, etc. I do not wish to be understood as being opposed to beauty of form, color or general appearance; I am not. In fact, I always like to see the same when combined with the utility points. But if I had to sacrifice something in selecting a breeding animal it would be the fancy points and not those which indicate individual utility.

The longer I study and handle live stock the more I am convinced that the first and most important point to be observed in all meat and milk-producing animals is a good middle. The signs of constitution and digestive capacity present their most visible manifestations in the body and not in the extremities. The animal is simply a machine to convert feed into more edible products, such as meat and milk. Its capacity is governed almost solely by the size of the middle. These are points which mean dollars and cents to every man who handles live stock.

We must pay more attention to the question of size and vigor in our animals. Size always has and always will be a vital point. It is usually associated with heavy and economical gains. Vigor is absolutely essential. It is associated with heavy gains and also helps to safeguard the animal in time of disease outbreaks. One of the chief causes for deterioration in both size and vigor of our animals is the use of immature sires and dams for breeding purposes. While both sire and dam exert an influence, it has been clearly proven that the immature dam is the most detrimental to progeny. The continued use of immature sires and dams, especially where corn rations are fed, will seriously reduce both the size and vigor of any breed or class of live stock. Anything which lessens the size and vigor of the animal renders it less profitable on high-priced land. Too much attention cannot be given to the importance of selecting breeding stock from mature parents. In this way, and only in this way, can we retain size and vigor in our herds and flocks.

The man who succeeds in breeding draft horses must ever keep in mind size, quality, feet, legs and action. These are all utility points. The markets demand horses weighing 1,700 pounds and upwards, that have good body conformation, large feet of good texture, strong, clean bone, large, sound joints, heavy muscular development combined with good, straight, snappy action. Such horses command high prices and are very scarce. The statistics for the year 1911 show that only one horse out of every twenty sold at our leading horse markets filled the bill. This is surely a good line of work to pursue for many years to come. The vast majority of our farmers make a serious mistake when they sell their good draft mares to go to the cities. A good draft mare is worth twice as much on any farm, if she is used for work and breeding purposes, as she will sell for in any market. Only mares of good weight, body conformation and absolutely sound should be retained for breeding purposes. It is very important that the stallion used should be sound, drafty, stand well on his feet and legs, short and straight in his back, heavily muscled and show good disposition as indicated by width and flatness of head between the eyes. Avoid unsound, small-footed, light-boned, crooked-legged or shallow-bodied stallions.

The profitable beef animal of the future must have size, large heart girth and middle, giving him constitution and capacity. He must also be low set, staight in his lines, back and loin and carry a good covering of natural flesh over these parts. The head must be short and wide between the eyes, the neck short and shoulders smooth on the sides and wide on top. Width on the top of the shoulders goes with good fleshing properties throughout. The hide should be soft and pliable. These are all utility points. We must ever keep the block type in mind, because the block is the ultimate end of all beef cattle.

In selecting dairy cattle, it is always difficult to judge accurately with the eye. The real test must be the weight scales and the Babcock tester. The cow is a machine to convert food into milk; thus she must have a large middle and a strong constitution to insure best results. She must also have a large udder, large milk wells, large, crooked milk veins and good-sized teats. Her head should be lean and angular in appearance, with the eyes standing out prominently. The neck should be rather long and lean in appearance, the shoulders pointed and the backbone rather prominent. The skin should be loose and soft to the touch. In selecting herd bulls, either mature animals which have already demonstrated their worth as sires or younger animals from high testing dams and sires only should be used. Remember that the best and surest results will always follow the use of a mature sire which has sired heifers with good records. A good dairy bull should be kept until he is twelve or fifteen years old; in fact, as long as he is a sure sire. Real good sires are so rare that when we do find one he should die only of old age. All breeders of dairy cattle should secure yearly tests on each and every cow in the herd. Shorter tests do not really mean very much. It is the cow that stays by her job that is really valuable.

Few lines of work offer greater financial returns for the capital invested than a good flock of breeding sheep. This is especially true when good mutton conformation is combined with a long, dense, fine fleece. The question of constitution is very important in sheep. In selecting rams, blockiness, low-setness, wide backs, loins and heavy, well-filled hind quarters should always be demanded. The head should be broad and masculine in appearance, the neck short and the shoulder broad and compact. The legs should be short and straight, especially at the hocks. The skin should be pink in color, and the fleece long, dense, fine and uniform on all parts of the body. Too much attention cannot be given the importance of density of fleece. It insures a heavier clip of wool, protects the sheep from rain, snow and cold weather and also sheds chaff and other foreign material so detrimental to the wool.

Breeders of hogs will do well to pay more attention to the utility end of the business and much less to the fad end as illustrated by the pedigree craze, shape of head, ear, nose, dish of face, etc. The one great need to-day in the hog business is a hog with size, quality and prolificacy combined with early maturity. Such a hog is best described as the kind that never lies to the assessor; that is, he is born after the assessor is around this year and marketed weighing three hundred pounds before the assessor comes back next year. Some such hogs may be found in almost any of the well-known breeds. With careful selection and judicious mating it is surprising how rapidly this type can be revived. In addition to the evil results of "faddism," the exclusive use of a corn diet and the policy of breeding from immature sires and dams have been detrimental, both from the standpoint of size and prolificacy. It is safe to say that over seventy-five per cent. of all the sires and dams used in the state of Iowa are under one year of age. It has been clearly proven by experimental work that pigs from young sows are inferior in every way to those from mature sows. The continued use of young sires and dams, especially

when associated with corn feeding, will cause marked deterioration in any breed of swine.

In selecting breeding swine, attention must be given to size, quality, strength of bone, evenness of fleshing and the use of more mature boars and sows. All pigs intended for breeding purposes should be selected from well-developed, mature sows. If the sires are mature animals, so much the better. These pigs should be fed on rations calculated to produce bone and muscle, not fat alone. In this way we could materially improve our swine herds without changing breeds.

In conclusion, I wish to once more emphasize the importance of utility in all classes of stock. Beware of "faddism" in any of its various forms. Demand masculinity in the sires and femininity in the dams. Also remember that the best results can only be obtained where careful selection is combined with intelligent mating and the proper feeding and management of the animals.

DISTEMPER AND INFLUENZA.

These are different names applied to a chain of symptoms which have many conditions in common and are attended in a greater or less degree by fever, dullness, loss of appetite, sore throat, discharge from the nostrils, quickened pulse and depression of strength. The diseases are most common in the spring, when the horse is shedding his coat, although they may occur at any season. They may develop in a few hours, last for weeks, or months, or again they may develop into chronic difficulties. A remedy is needed that will destroy the germs of these diseases. Frazier's Liquid Distemper Cure acts on the blood and destroys all germs. This remedy is guaranteed to cure and prevent distemper, shipping fever, influenza, pink-eye, coughs and colds. If you cannot procure it from your druggist, write the manufacturers, Binkley Medical Company, Dept. H, Nappanee, Ind., and send for their horse book.

D. O. Lively, Chief of Live Stock.

Our congratulations are extended to the Panama-Pacific Exposition in the appointment of Mr. D. O. Lively as Chief of the Live Stock Department.

Mr. Lively is a man of varied experience, from his initial Live Stock Show at Fort Worth, Texas, to the Vice-Presidency of the Portland Stock Yards. His ability has been fully demonstrated on the Pacific Coast, so much so that all the breeders there united to seek his appointment. Mr. Lively will not disappoint either the Fair Management or the breeders. Not only will there be a magnificent display of live stock at the Panama-Pacific Exposition, it will be so superior that the whole world will turn out to see it and so far as possible to be in it and a part of it.

We also understand that Colonel Charles F. Mills, able Chief of Live Stock at the St. Louis World's Fair and practical Manager of the Chicago World's Fair Live Stock Exhibit, has accepted an advisory capacity with Mr. Lively, and this is evidence, so far as it goes, that there will be an achievement in the form of Live Stock Exposition that will bring an exhibit together worthy of the last great Exposition to be held these many years.

The Two Concrete Books.

We sell a cement book that is well worth buying, as will be seen on page 5; but there is another book which is on the same subject, and it is sent absolutely free. It is entitled "Concrete Construction About the Home and on the Farm." It is not a catalogue; it is an illustrated, instructive book whereby you first learn to do little things with concrete and then greater and still greater as you get better posted. Write the Atlas Portland Cement Co., Dept. 165, 30 Broad street, New York, and ask for the free Cement Book. You will get it and you will find it very satisfactory.

It is reported that the Gravois Farmers' Club, an organization in St. Louis county, Missouri, with 150 members, intends erecting a ten-thousand-dollar club house on a tract of three acres near the old Grant farm. Mr. Fred Meister is President of the club; C. M. Treul, Vice-President; Charles Merckel, Secretary; J. C. Ruder, Treasurer; and Henry Kettler, Sergeant-at-arms.

BLOODED STOCK NOTES.

Mr. A. F. Siefker, Defiance, Mo., has an advertisement in the breeders' columns relating to his leading strains of Poland-Chinas. He mentions the great families represented in his herd, which make a splendid exhibit. Defiance, Mo., is in St. Charles county, a little way out from St. Louis, on the M., K. & T. Railway. Shipping facilities are good for any railroad point in the country.

Sidney B. Smith, of Springfield, Ill., Sale Manager, will hold a combination sale at the Union Stock Yards, Chicago, June 18, 19 and 20. The offerings will consist of Aberdeen-Angus, Herefords and Shorthorns. Mr. Smith is handling superior cattle and holds successful sales.

During the month of May, Messrs. Trumans' Pioneer Stud Farm, Bushnell, Ill., sold Shire horses as follows: To St. Marye Horse Company of Hancock county, Illinois, imported Shire stallion; to Omer D. Thornton, of Vermillion county, Illinois, an imported Shire stallion; to Cal.Walker, of Mahaska county, Iowa, an imported Shire stallion; to J. M. Springer, of Wyoming, a Shire stallion; to R. B. Brandon, of Hancock county, Illinois, an imported Shire stallion; to A. Simonson, of Nebraska, a Shire stallion; to Alf. Roberts, of Fayette county, Iowa, an imported Shire and also an imported Hackney stallion. Earl Bloom, of Adair county, Iowa, one of the leading Shire horse breeders of Iowa, purchased an extraordinary outstanding imported Shire stallion.

No Live Stock Show will be given this year at St. Joseph, Mo. The management claim that it is too great a luxury, and the average losses amount to $6,000 a year.

Messrs. C. J. Smith & Sons, near Greenville, Ill., again have a card in this paper offering pure-bred Shropshire rams and ewes. They are among the first-class breeders of Shropshires.

Those of our readers desiring to purchase a strictly first-class Shire, Percheron or Hackney stallion are advised that Messrs. Trumans' Pioneer Stud Farm have in their stables at Bushnell, Ill., the very choicest stallions of either of these breeds, running in ages from two to six years. This is the time of year when prices are shaded considerably.

Mr. R. Fleming, of Cuba, Kansas, raises Collie dogs of the farm and ranch type and useful for business. He has a card offering some females at bargain prices.

On May 16th, at Villa Nova, Pa., Frederick Phillips of Manor Farm, Villa Nova, Pa., sold eighty-nine head of Guernsey cattle at auction for an average of $362.35 per head. The top price for a bull was $1,050, paid by Alfred G. Lewis, of White Springs Farm, Geneva, N. Y., for Imp. Billy's France of the Isle. The highest price for a cow was $1,300, paid by Branford Farms, Groton, Conn., Henry Fielden, Manager, for Imp. Primrose, 2d, of Vimeria. Branford Farms also purchased Imp. La Fleur du jardin, 14th, calved July, 1909, at $1,025.

A shipment of fancy Hereford heifers sold at St. Louis, May 27th, at $8.25 and $8.30 per 100 pounds, average weight 726 and 720 pounds. They were fed and sold by J. T. Zook of Pike county, Missouri. When he purchased them at $5.25 they weighed 376 pounds. They nearly doubled their weight in the feed lot and brought $3.00 per 100 pounds more than cost as feeders.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Best imported Rams at head of flock. Prices reasonable.

WILLARD MILLER, R. F. D. 2, Anita, Iowa.

CONCERNING SHEEP ADVERTISING.

The day has come when every farmer in the United States should raise either a few sheep or more than a few. All flocks should have good, healthy ewes, and what is most important, there should be a pure-bred buck to head the flock. The National Farmer and Stock Grower is a first-class medium for advertising pure-bred sheep. The circulation is upwards of 120,000 copies each edition. Send in a copy of your advertising and write for rates. Address, **NATIONAL FARMER AND STOCK GROWER, 3550 Vista Ave., St. Louis, Mo.**

TAMWORTHS The hog that puts vigor, prolificacy, size and quality into the chunky lard breeds. I sell more Tamworths than any other two breeders in the United States. Descriptive literature free. **W. WARREN MORTON, Mountain Home Stock Farm, Russellville, Ky.**

TAMWORTHS FOR SALE. The Bacon Hog, the largest and most prolific breed; early to mature, economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs not akin from best strains. My herd won over 100 ribbons at the State Fairs of the year 1911, including a bunch of championships. Imported stock owned by me were winners at Royal Show, London, England, 1907. Mature Sows will fatten from 600 to over 700 pounds; Boars, 1,000 to 1,200 pounds. **CHAS. FORD, Mortonsville, Woodford County, Kentucky.**

BREEDERS' ADVERTISING MEDIUM.

In the last eight years every edition of The National Farmer and Stock Grower has been 100,000 copies or more. In the year 1911 the average circulation was 123,829 copies each edition. This is by far the largest circulation in the United States of America, reaching live stock breeders, ranch owners and stock farmers. Small space in this publication is equal to large space in any other. Write for rate for breeders' cards and public sales of pure-bred stock. Send in your copy at the same time. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

ENNIS FARM--GOLDEN SUNSET POULTRY

Buff Orpingtons, Rhode Island Reds, White Leghorns, Bourbon Red Turkeys, Buff and Indian Runner Ducks. Free mating list. BROADWAY STOCK FARM.

Large English Berkshires of the most popular breeding. Spring Pigs and serviceable Boars for sale; also B. P. Rock Eggs for sale, $1.00 for 15. **E. L. JOHN, Broadway, Maries County, Mo.**

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Argentine Meat For Austria.

The Austro-American Steamship Company was granted permission to import Argentine meat into Austria, and for that purpose chartered the Gulf of Venice to transport 700 tons of this meat, two-thirds of which was intended for Vienna and one-third for other large Austrian cities.

The meat arrived at Trieste in March. The Board of Directors of the municipal slaughter house at Prague bought 33,000 pounds of first-quality meat at 7.4 cents a pound and sold it to the local butchers at 11.2 cents a pound. This same price was charged butchers of other districts who ordered the meat through Prague. About 4,840 pounds of second-quality meat were purchased at 6.9 cents a pound and resold to butchers at 10.7 cents. The maximum retail prices were 14.8 cents for first-quality and 13.3 cents for second quality.—From report of Consul J. I. Brittain, Prague, Austria.

The Crops of Ireland.

Everybody knows that potatoes represent a great crop of Ireland, and 591,259 acres were devoted to the tuber; but people are not aware that in Ireland 1,040,185 acres are devoted to oats. Average in other crops is 45,056 acres in wheat; 158,180 acres in barley; 9,026 acres in rye; 1,683 acres in beans; 301 acres in peas; 270,795 acres in turnips; 77,857 acres in beets; 1,444 acres in carrots; 696 acres in parsnips; 37,281 acres in cabbage; 2,317 acres in vetches; 2,941 acres in rape; 29,127 acres in other soiling crops; 66,618 acres in flax; and 14,045 acres in fruit. The crops mentioned account for 2,348,811 acres. Then there are 542,401 acres devoted to hay, first year; 396,822 acres the second year; and 1,573,180 acres devoted to permanent pasture. Total acreage, 4,861,214.

Of live stock, Ireland has 4,711,420 cattle, 1,415,119 hogs, 390,743 sheep, 258,474 goats, 616,331 horses, 246,353 asses, 31,743 jennets and mules, and 5,447,801 head of poultry.

A Profitable Dairy Cow.

During the past ten years there has been owned by the College of Agriculture, Ohio State University, what appears to be a grade Red Polled cow. No special information is known as to her history, for she was bought of a cattle dealer. Each year the total record of her milk production and percentage of fat in the same have been recorded. During this period of ten consecutive years she has produced 60,936 pounds of milk containing 2,549 pounds of butter-fat. The average record for these ten consecutive years is very close to 6,100 pounds of milk and 255 pounds of butter-fat. On the basis of estimated butter this cow would have averaged nearly 300 pounds a year. The record for 1906 was a poor one, on account of the cow being dry for some considerable period of time. In 1904 she produced 8,777 pounds of milk and 379 pounds of butter-fat. For the last three years she has averaged about 6,100 pounds of milk per year, and 230 pounds of butter-fat. She originally cost about $50, and is known in the University herd as No. 196. She is an interesting example of what may be secured in continuous production through a term of years from a fairly good grade dairy cow.

The Tennessee State Fair.

The Poultry Exhibition at the Tennessee State Fair, Nashville, Tenn., September 16-21, will be bigger and better than ever. The big poultry building will be remodeled and rearranged in such a manner that it will be the best lighted and ventilated poultry show building in the country. Additional coops will be purchased and provisions made for cooping 5,000 birds. The premium list will be made the most attractive ever presented. A large list of cash specials will be offered in pens of the various breeds and varieties. The best judges in America will be engaged. The Poultry Show at the Tennessee State Fair is made one of the big features of this great annual agricultural and live stock exposition. For premium lists, entry blanks and further information address John A. Murkin, 501 First National Bank Building, Nashville, Tenn.

Beware of "Gasoline Doping"

It is a favorite trick of the professional "gyps" who infest the great horse markets—also the "ginger trick" and the "artificial tail" frame-up. These smooth dodges and all the other rascalities of these brazen scamps are laid bare in

"Horse Secrets"

by Dr. A. S. Alexander, famous veterinarian. The only complete book of horse-trading swindles ever published as far as we know. Farm Journal has distributed seven editions of this book—75,000 copies—in the past two years. We want every farmer to have one for his protection against roguery and for the valuable information this book also contains about the feeding and conditioning of stock and the cure of diseases and bad habits.

The warning advice contained in this book and in the pages of Farm Journal have probably saved "Our Folks" $100,000 in the past year. Subscribers constantly write to tell us of the cash value—dollars and cents—they have received from

FARM JOURNAL

This wise little paper will be of real money-saving and money-making value to you. No other farm paper is so broad in its scope—so intensely practical—so interesting in its presentation of facts—so helpful and entertaining in its columns devoted to the home—so strict in its demands that all its advertisers shall be absolutely reliable.

You need it for yourself and your family—and you can have

Farm Journal every month for four years and Horse Secrets at once, postpaid, for only $1.00.

Send for them at once, and if, on receipt of the book, you don't believe that in it alone you have more than your money's worth, say so and we'll stop the paper at once.

If you order promptly, we will send, absolutely free, "Poor Richard Revived"—our splendid new Almanac for 1912.

FARM JOURNAL, 257 N. Clifton St., Philadelphia

THE BOOK OF CHAMPIONS.

The Book of Live Stock Champions advertised on page 23 contains the finest collection of pictures of dairy cattle ever brought together in one volume. There must be 350 of the dairy champions out of a total of nearly one thousand in the book. All farmers who are inclined towards the dairy branch of farming should buy a copy. The price is a dollar and the amount pays a two-year subscription to The National Farmer and Stock Grower at the same time.

Their Ancestors.

When in England, Governor Foss, of Massachusetts, had luncheon with a widely-known Englishman, noted for boasting of his ancestors. Taking a coin from his pocket, the Englishman said:

"My great-great-grandfather was made a Lord by the King whose picture you see on this shilling."

"Indeed!" replied the Governor, smiling, as he produced another coin. "What a coincidence! My great-great-grandfather was made an angel by the Indian whose picture you see on this cent."—Lippincott's.

A Serviceable Book.

The Webster's Dictionary, which is advertised in The National Farmer and Stock Grower on page 19, is certainly one of the best books we have ever sent out, and we do send out some specially serviceable books as subscription premiums. We guarantee it to be better than it is represented; in fact, it is equal to any purpose in school, college, farm, office or country house.

Have you a copy of the Book of Live Stock Champions? See page 23.

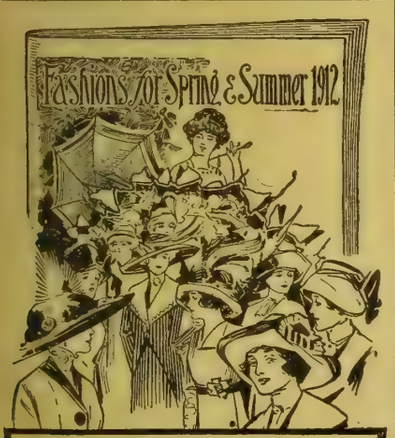
Grass Production in the South.

The Department of Agriculture is making efforts to encourage the production of grass as a feature of stock raising in South Carolina. Last spring an agent of the Farmers' Co-operative Demonstration Work started in to make a specific demonstration in portions of the Piedmont Region of South Carolina, in the matter of the possibility of grass and hay production. The work was taken up with 100 different farmers, inducing each of these farmers to make an acre demonstration with grass. The predominant industry in this section is of course cotton raising, and not a great deal of interest is taken in live stock. Each farmer put out an acre of grass under the direction of the agent. The land was thoroughly plowed, a ton of lime to the acre was applied, and in addition 400 pounds of fertilizer was used. The fertilizer consisted of 200 pounds of acid phosphate and 200 pounds of ground bone. The acid phosphate cost $12 a ton and the ground bone $29 a ton. This would make the 400 pounds of fertilizer cost $4.10. The lime cost about $5.00 a ton. The farmers furnished all the work, the lime and the fertilizer. The Department furnished the grass seed. The most successful mixture for hay grass in this section of the South is found to be one made up of orchard grass, tall meadow oat grass and Italian rye grass with red clover. There was a half bushel each of orchard grass, tall meadow grass and Italian rye, and 10 pounds of red clover sown to the acre. This very heavy seeding was believed to be necessary in order to insure a good stand. This mixture has been used for some time on the Arlington Farm with good success, cutting as high as two and one-half and three tons of hay to the acre.

The work in South Carolina has been eminently satisfactory, practically all of the 100 farmers having a fine crop of hay this season. From all indications, some of these plots will cut two and one-half to four tons per acre. So much interest has been aroused in the matter that farmers are now preparing to put out two additional acres, making three acres in all. They have found by this demonstration that they can grow enough hay to take care of two or three head of horses used in their general farm work. The success with the hay crop has encouraged farmers, furthermore, to look into the live stock proposition to the end of introducing greater diversification and devoting less acreage to cotton.



Where the Well Dressed Women, Who Wish to Save Money, Come From

At your disposal madam, in this book, is the pick of the new spring clothing. These suits, dresses and waists are the same pleasing designs and fabrics shown in all the first class fashion magazines and displayed in the most exclusive stores. But here is the difference—our prices are 20 to 50 per cent below what others charge. This is because we sell direct to you without your having to pay unnecessary profits to agents and dealers.

Undergarments, hats, shoes, gloves, parasols, dry goods—a full line of new, attractive, serviceable dress accessories—are also shown in this book at worth while money saving prices. Your spring and summer outfit, if you buy it from this book, will be prettier, more complete, than ever. Besides, think of the money you'll save.

Put your name and address on these two lines. Cut this coupon and send it by the next mail if possible. We will send you your copy of this money saving buying guide at once.

Overcrowding Trees.

One of the most common mistakes in the planting of trees is placing them too close together. One has but to take a walk in almost any direction to observe this fact. Scientists on tree planting are always warning against it but the practice of too close planting goes on.

Some time ago the writer warned a committee of citizens against planting trees along the streets too close together. But the unsophisticated members of the committee argued that it would be a long time before the trees were large enough to crowd each other and in the meantime the growing trees, if quite close together, would be very ornamental. So they were planted with no room in which to develop in the distant years to come. The result will be that in a dozen years or so the trees will be injuring each other by their shade, and the limbs on the shaded portions will become dwarfed and the trees will never grow into the grand and beautiful trees that fill people with delight.

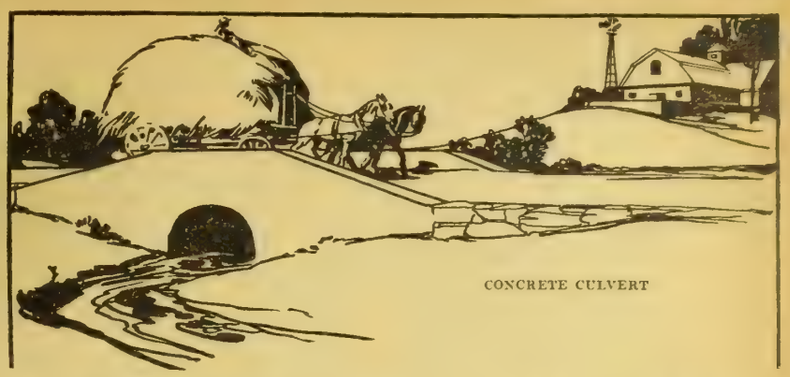
Trees along a village street should be planted so far apart that they will look too far apart for many years. But there will be this compensation: The grass under them will be a luxuriant greensward. There are two rows of soft maples known to the writer where the trees are so close together that all grass under them has long ago died out. The bare ground, being slightly sloping, is furrowed by the rills that develop with every spring shower. This gives an unsightly appearance to the vicinity. Were the trees farther apart they would be a help to the vicinity, with no drawbacks.

There are very few apple orchards in which the trees are given enough room. One crowds the other, and the crowding prevents that development that is necessary to produce the best results. This overcrowding is very observable in some of the older orchards.

Some orchardists have tried to meet the difficulty by planting rows of trees intended to be permanent and between those rows planting other rows of shorter-lived trees. The worst feature is that the secondary trees are not removed when they should be, but are permitted to grow, to the detriment of the others.

A few years ago a magnificent arbor vitae hedge was dug out because the individual trees comprising the hedge had been planted so close together that the limbs of many of the trees had been killed by too much shading, and the whole hedge had become an eyesore because of the dead spots in it.

The same occurs in many of the plantings of firs and spruces for ornamentation. The crowding results in masses of dead branches and gloom beneath, while a thinner planting would have let the sunlight in and kept the trees bright in color and made them truly ornamental. It is extremely difficult to induce people to heed advice of this kind, unless they have had disastrous experiences.



ATLAS PORTLAND CEMENT

"THE STANDARD BY WHICH ALL OTHER MAKES ARE MEASURED"

There are many kinds of Portland Cement. There is only one kind of "Atlas"—the best. It's a cement that's *all* cement—a cement made of genuine cement rock—a cement without impurities—a cement of absolutely uniform quality.

Others say "as good as Atlas." But the Government said "Atlas," and is using 5,000,000 barrels of Atlas on the Panama Canal. Remember this in buying for farm use. You cannot get "Atlas" quality under another name and you cannot get the best results unless you use the best cement.

"Concrete Construction About the Home and on the Farm"
Our free book for farmers

Get it. Read it. Follow it. And you cannot go wrong.

If your dealer cannot supply you with Atlas, write to

THE ATLAS PORTLAND CEMENT COMPANY, DEPT. 165, 30 BROAD ST., NEW YORK

Largest productive capacity of any cement company in the world. Over 50,000 barrels per day

[Please mention National Farmer and Stock Grower.]

When and How to Spray.

"Combating Orchard and Garden Enemies" is the subject of a new fifty-three-page bulletin which has just been issued by the Agricultural Experiment Station, Columbia, Mo. The bulletin is one of the most complete of its kind. It gives simple yet complete directions for identifying and combating all diseases and insect pests which prey upon fruit trees and bushes as well as garden crops.

The bulletin gives detailed directions for mixing and applying Bordeaux mixture, lime-sulphur, copper-sulphate solution, arsenate of lead, kerosene emulsion, carbon-bisulphide and a dozen other fungicides and insecticides.

There are thirty-seven illustrations which help to make the text clear. Not only the commercial fruit grower, but every farmer who has a home orchard and garden should read this bulletin.

Write to the Agricultural Experiment Station, Columbia, Mo., for a free copy of Bulletin 102.

High Water and Foot Ball.

Percy Haughton, the foot ball coach, was talking about queer foot ball games.

"There was a Thanksgiving Day game in Philadelphia at the end of the last century," he said, "that was played in a deluge of snow and rain, with Franklin Field a foot deep in cold, gray slush.

"The Princeton man who won the toss said rather bitterly before the game began:

" 'Do we have to play in this field?'

" 'Yes, of course you do,' was the impatient reply. 'Come,come—you've won the toss—which end do you take?'

" 'Well,' said the Princeton man, shaking his head at the gray waste of waters spread before him—'well, I guess we'll kick with the tide.' "—Washington Star.

The National Farmer and Stock Grower ought to be read at a desk with a bundle of postal cards at hand. We usually mention a number of valuable booklets which are well worth having, although free for the asking, and a postal card is very handy to ask for anything that is desired.

EXPERIMENTAL FEEDING.

Five Lots, Ten Two-year-old Steers in Each—Comparison to Show Value of Silage as Feed of Beef Cattle.

Silage must be put into the feeding programme of every beef producer who wants to fit steers for the market economically and efficiently. The Animal Husbandry Section of the Iowa Experiment Station proved that in part a year ago in a thorough feeding test; it proved it fully this year in a second test completed only the other day. The animals fed on silage made cheaper gains, they lost less in shrinkage and they returned greater profits than other animals in the test fed on clover hay as roughage. The silage-fed steers put on gains at a net cost that was $2.01 per 100 pounds less than the clover-hay-fed steers, and the best lot of silage-fed steers made a profit of $23.46 per animal, as against $17.27 per animal for those fed with clover hay.

Fifty steers were fed in this test. They were not fancy steers when bought, but average animals from the Nebraska range. They were bought November last and fed 150 days, from November 23, 1911, to April 21, 1912. They cost in Omaha $4.50, and in the Station feed lots at Ames, $4.65. They sold well, bringing $8.10 to $8.20 at Chicago. These steers were divided into five lots of ten animals each, and put on separate rations as follows:

Lot 1.—Shelled corn, cotton-seed meal, clover hay.

Lot 2.—Shelled corn, cotton-seed meal, clover hay, corn silage.

Lot 3.—Shelled corn, cotton-seed meal, corn silage.

(The above lots were all put on full feed of grain in forty days.)

Lot 4.—Shelled corn, cotton-seed meal, corn silage.

Lot 5.—Shelled corn, cotton-seed meal, corn silage.

Lot 4 and Lot 5 were handled the same the first ninety days, silage fed heavily and shelled corn increased to full feed in the ninety days as follows: First month, 6.44 pounds; second, 10.48 pounds; third, 14.97 pounds daily. Beginning the ninety-first day, Lot 4 was allowed corn and silage according to appetite, while Lot 5 was held back on silage and shoved hard on corn, the object being to make the ration concentrated at the end of the fattening period. Cotton-seed meal was allowed in equal amounts of practically 2¾ pounds daily to Lots 2 and 5. Lot 1, because of clover, which contains protein, was fed somewhat less for best results.

All feeds were charged at actual market prices as follows: Shelled corn, first month, 50 cents; second, 51 cents; third, 55 cents; fourth, 57 cents; and fifth, 65 cents; cotton-seed meal, $20 a ton; clover hay, $15 a ton; corn silage, $3.20 a ton.

The silage cost is based upon the actual value of corn in field—eight cents below market—at time of siloing. Cost of filling silo, storage of silage and depreciation on equipment are included. This allows the farmer a field profit on the corn. The actual production cost on this silage would not exceed $2.40 a ton.

All roughage was fed twice according to the steer's appetite, excepting in Lot 5 last two months, where it was limited.

Hogs following cattle were valued at $6.10 first three months and $7.50 last two.

The record of feed, gains, costs and profits follow in lots for the entire feeding period.

Detailed Statement of Results—Ten Two-year-old Steers in Each Lot.

Lot No. 1.

Lot No. 1 averaged 940 pounds when put up to feed, finally weighed 1,229 pounds; average daily gain, 2.398 pounds; average feed eaten per steer, 20.20 pounds shelled corn, 2.28 pounds cotton-seed meal, 9.02 pounds clover hay, no silage. Cost of hundred pounds' gain, excluding hogs, $12.63; after deducting hog profits, gain per steer cost $10.83 per 100 pounds; necessary selling price at home to break even, $6.36 per 100 pounds; sold at $8.20 per 100 pounds at Chicago, $7.69 net at Ames; profits per steer, $17.27 per head; shrink in transit, 34.7 pounds, or 2.669 per cent.

Lot No. 2.

Lot No. 2 averaged 943 pounds when put up to feed, finally weighed 1,299 pounds; average daily gain, 2.373 pounds; average feed eaten per steer, 16.95 pounds shelled corn, 3.08 pounds cotton-seed meal, 3.90 pounds clover hay, 22.35 pounds corn silage. Cost of hundred pounds' gain, excluding hogs, $11.77; after deducting hog profits, gain per steer cost $9.62 per 100 pounds; net selling price at home required to break even was $6.01 per 100 pounds; sold at $8.15 per 100 pounds at Chicago, netting $7.72 per 100 pounds at Ames; net profits per steer, $22.22 per head; shrink in transit, 21.0 pounds, or 1.617 per cent.

Lot No. 3.

Lot No. 3 averaged 919 pounds when put up to be fed, finally weighed 1,261.3 pounds; average daily gain, 2.281 pounds; average feed eaten per steer, 15.60 pounds shelled corn, 3.08 pounds cotton-seed meal, no clover hay, 27.10 pounds corn silage. Cost of hundred pounds' gain, excluding hogs, $10.65; after deducting hog profits, gain per steer cost $9.10 per 100 pounds; net selling price at home required to break even was $5.86 per 100 pounds; sold at $8.10 per 100 pounds at Chicago, netting $7.61 per 100 pounds at Ames; net profits per steer, $22.03 per head; shrink in transit, 31.3 pounds, or 2.482 per cent.

Lot No. 4.

Lot No. 4 averaged 920.6 pounds when put up to be fed, finally weighed 1,246 pounds; average daily gain, 2.169 pounds; average feed eaten per steer, 13.71 pounds corn 3.08 pounds cotton-seed meal, no clover hay, 30.81 pounds corn silage. Cost of hundred pounds' gain, excluding hogs, $10.74; after deducting hog profits, gain per steer cost $9.08 per 100 pounds; necessary selling price at home required to break even was $6.80 per 100 pounds; sold at $8.10 per 100 pounds at Chicago, netting $7.60 per 100 pounds at Ames; net profits per steer, $22.45 per head; shrink in transit, 32 pounds, or 2.368 per cent.

Lot No. 5.

Lot No. 5 averaged 922.8 pounds when put up to be fed, finally weighed 1,257 pounds; average daily gain, 2.228 pounds; average feed eaten per steer, 14.64 pounds shelled corn, 3.08 pounds cotton-seed meal, no clover hay, 28.62 pounds corn silage. Cost of hundred pounds' gain, excluding hogs, $10.72; after deducting hog profits, gain per steer cost $8.91 per 100 pounds; net selling price at home required to break even was $5.95 per 100 pounds; sold at $8.10 per 100 pounds at Chicago, netting $7.63 per 100 pounds at Ames; net profit per steer, $23.46 per head; shrink in transit, 29 pounds, of 2.307 per cent.

It will be remembered that last year the Iowa Station called attention to the indicated possibility of feeding silage heavily in the early part of the feeding period, decreasing as the animal became finished and quite fat, for the evident reason that the large amount of silage was not desirable in producing rapid and economical gains at the close of the feeding period. It is somewhat interesting to note that Lot 5, handled in this manner, heavy silage and light corn at the beginning, with light silage and heavy corn at the finish, returned the largest profit per head, or $23.46. This in spite of the fact that corn increased to 57 cents and 65 cents, from 50, 51 and 55 cents during the first three months. In other words, everything was against this lot because of the high price of corn, but in spite of this big handicap it won out by a narrow margin.

In making a change of this sort, as the animal becomes fattened, it is advisable to do it rapidly, pushing heavily on the corn and coming back gradually upon the silage. The object is to concentrate the ration at the end of the fattening period.

Clover is an exceptionally good cattle roughage, but at present prices its use is quite prohibitive. Had the clover in this experiment been figured at $10 per ton instead of $15, the net profits would have increased practically $3.50, or actually $3.38, or $20.65. Even at this advantage it is readily seen that the silage at $3.20 per ton is a more valuable feed than clover hay at $10.

The value of silage for a short feeding period is again abundantly demonstrated, in that cattle in Lot 3 on shelled corn, cotton-seed meal and silage made an average gain the first three months of $3.95, $8.67 and $15.17 per 100 pounds, or an average cost of practically 7½ cents. For a short feed the experience of the Animal Husbandry Department has been that silage is a superior roughage.

It is gratifying to feeders of silage to know that the Iowa Station results again show that silage-fed cattle are not heavy shrinkers. This year they all beat those having clover, as last year the least shrinkage occurred on those cattle fed both silage and clover hay.

The least shrink occurred on those cattle which received both silage and clover for roughness, being very light at only 21 pounds. This is in accord with the experience of last year. That those which had clover should have a heavy shrink is somewhat surprising, but the facts speak for themselves.

Silage is highly relished by both cattle and sheep, and is fed with profit to these classes of animals. The feeder with the silo must not get the impression, however, that silage

Bickmore's Gall Cure

The old-time remedy for keeping horses in condition. Don't lose the services of your high-priced horses. Bickmore's Gall Cure cures Galls and Sore Shoulders while the horse works. Approved remedy for Cuts, Wounds, Scratches, Grease Heel. Sold by dealers, money back if it fails. Gray horse trade mark on every box. Sample and valuable 84-page horse book sent on receipt of a stamp for postage.

is a cure for all ills, but that it has its shortcomings as well as its longcomings. The dairyman has long since concluded that he cannot satisfactorily run a dairy herd without the silo, which furnishes, as nearly as human ingenuity has been able to figure out, pasture conditions in the winter time. The steer feeder is coming to feel that the silo is a valuable adjunct to his business, in evidence of which the rapid increase of the number of silos in the cornbelt states is unmistakable. Silage is a starchy food, however, and when fed must be supplemented with a protein feed, such as cold-pressed cotton-seed cake, cotton-seed meal or oil meal. At present prices we would recommend either the cold-pressed cake or the cotton-seed meal. Another mistake which is usually made in addition to feeding without supplement, is to assume that silage is a complete feed within itself and use it as a sole feed in thinking that it will produce a marketable finish. It is necessary in finishing animals to add considerable concentrate, especially corn, in that it is the cheapest one we have, especially toward the finish of the feeding period. The truth of the matter is that in finishing steers and heifers or other cattle for the block it is necessary and quite imperative that a concentrate grain be fed in considerable amounts throughout the feeding period. Cattle which are being stalked or roughed through the winter can get along nicely on corn silage and a little clover or alfalfa hay, thus fitting them well for grass and subsequent green feed; but for the fattening animal the grain must be added.

The most eloquent friends the silo has are those men who have fed silage. Certainly no greater recommendation can be offered for any feed than this.—J. M. Evvard, M. J. Kennedy.

Texas Sheep at St. Louis.

N. H. Corder & Son, sheepmen of Kinney county, Texas, had a consignment of sheep at St. Louis, May 30th, eight double decks containing 2,015 head that averaged 88 pounds and brought $5.70 per 100 pounds. The sheep were good and sold almost straight, as but seventy-five head were thrown out of the shipment and sold at a less price on account of poor condition.

St. Louis Sheep Market.

During the last week in May, at the St. Louis market, the best spring lambs sold from $8.75 to $9.75 per 100 pounds, and were practically all from Illinois and Missouri. Medium-grade lambs sold at $8.00 to $8.65, and fair kinds at $7.00 to $8.00, while the culls went at $5.00 to $6.75. Best clipped lambs brought $8.25 to $8.75, most of which were Westerns fed in Missouri. Fair-grade clipped lambs went at $6.00 to $7.50 per 100 pounds.

The best fat native and Southwest sheep brought $5.30 to $5.40, while the fair kinds sold at $5.00 to $5.25. The number of sheep was rather small. A good string of Texas sheep arrived, 2,015 head, that averaged 88 pounds and sold at $5.70 per 100 pounds. Best thin sheep of good ages sold as stockers at $3.00 to $4.00, fair stockers brought $2.10 to $3.00, and old cull sheep at $1.25 to $2.00 per 100 pounds. Bucks all sold at $4.00 per 100 pounds.

Texas Cattle at St. Louis.

Embry & Fawks, of Aledo, Parker county, Texas, marketed thirty-eight head of cotton-seed-cake-fed Texas steer cattle that averaged 1,230 pounds and sold at $7.90 per 100 pounds. This was on Friday, May 31st, 1912, at the St. Louis National Stock Yards. The price paid was the highest on record at the market for cattle that had been fed no corn. On the same day 257 head of grass steers, 960 pounds average, sold at $6.00 per 100 pounds. Other sales on that day consisted of twenty-six head of bulls and stags, 866 pounds average, at $4.50 per 100 pounds.

Hog Market at St. Louis.

Heavy hogs at the St. Louis National Stock Yards, May 31st, sold at $7.10 to $7.52½ per 100 pounds. The highest price paid was for hogs averaging 278 pounds. One of the loads selling at $7.50 per 100 pounds averaged 307 pounds. A large number of mixed loads of 170 to 230 pounds average sold at $7.20 to $7.45, and those at $7.45 included some nice loads of butcher hogs, averaging from 200 to 215 pounds. Light-weight hogs, 150 to 170 pounds, sold largely at $7.00 to $7.35. Pigs, culls and throw-outs sold from $5.25 to $7.25. Thus far this year, in five months 1,180,000 hogs were sold on the St. Louis market.

The Cattle Situation.

There is certainly a shortage in cattle—two shortages, indeed—one in average weights of the cattle marketed and another in the total number. The cattle offerings are enormous, but the trouble is that there are close upon a hundred million people to be fed. There is an awful scarcity of 1,300 to 1,400-pound cattle. On Thursday, May 30, Chicago only had 3,000 cattle on the market, and yet 250 of them, averaging 1,300 to 1,482 pounds, sold at $9.00 to $9.30 per 100 pounds.

Yearling Beef Cattle.

A drove of Randolph county, Missouri, yearling steers sold at $8.50 per 100 pounds at St. Louis, May 30th, thereby breaking all records so far this year on that class of cattle. They averaged 923 pounds and were marketed by A. L. Bennett, a prominent feeder of that county. They were of splendid quality and were of very good flesh. It was one of the best droves of that class of cattle that have been seen on the market for some time.

Horses Direct From Farmers.

Holland, Nugent & Maxwell Bros., holding horse auctions Mondays and Tuesdays at the National Stock Yards, Ill., desire to communicate with a few more shippers who buy horses direct from farmers. At the St. Louis market every kind of horses that money can buy are handled to good advantage, and mixed car-loads, containing drafters, chunks, work horses and Southern horses, are sold quickly and with less cost to come out of the horse than at any other market. A personal letter to T. H. Holland, National Stock Yards, Ill., stating what you buy and where your shipments are going will be a good introduction to the St. Louis Horse Market.

Branded Cattle at $9.30 at Chicago.

On May 15th a three car-load shipment of Hereford steers sold at Chicago at $9.30 per 100 pounds, the highest price paid there up to that time in about thirty years, excepting for a few fancy Christmas beeves. These steers, which averaged 1,507 pounds, were branded Hereford steers from the feed lots of Lee & Prentis, of Vermillion, S. D.

Western Range Horses.

Owing to the late spring the Western range horse season is estimated to be two weeks late. The first auction sale for the year 1912 under the management of Messrs. Campbell & Reid and Western Sales Stables Company will be held at the St. Louis National Stock Yards on Thursday, June 27th. At this sale there will be 1,200 select horses and mares that will be in good condition, and there may be 2,000 or more, all to be sold without reserve. The horses are very nearly fit to be sold in the domestic horse auction, but need a little finishing and handling. Keep in touch with these sales by writing to J. J. Searcy, sale manager, National Stock Yards, Ill.

Highest in Forty-two Years.

Yearlings of high class are still high, the week's business showing the highest prices of the season, the sale of a bunch of eighty-two head of fancy 780-pound Hereford steers and heifers, Wednesday, May 29th, from the Robert Turnbull feeding at Speer, Ill., at $9.10 per 100 pounds, standing the best price recorded at the Chicago market in forty-two years, at least for cattle of their class.—Chicago Live Stock World.

From New York Herald, May 26th.

"Philip H. Hale, editor of The National Farmer and Stock Grower, in St. Louis, has just published a picture book of 'Live Stock Champions,' which is full of interest to horsemen. It contains 720 indexed portraits of noted animals, among which are scores of thoroughbreds, trotters, Hackneys and draught horses. Schreiber's photographs of Rysdick's Hambletonian, Ethan Allen, George Wilkes and other old-time trotters make the book of lasting value to votaries of harness racing."

The last Elgin butter quotation in May and the first in June was 25 cents.

WESTERN RANGE HORSE SALES.

Horse raisers are advised that sales of the very best Range Horses in the country will be conducted by

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.,
As usual, during the season of 1912.
The First Sale will be held

THURSDAY, JUNE 27,

And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is sure to be good, especially for well-bred Mares and Geldings in good condition.

Please address
J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

Crossed Over the River.

N. Kirtley, for nearly twenty years one of Missouri's prominent Hereford breeders, died at his home in Savannah, Mo., May 22d.

On May 24th, at Paducah, Cottle county, Texas, F. P. Sayers, a ranch owner, thirty years old, died at the hands of S. B. Burnett, a neighboring ranchman, who shot him. The tragedy is supposed to have been the result of a difference of long standing.

ABSORBINE

Cures Strained, Puffy Ankles, Lymphangitis, Poll Evil, Fistula, Boils, Sores, Wire Cuts, Bruises, Swellings, Lameness, and allays Pain quickly without Blistering, removing the hair, or laying the horse up. Pleasant to use. $2.00 per bottle, delivered. Describe your case for special instructions and Book 5 E free.

ABSORBINE, JR., liniment for mankind. For Strains, Painful, Knotted, Swollen Veins, Milk Leg, Gout. Price $1.00 per bottle at dealers or delivered.

W. F. YOUNG, P.D.F., 106 Temple St., Springfield, Mass.

KENDALL'S SPAVIN CURE

The old reliable remedy you can depend on for Spavin, Curb, Splint, Ringbone or lameness. Thousands have proved it invaluable. Get a bottle from your druggist. Price per bottle $1, 6 for $5. "Treatise on the Horse" Free at druggist or from Dr. B. J. KENDALL CO., Enosburg Falls, Vt., U. S. A.

Bog Spavin

Cure the lameness and remove the bunch without scarring the horse—have the part looking just as it did before the blemish came.

Fleming's Spavin Cure (Liquid) is a special remedy for soft and semi-solid blemishes—Bog Spavin, Thoroughpin, Splint, Curb, Capped Hock, etc. It is neither a liniment nor a simple blister, but a remedy unlike any other—doesn't imitate and can't be imitated. Easy to use, only a little required, and your money back if it ever fails.

Fleming's Vest-Pocket Veterinary Adviser

describes and illustrates all kinds of blemishes and tells you how to treat them. Covers over 200 veterinary subjects. 192 pages, 69 illustrations. Write for a free copy.

Please mention Nat. Farmer and Stock Grower.

Poultry and Farm Paper Club.

Two first-class papers can be had for the price of one. **The National Farmer and Stock Grower** is one, and the **American Poultry Journal** is the other. There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is the **American Poultry Journal.** We have made arrangements whereby we can send **The National Farmer and Stock Grower** and the **American Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Keeping Poultry Where Range is Small.

Keeping poultry under the above conditions is an entirely different thing from keeping poultry where there is large range. Without doubt the large range reduces the cost of feeding poultry. On the place with almost no range the profits of poultry keeping are greatly reduced, unless the conditions are such that there is a more profitable market available.

A very great mistake is the keeping of too many fowls on a small place. Crowded conditions result in the appearance of contagious diseases, which frequently cause such losses that the profits disappear.

One poultryman says that the house in which the fowls are kept should be large enough to give ten square feet of space to each fowl. The writer has found this rule a good one to follow. The yard space should be ten times as great as the house space. Even then the ground will be quickly robbed of its verdure by the fowls.

Health must be the first requisite to be looked after. Without health the fowls will prove a delusion and a snare to the one trying to make money out of them.

During the past few years the writer has had occasion to observe the operations of a young man who was going on the principle that fowls can be penned together in great numbers on a small lot and still prove profitable. The said young man paid someone $5.00 for the secret of how to do this. In a given space he had at least ten times as many fowls as the best poultry raiser considers safe. For long winter months he was pouring expensive feed into the fowls and getting few eggs. A little later a disease similar to roup broke out and was killing several every day. At the end of two years the young man had a good fund of experience and little money. At last accounts he had lost so many fowls from disease that was buying more to fill up the gaps.

Therefore the first principle should be to keep only as many fowls as will thrive. The second should be to give those fowls perfectly healthful conditions. The house should be light, dry and well ventilated. The fowls should be particularly well protected from the rains.

Where land is limited, a plot outside of the poultry yard should be used for the growing of rape and other forage plants, and these should be fed to the fowls daily. If the land can be so utilized, a good-sized patch of rape should be allowed to grow plants to a height of a foot and the poultry yard extended to include this patch. It will not only supply a large amount of food but will keep the digestion organs of the fowls in good condition.

Where all grain food has to be purchased this item will be found to be a big one, but often large quantities of scraps will be available, such as those obtained from restaurants and hotels. The writer has noticed with surprise that these by-products are often dumped into holes and buried rather than disposed of to those that could use them for poultry feed.

Why More Turkeys Are Not Raised.

With the high prices which have prevailed for the past few years for turkeys there is general feeling that farmers might find in them a more profitable feature than almost any other branch of the work. Yet it is a fact that a large proportion of the farmers buy the bird for the Thanksgiving or Christmas dinner or substitute the one omnipresent in rural communities—the chicken.

There are several factors entering into the scarcity of turkeys, the most serious of which is the disease called blackhead, from its most prominent symptom, though the seat of trouble is in the liver instead of the head. Thus far the relief is of a preventive rather than a curative nature, and one of the essentials is to quit raising turkeys on infested ground. The result is that Rhode Island, once the greatest turkey-growing state, is practically barred out, while several other states in the East have been temporarily forced into some other work. From the West and South we must now look for a great part of the supply, the disease having not yet reached them, and the wide range offering exceptional facilities for rearing them.

The Bronze variety, the largest and most popular, is a cross between the common black turkey and the Mexican wild turkey, its love of roaming giving ample evidence of the wild blood in its veins. At nesting time it grows shy and suspicious, usually sneaking off by a circuitous route, doubly serpentine if it suspects that it is being followed; and the nest may after infinite patience be located in a neglected fence row many rods from the house. Each egg is carefully buried in leaves when deposited, the leaves being placed over it one at a time with the bill.

In late summer and autumn insects and acorns call the birds long distances from home, and if there are other flocks within a mile they eventually get together, the intermingling ultimately producing a neighborhood quarrel; hence it is that some who once found it profitable have dropped out, resolved never again to raise turkeys "for others to feast upon."—Bessie L. Putnam.

Satisfactory Carbon Fertilizers.

Empire Carbon Works, St. Louis, Mo. Gentlemen:—The results obtained in this vicinity from the use of fertilizers made by the Empire Carbon Works of St. Louis have been most satisfactory. This is especially true as applied to strawberries and tomatoes. 300 pounds to the acre will, on the average, double the yield of strawberries, and 300 to 400 pounds to the acre on old to medium old land will increase the yield of tomatoes 60 to 8 times. This we have proven by leaving test rows and plots. Stable manure is too hot and has too large a percentage of nitrogen for tomatoes. We usually plow and harrow the ground, then check it off for tomatoes two or three weeks before the time to plant. Then put in the hill one pint to one quart of fertilizer and work it into the soil well with a potato fork; then when ready to set the plants, the hills are ready. A still better plan is to do this after having first drilled or sowed fertilizer broadcast and harrowed in. This will require 200 pounds to the acre in addition, but will be a splendid investment. Very truly yours, E.L.Beal, Horticulturist, Republic, Mo., February 13th, 1912. (See advertisement in this issue.)

Raising Belgian Hares.

The Department of Agriculture is constantly in receipt of inquiries in regard to the breeding and care of rabbits, and to meet the demand Secretary Wilson has prepared Farmers' Bulletin No. 496, entitled "Raising Hares and Other Rabbits." In this bulletin, prepared in the Bureau of Biological Survey, it is pointed out that rabbits form an important and esteemed article of food, and that the principles of breeding and care are as well defined as with any domestic animals.

The so-called Belgian hare is a domesticated form of the wild rabbit of Europe, being bred with reference to its value as a food animal, and its flesh is now generally considered better for food than that of the ordinary hutch rabbit. Rabbits may be propagated without costly investment in land and buildings, and possess the further advantage that they contribute another animal to the farm stock that may be killed and prepared for the table at short notice.

As a rule, the same treatment applies to all forms of rabbits, except the lop-eared variety, which requires heated quarters in winter. Care in the selection of stock is the first important consideration upon entering upon the raising of rabbits, and for the rest of the enterprise only observation and judgment are essential. Descriptions of hutches are given and illustrations showing construction will aid the prospective breeder in providing ample quarters. Food and feeding, breeding, marketing and ailments are fully explained.

While not affording large profits, the raising of rabbits in a small way may be made interesting and fairly remunerative, as well as affording an agreeable change in the family diet where ordinary meats are high-priced or difficult to obtain.

To obtain a copy of this Farmers' Bulletin No. 496 address Hon. Secretary of Agriculture, Washington, D. C.

Variety in Cooking Eggs.

At this season of the year, when eggs are inexpensive, we are apt to grow very tired of their frequent appearance on the table. This is due to the fact that for most people there are only two ways of cooking an egg—boiling and frying.

In using some of the following recipes, where cream or white sauce is the dressing, two or three quarts may be made up at one time in cool weather and used as needed.

Eggs a la Goldenrod.

Three "hard-boiled" eggs, one tablespoon butter, one tablespoon flour, one cup milk, one-half teaspoon salt, one-eighth teaspoon pepper, five slices toast, parsley.

Make a thin, white sauce with butter, flour, milk and seasonings. Separate yolks from whites of eggs. Chop whites finely and add them to the sauce. Cut four slices of toast in halves lengthwise. Arrange on platter and pour over the sauce. Force the yolks through a potato ricer or strainer, sprinkling over the top. Garnish with parsley and remaining toast, cut in points.

Scotch Woodcock.

Four "hard-boiled" eggs, three tablespoons butter, one and one-half tablespoons flour, one cup milk, one-fourth teaspoon salt, few grains cayenne, Anchory essence.

Make a thin, white sauce of butter, flour, milk and seasonings; add eggs finely chopped and season with Anchory essence.

Scrambled Eggs With Tomato Sauce.

Six eggs, one and three-fourths cups tomatoes, two teaspoons sugar, four tablespoons butter, one slice onion, one-half teaspoon salt one-eighth teaspoon pepper.

Simmer tomatoes and sugar five minutes; fry butter and onion three minutes; remove onion, and add tomatoes, seasonings and eggs slightly beaten. Cook same as scrambled eggs. Serve with entire wheat bread or brown bread toast.—Margaret H. Haggart, Colorado Agricultural College, Fort Collins, Colo.

Bitter in Defeat.

The late Colonel Wilbur F. Sanders, of Montana, who was once a United States Senator from that commonwealth, mixed a good deal in politics, and one time when he ran for the Governorship was defeated by a widely-known Democrat.

On election night the Democrats of Helena held a jollification meeting, and Sanders went over to see what was going on. He stood in the edge of the crowd, but was soon recognized and called upon for a speech.

"Friends and fellow-citizens," he began. "When I was nominated for the high office of Governor by the Republicans, my opponents and Democratic friends told me they could beat me with a yellow dog."

There were loud cheers.

"And," shouted Sanders, "they did."—Saturday Evening Post.

Sent on Trial.

If you are sick, you can get a full-size one-dollar box of Bodi-Tone on twenty-five days' trial. If it benefits you, you pay $1.00 for same. If it does not help, pay nothing for it. This is the way Bodi-Tone is being offered to the sick in the large announcement on the last page of this paper and the way thousands have already been cured by it.

"It is not the insurrections of ignorance that are dangerous, but the revolts of intelligence."—Lowell.

Our Industrial Policy.

The National Farmer and Stock Grower is in favor of the United States collecting a reasonable range of customs duties upon all foreign farm products and all foreign manufactured goods admitted into the United States from foreign countries, said duties to be applied to the support of the national government. Import duties on various products as now collected amount to over three hundreds of millions of dollars a year, and if not collected that way would have to be collected by direct taxes upon our own productions.

Every farmer in the United States is taxed by his county and by the state, and he pays indirect taxation for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal service the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. By collecting these customs duties the United States government receives the income that is necessary and must be collected for the public service and the farmer has a very moderate degree of what is called protection. In times of scarcity, caused by drouth or other unavoidable influences, the foreign farm productions can come in on a fair basis, and in times of abundance the country thrives better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmer's products the manufacturer would have to shut his doors. Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. It will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out.

Fiddling Bob's Best Story.

He was President Taft's favorite story-teller. Once the President wanted to get away from his official duties for a few days, and that social soul invited half a dozen Senators to go with him. One was Taylor. He spun one yarn, "and after that," said one of the other Senators who was on the trip, "none of us could get a word in with the President. He spent that entire trip listening to Bob, and he kept him talking the whole time. Laugh? I never knew a man to laugh so much in my life."

His best known story has since been plagiarized and extended to geographical localities unknown to "Bob;" but here is the story as it emerged in pristine beauty from Taylor's repertoire: A mountaineer who had never ridden on a railroad decided to take advantage of a $2.00 excursion rate to Memphis, and saw for the first time a large city. What chiefly interested him was the bars. He had never seen a bar nor a highball; he had been used to drinking "liquor" out of a gourd. After he had visited a number of marvelous places his enthusiasm overcame him, and he addressed the crowd thus: "I can lick any man in the United States."

The crowd laughed good-naturedly. This infuriated the mountaineer. "I can lick any man in Shelby county!" he yelled. This time the crowd sobered and looked at him with hostile eyes. "I can lick any man in Memphis!" he shouted. A short, thick-set man emerged from the crowd and put him out of action with a right-arm swing. When he came to the mountaineer looked around feebly and said: "I reckon that in that last proposition I kivered too much ground."—New York Times.

Australian Wool Trade.

A dispatch from Melbourne states that the Victorian province wool production for the past season amounted to 110,000,000 pounds, as compared with 101,803,000 pounds last season. The average weight of a sheep's fleece was 7.28 pounds, as compared with 6.99 pounds in the preceding year. Exports of wool from July 1, 1911, to April 30, were: From Australia, 1,878,000 bales, an increase of 42,000 bales, as compared with corresponding period of last season; from New Zealand, 430,000 bales, a decrease of 20,000 bales.

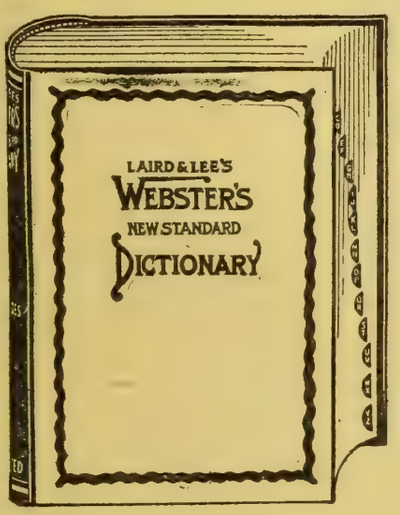
Look up the premiums we offer.

The Greatest Value Ever Offered For $1.00.

The Very Best Monthly Farm Paper For Two Years and a Copy of Laird & Lee's

WEBSTER'S NEW STANDARD DICTIONARY

Which is the Most Compact, Useful, Handy, Instructive Book Ever Issued by the American Press.



LAIRD & LEE'S Webster's New Standard Dictionary of the English Language—a wonderful book, 756 pages in all, 840 illustrations, substantially bound, gilt title, red edges, patent thumb index. Special edition for office and general use on farms, estates, ranches, etc.; massive but handy; contains ten encyclopedic features, supplement of new words, dictionaries of biography, geography, musical terms, Biblical, classical, historical and mythological names, foreign phrases, English word-building, rules in orthography, current abbreviations, metric system with conversion tables; weighs twenty-eight ounces.

The National Farmer and Stock Grower

is a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in THE NATIONAL FARMER AND STOCK GROWER. There are thirty-two pages, four columns to the page. It is published monthly.

Special Inducements

To Paid-in-Advance Subscribers — To Old Friends and New Patrons.

Our offer to you: Send us One Dollar and we will send you The National Farmer and Stock Grower for two years, and we will also send you, postage paid, safe delivery guaranteed, one copy of this great Webster's Dictionary. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain.

Here is a Subscription Blank.

HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Premium one copy of Laird & Lee's Websters's New Standard Dictionary, 756 pages, as advertised, the same to be sent post free, safe delivery guaranteed.

INTERSTATE SHIPMENT OF LIVE STOCK.

Ready Reference For the Shipper—How He Can Solve the Problem.

[By Dr. C. D. Folse, of the Kansas City Veterinary College.]

For several years the United States Association of Live Stock Sanitary Commissions has attempted to devise a plan for uniformity in the state regulations of shipment of stock interstate. The membership of the United States Association, made up of State Sanitary Boards and State Veterinarians, has been taxed to relieve the inconvenience to the shippers from confusion resulting from the widely differing requirements of the several states. Until the federal government issued a synopsis of all the state laws in pamphlet form, neither the shipper nor the veterinarian was always sure just what form of inspection is necessary for stock to gain entrance to a given state. Unless one carried a library at his elbow, he could not hope to advise definitely upon the matter, and even now with the government pamphlet in circulation, the general shipping public is at sea as to what is expected.

The necessity of control of interstate shipment of stock became evident in investigations of epizootics of contagious diseases, for it was found that such diseases as glanders and tuberculosis were spread by the movement of stock. Each state in its endeavor to protect its live stock interests framed laws to suit its own needs, which resulted in a great variety of statutes in the several states. The Western States placed rigid restrictions upon the ingress of sheep because they wished to rid themselves of the sheep scab; the Northern States discriminated against Southern cattle because of a fear of Texas fever; and the Dairy States looked carefully to dairy cattle with the view of suppressing tuberculosis. Later it became evident that certain inspectors were not above the practice of issuing health certificates to diseased animals, and the several states began to designate what inspectors should be considered competent to issue certificates. It is natural there should be a widely-differing idea of proper inspection reflected in the laws of the different states. As example, Tennessee will accept the certificate of any qualified veterinarian, while Texas requires inspecting veterinarian be endorsed by the State Veterinarian of the state of origin, and Mississippi will recognize only official State or Federal Veterinarians.

In an effort to correct some of these undesirable conditions the United States Association requested the federal government to assume control of all interstate shipments; but the officials of the Bureau of Animal Industry thought it impracticable to do so at this time and suggested some help might be obtained by using government forms in making certificates. The Bureau offered to furnish blanks for the certificates, which certainly made a valuable aid to the state authorities. The chief defects, however, are not yet rectified, and it will be necessary for the stock shippers to give the matter some careful thought if anything definite is accomplished in the future toward simplifying inspection requirements.

Several methods of inspection have been suggested which may relieve the situation of the present dissatisfaction. It has been suggested that all the states require veterinarians making inspection to be vouched for by the federal government, and it is certain that such an arrangement would insure competent men being authorized to make inspections and would make impossible such a situation which is claimed to have existed in Illinois through a political control of the State Live Stock Sanitary Commission. The use of government forms by men endorsed by the federal government and known to be competent to fill in the forms would remove any grounds for question on the part of any state. Such an arrangement can be made if the shipper himself will lend his efforts to the state authorities in presenting the matter to the legislative bodies.

Below is given a synopsis of the regulations of the various states concerning the interstate shipment of stock. These briefly-stated regulations were taken from the pamphlet of the Federal Bureau of Animal Industry and several corrections made to cover changes in state laws since the pamphlet was issued. The synopsis will be of service to the shipper as a reference, for it makes possible ready information concerning the requirements of any state for admission of stock from another state.

Alabama.

Horses and mules.—Health certificate in duplicate, issued by officially qualified veterinarian.

Cattle.—Health certificate, including tuberculin test for animals not intended for immediate slaughter. Calves from tubercular mothers or herds not admitted under any circumstances.

Sheep.—Health certificate.

Hogs.—Health certificate, showing no exposure to disease.

Who may inspect.—Any Federal Veterinarian or any legally-qualified veterinarian endorsed by the State Veterinarian of state of origin.

Arizona.

Horses and mules.—Health certificate, preferably including mallein test.

Cattle.—Health certificate. Tuberculin test for dairy and breeding cattle.

Sheep.—Health certificate. Animals from infected districts dipped for scab.

Hogs.—Health certificate. Two-weeks' detention at destination.

Who may inspect.—Any veterinarian endorsed by state officials of state of origin.

Arkansas.

Horses and mules.—Health certificate.

Cattle.—Health certificate from official veterinarian of state of origin, for dairy or breeding cattle.

Sheep.—Statement showing freedom from infection or exposure to same.

Hogs.—Statement showing freedom from infection or exposure to same.

Who may inspect.—Federal Veterinarian or official veterinarian of state of origin.

California.

Horses and mules.—Health certificate, including mallein test. One copy of certificate and test record with way bill, other mailed to State Veterinarian on day of shipment.

Cattle.—Health certificate. Tuberculin test for breeding and dairy cattle. Certificate and test record must accompany way bill and duplicate go to State Veterinarian on day of shipment. Special rules for Southern cattle.

Sheep.—Health certificate and dip for those from infected localities.

Hogs.—Health certificate.

Who may inspect.—Federal Veterinarians or veterinarians endorsed by live stock sanitary officials of state of origin.

Colorado.

Horses and mules.—No inspection required.

Cattle.—Health certificate. Tuberculin test chart must accompany certificate for dairy and breeding cattle.

Sheep.—No inspection.

Hogs.—No inspection.

Who may inspect.—Federal Veterinarian; any veterinarian endorsed by State Veterinarian of state of origin.

Connecticut.

Horses and mules.—No inspection.

Cattle.—Health certificate accompanied by tuberculin test chart in which each animal is clearly identified.

Sheep.—No inspection.

Hogs.—No inspection.

Who may inspect.—Any veterinarian endorsed by live stock sanitary officials of state of origin.

Delaware.

Horses and mules.—No inspection.

Cattle.—Those for dairy or breeding must have health certificate accompanied by tuberculin test chart.

Sheep.—No inspection.

Hogs.—No inspection.

Who may inspect,—Federal Veterinarian or any veterinarian endorsed by the Live Stock Sanitary Commission of the state of origin.

Florida.

Horses and mules.—No inspection.

Cattle.—No inspection.

Sheep.—No inspection.

Hogs.—No inspection.

Georgia.

Horses and mules.—No inspection.

Cattle.—Health certificate and tuberculin test record for dairy and breeding animals. Show animals may enter for that purpose on special permit from State Veterinarian of Georgia.

Sheep.—No inspection.

Hogs.—No inspection.

Who may inspect.—Federal Veterinarians or any graduate veterinarian endorsed by state live stock sanitary officials of state of origin.

Idaho.

Horses and mules.—No inspection.

Cattle.—Health certificate with tuberculin test record showing three preliminary temperatures and four after injection.

Sheep.—Bucks dipped after entering state.

Hogs.—No inspection.

Who may inspect.—Federal or official State Veterinarian.

Illinois.

No inspection except for Texas fever in cattle from below the quarantine line, which inspection is made by Illinois officials within that state.

Indiana.

Horses and mules.—No inspection.

Cattle.—Health certificate accompanied by tuberculin test chart, one copy of which must be sent to State Veterinarian of Indiana at time of shipment. Feeding cattle admitted under special permit.

Sheep.—No inspection.

Hogs.—Breeders must have certificate showing freedom from infection and that they have not been in infected territory.

Who may inspect.—Federal Veterinarian or State Veterinarian of state of origin.

Iowa.

Horses and mules.—Health certificate accompanied by mallein test chart.

Cattle.—Health certificate accompanied by tuberculin test chart.

Sheep.—Health certificate.

Hogs.—Health certificate.

Who may inspect.—Federal Veterinarian or any veterinarian endorsed by live stock sanitary officials of state of origin.

Kansas.

Horses and mules.—Health certificate by official veterinarian. When from tick area, certificate must show them to be free of ticks.

Cattle.—Health certificate. Tuberculin test for breeding and dairy cattle. For those for South, certificate must show freedom from fever ticks.

Sheep.—No inspection.

Hogs.—No inspection.

Who may inspect.—Federal Veterinarian and those commissioned by state of origin.

Kentucky.

Horses and mules.—No inspection.

Cattle.—Health certificate accompanied by tuerculin test record.

Sheep.—Certificate from federal officials showing they were dipped within ten days of date of shipment.

Hogs.—No inspection.

Who may inspect.—Federal Veterinarians or official State Veterinarians.

Louisiana.

Horses and mules.—Health certificate.

Cattle.—Health certificate for breeding and dairy cattle, including tuberculin test record. Copy of each must be mailed by owner to Louisiana Live Stock Sanitary Commission upon arrival of animals at destination. Calves from infected herd or mothers not to be admitted at all.

Sheep.—Health certificate showing inspection was made just before shipment.

Hogs.—Health certificate showing inspection was made just before shipment.

Who may inspect.—Any veterinarian deputized by officials of state of origin.

Maine.

Horses and mules.—Health certificate including mallein test.

Cattle.—Enter on permit of Cattle Commission of Maine. Quarantines thirty days and subjected to tuberculin test by Maine officials.

Sheep.—No inspection.

Hogs.—No inspection.

Who may inspect.—Any veterinarian deputized by state of origin.

Maryland.

Horses and mules.—No inspection.

Cattle.—Health certificate and for dairy and breeding cattle the tuberculin test in addition.

Sheep.—Health certificate.

Hogs.—Health certificate.

Who may inspect.—Federal or official State Veterinarians of state of origin.

Massachusetts.

Horses and mules.—No inspection.

Cattle.—Health certificate and record of tuberculin test.

Sheep.—No inspection.

Hogs.—No inspection.

Who may inspect.—Any veterinarian endorsed by sanitary officers of the state of origin.

Michigan.

Horses and mules.—No inspection.

Cattle.—Health certificate for dairy cattle, including tuberculin test.

Sheep.—No inspection.

Hogs.—No inspection.

Who may inspect.—Any competent veterinarian.

Minnesota.

Horses and mules.—If branded, must have health certificate with record of mallein test given within thirty days of date of shipment.

Cattle.—Health certificate and tuberculin test record for dairy and breeding cattle. No certificates accepted from Illinois unless made by Federal Veterinarian.
Sheep.—Health certificate.
Hogs.—Health certificate.
Who may inspect.—Federal Veterinarian, official State Veterinarians or their assistants, excepting those of Illinois.

Mississippi.

Horses and mules.—Health certificate.
Cattle.—Health certificate and tuberculin test for dairy and breeding cattle.
Sheep.—Health certificate.
Hogs.—Health certificate.
Who may inspect.—Federal Veterinarians and official State Veterinarians.

Missouri.

Horses and mules.—No certificate required.
Cattle.—Health certificate, and for dairy and breeding cattle record of the tuberculin test. Pasture cattle and those for slaughter admitted on special permit. Regulations do not apply to show animals.
Sheep.—No certificate required.
Hogs.—No certificate required.
Who may inspect.—Federal or official State Veterinarians or any veterinarian endorsed in writing by State Veterinarian of state of origin.

Montana.

Horses and mules.—Health certificate including mallein test record.
Cattle.—Except for immediate slaughter, health certificate including the record of tuberculin test.
Sheep.—Health certificate, and animals must be dipped twice within ten days after arrival in Montana.
Hogs.—Health certificate showing non-exposure to cholera, except where certificate shows immunization by Dorset-Niles method. Show animals must have certificate showing such immunization.
Who may inpect.—Only official State and Federal Veterinarians.

Nebraska.

Horses and mules.—Health certificate.
Cattle.—Health certificate, including tuberculin test for dairy and breeding cattle.
Sheep.—No certificate, if from clean territory. Federal certificate if from infected territory.
Hogs.—Health certificate and animals must be crated unless for immediate slaughter.
Who may inspect.—Federal Veterinarian, any graduate veterinarian endorsed by official State Veterinarian of state of origin.

Nevada.

Horses and mules.—No certificate required.
Cattle.—No certificate required.
Sheep.—Must secure permit from Sheep Commission or its deputies.
Hogs.—No certificate required.
Who may inspect.—Practically no inspection required.

New Hampshire.

Horses and mules.—No certificate required.
Cattle.—Health certificate, including tuberculin test record.
Sheep.—No certificate required.
Hogs.—No certificate required.
Who may inspect.—Any qualified veterinarian.

New Jersey.

Horses and mules.—No certificate required.
Cattle.—Health certificate for dairy and breeding cattle, including the tuberculin test record.
Sheep.—No certificate required.
Hogs.—No certificate required.
Who may inspect. — Competent veternarians whose certificates are approved in writing by the State Veterinarian of the state of origin.

New Mexico.

Horses and mules.—Health certificate.
Cattle.—Health certificate, and for dairy and breeding cattle a record of tuberculin test.
Sheep.—Health certificate. Bucks dipped at unloading point.
Hogs.—No certificate required.
Who may inspect.—Official veterinarians of state of origin for animals other than sheep. Latter must be inspected by Federal Inspector.

New York.

Horses and mules.—Health certificate.
Cattle. — Health certificate for beef cattle and record of tuberculin test in addition for dairy and breeding cattle.
Sheep.—No certificate required.
Hogs.—No certificate required.
Who may inspect.—Federal Inspector or veterinarians endorsed by proper official of state of origin.

North Carolina.

Horses and mules.—Health certificate for brood animals.
Cattle.—Health certificate with record of tuberculin test additional for dairy and brood animals.
Sheep. — Health certificate for brood animals.
Hogs.—Health certificate for brood animals.
Who may inspect.—Federal Inspectors, State Inspectors, or any veterinarian endorsed by State Veterinarian of state of origin.

North Dakota.

Horses and mules.—Health certificate and record of mallein test given within thirty days preceding date of shipment.
Cattle.—Health certificate showing record of tuberculin test given within thirty days of date of shipment.
Sheep.—Health certificate showing freedom from scabies or lip and leg ulceration or exposure to either within thirty days of shipment.
Hogs.—Health certificate showing animals came from clean territory or that they have been immuned against cholera by the Dorset-Niles method. All show animals must be immunized against cholera.
Who may inspect.—Federal, State or Deputy State Veterinarians or any veterinarian endorsed by State Veterinarian of state of origin. Only federal certificates from Illinois.

Ohio.

No inspection required for entry of stock.

Oklahoma.

Horses and mules.—Health certificate showing animals free of ticks.
Cattle.—Health certificate showing record of tuberculin test for dairy and breeding cattle.
Sheep.—No certificate required.
Hogs.—Health certificate, except for immediate slaughter.
Who may inspect.—Official Veterinarian, federal or state, or any registered graduate veterinarian of state of origin.

Oregon.

Horses and mules.—Health certificate, including mallein test for animals to be used on construction work.
Cattle.—Health certificate including tuberculin test, except for strictly range cattle.
Sheep.—Health certificate, if from quarantined state. In all cases State Sheep Inspector must be notified of point of entry, time, origin of shipment, owner's name and address, name of person in charge, and full identification of each animal. If from quarantined state, animals must be dipped after entry.
Hogs.—Health certificate. Must not contact public yard or undisinfected cars or other environment. Show animals must be crated.
Who may inspect.—Official Veterinarian, state or federal, or any veterinarian endorsed in writing by State Veterinarian of state of origin. Sheep can be inspected only by Federal Inspector.

Pennsylvania.

Horses and mules.—No certificate required.
Cattle.—Dairy and breeding cattle must be accompanied by certificate showing temperature chart of tuberculin test. Special permit required for Southern cattle.
Sheep.—No certificate required.
Hogs.—No certificate required.
Who may inspect.—Federal Inspectors, official State Veterinarians, or any veterinarian certified to in writing to the State Veterinarian of Pennsylvania at Harrisburg by the State Veterinarian of state of origin.

Rhode Island.

No inspection required except physical inspection by Rhode Island officials after animals have entered.

South Carolina.

Horses and mules.—Health certificate; mallein test, if exposed to glanders.
Cattle—Health certificate; tuberculin test for dairy and brood animals.
Sheep.—Health certificate.
Hogs.—Health certificate.
Who may inspect.—Official Veterinarian, federal or state.

South Dakota.

Horses and mules.—Health certificate, including mallein test.
Cattle.—Health certificate; tuberculin test for dairy and brood animals.
Sheep.—Health certificate.
Hogs.—Health certificate.
Who may inspect.—Only Federal and official State Veterinarians or deputies.

Tennessee.

Horses and mules—Must have proof of freedom from contagious disease.
Cattle.—Health certificate, including tuberculin test.
Sheep.—Health certificate.
Hogs.—Hogs from public stock yards not accepted. No certificate for others.
Who may inspect.—Any qualified veterinarian.

Texas.

Horses and mules.—Health certificate.
Cattle.—Health certificate and record of tuberculin test given within sixty days of date of shipment.
Sheep.—Health certificate.
Hogs. — Breeding, stocking or those for shows must have certificate that they have been immunized against cholera by the Dorset-Niles method.
Who may inspect.—Federal or official veterinarian of state of origin.

Utah.

Horses and mules.—Health certificate; mallein test for stallions and jacks.
Cattle.—Health certificate, including tuberculin test record for breeding or dairy cattle.
Sheep.—Health certificate.
Hogs. — Health certificate; all animals quarantined fifteen days after entry.
Who may inspect.—Federal or official State Veterinarians or those endorsed by the State Veterinarian of the state of origin.

Vermont.

Horses and mules.—No certificate required.
Cattle.—Permit from Vermont Cattle Commission, which makes tuberculin test after entry.
Sheep.—No certificate required.
Hogs.—No certificate required.
Who may inspect.—Any veterinarian having endorsement of proper official in state of origin.

Virginia.

Horses and mules.—No certificate required.
Cattle. — Health certificate for dairy and breeding cattle, including record of tuberculin test made within four months of shipment date.
Sheep.—No certificate required.
Hogs.—No certificate required.
Who may inspect.—Federal Veterinarians or any veterinarian endorsed by proper official of state of origin.

Washington.

Horses and mules.—Certificate of physical inspection.
Cattle.—Tuberculin test for dairy and breeding cattle; physical inspection for others.
Sheep.—Physical inspection.
Hogs.—Physical inspection.
Who may inspect.—Only Federal Veterinarians or official State Veterinarians or their deputies.

West Virginia.

Horses and mules—Physical inspection.
No inspection required for shipment of stock.

Wisconsin.

Horses and mules.—Health certificate, including mallein test.
Cattle.—Health certificate; and for dairy and brood cattle a record of tuberculin test in addition.
Sheep.—No certificate required.
Hogs.—No certificate required.
Who may inspect.—Graduate veterinarians approved by State Veterinarian of state of origin.

Wyoming.

Horses and mules.—Health certificate; mallein test for stallions and jacks.
Cattle.—Health certificate; and for dairy and breeding cattle, tuberculin test.
Sheep.—Ten-days' notice to Secretary State Board of Sheep Commissioners at Cheyenne, enclosing three cents for each sheep and twenty-five cents for each buck. All sheep are dipped after arrival in the state.
Hogs.—Health certificate. If for shows, must be immunized against cholera by Dorset-Niles method.

Where mallein test and tuberculin test records are required, the charts should be made in duplicate, one copy going to the owner, one accompanying the way bill, and, if required, the third sent to the proper official of the state into which the animals are to be shipped.

By a qualified veterinarian is meant one who is licensed to practice under the laws of his state. Where graduate veterinarian is meant it is so indicated.

The Dorset-Niles method of immunization against hog cholera is what is commonly known as the simultaneous method. By this is understood that anti-hog-cholera serum is administered in conjunction with a small dose of cholera virus.

In nearly all the states cattle, sheep and hogs may be shipped in for immediate slaughter without inspection, though as indicated some issue special permits in such cases. In certain public stock yards, as those at Kansas City, St. Louis and Chicago, where federal government officials are in charge and not likely to permit the spread of infection, the general regulations are not made to apply.

Ropp's Commercial Calculator.

This is a standard book, and a revised, enlarged and improved edition. There are millions in use. **Ropp's Commercial Calculator** is especially valuable to farmers. By its regular use many hard problems become easy. It will prevent mistakes, relieve the mind, save labor, time and money, and do your figuring in the twinkling of an eye. As handy as a watch, always ready and reliable. Anyone who will send 50 cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of **Ropp's Commercial Calculator** as a free premium. Address **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Grain Dealer Surprised.

Farmer—Isn't No. 2 Corn worth more than 35c?
Grain Dealer—That is really the market price today, but I will make it 35½c. (Load weighs 2720 lbs.)
Farmer, opening Calculator—Amounts to $17.24; had on 48 bushels and 57 hundredths. (Page 13.)
G. D.—Well, I declare! Whose lightning Calculator is that?
F.—Why, Ropp's of course—the New improved edition. It comes handy indeed, couldn't get along without it.

Draft Horses in Denmark.

The draft horses in this Kingdom are put to work between the ages of two to two and one-half years, but as a rule they begin in the country districts and are only used in the large cities when they are at least five years of age. There are in Denmark at present about 550,000 horses.

The majority of the draft horses belong to what is called the Jutland breed, and are foaled in Jutland, although there are many breeding establishments on other islands comprising the Kingdom. The Jutland breed has been and is being constantly crossed with breeds of other foreign lands, especially Belgium. There is also much crossing with the horses from the south and central parts of Sweden.

The length of the usefulness of the city horse may be said to be from four to five years as a "coacher," five years at an omnibus, six years at a street railway, and from six to nine years on trucking work.

The price at which horses sell is difficult to give. Sound coachers can be obtained for about $170, but the same horse after a few years' work would probably sell for only $100. A good "bus" horse will cost $200, but after service will bring about $75. A car horse represents an outlay of about $190, and when resold after service will bring about $75. Brewery horses, which are usually very heavy, cost about $275 to $300, but when sold after being worked out bring only $50. This low price is explained by the fact that the agricultural sections do not want such heavy beasts and the majority of these animals are slaughtered. An ordinary working horse, fresh, young and sound, can be had for $200; what he will bring when sold is problematical.

The mortality of horses is about two or three per cent. in well-kept stables. Injuries received seem to be the main cause of mortality. Diseases brought on by a bad digestion or disarrangement of the bowels or colds also add to the causes of mortality. The death rate among the loosely-kept animals is about five to six per cent.

The daily allowance of forage is approximately sixteen pounds of oats, five pounds of corn, two pounds of molasses, six pounds of hay and three pounds of straw. No bran of any consequence is fed. For bedding, straw and coarse hay are used as a rule, and no account is taken of what the animal may eat. The teams used by the city are bedded with peat dust. The value of a horse's droppings may be placed at about 25 cents per month.—From Report of Consul General E. D. Winslow at Copenhagen to the United States Department of Commerce and Labor.

Concrete Silo Construction.

The College of Agriculture of the University of Missouri has perfected plans to help farmers build concrete silos. The chief difficulty which confronts the individual farmer who wants to build a concrete silo is the expense of the "forms" used in the construction. If several farmers join in making the forms it is less expensive. It costs still less to rent the forms. The College of Agriculture has made a limited number of these forms for building concrete silos and will rent them to farmers under the following conditions:

1. At least three farmers in a community must apply at one time.
2. The rental charge will be ten dollars each when there are three farmers, nine dollars each for five farmers, and eight dollars each when six or more silos are constructed in one community. The rental must be paid in advance.
3. The College will send a man free to help start the construction of the first silo and will pay the freight on the forms.

If a group of farmers desire to construct their own forms, plans and specifications will be furnished under certain conditions. Under the latter plan the College will send a man when possible to help start the building of the first silo, provided his expenses are paid by the farmers.

Full information regarding this plan of co-operative silo building may be had by writing to the University of Missouri Dairy Department, Columbia, Mo.

Hogs Pay the Bills.

While the hog is a debt payer, it is necessary for the breeder, farmer or feeder to manage so as to make the greatest amount of money at the least cost in the quickest time. To do this there is nothing of more importance than feeding alfalfa. The Illinois Farmers' Institute state that alfalfa is the most important single product of the soil, a product that has been neglected to the detriment of every community.

Alfalfa as a forage plant for general use has no equal. It is easily grown, it is hardy under trying circumstances, and while it is an excellent food for all kinds of stock, and especially the hog, it at the same time through a natural process improves the soil by drawing from the atmosphere nitrogen.

Alfalfa is a gold mine which can be worked most successfully by the use of swine feeding. A gold mine unworked is useless. The farms of the West and East, North and South, contain these gold mines that are unworked.

Alfalfa furnishes the cheapest feed for growth, health and vitality in pigs.

Get busy and open up an alfalfa mine on your farm and work it with hogs.—American Swineherd.

Get All the Crop Profits-Kill Insect Pests-Spraying Merry War Powdered Lye

E. Myers, President, E. Myers Lye Company

And It Will Not Injure Vegetation

I have spent more than 20 years making all manner of tests so that I know what I am talking about when I claim that *Merry War Powdered Lye* makes the most effective, most economical, safest and surest spray mixture you can use in orchard, garden or poultry house.

And my claim is backed by the experience of thousands and thousands of fruit growers and truck farmers everywhere who have used *Merry War Powdered Lye* as a spray mixture to exterminate San Jose Scale, Borers, Potato Bugs and other profit-eating insect pests in orchard or garden—and with wonderful results. Don't wait until your trees and plants are half eaten up with the pests. If you want the best results begin now when you know the first signs are due—and devote all the time you can spare to systematic spraying with *Merry War Powdered Lye.*

Every farmer knows that it is a constant battle for extermination. The trouble with many spray mixtures, like Paris Green, lies in the fact that they cannot be used strong enough and frequently enough to destroy the pests without searing foliage and poisoning and dwarfing the yield. The farmer who sprays with *Merry War Powdered Lye* need have no such fear—it will kill the pests without injuring either foliage or yield. The drippings act as a fertilizer, enriching the soil around the roots, increasing both the size and quality of the yield.

It's up to you to get *all* the profits—don't let insect pests eat the profits when you can exterminate them with *Merry War Powdered Lye*—without injury to plant life.

Here's One Man's Experience

Dear Sirs:- Vale Summit, Md.
I have given Merry War Powdered Lye a thorough test in removing San Jose Scale and have the most beneficial results. My orchard is now in fine, healthy condition as is my rose garden also. **James Barber.**

Cut Out And Save These Directions And Follow Carefully

One can of *Merry War Powdered Lye* to 15 gallons of water makes a most effective mixture for most spraying purposes in orchard or garden. Used frequently during Winter and early Spring months, this solution will prevent or destroy San Jose Scale.

To exterminate Borers, make a solution of one can Merry War Powdered Lye to 10 gallons of water. Apply plentifully with a brush around the mouths of the burrows so that it will trickle down into the burrows.

A potato patch sprayed weekly with *Merry War Powdered Lye* will yield an immense crop. Try it.

Spray as often as necessary to keep down the pests—regular spraying gives best results. Use any kind of spraying device you like.

Unequaled In Poultry House

The most effective wash or spray for nests, roosts and poultry houses is made from three teaspoonfuls of *Merry War Powdered Lye* to one gallon of water—it's death to lice, mites and vermin.

You can use a solution of *one* teaspoonful of *Merry War Powdered Lye* in one gallon of water on bodies of lice infested fowls without injury to skin or plumage.

Which Kind of Crops Do You Want?

My Warning Important—Heed It

If you want the very best results do not make the mistake of thinking that any ordinary commercial lye will produce the results claimed for *Merry War Powdered Lye.* Insist on dealer supplying the genuine—and *accept no substitute.*

Sold By Leading Dealers Everywhere

Merry War Powdered Lye comes in 10c cans, full case of 4 dozen cans for $4.80, at Grocers, Druggists or Feed Dealers Everywhere. If yours can't supply you, write us, giving your dealers' names and we will see that you are supplied, and will also send you free, a valuable booklet on *How Merry War Powdered Lye Adds To The Farmer's Profits.*

Crops Sprayed with Merry War Powdered Lye

Without

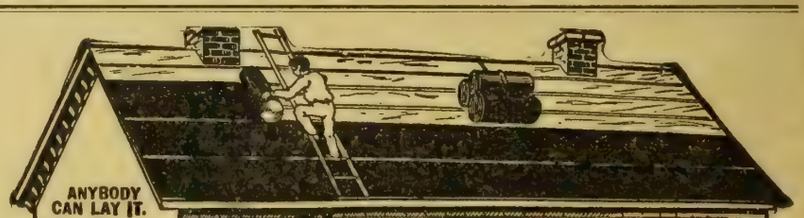
Also Greatest Hog Remedy Ever Known

Light Steers From Texas.

On Monday, May 27th, at the St. Louis National Stock Yards, Mr. R. E. Ward, of Southern Texas, marketed a shipment of fourteen cars of grass steers, 750 pounds average, that sold at $5.50 per 100 pounds, which is $41.25 per head. Asking a cattle buyer what these cattle would have sold for in former years, the answer was: "I have seen many a thousand better cattle sell for 2¼ cents a pound."

Distillery-fed Cattle.

It is very seldom that distillery-fed cattle are sold at St. Louis, but on Monday, May 27th, the Seneca Distillery Company, of Newton county, Southwest Missouri, shipped in some steers, 1,174 pounds average, that sold at $8.35 per 100 pounds. The price then paid was the highest of the year for that class of cattle.



Rubber Roofing

Warranted For Twenty-Five Years.
FREIGHT PAID To Any Station East of Rocky Mountains, except Texas, Okla., Colo., N. D., S. D., Wyo., Mont., N. M., La., Ga., Ala., Miss. and Fla., on all orders of three rolls or more. Special Prices to these States on request.

CENTURY MANUFACTURING COMPANY, Dept. 433, East St. Louis, Ills.

The Advantage of Keeping Accounts.

The farmer is as much a business man as he would be if he were keeping a store or running a mill. Bookkeeping is part of the business of farming, and the bookkeeping should be so well kept up that a man can know at any time just where he stands in the expenses of the year.

The simplest form of bookkeeping is usually desirable. The cash book can be used for both receipts and expenditures. Two perpendicular columns should be used, one to show expenses and the other receipts, both on the same page. This should be a large book.

In addition, the one keeping the accounts should carry a small cash book in the pocket for the purpose of putting down every item as soon as it occurs. In this way only will it be possible to keep the accounts up to date. If a person must carry an expense in mind all day before putting it down it will often be forgotten. This is particularly likely to be the case with the farmer when he goes to town to make purchases. Often his purchases will run into a score of items in a single day. If he has a vest-pocket account book, each item of expense can be jotted down at the time the money is paid out.

Another thing that will greatly assist in keeping accounts straight is to carry a bank account and pay most bills with checks. Most people could carry banking accounts if they thought they could. The banker is always ready to welcome the small account. The check and its stub constitute quite a system in themselves. When the canceled check comes back it is a receipt that cannot be contradicted. The stubs can contain a quite complete statement of the transaction. Then any time, by looking back, the man owning the check book can tell how his various accounts stand. Thus one man, when he makes a partial payment, always puts on the stub a memorandum of the amount still due to be paid in the future. He also makes a record on the back of the stubs of the items in his bank deposits at each date when deposits are made. This is in addition to the deposit statement in the bank book, which shows only the total amount deposited. It will frequently be found desirable to know what checks have been received and deposited, and the record on the back of the corresponding stubs will show this.

Many a man becomes hopelessly entangled in debt because he does not keep an account of everything. Most farmers are given credit at stores in the towns, and it is then very easy for a family, where no accounts are kept, to order a good many things they do not need and thus bring up the expenses of the place to a point that means ruin finally.

One point on which the world needs education is that of family financing. People are brought into the bondage of debt largely through their expenses for luxuries rather than necessities. Our necessities are few; our luxuries are many. A good many people imagine most of their luxuries are necessities. Arithmetic in the family is one of the most necessary forms of education in every nation.

There is no family so small or so limited in its means that the necessity for account keeping does not exist.

Fruit Growers and Empire Fertilizer.

Empire Carbon Works, St. Louis, Mo. Gentlemen: We, the Dongola Fruit Growers' and Shippers' Association, have used the "Horse Shoe" Brands of Fertilizer for the last fourteen years—except one year, and growers took another fertilizer that year, and it did not suit them—and when I go to take orders for fertilizers they ask if it is the "Horse Shoe" Brands, and I have to tell them it is or they do not want it. I think it is the best fertilizer on the market to-day. I have used it myself under corn, cabbage and potatoes, and it gives me good results. I tried it under corn and it made a third more to the acre, and the corn was ripe sooner, and no worms about it. Yours, (Signed) S. R. Rhymer, Secretary and Manager of Dongola Fruit Growers' and Shippers' Association, Dongola, Ill., February 24th, 1912.

Without a Hitch.

"Did her wedding go off without a hitch?"

"It did, indeed—the man she was going to marry didn't show up."—Brooklyn Life.

THE BOOK OF LIVE STOCK CHAMPIONS.

Edition of 1912.

Now Ready For Delivery.

True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

ONE THOUSAND CHAMPIONS,

Winners in Annual Live Stock Contests at State and National Fairs and Expositions.

THIS is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in The Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, famous sire, mother of champions, or winner in the prize ring.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special Inducements

To Paid-in-Advance Subscribers--To Old Friends and Patrons.

We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title.

This is An Extraordinary Offer.

Here is a Subscription Blank.

HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of The Book of Live Stock Champions, cloth-bound edition of 1912.

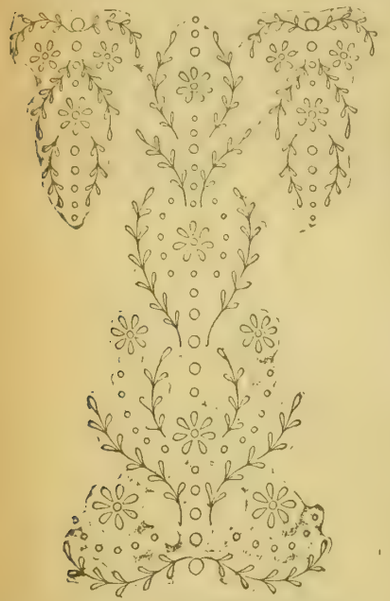
MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down, and press over the entire surface of the paper with a hot iron when a perfect outline will result. Please order by embroidery number.



Design For Embroidering Panels.

No. 656.—One panel, twenty inches in depth and nine and one-quarter inches in width, at the lower edge, and two panels, seven and one-quarter inches in depth and four and one-half inches in width at the lower edges, are given. The price of the pattern is 10 cents.

For Yokes and Collars.

No. 653.—Designs for embroidering yokes and collars of infants' and children's dresses. The price of the pattern is 10 cents.

Sprays of Daisies.

No. 652.—Design for embroidering sprays of small daisies. The price of the pattern is 10 cents.

Blouse Embroidery.

No. 657.—Design for embroidering a boy's Russian blouse. Especially adapted to May Manton's Pattern No. 7400. The price of the pattern is 10 cents.

Sprays of Chrysanthemums.

No. 654 consists of designs for embroidering sprays of chrysanthemums. Two sprays of each size are given. The price of the pattern is 10 cents.

Corset Cover Design.

No. 650.—Refined design for embroidering a corset cover. Scallops for neck and sleeve edges and flower sprays for the fronts are given. The price of the pattern is 10 cents.

Please send all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Have You a Chronic Illness?

If you have, you will surely be interested in the Bodi-Tone trial offer, which is printed on the last page of this paper. Bodi-Tone, which is now three years old, has made a great record in such cases. The manufacturers believe in it, for they will send you a box to try, no matter how old, hard or obstinate your case may be. If it does not help you, you need not pay for it.

Taking Care of Dress Skirts.

It is no little trouble to shake and brush a woolen dress skirt carefully after each time of wearing, but it is the only way to keep them free from dust and wrinkles, and when a skirt becomes soiled or begins to lose shape, to clean it and follow this with a thorough pressing is to freshen it wonderfully.

Dress skirts will often wrinkle less if folded right side out, and, if possible, where it is not necessary to fold them crosswise. A girl or woman is fortunate if she can have a box a little longer than her skirts, as they can be laid out smooth after each wearing and they will keep their shape twice as long. If you have no box, the skirt should be hung on two hooks by means of a loop on each side. No other garment should be placed on the same hooks, so that the skirt will not be at all crushed.

A good way to mend a small rent in a woolen dress skirt is to wet the end of a cake of common yellow soap, rub over a piece of goods like the skirt, place on the wrong side, and make ti adhere by pressing with a moderately warm iron.

Woolen skirts of any color that are not quite soiled enough to be washed can be cleaned and brightened by putting them to soak in gasoline, and this must be placed out of doors or in an unused room. Put enough gasoline to cover the skirt in a bucket and then place the bucket in a pan of hot water. Remove all spots from the skirt with the warm gasoline, then place in a large bucket and pour the warm gasoline over the skirt, then cover closely and let stand for two or three hours, then rinse in clear gasoline and hang out on the line.

If a skirt is soiled enough to be washed, add half a cupful of gasoline to the suds before putting in the skirt, and it will make it clean easier and help to keep the color bright; and when pressing a skirt, always press one way of the goods, either lengthwise or across, to preserve the shape of the pieces.

If a skirt is still good but faded or rusty-looking, it is well worth recoloring, and a rusty black skirt can easily be recolored a jet black with Diamond dye for wool and will look as nice as new with careful pressing and finishing. An old-style faded blue skirt was ripped apart and colored a rich dark blue, and a white woolen dress skirt that had become yellow from careless washing was colored a dark shade of green, then they were cut by one of the late patterns and carefully made over, and they were as stylish as any of the high-priced garments.

Dress skirts soon look old and untidy, if, when removed, they are carelessly thrown aside or hung on a nail; and to keep skirts fresh, they should never be allowed to become creased; and, if they are always folded carefully, they will always look fresh.—A. M. H.

The Army and Navy Needle Book.

A TEN-CENT PROPOSITION WORTH TEN TIMES AS MUCH. The Army and Navy Needle Book contains five packages of Peerless Steel Needles, warranted; sizes, 3 to 9, 5 to 10, 6 to 7. There is no needle in the market better. There is also an assortment of fifteen other cloth-stuck needles, such as darners, mending needles, stitching needles, crewel needles, glove needles, straw-working needles, worsted needles, etc. The book as a whole cannot be beat. We have adopted the Army and Navy Needle Book as a subscription premium with the **Universal Magazine**, our own publication. It is a thirty-two-page, three-column illustrated monthly magazine. It contains interesting reading, stories, poetry, history, and useful information, fashions, patterns, etc. It is a magazine that recommends itself. Send us 10 cents in silver and we will send you the **Universal Magazine** on a trial subscription for three months, and we will send you one Army and Navy Needle Book. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo. TO CLUB RAISERS:**—Anyone who will get up a club of four subscriptions to the **Universal Magazine** in accordance with this advertisement will be credited with an extra three-months' subscription to the **Universal Magazine** and an extra package of needles will be sent for getting up the club. Don't wait. Remember, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

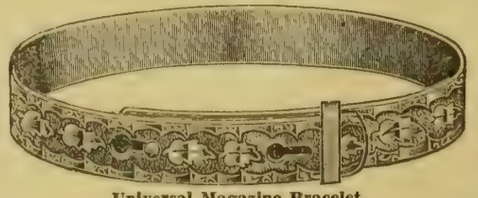
The Boys' Magazine.

A special offer made by the Boys' Magazine, Smethport, Pa., is well worth reading by parents and guardians as well as by boys themselves. Read it at once and act quickly. See page 28.

The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the **Universal Magazine.** The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one elegant **Universal Magazine Bracelet, postage free, as a subscription premium.** Money returned if not satisfied. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.** To Club Raisers:—Anyone who will get up a club of four two-year subscriptions in accordance with this advertisement and send us two dollars to pay for same will be credited with one extra two-year subscription to the **Universal Magazine** and we will also send one extra Bracelet for getting up the club.



Universal Magazine Bracelet.

MISSOURI CROP REPORT.

The Situation on June 1st, as Furnished By the State Board of Agriculture.

General Statement.

The Missouri crop report is issued to acquaint the public with the facts just as far as it is possible to get them, rather than to paint rosy-hued pictures for advertising purposes. The first aim is to tell the truth and to tell it in such a manner that it may be understood. This policy has not and will not be departed from. To do so would destroy the value of these reports. Furthermore, the truth about Missouri is always good enough.

The end of the month of May finds Missouri farmers much more optimistic than a month ago. Splendid progress has been made with farm work. The weather during the month of May was cool enough to allow men and teams to go the limit, which they seem to have done, judging from the progress reported. One week of cool weather checked corn somewhat, but in some sections apparently aided wheat slightly. Previous to the rains of the 24th and 27th there was a little complaint of lack of moisture over a part of the state, especially in a few counties in the southwest section, while too much moisture retarded work in some of the lowland counties of the southeast. Taken as a whole, however, weather conditions for the month were above the average. Rainfall during the month of May at Columbia was 3.25 inches; May, 1911, showed 1.27 inches.

The Corn Situation.

The per cent. of corn planted is placed at 81, while one month ago it was but 3.5. By sections, planting shows: Northeast, 78; Northwest, 89; Central, 84; Southwest, 83; Southeast, 71. Part planted June 1, 1911, was 91.6; 1910, 80.5; ten-year average, 84. Stand is estimated at 82, varying but slightly in the several sections. Stand last year was 87; 1910, 71.5. Necessary replanting this year is attributed to poor seed and too hard rain following planting. With good seed harder to secure than ever before, the reasonably good stand of corn proves the value of the "test-your-seed-corn" campaign. Many farmers planted two-year-old seed with good results. There is some complaint of poor corn sold by seed houses. Soil condition is 88. Condition of growing crop is 87; 1911 was 85.6; 1910, 67; ten-year average, 79. Indications are for an increase of 3 per cent. in acreage, as compared with last year's crop of 7,554,242 acres.

The Wheat Situation.

Condition is practically the same as one month ago—now, 64.2; then, 63.4. By sections, condition is: Northeast, 51; Northwest, 76; Central, 66; Southwest, 61; Southeast, 67. One year ago condition for state was 85; two years ago, 69; ten-year average, 79.6. Practically one-fourth of the crop—24 per cent.—has been plowed up and more would have been had it not been seeded to timothy or clover. Harvest will be in progress in about four weeks.

The Oats Situation.

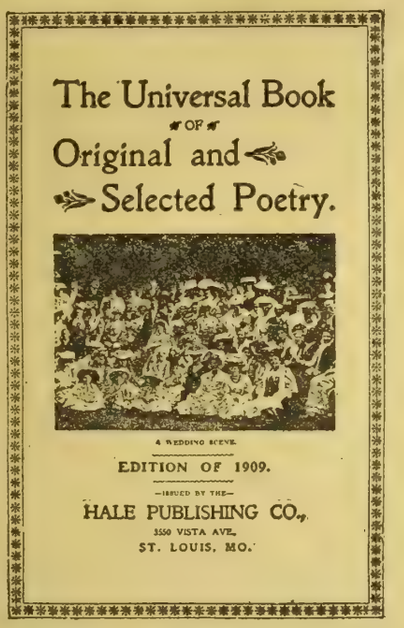
Condition of oats is estimated at 83.4. By sections it is: Northeast, 87; Northwest, 85; Southwest, 80; Central, 85; Southeast, 80. Acreage is 79.4, compared with 1911, when it was 1,143,753 acres, less than half of which was cut and threshed. One year ago, when hot weather had played havoc with oats by June 1, condition was 62; two years ago, 91.2.

Other Crop Conditions.

Clover condition is 79; stand of new crop, 90; timothy, 85, and stand of new, 87. Rye condition is 84; barley (but little grown), 89; alfalfa, 94. Pastures are generally good, being reported at 92 for the state. A preliminary estimate of the tobacco acreage, as compared with last year, places it at 87. Cotton acreage will be short, as compared with 1911 crop. Preliminary figures place it at 70. Overflows have reduced acreage and made planting late. Potato acreage is placed at 92; flax, 82. The outlook for a general fruit crop continues good, being 84 for the state. Berries and small fruit show 73, with a record strawberry crop, hundreds of additional pickers being needed at once to save it. The peach crop is practically a failure, the state estimate being 6 per cent.

Read about the Book of Live Stock Champions on page 23.

The Universal Magazine



and the Universal Poetry Book.

TWO EXCELLENT PUBLICATIONS.

The Universal Poetry Book

CONSISTS of One Hundred Pages, containing three hundred and ninety beautiful, interesting, pathetic, descriptive, humorous and delightful poems. These poems have been selected from the very best of the ancient and modern authors and the occasional pieces which have attracted favorable attention. It is a book to be kept by the bedside to compose one to sleep, a book to carry in the satchel or to read on the train and street car. It is a book for all people at all times. We issued the UNIVERSAL POETRY BOOK for the purpose of using it as a subscription premium in connection with our own new successful paper, the UNIVERSAL MAGAZINE.

THE UNIVERSAL MAGAZINE

is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication. One thing about the UNIVERSAL MAGAZINE is, that it is not loaded down with advertisements. Notwithstanding it is a cheap magazine, the subscription price being 25 cents a year, it is supported by subscriptions alone.

A TEN-CENT PROPOSITION.

Anyone who will send 10 cents to pay for four-months' trial subscription to the UNIVERSAL MAGAZINE can select one copy of the UNIVERSAL POETRY BOOK as a free premium, and we will send it by mail, prepaid, safe delivery in good order guaranteed. Below will be found two subscription blanks for two subscribers.

Here is a Subscription Blank.

HALE PUBLISHING CO., 3550 Vista Ave., St.Louis, Mo.:

Gentlemen:---Herewith please find Ten Cents to pay for four-months' subscription to the Universal Magazine, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of the Universal Book of Original and Selected Poetry.

THE SMITH FAMILY DOWN THE ROAD.

The Neighbor Woman Makes Their Acquaintance.

Mrs. Smith lived about a quarter of a mile down the road in a small, unpainted house set in the middle of a barren-looking plot of land. The ugliness was in no way concealed, for there had been no attempt to hide it behind beautiful shade trees and shrubbery, nor to give it a dress of green vines. Mrs.Smith resembled her dwelling place. She was down-at-the-heels, both literally and figuratively, and gave the impression of being bored with life in general and her own life in particular. Her four children were ordinary youngsters, who, in some respects, might have been extraordinary, had they been under the influence of some person who took the pains to study and strive to understand their several individualities. Mrs. Smith looked on them as a necessary adjunct to her married life. There might be better children in the world, there were probably worse. Mr. Smith matched the house and his wife. Slow, easy-going, not much in love with work, he got just enough out of the mortgaged farm to pay the interest on the mortgage and keep together the souls and bodies of the six members of the family. The farm had come to them from Mrs. Smith's father. It was clear then. But it was the first time in his life that Mr. Smith had any security upon which to borrow money and he couldn't resist the temptation. He got five hundred dollars, spent it recklessly, and then settled back into his old rut, feeling that at least he had had his fling.

It was only a pail of strawberries —luscious, dewy fruit, half the size of a small pear—piled into a small crimson mound, that made Mrs. Smith half open her eyes. This was the beginning of her awakening.

The berries came to her from the hands of the neighbor woman, who had lived on the next farm scarcely two years. Mrs. Smith looked at the neighbor woman with her pink-tanned cheeks blooming beneath a stiffly-laundered gingham hat, then she looked at the neat gingham dress and then she asked her to come in and dusted a chair for her to sit upon.

"I thought maybe you'd like some of my berries," said the neighbor woman. "We sold a couple of crates this morning, but I saved these out on purpose for you."

"Land, you didn't raise them yourself?" ejaculated Mrs. Smith.

"We surely did. That's my part of the farming, you see. My husband has the big crops to take care of, but I try these kind of things. I've planted rhubarb and asparagus and this year I'm going to try some new things in my kitchen garden, in the annuals, I mean. Why, that's the fun of having ground of your own. Cabbage and turnips are all right sometimes, but there's no reason in the world why we country women cannot have the best things in the world to put on our table."

"Land, you talk as if it was a pleasure to have to dig around in the country. I hate it!"

"Oh, it's work," admitted the neighbor woman. "I know what a real backache is since I've been raising strawberries, but it's the kind of work that I love. I love to think I'm helping to capture great big chunks of air and sunshine and rain and dew and serving them on our table with cream and sugar."

"Land, that's a new way to talk about plain farming," said Mrs. Smith, who felt drawn to the queer neighbor woman. "Maybe I'd like it some better if I could make a go of anything like that. But I can't. Once when we first came here, I spent a few cents I had saved for a grapevine and some currant bushes that an agent had. They never did nothing. Jim says they was all dried out when I got them. But I never had the heart to try such things again."

The neighbor woman, who was interested in cultivating other things besides delectable edibles, glimpsed a world of discouragement behind the simple statement.

"Oh, but you could succeed just as well as I, if you had the right stock and the ground was properly prepared. My berries are ripening so fast that they are getting beyond me, and I wonder if you could spare your little John and Myrtle to help me pick. They may have one box for every three they pick. They can sell their berries or bring them home to you, just as they choose. Then in the fall we will plant a bed for you and I will help you with my experience. I've made fifteen dollars already and the season is only beginning. Strawberry money is the farm woman's money, you know, Mrs. Smith."

Mrs. Smith's dull blue eyes had been gradually brightening during the neighbor woman's speech. Here was something of hope held out to her and her children. Perhaps she might succeed in raising berries like those of the neighbor woman. Perhaps there might be a little brightness gleaned from this dreary old farm.

That night Mrs. Smith dreamed rosy dreams in which acres of strawberries as big as Winesaps floated before her vision. And the next morning, even before the dew was off the grass, she had sent Myrtle and John scurrying up the road to the neighbor woman's farm. During the day Mrs. Smith forgot to think very much about her own discouraging lot. Many a time she wondered how the two children were getting on at the berry picking, and after several hours she began to watch the road eagerly to see if they were coming. Finally they came in sight, carrying a big pail of berries. They rushed into the house breathless with excitement. They had picked so many berries! And the neighbor woman would take them to market with her own, because they had asked her to. And the neighbor woman's house was so shiny. And she had given them a big plate of cookies and ice-cold milk to eat when they were half through the picking, and she wanted them every day while the berries lasted.

At the end of that berry season each of the little Smiths was ten dollars to the good, and the Smith family had had as many berries to eat as even they could dispose of. Then there was the big strawberry bed of their own which held rosy promise of the future. And, best of all, were the visits of the neighbor woman. Mrs. Smith did not dream that already there had been a change in herself, but the little woman from up the road saw that the dulled expression of the eye was being replaced by one of interest. And she felt that her strawberry season had been indeed a success when she heard Mrs. Smith's remark to her husband that "maybe living in the country wasn't the worst thing in the world, after all, if only you had the knack of thinking up new things to do with the ground."—Janet Thomas Van Osdel.

When Cleaning House.

The days which women hail with delight and which men abhor have arrived. And yet the even the woman who glories most in "upsetting a perfectly clean house just to make it a little cleaner," as one old man, sitting on the front steps, whither he had been driven by the strenuous work going on indoors, described it to me, may be glad to take a hint.

In your cleaning water used in washing windows, mirrors and woodwork, use a little coal oil, about a tablespoonful to a pail of water. This will make the glass easier to clean and will give to it an added shine when polished. It will remove paint and stains from woodwork with very little hard rubbing.

If you wish to clean soiled wall paper without going to the expense of calling a professional cleaner, try one of two ways: Break chunks off a mediumly stale loaf of bread and rub the soiled places with the bread until they disappear; or, procure a big dry sponge and rub it over the soiled places until the spots are eradicated.

If you have oil paintings that are in need of cleaning, take a slice of raw potato and rub it over the painting, then wipe off the juice of the potato with a clean, soft cloth. If it is the frames that need renovating, procure a can of gilt, if the frames are of gold, or of dark stain if they are of oak, and give them a coating.

If you have had trouble with moths in any particular room or closet, get rid of them by burning some gum camphor in the room. After removing from the room any plants or live pets it may contain, burn a piece of the camphor the size of a marble in an iron pan and light a match to it. Keep all the windows and doors closed for about three-quarters of an hour, then throw everything open to let the smoke escape.

If you haven't a moth-proof box in which to put away winter clothing, you can easily make one by lining a good-sized dry goods box with tar paper and then covering that again with newspapers or white muslin. This second lining must be tacked over the tar paper to keep the tar from getting on the clothing.—Jane Thomas Van Osdel.

He Smelled the Cake.

Senator Simmons was talking about a boom.

"I congratulated him on his boom," said the Senator, laughing, "and he appeared astonished that I knew anything about it. But I had a keen nose for booms, even for little ones. I explained that I was like the Newbern urchin.

"A Newbern urchin used to call on a certain old lady every Saturday afternoon and she would give him a piece of cocoanut layer cake. But one Saturday, as she expected company for tea, she decided not to cut the cake, and therefore none was offered to the urchin.

"He said, plaintively, as the time came for him to go:

"'I believe I smell cocoanut layer cake.'

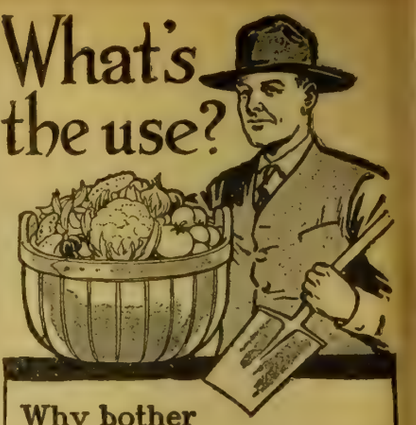
"The old laughed, went to the cupboard and cut him a very tiny slice. When she gave it to him he thanked her and said:

"'But it seems strange that I could smell such a little piece,doesn't it?'"—Washington Star.

Bill's Luck.

First Coster—"Well, pore old Bill's gone."

Second Coster (scornfully)—"Pore, indeed! Luckiest bloke in the market. Couldn't touch nuffink wifout it turned to money. Insured 'is 'ouse—burned in a month. Insured 'isself agin haccidents—broke 'is harm fust week. Joined the Burial Society last Tuesday, and now 'e's 'opped it. Pore old Bill, indeed!"—Punch.



Why bother to raise so many "good things" unless—

—Unless you *save* them. Your wife can "put up" many kinds of fruit. But it isn't so *easy* to "can" vegetables.

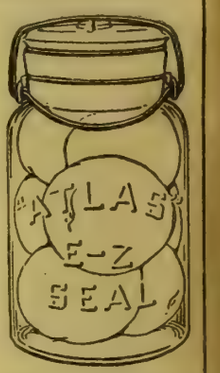
Not—if she *depends* on old-style, narrow-necked, tin-topped, screw-capped jars, that take in only *small* fruit. This year find out the better way to "put up" fruit—and vegetables, too—the

E-Z SEAL JARS

This is the all-glass jar, with the all-glass cap—no metal to taint the fruit—no twisting and turning. No shattering, no splattering. Easy to fill, easy to seal, easy to open and clean.

Don't allow good garden stuff or fruit "to go to waste." You may be sure it will keep—vegetables and fruit will *not* spoil in these air-tight, all-glass sanitary jars.

Free Jar—Free Book



Cut out this coupon, take it to your grocer—he will give you one E-Z Seal Jar—FREE. Be sure and write us for FREE Book of Recipes—it tells many things you should know. Get the Jar from the *grocer*. Get the Book from *us*.

HAZEL-ATLAS GLASS COMPANY
Wheeling, W. Va.

1-Qt. E-Z Seal Jar CG FREE for the Coupon

Please note—in order to secure free jar this *coupon must* be presented to your dealer before Sept. 1st, 1912, with blank spaces properly filled out.

HAZEL-ATLAS GLASS CO.,
Wheeling, W. Va.

This is to certify, That I have this day received one "Atlas" E-Z Seal Jar Free of all cost and without any obligation on my part. This is the first coupon presented by any member of my family.

Dahlias.

Fads and fashions are to be recognized in the realm of flowers as surely as in that of fashions, and now the dahlia, gladiolus and iris are coming to their own in the estimation of the public. Each has its own special points of favor, but for the person of limited means who wants a continuous display, the dahlia will prove most satisfactory. Its season of bloom is longer than either of the other members of the trio. While the gladiolus is useful for cutting and is unexcelled for faultless coloring and lily-like stateliness, the cut flowers permit of only the spike-like arrangement, and the seedlings require at least two years before reaching blooming size.

The dahlias have long slender stems, and some of them combine in various forms of decoration. The colors are rich, varied and striking. Plants continue to bloom until cut short by frost. Seedlings are easily grown and blossom the first year, though they seldom produce tubers large enough to keep through the winter. Plants raised from seed are not like the parent, though if started from cuttings or root division they are always true to name.

The dahlia is a native of Mexico, growing naturally on sandy soil, and the multitude of varieties now catalogued are all derived from a single, eight-rayed wild variety. This is a remarkable illustration of what cultivation ad careful selection may accomplish. While the family still delight in the warm sunshine, rich, light soil and plenty of moisture are also well suited to their needs, and a light mulch during the hottest months serves to protect from drouth.

Seed germinates very quickly and may be started in a window box, shifting the plants to separate pots when they have attained a size of two or three leaves. Transplant in the ground as soon as danger from frost is over. If started from tubers, the ideal plant is one sprout from a medium-sized tuber. Some leave two sprouts, but more cause a general weakening of growth and overcrowding of foliage with correspondingly few flowers. If permitted to grow tall, the plants will require staking. Another method is to pinch out the top bud and induce branching, the low, bushy form thus acquired needing no support. If it is desired to increase the number of plants, cut off the first shoots before they are so large as to become hollow, making an incision just below a joint after two or three pairs of leaves are developed, removing the lower pair with a knife and placing the cuttings in sand to root. Other sprouts will quickly take their place on the parent tuber.

Specialists class the larger forms in three divisions: Show dahlias, with the petals rolled forward; Decorative, with flat or nearly flat petals; and Cactus dahlias, with petals recurved, though in some popular catalogues this distinction seems not very closely followed. Then there are the small-flowered pompons. Fancy dahlias show variegations in markings or are shaded from dark to lighter shades of a solid color. Some of the variegated varieties may show all combinations of color, from an almost solid line of red or purple to almost white, and thus a fine collection with no two alike be gathered from the same plant.

Give a sunny situation with rich, light soil and plenty of room to grow. Three feet is not too much in every direction. Our grandmothers prided themselves with the mammoth plants grown by the kitchen porch, the secret of success being not so much in dishwater, as was usually supposed, but an abundance of moisture at the roots.

After the frosts have destroyed the tops, choose a drying day for digging the tubers, allowing them to dry enough that little soil adheres. Store in a frost-proof place in dry sand or earth, or they may be kept in paper bags until spring. Start early in boxes, or plant in the open ground when frosts are over.—Bessie L. Putnam.

Where the Candy Danger Lies.

According to recent statistics, the annual output of candy in this country amounts to nearly $100,000,000, or nearly one-sixth as much as all the wheat grown. The old cry of unwholesomeness is becoming more muffled, sweets in moderate quantity being now recognized as a necessary component of food rather than a harmful tickler of the palate. Candy is universally a child's luxury, and the mint is the mild remedy of the adult, which counteracts before they have had time to appear any ill effects that might otherwise follow the elaborate banquet.

Specialists who have made a business of investigating candy in relation to the pure food laws of one of our great commonwealths report that out of 250 samples—in which the cheapest penny specialties figured prominently—only four were found to contain material specifically prohibited by law. We are truly thankful to learn that talc, terra alba, sulphur dioxide, gelatin and glue, so common in the substance or coloring of the cheaper candies a few years ago, are being driven from the trade through legislation.

But we are not beyond the danger line. Though stripped of chemical adulteration, many of the samples are vile with filth. Dirt clings to candies, especially the softer kinds, and is to a certain extent absorbed by them. The cheaper grades, the ones which are most universally indulged in by all classes, are more carelessly handled, consequently very much more objectionable in this respect. If sold by the street vender, his grimy hands are aided by the dust from the street in rendering them unfit for food. If in open cases in the shop, tobacco smoke may mingle with the dust which settles upon them. And if they escape the contaminating touch of the general purchaser, his breathing over them is an added feature of repulsiveness.

Some of these cheap products prove objectionable even when still in the cases of the manufacturer, wormy nuts being among the materials of which they are compounded. Food specialists sound a vigorous note of warning against animal candies, observing that children play with them in the dirt and then eat them. A similar point seems in order against animal cookies, unless the little one is trained to treat them as a pleasing form of food and never as a plaything. The combination of food products and toys is incompatible with the rules of hygiene.

Among the more than 50,000 workers in the candy factories, disease germs are bound to be present. Why not eliminate this danger, together with the attendant dirt and dust, by making your own candy? There are innumerable recipes, some so simple that a child can follow them, so cheap that they eclipse even the cheapest of store candies, yet so good that all enjoy them. Nuts fresh from the shell add variety, and the pleasure of candy making is enjoyed quite as much as that of eating the sweets.

But there is still another advantage to be gained. Only $28,000,000 worth of sugar cane is made, according to official figures, in a year. This with the beet sugar, sorghum and maple products gives a total valuation for the entire product of sweets at less than that of the candy output in the same time. Some one is making some money. And remember that the cheapest as well as the cleanest candy is made directly from sugar or syrup in your own kitchen.—Bessie L. Putnam.

The Memory Garden.

I have just had the happy privilege of walking through the memory garden of a middle-aged lady. It a beautiful place, as must needs be, when so many hands and minds had worked to make it a place of such interest and usefulness.

"That rhubarb along the fence was planted by Sister Anne, who was always such a practical soul," said she. "Nothing better than rhubarb in the spring to take out the winter poisions. They'll enjoy the posies other people plant all the more after they've had a few doses of my rhubarb, for it will make them lose their blue spectacles. And the raspberry vines were started by our own Bennie, when he was a little fellow," went on my hostess. "He was that fond of raspberry jam that he begged to plant some vines, and so he saved his pennies and bought the vines himself and always tended them so long as he was at home. And on my birthday, when he was only a lad of twelve, he planted that grapevine that now covers the whole arbor. It gives me pleasant thoughts to sit out there with my darning or my knitting. And the catsups and the jellies and the wines we make from those grapes have a different flavor than any others in the world, I believe. Imaginative old woman am I? Well, it's a rare pleasure anyway."

"And these two peony bushes were planted the day Daughter Mary was married. She and her husband-to-be, William, came out the morning of the wedding day and she planted a white one and he a red one. You never saw such peonies to bloom, and, early as it is, they are always out on the wedding day, in celebration I tell myself. I never knew of any other peonies to bloom so early, nor so full, nor so long as those. And this little white rose bush was planted by Mary's little girl. She died when she was seven years old. She planted the bush when she was here on her fifth birthday. Those roses never open out full. They just stay little white buds. Can't you see the reason?" The gentle little lady wiped a tear away and then she turned with a smile to a big snowball bush that dropped almost to the ground with its weight of green and white balls. "That's Billy's choice," she said. "Such a boy! He was the greatest lad to snowball you ever saw. He was only eight years old when he set that out after I asked him what he was going to put in my garden to remind me of him. "Blossom snowballs are next best to the real ones, but you'll let me have just a few to snowball with, won't you?" he begged, and many and many a time have I been pelted with the balls from that tree. But Billy always waited until they had lost their first freshness before he picked them and I never told him to, either. Father, that is my husband, set out the mignonette. He said its fragrance made him think of a quiet, beautiful life. Ah, but he was quick to see the beauty in the lives of those about him.

"And here is the row of hollyhocks that my own grandmother planted on my first wedding anniversary when she came to visit us. She used them to make a hedge between the kitchen garden and the back lawn. And over there is the Golden Glow that Susan, a colored girl who worked for me once upon a time, planted for me. It was a color Susan loved. God bless the girl; she served me faithfully for a long while."

There were many others that the dear lady pointed out, and besides the perennials in the flower and vegetable garden there were the fruit trees in the orchard, almost every one with some special memory clinging to it and flavoring the fruit.

I left the old lady in quite an abrupt manner, but, of course, she understood that I must hurry home to start a memory garden of my own. Who would be without one after passing through hers? — Janet Thomas Van Osdel.

BEAUTIFUL APRON PREMIUM.

To further introduce our splendid Universal Magazine we are offering a useful fancy apron as a premium. Hand-embroidered tea aprons are always in great demand among ladies and girls, and this is an article anyone would be proud to own. We offer this beautiful apron, stamped on fine white lawn, including piece for pocket and strings; also a year's subscription to our

popular Universal Magazine, filled with choice stories, departments for all the family, thirty-two pages, etc., all for only thirty cents. Send stamps or coin at once. Don't miss this great offer, because our supply will not last very long. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Used Kendall's With Success.

Mr. G. G. Gilman, writing from Jerico Springs, Mo., under date of December 12th, 1911, address Dr. B. J. Kendall Co., Enosburg Falls, Vermont, saying: "I have been using your wonderful medicine for a long time and find it to be a splendid remedy." See page 16 and write for "A Treatise on the Horse."

During the census year the state of Texas harvested and sold 5,832,000 pounds of pecan nuts, and all the balance of the United States harvested the total of 3,959,000 pounds.

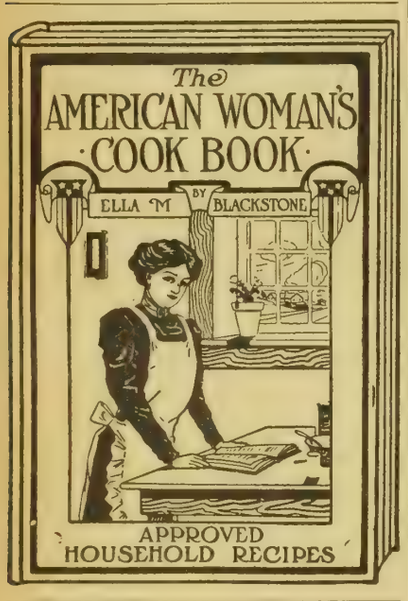
THE BEST COOK BOOK.

The American Woman's Cook Book.

This is a splendidly-bound book that weighs nearly two pounds. There are three hundred and eighty-four pages of approved household recipes, including many excellent dishes never before presented in a Cook Book.

The American Woman's Cook Book is by Ella M. Blackstone, who is famous for clearing the road for the student of domestic science by giving the reasons for everything. It is easy to learn from her when everything having a bearing on the subject is explained so clearly.

The book includes chapters devoted to foods for each month; time required to digest different articles of food; menus for all occasions; table etiquette; kitchen don'ts; kitchen equipment, and useful hints and recipes for the home in general; specially-drawn articles upon various subjects, such as soups, fish, poultry, beef, veal, mutton, pork, salads, vegetables, and all classes of dishes, besides beverages, candies, pickles and preserves, ice creams and ices; also ruled pages for new recipes to be preserved.



The thorough alphabetical index is a wonderful help to all subjects. A good book is known by its index, which in this case is eighteen pages, three columns to the page.

The publisher's price for single copies of the American Woman's Cook Book is $1.50 per copy and 15 cents postage, but we have contracted for such a large number we have obtained the benefit of a reduced rate. Therefore we will send one copy of the American Woman's Cook Book, postage paid, for One Dollar and include one-year's subscription to The National Farmer and Stock Grower. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

THE FARMERS' MARKET.

On May 25th it was reported that probably the largest amount ever received for a car of timothy hay in St. Louis was obtained for a consignment from Idaho, which sold for $637.49. This car was received by Toberman, Mackey & Co., and contained something over twenty-four tons, which was almost double the average car capacity. It sold for $26 per ton. The freight charges were $275.

The first peaches of the season were received at St. Louis on March 25th by P. M. Kiely & Co. They were donated by that firm to the Fruit and Produce Exchange, and were auctioned off on the floor of that organization for the benefit of charity. President John Gazzolo was the first buyer, paying $10 for a four-basket crate. They were redonated, and sold a number of times, and brought a total of $60. George P. Schopp, the last buyer, who paid $7 for the peaches, sent them over to the Butter, Egg and Poultry Exchange, to be sold for charity. Ex-President Fred Heger, of that organization, was the first buyer, paying $10. The peaches were resold a number of times and brought a total of $163 on the Exchange.

The peaches that were the first of the season at St. Louis and arrived on March 25th were "Arp Beauties" and were shipped by Ray Brothers, of Arp, Smith county, Texas. The total proceeds of the sales were divided equally between Father Dunn's Newsboys' Home and the German Protestant Orphans' Home, on the St. Charles Rock Road. The first cantaloupes of the season were also received by P. M. Kiely & Co. from Florida. They were of only fair quality, and sold from $2.50 to $4.00 per crate, as some were too green.

On May 24th the first car-load of melons came on the St. Louis market from Florida, consigned to R. H. Pennington & Co., who sold them to Henschen & Goerner. The car brought $425 on track and contained about 1,000 melons. They were the Tom Watson variety and averaged twenty-five pounds apiece. A week previous the first watermelons came along in a few barrel shipments. They sold for $1.50 apiece. The person who supposed the big hotels and swell cafes absorbed them stands corrected. The negro restaurants which line Market street west of Union Station had them displayed in glass cases alongside chunks of ice.

Cash Grain at St. Louis.

Anyone who keeps a file of this paper on his farm will also be keeping a record of the actual prices paid for cash grain at St. Louis on the last day of each month. Where the word "nominal" appears it is to show that although the price of the grade quoted is all right, there were no sales on that day. This is the market report of May 31st, 1912.

Wheat.—Market slow and easier; offerings were larger, including two-days' receipts; choice soft winter sold at steady prices, but lower grades were easier and prices lower; hard winter was quiet, with little demand; No. 2 red winter wheat, $1.19 to $1.20½; No. 3 red winter wheat, $1.16 to $1.17½; No. 4 red winter wheat, $1.08 to $1.15, nominal; No. 2 hard wheat, $1.13½ to $1.18, nominal; No. 3 hard wheat, $1.11 to $1.16, nominal; No. 4 hard wheat, $1.06 to $1.14.

Corn.—Market weak and from ½c. to 2½c. lower; offerings were two-days' receipts and there was not much demand until after the decline, when most of the offerings were sold; white corn was best sustained in price; No. 2 corn, 79½ to 80c.; No. 3 corn, 78½c.; No. 4 corn, 72½c.; no-grade corn, 65 to 69c.; No. 2 yellow corn, 80 to 81c.; No. 3 yellow corn, 79 to 80c.; No. 4 yellow corn, 74 to 75c.; No. 2 white corn, 87c.; No. 3 white corn, 84¾ to 85½c.; No. 4 white corn, 71 to 76c.

Oats.—On track: White ½ to ¾c. lower; fair demand; mixed lower and dull; No. 2 white, 54¼ to 55c.; standard, 54 to 54½—car 54¾c.; No. 3 white, 53¾ to 54c.; No. 4 white, 52 to 53c., nominal; No. 2 oats, 53c., destination; No. 3 oats, 52c.; No. 4 oats, 51c., nominal.

Flour.—Receipts, 11,410 barrels; shipments, 5,610 barrels. Quote: Soft winter—Patents at $5.30 to $5.85 in wood; straights at $4.80 to $4.90 in jute; extra fancy at $4.55 to $4.65 in jute; fancy at $4.10 to $4.20 in jute; low grades at $3.25 to $3.75 in jute. Hard winter, in jute—Patents, $5.00 to $5.25; straights at $4.75 to $4.90; first clears at $3.80 to $4.05; second clears at $3.40 to $3.65; low grades at $3.00 to $3.25; spring patents at $5.40 to $5.65 in jute. Foregoing for lots from first hands on track or at depot; special brands on orders more.

YOUR BOY'S HAPPINESS

is one of your first considerations. Have you ever thought of the tremendous importance and influence of his **READING MATTER?** There is nothing in this world that will do a boy more harm than cheap, trashy literature.

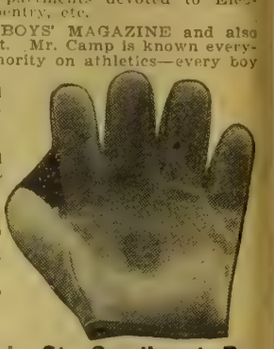
GET THE BOYS' MAGAZINE FOR HIM!

In no other way could you give him more solid pleasure, entertainment and instruction. This splendid magazine is chock full of just the kind of reading **YOU** want **YOUR** boy to have. Clean, inspiring, stories written by such noted boys' authors as Hugh Pendexter, Everett T. Tomlinson, Wm. Heyliger, etc., etc. **PRACTICAL** and **INSTRUCTIVE** departments devoted to Electricity, Mechanics, Photography, Carpentry, etc.

WALTER CAMP writes the editorials for THE BOYS' MAGAZINE and also conducts the Athletic department. Mr. Camp is known everywhere as America's highest authority on athletics—every boy should read his ideas of clean, manly sportsmanship.

THE BOYS' MAGAZINE is beautifully illustrated throughout—each issue has a new, handsome cover in colors.

SPECIAL OFFER! In order to introduce THE BOYS' MAGAZINE to thousands of new readers we will offer to send the magazine for a whole year, together with a copy of our book, "Fifty Ways For Boys To Earn Money," and also this splendid base ball glove, ALL FOR ONLY $1.00. This glove that we give away with a **YEARLY** subscription is a **HIGH-CLASS** one and one that your boy will be proud to own. It is made of finest tan leather, felt padded, **LEATHER LINED,** web thumb and deep pocket. We prepay all transportation charges.



Order to-day. We will refund your money promptly if you are not more than pleased with your investment.

(This offer is open to new subscribers only.)

THE SCOTT F. REDFIELD COMPANY, 1056 Main St., Smethport, Pa.

THE BOYS' MAGAZINE at all news-stands, 10c. a copy.

Names For Twins.

Col. Roosevelt was warmly congratulating a young husband of Oyster Bay on the arrival of twins.

"Yes, they're a great joy to us," the young husband said, biting his lip nervously; "only we don't know what to name them."

"Why," said Col. Roosevelt, with a gay laugh, "there are hosts of good twin names. There's Ann and Another, or Kate and Duplicate, for girl twins; and for boys we have Peter and Repeater, Max and Climax, or even—if the little fellows incline to be boisterous—or even Hugh and Cry." The Colonel did not mention Alpha and Omega.

A Coupon Worth a Fruit Jar.

Our lady friends are invited to understand the advertisement of the Hazel-Atlas Glass Company, of Wheeling, W. Va., on page 26. They manufacture the E-Z Fruit Jar and wish to introduce them into families where fruits and vegetables are canned. These jars are kept for sale by grocers, and if you can find the grocer handling their jars he will furnish you with a free sample that when canning time comes around you will buy their jars because you like them. It will do no harm to write the Hazel-Atlas Glass Company, Wheeling, W. Va., and ask for a free book on fruit jars.

Regain Your Health.

You ought not to wait another day before trying Bodi-Tone, which many of your neighbors have used to the great and lasting improvement of their health. You ought to test it, because you can get it on trial and need not pay a penny unless it greatly benefits you. Read the liberal Bodi-Tone trial offer on the last page of this paper and send for a box.

Always the Same Name.

J. Ogden Armour, apropos of leap year, said at a luncheon at the Auditorium in Chicago:

"A girl can take advantage of leap year without being at all unmaidenly. There are subtle and delicate ways of doing things, and such ways are just as efficacious as brutal, knock-me-down ones.

"There's a girl named Jones, who, having been engaged altogether too long, took advantage of leap year to hurry on her wedding. But she accomplished this delicately. She just signed a letter to her fiance: 'As always, Edith Jones,' and she underscored 'always' and 'Jones' very heavily.

The New Butter Idea.

Cotton-seed crushers are placing an alleged butter product on the market. One of the cotton-seed crushers here said anything that can be eaten on bread and produced from oil is butter, and all should be sold on their merits for what they are. "Fruit butter," such as apple butter; "beef butter," such as butterine or oleo; "cream butter" for the dairy-made article; and "vegetable butter," or seed butter, for the cotton-seed product. The cotton-seed crushers were in dead earnest and will probably be heard from when Congress meets again.

The Boys' Magazine.

A special offer made by the Boys' Magazine, Smethport, Pa., is well worth reading by parents and guardians as well as by boys themselves. Read it at once and act quickly. See page 28.

Ptomaine Poisoning.

Illness due to the eating of infected foods is very frequent and the account of it is invariably written up as "ptomaine poisoning." The term in this connection is not scientifically correct, as the poisoning from foods may or may not be from ptomaines. Illness from infected foods is far more frequent than is generally supposed. There is little doubt that many indefinite infections and disturbances of the intestinal tract, ordinarily termed errors in diet, are due to the ingestion of decayed or infected foods.

It is often difficult to establish the true cause of food poisoning, though, of course, it is easier when the cases occur in large numbers. When but one or two cases occur in a private family, it is much more difficult to ascertain the true cause, and then only by means of the most painstaking investigation.

The poisonings from tin, leaden and copper receptacles are infrequent and in most cases are found to be due to bacteria. The more important of the food poisonings due to bacteria, often occurring in extensive outbreaks, are the following: Meat poisoning, fish and shell-fish poisoning, and poisoning through cheese, ice cream, puddings, potatoes and canned goods.

The most common form of meat poisoning is that from eating the meat of animals that were diseased at the time of slaughter. In this form of poisoning the bowels are principally affected, with symptoms of vomiting and diarrhoea. It is well to remember in this connection that most of the outbreaks in this kind of meat poisoning have been traced to the meat of calves suffering from navel infection and diarrhoea, or from cows that were slaughtered because they had been infected after calving, or were suffering from some intestinal or udder infection. The germ of enteritis (bacillus enteritidis) is the organism responsible in this kind of poisoning.

Then there is the poisoning due to the eating of putrefied meat. This is usually associated with the bacillus proteus and bacillus coli. In this case we have symptoms of vomiting, headache, dysentery, weakness, convulsions, pains in the back and neck, and great depression.

The third kind of meat poisoning is commonly called "sausage poisoning," and is caused by the bacillus botulinus. In this kind of meat poisoning the symptoms are those referable to the central nervous system, muscular paralysis, double vision, dryness of the mouth and throat, disturbances of the heart action and respiration. There is no fever and consciousness is unimpaired. In the first two forms of meat poisoning the symptoms appear usually in from six to ten hours, while in sausage poisoning the symptoms do not appear for twenty-four hours or longer.—Geo. H. Glover, Colorado Agricultural College, Fort Collins, Colo.

Houseflies and Disease.

The housefly stands convicted as a disseminator of disease and a carrier of contagion. Ever since the investigation of the spread of typhoid fever in the United States military camps during the Spanish War of 1898, the evidence has been accumulating, until to-day there is no escape from the charges against this tantalizing insect. Every far-reaching probe into sanitary problems is liable to disclose conditions hitherto quite unsuspected; and the indictments already brought against the housefly during the past few years charge responsibility for a long category of infections, including cholera and various forms of dysentery, diphtheria, erysipelas, contagious ophthalmia, cerebrospinal meningitis, anthrax and possibly small-pox, in addition to typhoid fever.

Whether all of these charges will stand in the light of scientific investigation remains to be seen. It is important, not so much in justice to the accused insect as because of the hygienic and preventive measures which are dependent thereon, that the questions here raised be authoritatively settled. In the case of typhoid, the evidence appears to be complete.

Dr. Torrey, of the Loomis Laboratory of New York, has attempted to supply facts on this question. He has examined the flies caught in the densely-populated parts of New York City during a number of months. Both the bacteria occurring in the intestine and those from the surface of the insects were investigated. The flies examined in April and early in June were comparatively free from dangerous bacteria. As the summer season advanced, high bacterial counts began to appear and also an abrupt change in the character of the bacteria. The record counts came at the end of the two weeks of excessive heat in July.

Some idea of the number of organisms that a single insect may carry is indicated by the figures 570 to 4,400,000 for the surface contamination, and 16,000 to 28,000,000 for the intestinal bacterial contents. Most of the bacteria found were comparatively harmless. This investigation, however, was carried on in the crowded city, where sewers would naturally carry off all of the most dangerous infective matter. The Journal of the American Medical Association says that the housefly is an "undesirable citizen" in any event, so that the war of extermination already begun against it in many quarters deserves encouragement and support.

The Tactful Ones.

Of all the gifts which the gods bestow upon mankind, there is none more to be desired than the gift of tact. The tactful person may be rich or poor, educated or uneducated, no matter what his social status, he can move gracefully through any society, is beloved by everyone who knows him and has a perfectly glorious time living his own little life.

A now-famous divine tells of an expetience in his early college days. He came from a crude country home where life resolved itself into a day-by-day existence which was maintained by hard wrestling with a stubborn soil. The young man was so poor that he never went out socially at college. The wife of one of the professors, learning of his lonely state, invited him to spend Christmas in her own home. The student joyfully accepted the invitation and it was a wonderful day to him. He went to his little room at night, feeling that he had indeed taken the part of a hero that day. For at the close of the Christmas dinner, a servant appeared bearing a large platter upon which reposed a regular story-book plum pudding. And the pudding was wreathed in blue flames! Here, thought the young man, was a chance to do something repaying his kind hostess for her attention to a poor student. He rushed to the rescue and extinguished the blaze! So absorbed was he in this little act that he did not observe the quick gesture of the hostess to her husband, the children and the servant. When the guest resumed his seat she thanked him most heartily for his quick thoughtfulness. It was some years later that this man attended another dinner at which a flaming pudding was brought in and the episode of his college days returned to him, and he now learned that according to an old custom brandy was poured over the pudding in the kitchen and it was then lighted and borne in while all aflame. And his heart was filled with a new gratitude to the woman who could so tactfully hide his error on that occasion that not a suspicion of it had come to the oversensitive youth.

Another theological student had trouble with the forks and spoons at his first course dinner. He began at the wrong end of his line of spoons, and when he came to the dessert he had nothing but a soup spoon left to eat it with. But looking up he saw that his hostess was evidently in the same predicament. She rang the bell and said to the servant: "Something wrong with the spoons, Parker. Will you attend to them, please?" It was not until long after that the young theologian understood that the use of his hostess' silverware had been wrong on purpose so that she could save him from embarrassment.

It was a man well accustomed to the ways of society who called forth a rare demonstration of tact and sacrifice from another hostess. This woman was using in her table service a set of fragile cups of almost priceless value. Through an awkward movement the man broke one of the cups. He was mortified, for he understood that the cups were something unusual, though he did not know their full value He was so evidently disturbed that the woman thought only of how she could smooth over the accident and put him at ease. "Don't think another thought about it," she exclaimed. "Such ware as this is really too fragile for use, anyway. Why, a mere pressure of my fingers will break the cup. See!" And, picking up the cup, she crushed it in her hand.—Janet Thomas Van Osdel.

Flies! Flies! Flies!

Get rid of them and help make your home and premises sanitary by the liberal use of *Tanglefoot Fly Paper.* There is fully one-third more compound per sheet on *Tanglefoot* than on any other fly paper; hence it lasts longest, catches the most flies and is the **best** and **cheapest** fly paper. If you ask for "fly paper" or "sticky fly paper" you may get a cheap imitation that will soon dry up or glaze over. **Ask for Tanglefoot.**

Sold by Grocers and Druggists.

TREE TANGLEFOOT, put up in 1, 3, 10 and 20 lb. cans, Will protect your trees from all climbing insects.

Dainty Neckwear.

Pretty neckwear often makes a plainly-dressed woman or girl look well dressed, and the present style of dressing the neck enables one to use to good advantage all pieces of ribbon, silk, lace and linen, and these accessories are as pretty and becoming as the high-priced ready-made articles. Every piece of lace can be used to good advantage, and if it has turned yellow and you want it whitened, place it in strong suds and set it in the sun for several days, or put it in sour buttermilk and let it remain for two or three days.

The best way to dry a short piece of lace is to spread it smoothly over a large window-pane while it is still damp, and when perfectly dry the lace will be crisp and new in appearance.

For starching very light laces or fabrics, dissolved gum Arabic is much better than starch. Get the fine white gum Arabic and dissolve it in hot water, then add as much of this to warm water as you need for the starching.

Laces, ties and collars should never be rubbed in washing, and the best way to clean them is with a small cleaner made like a churn dasher; that is, a small, smooth board with holes bored through and tacked to a short handle, and any girl can make one of these, and they are excellent for cleaning fine white waists and all kinds of sheer fabrics. If you haven't one of these cleaners, use a common wooden potato masher. Put the collar or laces in warm suds and pound gently, but do not pound all in one spot, but round and round until every part of the article or articles has been pounded. Lay aside the pounder and examine the pieces, and if not clean, pound a little longer, and it will not take long to cleanse even the most soiled pieces in this manner.

The crocheted collars and jabots and all kinds of dainty white neck-pieces are made beautifully white by dissolving some borax soap chips in hot water and then stirring enough of this solution in warm, soft water to make a nice lather. Put the pieces in the suds and let them soak for half an hour or longer before cleaning, and it is the Twenty Mule Team Soap Chips that are used for washing all such dainty articles; but if very soiled, it is best to clean them in the following way: Make a suds with the chips, then put in the articles and let simmer slowly on the back of the stove for half an hour, then remove it from the stove and squeeze it well through the suds, then rinse through two or three waters and finally through the thin gum Arabic water for the stiffening. —Aline.

Told the Wrong Party.

"You can't sit up with my daughter after eleven o'clock."

"Would you mind telling her that, sir? I have been trying to get home early for six months."—Life.

Elegant Thin Model 20 YEAR Watch $3.75

Hunting case beautifully engraved, gold finished throughout, stem wind and stem set, fitted with 7 jeweled American lever movement, guaranteed 20 years, with long gold finished chain for Ladies, vest chain or fob for Gents.

Diamond Jewelry Co., 488, 189 W. Madison St. Chicago, Ill.

SELECTED POETRY.

MAY.

She comes a thing of beauty with sweet loveliness a duty,
With the daisies and the cowslips in her hair;
The breath of bloom upon her and the sun's warm kisses on her,
The perfume of her presence everywhere.
The songs of birds, her greeting, all the world with pleasure meeting,
Their melody upon her lips to stay,
Her robes of fresh green sweeping, little wild buds on its creeping,
The fairy, airy, merry month of May.

Oh, her laugh is like a tonic with all happy sounds harmonic,
Her eyes are like the blue of tender skies;
Her hair, like princess olden, hangs about her gleaming golden
And its sheen in little broken tendrils flies;
Her step so lightly presses, that its marks are like caresses,
Which the flowers spring to gain upon her way,
And all things in nature love her, round her slight form loving hover,
The glancing, dancing, maiden month of May.

She's the sprite of birdlike wingtime, she's the darling of the springtime,
She's the fairest month of all within the year.
She's in gay moods ever moving, yet is tender, sweet and loving,
And she brings the breath of Eden very near;
Her fresh youth brings its vigor, its light touch checks age's rigor,
Bloom and song and sunlight make her ever gay,
And the earth she cheers and brightens, nature softens, glories, lightens,
This gladsome, madsome, merry month of May.

—Baltimore American.

THE DEACON'S MASTERPIECE; OR, THE WONDERFUL "ONE-HOSS SHAY."

Have you heard of the wonderful one-hoss shay,
That was built in such a logical way
It ran a hundred years to a day;
And then, of a sudden, it—ah, but stay;
I'll tell you what happened without delay;
Scaring the parson into fits,
Frightening people out of their wits—
Have you ever heard of that, I say?

Seventeen hundred and fifty-five,
Georgius Secundus was then alive—
Snuffy old drone from the German hive.
That was the year when Lisbon-town
Saw the earth open and gulp her down,
And Braddock's army was done so brown,
Left without a scalp to its crown—
It was on the terrible earthquake-day
That the deacon finished the one-hoss shay.
Now, in building of chaises, I tell you what,
There is always somewhere a weakest spot—
In hub, tire, felloe, in spring or thill,
In panel or crossbar, or floor or sill,
In screw-bolt, thoroughbrace, lurking still—
Find it somewhere you must and will,
Above or below, or within or without;
And that's the reason, beyond a doubt,
A chaise breaks down but doesn't wear out.

But the deacon swore (as deacons do,
With an "I dew vum," or an "I tell you")
He would build one shay to beat the taown
'N' the keounty 'n' all the kentry raoun';
It should be so built that it couldn't break daown;
"Fur," said the deacon, "'tis mighty plain
That the weakes' place mus' stan' the strain;
'N' the way t' fix it, uz I maintain,
Is only jest
T' make that place as strong uz the rest."
So the deacon inquired of the village folk
Where he could find the strongest oak,
That couldn't be split, nor bent, nor broke—
That was for spokes, and floor, and sills;
He sent for lancewood to make the thills;
The crossbars were ash from the straightest trees;
The panels of whitewood, that cuts like cheese,
But lasts like iron for things like these;
The hubs of logs from the "Settler's ellum"—
Last of its timber—they couldn't sell 'em;
Never an ax had seen their chips,
And the wedges flew from between their lips.

Their blunt ends frizzled like celery tips;
Step and prop-iron, bolt and screw,
Spring, tire, axle and linchpin, too,
Steel of the finest, bright and blue;
Thoroughbrace, bison-skin, thick and wide,
Boot, top, dasher, from tough old hide
Found in the pit where the tanner died.
That was the way he "put her through."
"There!" said the deacon, "naow she'll dew!"

Do! I tell you, I rather guess
She was a wonder, and nothing less!
Colts grew horses, heads turned gray—
Deacon and deaconess dropped away;
